Agriculture.—Main crops (metric tons, 1954): wheat 279,000; barley 2,045,000; oats 787,000; rye 280,000; potatoes 1,963,000; beet sugar (raw) 235,000. Livestock (Sept. 1954): cattle 3,152,000; pigs 4,800; sheep 33,000; horses 358,000. Dairy production (metric tons, 1954): milk 5,400; butter 180,000; cheese 81,600. Meat production (metric tons, 1954): beef and veal 190,300; pork 504,100. Fisheries (metric tons, 1953; 1954 in parentheses): total catch 342,800, (353,000).

Industry.—Fuel and power (1954): lignite 679,000 metric tons; manufactured gas 388,400,000 cu.m.; electricity 2,836,000,000 kw.hr. Manufactured goods (metric tons, 1954): cement 1,174,200; superphosphates (1952) 420,000. Merchant vessels launched (1953): 142,056 tons. Index of production (1948=100): manufacturing (Feb. 1955) 128; metal products (June 1954) 140; textiles (June 1954) 120.

Dentistry. Fluoridation continued during 1955 to be the most discussed subject in dentistry. The year marked the tenth anniversary of fluoridation in Grand Rapids, Mich., Newburgh, N.Y., and Brantford, Ont. The reductions in the amount of dental caries after nine years of fluoridation were remarkably consistent in these independent studies. Results indicated that dental caries could be brought under a large measure of mass control through fluoridation.

As of Oct. 1, 1955, there were 1,115 communities in the United States with a total population of 22,093,955 persons who were using fluoridated water supplies. In addition, about 3,000,000 more persons in the country were using a domestic water supply with a natural fluoride content of about 1.0 part per million of fluoride or more. Excluding Canada, where a number of cities were utilizing this control measure, other countries where at least one city was fluoridating included Brazil, Chile, Columbia, Germany, Netherlands, Japan and Sweden.

The germ-free animal studies conducted jointly by The University of Chicago and the University of Notre Dame, Notre Dame, Ind., aroused considerable interest. These studies utilized the new biological technique of inoculating otherwise germ-free animals with bacteria. Earlier studies had revealed that rats reared entirely free of all bacteria developed no caries, despite ingestion of a cariogenic diet for five months. In the latest report rats were inoculated with known bacterial cells in which an enterococcus was the predominating microbic form. All developed carious lesions in their molar teeth. These animals were fed the same standard diet that was fed to conventional control rats having an unknown complex bacterial flora. These latter

DENTAL CARIES PREVALENCE in continuous resident children of Grand Rapids, Mich., Newburgh, N.Y. and Brantford, Ont., Canada, before fluoridation and after nine years of fluoridation, a study completed in 1955

rats regularly developed cavities during the 150-day test period. These studies suggested that for the first time in history it might be possible to learn whether the causative organism(s) of dental caries fulfils Koch's postulates. F. J. McClure and J. E. Folk continued their studies of producing smooth-surface caries in rats with two relatively new diets, neither of which contained customary caries-producing agents, *i.e.*, (1) coarse particles of corn or rice, or (2) excessive quantities of refined sugars. These two new diets were essentially a combination of four processed cereal foods, enriched rye bread (toasted), enriched white bread (toasted), cooked rolled oats (dry) and cooked yellow corn grits (dry), or a diet containing a roller-processed skim milk powder. This novel avenue of approach opened a new field in experimental dental caries.

Increasing interest was being shown in new instruments for cutting hard tooth structure. These included high-speed rotation (10,000 r.p.m.), ultrasonic mechanical vibration with an abrasive slurry, the hydraulic turbine contra-angle handpiece and a revaluation of the air abrasive technique.

At the 1955 meeting of the International Association for Dental Research, largely American in membership, 211 papers were read, almost treble the number presented in 1950. Studies included continuing research on fluorine and its relation to dental health; structure of the teeth; saliva; oral microbiology; dental caries; periodontal disease; and the science of dental materials. Other research projects in progress were growth and development of the face and head (orthodontics and physical anthropology); radiography; physiology of the mouth; oral surgery; pain control, particularly in operative dentistry; epidemiology; genetics; anomalies; effects of atomic radiation on oral structures; antibiotics; and therapeutic dentifrices.

On the basis of the 1955 edition of the *American Dental Directory*, there were in the United States a total of 95,883 dentists, including retired. Of these, it was estimated that 84,000 were active in the profession. Approximately 81,000 practised dentistry, *i.e.*, worked at the chair, and about 3,000 were engaged in teaching, research and administration. About 75,000 were in private practice. It was estimated that 80% of all active dentists were members of the American Dental association. (See also NUTRITION, EXPERIMENTAL.) (H. T. DN.)

Dermatology. In 1955 it appeared that the long-held view that acute fungous infections of the feet are freshly acquired infections contracted directly from contaminated sources such as shower room floors, swimming pools, rugs, slippers or wet towels might have to be abandoned. A well controlled study indicated that such infections are caused rather by decreased resistance of the human host to pathogenic fungi that ordinarily lie dormant on the skin surface.

Moniliasis, another mycotic disease caused by yeast organisms, found normally on skin and mucous membranes, had been increasing both in incidence and severity since the widespread use of antibiotic drugs. Affecting warm areas such as folds of the skin, it is especially troublesome in hot, humid weather and tends to resist treatment rather stubbornly. Moniliasis may affect the lungs and other internal organs. A new drug, Nystatin derived from *streptomyces noursei*, which had been extensively studied in the laboratory with encouraging results, was used now with excellent results in humans. Available in capsule, powder, tablet and ointment form, this drug may be administered by mouth, incorporated in babies' formulas, used as tongue swab, mouth rinse, suppository and topically. The results, when used for superficial infections and for oral thrush, were reported to be excellent and no untoward reactions from its use were noted. The drug's value for systemic moniliasis still awaited evaluation.

Scabies, familiarly known as the "seven-year itch," an annoying affliction throughout the history of mankind, was disappearing without apparent reason. The disease, a parasitic infestation of the skin, was widespread in biblical times; perhaps much of the frequently mentioned leprosy in old literature was actually scabies. This has always been among the ten commonest skin diseases, and there is a definite rise in its incidence during war time. An interesting study, undertaken to explain the sudden disappearance of the disease, considered possible causative factors such as the better treatments devised in recent years; improvement in living conditions and hygiene generally, the widespread use of insecticides, the development of immunity; changes in the flora of the skin as a result of use of antibiotics and improved laundering techniques since the introduction of detergent cleansers and washing machines. Ervin Epstein concluded that the latter was probably the most important factor, though a complete explanation for the phenomenon was not forthcoming.

The suggestion that the itching of dry skin might be caused by electrostatic charges resulted from a study which revealed that patients with dry skin harboured an electrostatic charge on the body surface which had a higher voltage than that of persons with normal or moist skin. As atmospheric humidity increased, the surface voltage tended to decrease, and increases in surface voltage occurred when there was diminished or absent sweating, when wool or nylon were worn and when there was little contact with the ground, as when the patient was in bed. Electrostatic charge was increased by rubbing or scratching the skin; it decreased when the irritation was stopped, but more slowly in dry skins. These observations, it was suggested, could explain the usual increased amount of itching in patients with pruritic skin diseases when they were in bed at night and experiments in which patients were grounded by a wire resulted in greater comfort to some of them.

A new treatment for herpes zoster (shingles), gamma globulin administered intramuscularly, was said to have effected excellent results in a small group of cases. As with all treatments for herpes zoster, the results were better when the treatment was administered early in the course of the disease.

In support of the contention that eczema is something more than a skin disease, studies of the reactivity of the skin and

of the central nervous system showed, in a group of persons, that the incidence of abnormal electroencephalographic tracings was significantly higher in persons with eczema than in the general population.

Usually patients suffering from miliaria rubra, prickly heat, obtained relief only from change in the atmosphere; topical agents gave but little help; but it was reported from experience with a large number of patients that the antibiotic agent neomycin in a demulcent and emulsifying vehicle afforded excellent results when applied to the skin.

Detroit. Detroit, Mich., seat of Wayne County, with a population of 1,849,568 by the 1950 census which gave it fifth rank among U.S. cities, had an estimated 1955 population of about 2,000,000. The city and its metropolitan area, embracing parts of four counties, had an estimated population nearing 4,000,000. In the preceding five years Detroit housing increased by 6%; metropolitan area housing by 45.1%.

Suburban growth by 1955 had created acute problems in water supply (almost wholly furnished by Detroit) and traffic, the one being met with increased pump and main facilities and the other by continued expansion of expressways and multilevel interchanges. So great did the water shortage become that for a time certain localities suspended building permits.

Detroit stands on the north bank of the Detroit river, linking Lakes Erie and Huron. Anticipating that future channel deepening would make it accessible to all vessels capable of using the St. Lawrence seaway, a port director was appointed and studies of future wharfage needs begun.

Two of the three remaining streetcar routes were discontinued during 1955 and steps taken toward abandonment of the third. Public transportation consisted almost wholly of busses. Detroit has an area of 137.9 sq.mi. With reliance upon private automobiles heavy, an acute parking problem had developed, especially downtown, and in 1955 municipal parking facilities with their attendant land condemnation were launched.

Razing of buildings over several blocks, together with shoreline filling, made room for completion of the partly constructed

river front civic centre. It was to include an auditorium, convention hall, exhibits building and underground parking. A skyscraper municipal and county building, part of this development, was occupied.

Eight public housing units were in use in 1955, six segregated. Under a federal court ruling, all had been ordered desegregated. Long-standing legal and financial hinderances were overcome to permit construction of housing on a 50-ac. site cleared by condemnation and for some years vacant. A pilot program for neighbourhood rehabilitation also was begun.

With a fire department rated by underwriters as the country's best, Detroit had the lowest fire loss among cities of comparable size. It kept a fire insurance premium classification of 2, held since 1935. Underwriter ratings range from 1 (best) to 10 (worst). The school system, which embraces Wayne university with about 17,000 students, has long been operationally divided between the elementary and intermediate plans. A new definition of policy called for ultimately making the intermediate plan universal in the city.

The city government is nonpartisan, with a nine-man council elected at large. Elected officials serve four-year terms.

Detroit's 1955-56 fiscal year assessed valuation was \$4,753,-021,870, its bonded indebtedness \$336,821,000, its tax rate per \$1,000 of valuation \$36.07, of which \$14.30 was for schools.

(R. Ho.)

Diabetes. The number of diabetics in the United States in 1955 was estimated at somewhat more than 2,000,000, of whom 100,000 were diabetics with onset in childhood. Diabetics continued to live longer and longer, the average age at death of 2,897 seen between 1897 and May 31, 1955, who died between 1950 and May 3, 1955, being 64.3 years and the duration of the diabetes 16 years; those with onset between 0 and 39 years lived 22.8 years; with onset 40-59 years, 16.4 years; and with onset at 60 years or over, 9.9 years. There were only five deaths, or 0.2%, under 10 years of age and 21 deaths or 0.7%, above the age of 90 years. Approximately one-third survived their diabetes 20 years. Of the 3,752 children seen during the 58-year period, the duration of the disease for those who died in the last five years was 2.2 years longer than for those in the preceding five years. Disease of the blood vessels was responsible for 75% of the recent diabetic mortality. In young people this was studied advantageously because at this age it was less complicated by the ills of later life.

The knowledge that removal or destruction of the anterior portion of the pituitary gland will lessen the severity of diabetes and, contrariwise, that the injection of an extract of its anterior portion will make the diabetes worse, stimulated physicians and surgeons to remove the pituitary, hoping thereby to lessen its possible harmful effect upon the blood vessels. L. W. Kinsell and R. Luft and their co-workers in California and Sweden performed hypophysectomy upon 5 young diabetics who showed advanced vascular complications in their kidneys and upon 20 who showed such complications in their eyes. Results were awaited with interest. Juvenile diabetic patients with progressive vascular disease of the eyes and kidneys would be candidates for the operation, provided the damage to the kidneys was only moderate. As a result of the operation, the dosage of insulin must be continued, but drops materially. However, because of the removal of the stimulating hormones of the pituitary, patients must receive substitute medication for the thyroid, sex glands and the adrenal gland with careful adjustment of the mineral metabolism. This operation was being performed more and more for the relief of symptoms secondary to cancer, and it was hoped that new methods might be learned which would lessen its gravity.

U.S. FLAG DRY-CLEANED by students of the University of Detroit, Mich., in preparation for Flag day, June 14, 1955. The flag, believed to be the largest in the world, measured 135 x 250 ft.

Increased emphasis was placed upon the detection and identification of the prediabetic and upon prevention of outbreak of the disease, especially in pregnant women. In pregnancy, as in infections, there is a lowering for the tolerance for carbohydrate. No longer was the transitory appearance of sugar in the urine of a pregnant woman considered to be negligible and normal; rather it was looked upon as a precursor of diabetes in future pregnancies. The endeavour, therefore, was made to test pregnant women several times during pregnancy and to discover which showed abnormality in carbohydrate metabolism. It was hoped thus to detect persons who later would be diabetic, and it was hoped that by administration of insulin they and their offspring would be protected.

To detect the future diabetic, S. S. Fajans and J. W. Conn temporarily administered hormones from the suprarenal gland to make individuals more sensitive to the glucose tolerance test, and those who showed impaired tolerance were kept under supervision. E. R. Froesch and A. E. Renold noted that the reducing substances excreted in the urine of normal subjects, hitherto called urine glucose, actually contained only 10 to 20% true glucose. They therefore used a glucose oxidase to determine the true sugar, bearing in mind the possibility of detecting hitherto unrecognized diabetes. G. E. Anderson, using insulin free from glucagon, the active ingredient of the alpha cells of the pancreas which aggravates rather than alleviates diabetes, also sought to discover the prediabetic.

Ferdinand Bertram of Berlin reported discovery of a sulfonamide that lowered the blood sugar without harmful effects. It was tried on more than 100 patients. It does not work with children or, in fact, persons under 45 years of age, persons over 45 years who have had diabetes for five to ten years or persons who have taken insulin for two or more years. Similarly, it will not act in acidosis or preacidosis or in infections. In a few cases there was pruritus and irritation of the skin, and in one case hepatitis developed, although not necessarily because of the drug. In 10 of 38 patients who had taken insulin and with onset after the age of 45 years, it failed. It is given in $\frac{1}{2}$ -g. tablets five times daily at first, then four, three and two tablets, and eventually it can be omitted, although in some cases glycosuria returned and it had to be resumed. The U.S. pharmaceutical industry was experimenting with production.

Diamonds. In 1954, world production of diamonds increased 1.2% over that in 1953. Most of the increase occurred in Tanganyika with some in South-West Africa. The pro-

portion of industrial stones in the total caratage remained 82%. Table I shows the output of diamonds by the major producing countries, including a breakdown of industrials in 1955 according to data supplied by the U.S. bureau of mines.

The sales syndicate reported sales for 1954 as follows: gem stones worth £45,610,010, industrials worth £16,543,115, a total of £62,153,125 compared with £61,155,941 in 1953, an increase of 1.6%. Sales in the first quarter of 1955 rose greatly, indicating a record year. Sales of gems were £15,231,054 and industrials were £6,956,763, totalling £22,187,817 for the quarter.

United States Imports.—The dollar value of diamond im-

Disasters. The loss of life and property in disasters during the period Nov. 1, 1954, to Oct. 31, 1955, is contained in the following list. (See also articles on ACCIDENTS; FIRES AND FIRE LOSSES; FLOODS AND FLOOD CONTROL; METEOROLOGY; SEISMOLOGY.)

Aviation

Nov. 26	Near Liège, Belg. Belgian air force fighter plane crashed in building; 14 persons were killed, 10 injured.
Dec. 4	Near Luang-Prabang, Laos, Indochina. Air liner crashed in mountain; 26 persons aboard were killed.
Dec. 8	Near Athens, Gr. Nineteen Greek military servicemen were killed in the crash of a transport plane.
Dec. 18	New York, N.Y. Italian air liner crashed into pier and fell in Jamaica bay during landing; 26 passengers and crewmen were killed, 6 survived.
Dec. 22	Near Pittsburgh, Pa. U.S. army chartered plane carrying "honor Christmas" soldiers crashed in Monongahela river; 10 persons aboard were killed, 15 survived.
Dec. 24	Prestwick, Scot. British air liner crashed and burned during landing attempt; 28 persons aboard were killed, 8 survived.
Dec. 29	Near Guntersville, Ala. U.S. air force plane struck mountain; 11 persons aboard were killed.
Jan. 12	Near Limaburg, Ky. Air liner and private plane collided; 15 persons aboard were killed.
Jan. 17	Gulf of St. Lawrence. U.S. navy plane went down off Stephenville, Nfld.; 13 persons aboard were missing and presumed dead.
Feb. 13	Central Italy. Belgian air liner crashed in Apennine mountains; all 29 persons aboard were killed.
Feb. 17	Near Anchorage, Alaska. U.S. navy patrol plane crashed into mountain; all 11 persons aboard were killed.
Feb. 19	Near Albuquerque, N.M. Air liner with 16 persons aboard crashed into mountain during snowstorm; there were no survivors.
Feb. 23	Near Windsor, Mo. U.S. air force plane crashed and burned; 9 persons aboard were killed.
March 6	Near Taitung, For. Fourteen persons were killed when U.S. force plane struck mountain.
March 8	Near Mascota, Jalisco, Mex. Commercial air liner crashed in mountain; 26 persons were killed.
March 20	Near Springfield, Mo. Air liner exploded and crashed; 13 persons aboard were killed, 22 injured.
March 22	Near Honolulu, Haw. U.S. navy transport plane crashed into Healeakala; all 66 persons (64 were military personnel) aboard were killed.
April 11	South China sea. Indian air liner crashed near Great Natu Island; 11 Communist passengers, en route to Asian-African conference at Bandung, Indonesia, and four crew members were killed.
April 28	Near Naha, Okinawa, U.S. army plane crashed during landing attempt; ten persons aboard were killed, four on ground injured.
May 4	Atlantic ocean. U.S. air force plane, with nine persons aboard, crashed and burned about 90 mi. off Iceland; no survivors were found.

*Estimated.

- May 18 Near Nairobi, Kenya. East African commercial air liner crashed into Mt. Kilimanjaro; 20 persons aboard were killed.
- May 30 Near Alamogordo, N.M. U.S. air force plane crashed in canyon; seven persons aboard were killed.
- June 10 Near Stuttgart, Ger. U.S. air force plane crashed into mountain; all 10 crew men perished.
- June 16 Cuatro Mojones, Parag. Brazilian air liner crashed and exploded during landing attempt, killing 14 persons aboard and injuring seven. Among those killed was John Graham Dowling, U.S. foreign correspondent.
- June 25 Near Agra, India. Two Indian air force planes collided in flight; all 19 occupants of both planes were killed.
- July 1 Near Coimbra, Port. Eight Portuguese air force planes, flying in formation, crashed into same peak; all eight pilots were killed.
- July 14 Oaxaca, Mex. All 22 persons aboard were killed in crash of Mexican air liner.
- July 17 Chicago, Ill. Twenty-two persons aboard were killed, 21 injured, when air liner crashed while landing.
- July 27 Near Petrich, Bulg. Israeli air liner crashed after being shot-up by Bulgarian anti-aircraft guns; 58 persons aboard were reported killed.
- Aug. 4 Near Newburg, Mo. Thirty persons aboard were killed in crash and explosion of U.S. air liner.
- Aug. 6 Near Voronezh, U.S.S.R. All 25 persons aboard, including 10 women members of Norwegian parliament, were killed in crash of Soviet air liner.
- Aug. 11 Near Edelweiller, Ger. Sixty-six U.S. air force men were killed in midair collision of two troop carriers.
- Aug. 23 Charleston, S.C. U.S. air force plane crashed into housing area; five crew members and four civilians were killed, 10 persons were injured.
- Sept. 1 Skwentna, Alsk. U.S. air force plane crashed; all 12 persons aboard were killed.
- Sept. 8 Pacific ocean. U.S. air force plane with 13 persons aboard crashed near Naha, Okinawa; all were killed.
- Sept. 11 Ngoaoundere, Fr. Cameroons. French plane crash took lives of 10 persons.
- Sept. 27 Caribbean sea. U.S. navy plane with 11 persons aboard went down during Hurricane "Janet," near Swan Island, Br. Honduras; there were no survivors.
- Oct. 2 Near Vinac, Peru. Commercial air liner crashed in Andes mountains; 19 persons were killed and 16 injured.
- Oct. 6 Near Laramie, Wyo. Air liner struck Medicine Bow Peak; all 66 persons aboard were killed in what was reported to be the worst commercial aviation accident in the U.S.

Explosion

- Nov. 4 São Paulo, Braz. Explosion in fireworks factory demolished neighbouring schoolhouse; 20 children and teachers were reported killed.
- Nov. 13 Near Farmington, W.Va. Gas explosions in coal mine killed 16 miners.
- Dec. 10 Near Manila, Phil. Explosion in fireworks plant killed 26 persons.
- Dec. 24 Near Parkin, Ark. Stove explosion in home killed 11 persons.
- Jan. 23 Zonguldak, Tur. Explosion in coal mine killed 54 persons, injured 14, left 12 missing.
- Feb. 5 Amlabad, Bihar, India. Explosion in coal mine killed a reported 55 workers.
- Feb. 21 San Francisco, Calif. Five sailors were killed in explosions on submarine U.S.S. "Pomodon"; six other persons were injured.
- March 22 Morgnano, It. Explosions in coal mine killed 24 miners, injured 15, and left one missing and presumed dead.
- May 4 Mexico City, Mex. Explosion in plastics factory killed a reported five persons and tossed burning chemicals on parked bus killing six passengers; an escaping bus passenger was killed when a power line fell. Total dead—12 persons.
- June 26 Gelsenkirchen, Ger. Fourteen persons were killed in coal-mine explosion.
- Aug. 3 Near Gelsenkirchen, Ger. Dust explosion in coal mine killed 41 miners.
- Sept. 23 Near Torreón, Mex. Collision of two trucks, carrying explosives, and train killed a reported 20 persons, injured 52.

Fire

- Nov. 27 Istanbul, Turk. Fire destroyed the city's ancient covered bazaar and caused property damage estimated as high as \$178,000,000.
- Feb. 1 Amsterdam, N.Y. Explosion of oil drum started fire in house; 12 persons were killed.
- Feb. 12 Chicago, Ill. Twenty-nine men were killed, 15 injured in fire in "skid row" hotel.
- Feb. 17 Near Yokohama, Jap. About 100 women were killed when fire swept home for the aged.
- April 3 Sclessin, Belg. Fire in movie theatre killed 39 persons, injured six.
- April 9 Tacoma, Wash. Seven children burned to death in home.
- April 12 Saratoga Springs, N.Y. Fire in apartment building caused deaths of eight persons, injured seven.
- May 6 Chicago, Ill. Hotel fire in "skid row" area killed nine persons.
- May 18 Wielopolo, Pol. Theater fire left a reported 58 persons dead.
- May 21 Limbdi, Saurashtra, India. Fire in cotton mill killed a reported 42 persons, injured 24.
- June 18 Ichikawa, Jap. Fire in mental hospital killed a reported 18 persons.
- July 16 Niederschlema, Ger. Fire in uranium mine killed 33 persons and injured 96.
- Aug. 10 Andover, O. Lightning struck restaurant; ensuing fire and explosion killed 22 persons.
- Aug. 27 Whiting, Ind. Oil refinery fire and explosions killed two persons, injured 44 and caused estimated property damage of more than \$10,000,000.
- Sept. 7 Santa Barbara-Yreka, Calif., area. Week-long forest fires killed six persons and caused property damage estimated at \$15,000,000.

Marine

- Nov. 15 Atlantic ocean. Brazilian vessel "Deus Quem Manda" ran on sandbar and capsized off Maranhão, Braz.; 7 persons were killed, 18 others were missing and presumed dead.
- Nov. 27 Pacific ocean. Mexican shrimp boat capsized in rough seas; 13 fishermen were drowned.
- Nov. 28- Dec. 9 English, French, Irish coasts. Storms caused deaths of a reported 121 seamen and the loss of 16 ships.
- Dec. 4 Atlantic ocean. Freighter "Southern Districts" with crew of 24 was lost off coast of South Carolina.
- Dec. 31 Sound of Mull, Scot. Trawler "Evelyn Rose" struck rocks and sank; 12 persons were drowned.
- Jan. 7 South China sea. Motor vessel sank off Cavite, Phil.; 12 persons drowned, two others were missing and presumed dead.
- Jan. 16 Central Japan. Fourteen fishermen were reported lost during storm.
- Jan. 27 Atlantic ocean. Heavy coatings of ice caused two British trawlers to capsize; 40 men were missing and presumed lost.
- March 13 Southern Italy. Greek trawler "Iason" sank off Cape Stilo; 11 crewmen were drowned. Eight crew members of British ship "Stratheden" were killed when a lifeboat capsized during rescue operations.
- May 9 Kaohsiung, For. Explosion of ammunition aboard military vessel was reported to have killed 40 persons.
- May 11 Sea of Japan. Ferryboat struck freighter and sank between Honshu and Shikoku islands; 154 persons were reported dead, 19 missing, and 51 injured.
- June 1 Adriatic sea. Yugoslav naval ship sank in Senj channel; 26 navy men were drowned.
- June 9 English channel. Swedish tanker "Johannishus" burned after colliding with Panamanian freighter off Ramsgate, Eng.; 20 of tanker's crew perished.
- June 9 Ganges river. Ferry capsized near Allahabad, India; 32 persons were drowned.
- June 16 Portland, Eng. Torpedo explosion sank British submarine "Sidon"

CHICAGO FIREMEN removing sailor from the wreckage of air liner which crashed at Midway airport July 17, 1955

- in harbour; 13 persons were killed, seven injured; 43 persons were saved.
- June 18 English channel. Pleasure boat was swamped off Caen, Fr.; 22 persons were killed.
- Aug. 12 Chesapeake bay. Fourteen persons were drowned near North Beach, Md., when hurricane winds wrecked excursion steamer.
- Aug. 15 Brittany, Fr. Pleasure launch sank; 20 persons were reported drowned.
- Sept. 14 Near Aveiro, Port. Portuguese trawler sank; 19 persons were reported drowned.
- Sept. 20 North sea. German trawler sank after striking motorship; 15 seamen were reported missing, and presumed dead.

Miscellaneous

- Nov. 7 New York, N.Y. Faulty gas heater emitted carbon monoxide fumes which killed 10 persons.
- Nov. 12 Bel. Cong. Uranium mine was accidentally flooded; 27 workers were reported drowned.
- Dec. 12 Miranda de Ebro, Sp. Panic in church caused stampede, resulting in deaths of 10 girls.
- Jan. 6 Aguascalientes, Mex. Panic in theatre caused deaths of nine persons, injured 40.
- Feb. 13 Hunucmá, Mex. Collapse of bullring stadium grandstand caused deaths of a reported 14 persons, injured about 165.
- Feb. 28 Caribbean sea. Wave swept eight sailors into sea from Colombian destroyer "Caldas"; all were presumed dead.
- April 21 Minas Gerais, Braz. Thirty gold-diggers were killed when trench collapsed.
- June 11 Le Mans, Fr. Racing car, during running of Grand Prix, crashed into spectators and exploded; 82 persons were killed, 78 injured. This was thought to be the worst tragedy in auto racing history.
- July 11 Banff, Alta. Seven boy mountain climbers were killed in avalanche.
- July 11 Western Europe and Great Britain. Severe heat wave killed a reported 420 persons.
- July 28 Ise sea. Wave drowned 36 teen-age girls swimming near Tsu, Jap.
- Sept. 7 Los Angeles, Calif. Ten-day heat wave killed a reported 107 persons.

Natural

- Nov. 12 Zagora, Fr. Mor. Floods caused deaths of a reported 30 persons.
- Nov. 28 Fujiyama, Jap. Avalanche on Mt. Fujiyama swept 16 persons to their death.
- Dec. 11 Parasia, India. Accidental flooding of coal mine caused cave-in; 64 miners were killed.
- Dec. 23 North sea. Storms struck England, Germany, Denmark, and the Low Countries; 74 persons were reported killed.
- Dec. 28 Near El Carmen, Colom. Landslides caused deaths of a reported 47 persons.
- Jan. 5 Leyte, Phil. Storm and floods killed a reported 51 persons.
- Feb. 1 Tunica, Miss., area. Tornadoes killed 31 persons, injured 100.
- Feb. 18 Western United States. Snowstorm killed 18 persons.
- Feb. 21 Japan. Blizzard killed 18 persons, left 180 missing.
- Feb. 26 Western New South Wales, Austr. Floods left a reported 70 persons dead; hardest hit was Maitland area.
- April 1 Southern Philippines. There were 432 persons killed and more than 2,000 injured by earthquakes; hardest hit was Mindanao area.

- April 14 Kangting, Sikang, China. Earthquakes killed a reported 39 persons, injured 113.
- April 16 Sasebo, Jap. At least 73 persons were reported dead in landslides.
- April 17 Pakasiran, Java. Landslide caused deaths of 405 persons.
- May 25 Santa Catarina, Braz. Tornado killed a reported 22 persons, two missing.
- May 25-27 Kansas, Oklahoma, Texas, Missouri. Tornadoes caused deaths of a reported 125 persons, injured more than 700 and left 11 persons killed; property damage; hardest hit was Udall, Kan., area, where 11 persons were killed.
- June 23 Near Patani, Thai. Tidal wave caused deaths of a reported 22 persons.
- Aug. 17-19 Northeastern U.S. Floods and Hurricane "Diane" winds in Connecticut, Pennsylvania, Massachusetts, New Jersey, Rhode Island, New York caused deaths of a reported 191 persons, injured 1,000 and caused property damage estimated as high as \$1,600,000.
- Aug. 30 Kalu, India. Bursting reservoir caused floods which killed a reported 180 persons, injured 200.
- Sept. 12 Near Cairo, Egy. Earthquake killed a reported 20 persons, injured 28.
- Sept. 19 Tampico-Vera Cruz, Mex., area. Hurricane "Hilda" brought on a reported 250 persons, injured 1,000. A reported 206 persons were killed on the Yucatan peninsula, when Hurricane "Janet" reversed course on Sept. 28. Damage in the Tampico area was estimated at more than \$42,000,000.
- Sept. 19 New Bern, N.C., area. Hurricane "Ione" caused deaths of five persons and caused property damage estimated at \$160,000,000.
- Sept. 23 Barbados, Windward Is. Hurricane "Janet" and subsequent floods killed a reported 61 persons, injured 247 and caused property damage estimated at \$5,000,000; the total of dead in the Caribbean area was estimated to exceed 200 persons.
- Oct. 1 Kyushu, Jap., area. Typhoon "Louise" caused deaths of 31 persons, injured a reported 241, left 41 missing and caused property damage estimated at \$30,000,000.
- Oct. 13 Volos, Gr. Twenty-three persons were killed and 15 injured in floods.
- Oct. 13 Punjab, Patiala and Delhi, India. Floods killed a reported 21 persons, and caused estimated property damage of more than \$63,000,000.
- Oct. 17 Northeastern U.S. Rains and resultant floods killed a reported 11 persons and caused property damage estimated at \$21,000,000.

Railway

- Dec. 2 Louvain, Belg. Twenty-one persons were killed, more than 50 injured when train was derailed.
- Dec. 17 Southeast Algeria. Fifteen passengers were killed when two trains collided.
- Dec. 18 Near Dortmund, Ger. Collision of two passenger trains killed 11 persons, injured about 60.
- Jan. 4 Near Barra do Pirai, Braz. Train wreck caused deaths of a reported 15 persons, injured 40.
- Jan. 8 Near Aracaju, Braz. Forty persons were reported killed and a reported 100 injured in train crash.
- Jan. 23 Sutton Coldfield, Eng. Seventeen passengers were killed, 30 injured when train jumped track.
- Feb. 6 Between Johannesburg and Durban, U. of S. Af. Two trains collided; 12 persons were killed, 66 injured.
- Feb. 26 East Germany. Derailment of Soviet troop train killed a reported 40 soldiers.
- March 1 Near São Paulo, Braz. Thirty persons were reported killed, injured when train overturned.
- March 2 Pusan, Kor. Fire in train car killed 39 persons, injured about 100.
- April 3 Near Alsaba, Mex. Six cars of train carrying Holy Week vacationers fell into canyon; 13 persons were killed, about 90 injured.
- May 12 West Java, Indon. Forty-six persons were killed, about 43 injured in train crash.
- July 17 San Bernardo, Chile. Collision of two trains killed 49 persons, injured 43.
- Aug. 22 Spring City, Tenn. Eleven children were killed, 30 injured in train school bus collision.

Traffic

- Nov. 14 Near Caracas, Venez. Two racing cars ran into crowd; nine persons were killed.
- Dec. 16 Near Lens, Fr. Eleven persons were killed when bus ran off bridge.
- Dec. 19 Near Mexico City, Mex. Bus ran into ravine; 37 persons were killed, 38 injured.
- Dec. 24 Johannesburg, U. of S. Af. Ten persons were killed in a collision of two trucks.
- Dec. 24-26 United States. Traffic deaths during two-day Christmas holidays reported by the Associated Press, numbered 392 persons.
- Dec. 26 Near Cuzco, Peru. Bus went over cliff; 17 persons were killed, 5 were injured.
- Dec. 31-1955 United States. Reported 296 persons died in traffic accidents during 54-hour New Year holiday period.
- Jan. 2 Near Tucuman, Arg. Bus ran off bridge and fell into river; 11 persons were killed, 22 injured.
- Jan. 21 Near Mexico City, Mex. Bus fell into canyon and burned; 30 persons were reported killed.
- Feb. 26 Vigo, Sp. Bus struck tree and burned; 31 persons were killed.
- March 9 Near Seoul, Kor. Bus ran off bridge; 38 persons were killed, 17 injured.
- April 8 Northwestern Argentina. Sixteen persons were killed, 14 injured when bus ran over cliff.
- May 27-1955 United States. Associated Press listed three-day Memorial week-end deaths in auto accidents as 369 persons.
- May 27 San Francisco, Calif. Runaway furniture van killed seven persons, injured three.
- July 1-4 United States. Traffic death toll over Independence day week numbered 407 persons.

Aug. 13	Near Bourg St. Pierre, Switz. Seventeen sightseers were killed when bus ran off cliff.
Sept. 6	United States. Labor day weekend (three days) traffic accidents killed a reported 438 persons.
Oct. 2	Near Eudora, Ark. Bus-automobile collision killed all seven passengers in car.

Disciples of Christ. Total membership of the Disciples of Christ in the United States and Canada in 1955 was 1,890,679, and the world membership was 2,045,943. Additions for the year totalled 137,613: by baptism 68,334, by transfer 69,279. Local congregations in the world numbered 8,830; in the United States and Canada 8,009. The world total of ministers was 7,578. Missouri reported the largest number of local congregations, 801; Indiana the largest membership, 194,589; this state also had the largest number of baptisms, 6,033. Total contributions for the United States and Canada were \$75,955,232.30. Of this, \$50,828,610 was for local expenses and \$25,126,622.30 for missions and benevolence. Unified Promotion, the central receiving agency for missionary funds, secured \$3,889,574.28, an increase of \$452,250.78 over the preceding year.

Missionary work during the year was conducted in 11 fields outside the United States: Belgian Congo, South Africa, Argentina, Paraguay, India, Japan, Thailand, Jamaica, Puerto Rico, Mexico and the Philippines, with 223 missionaries and 1,993 national leaders. Baptisms in these fields numbered 9,414. The United Christian Missionary society, located in Indianapolis, Ind., is the major administrative office in the United States for missions, Christian education and church development.

The pension fund of Disciples of Christ reported a total active membership of 4,632 with assets of \$19,000,000. The Board of Church Extension served 824 churches through building loans. The total assets of this board were \$8,198,937.03.

The International Convention of Disciples of Christ, located at 620 K. of P. Building, Indianapolis, Ind., did not hold its usual annual assembly. However, it conducted 12 Area Christian assemblies in Lynchburg, Va., Atlanta, Ga., Pittsburgh, Pa., Cincinnati, O., St. Louis, Mo., Omaha, Neb., Colorado Springs, Colo., Spokane, Wash., Bakersfield, Calif., Wichita, Kan., Ft. Worth, Tex., and Memphis, Tenn. These assemblies were for the purpose of reviewing progress on the ten-year long-range program which would culminate in 1960. The World Convention of Churches of Christ was held in Toronto, Can., with representatives from 13 countries. The total registration was 7,652.

The Disciples of Christ, through their international convention, maintain active membership in the World Council of Churches and the National Council of the Churches of Christ in the U.S.A.

The 1956 assembly of the International Convention of Disciples of Christ was to be held in Des Moines, Ia., Sept. 28 to Oct. 3, 1956, with Riley B. Montgomery, president of the College of the Bible, Lexington, Ky. as convention president. Gaines M. Cook continued as executive secretary. (See also CHURCH MEMBERSHIP.)

Dominican Republic. Nearly two-thirds of the island of Hispaniola, to the east, is occupied by the Dominican Republic (area 18,682 sq.mi.; population, (1950 census) 2,135,872, (1955 est.) 2,404,000. (The western

one-third comprises Haiti.) The capital of the Dominican Republic is Ciudad Trujillo (known from the beginning of the 16th until the second quarter of the 20th century as Santo Domingo, whence the name of the nation) with a population of about 200,000. The other large city, Santiago de los Caballeros, in the northern mountains, has about 60,000 inhabitants. The 1950 census gave the largest cities the following populations: Barahona 14,654; Ciudad Trujillo 181,553; La Romana 14,074; La Vega 14,200; Puerto Plata 14,843; San Francisco de Macoris 16,083; San Pedro de Macoris 19,876; Santiago 56,558. The president in 1955 was Gen. Hector B. Trujillo y Molina.

History.—There was rising economic activity throughout 1955. While cacao prices fell, they tended to stabilize by mid-year. Coffee production increased over 1954, but prices were unsteady. Sugar production continued to be well sustained, with most of the crop going to Great Britain and elsewhere in Europe, and a slight increase in the amount admitted into the U.S. The resentment caused by the small sugar quota assigned to the Dominican Republic by the U.S. secretary of agriculture was revealed in press and other public comment. A tobacco export monopoly was decreed, effective early in 1956.

Tourist entry requirements were radically simplified in 1955, and as two new large hotels were completed, the number of tourists increased. Spanish immigrants at the rate of 1,000 monthly began to arrive on Italian ships chartered by the government. The government provided land and initial working capital, since its interest was to build up a durable farm population of European origin in the mountain areas along the Haitian border. The extensive program of public works led to an increase in export taxes on sugar, cacao and coffee, and on tobacco until such time as the monopoly began to operate. Import duties were unified in a flat 23% tax ad valorem.

Although agriculture continued to be the principal occupation of more than 80% of the population, new industries continued to get under way. A shipyard was begun in February with a 1,000 ft. dry dock. A plant producing furfural from sugar-cane bagasse was built at a cost of \$7,000,000; its output was reported to be wholly contracted for by an American concern.

Preparations for an international fair, scheduled to begin at the end of the year, were vigorously carried forward in the autumn. Relations with Haiti and other countries were unusually tranquil during 1955.

(C. E. Mc.)

Education.—In 1954 there were 2,641 schools (including 1,250 emergency schools), all of which were maintained by the state except 112 semiofficial (state-aided) and 169 private schools. The total number of pupils enrolled was 246,734. There were also 3,568 centres for combating illiteracy with 78,709 students enrolled. The University of Santo Domingo had 2,560 students. According to the 1950 census, 56.7% of those 10 years of age and over were illiterate.

Finance.—The monetary unit is the peso, officially pegged at par with the U.S. dollar. The 1955 budget estimated revenue at \$108,100,000 and expenditure at \$105,500,000. Revenue in 1954 was \$110,400,000. There was no public debt. Currency in circulation (Aug. 31, 1955) totalled \$41,580,000; demand deposits \$38,150,000; gold reserves \$12,080,000. The U.S. dept. of commerce estimated U.S. direct investments in 1954 at \$133,000,000. The cost-of-living index at Ciudad Trujillo stood at 103 in July 1955 (1948=100). The gross national product (1954) totalled \$471,200,000.

Trade and Communications.—Exports in 1954 totalled \$119,726,923; imports were \$82,827,010. Leading exports were sugar (31%), coffee (26%), cacao (20%), chocolate (7%) and tobacco (4%). Leading customers were the U.S. (57%), the U.K. (21%), the Netherlands (3%), Puerto Rico (3%) and Ceylon (2%); leading suppliers, the U.S. (66%), the Netherlands Antilles (6%), Canada (5%), Germany (5%) and Belgium (3%).

In 1951 there were 152 mi. of public railway, all owned and operated by the government, and 748 mi. of industrial railway, operated mainly by the sugar companies. Road mileage in 1950 was placed at 1,966, of which 694 mi. were classified as first-class all-weather, 1,027 secondary and 245 third-class. On Jan. 1, 1955, there were 11,308 motor vehicles, including 5,794 automobiles, 5,034 trucks and 480 buses.

Agriculture.—In the 1954-55 season 613,000 metric tons of sugar were produced; in 1954, 512,675 tons of sugar and 28,058,340 gal. of molasses were exported. Production of other important crops in 1954-55 (preliminary) included coffee 460,000 bags of 132 lb. each (exports 1954: 393,000 bags), cacao 84,024,000 lb.; rice 170,000,000 lb.; tobacco (1954) 41,500,000 lb. In 1952 there were 769,000 cattle, 833,000 hogs and 129,000 horses.

Manufactures.—In 1954 there were 3,416 industrial establishments with capital of \$166,567,172, 66,299 employees and sales amounting to \$162,516,994. Important products included sugar, cotton textiles, cement, beer, edible oils and chocolate. (J. W. Mw.)

Donations and Bequests. The generosity of the citizenry of the United States to its philanthropic institutions, according to available indexes, continued its upward climb in 1955 and exceeded the \$5,400,000,000 estimated total for 1954.

This upward trend appears to have been in all areas of benefactions. Individual giving which, in 1954, was estimated at \$4,100,000,000, showed an increase in 1955, notably in the number of gifts of \$100,000 and over. John D. Rockefeller, Jr., alone, made publicly announced gifts of more than \$24,000,000.

Foundations, whose grants had been estimated at \$200,000,000 annually, distributed more than \$325,000,000 in 1955. The Ford foundation, early in the year, announced a \$50,000,000 program of aid to higher education through faculty salary increases and, later, a \$20,000,000 scholarship aid program. It allocated \$15,000,000 to strengthen and extend research in mental health over the next five to ten years. During the first nine months of the year, a record of 114 publicly announced grants of \$100,000 and more totalled more than \$151,000,000.

Corporation gifts which, according to income tax figures, amounted to \$398,579,000 in 1952, and were estimated at \$500,000,000 annually, passed the \$650,000,000 mark in 1955. Large corporations continued to announce expanded programs of aid to educational institutions, supported their health and welfare activities on a per employee basis formula and, when the American Red Cross needed additional funds to meet the flood disaster emergency, responded with sizable giving.

Philanthropic bequests average about \$650,000,000 annually, and during 1955 many estates in excess of \$1,000,000 were left to nonprofit institutions. Where does this \$5,500,000,000 go? Churches and other religious organizations receive annually about 55%, or \$3,025,000,000. In 1955, total gifts to religion were responsible for \$700,000,000 in new religious construction—an all-time record.

Colleges and universities receive about \$325,000,000 in gifts and bequests, and it was believed this figure was increasing, for many institutions, both large and small, announced record amounts in benefactions received in the 1954-55 fiscal year.

Expenditures for civilian health and medical care average about \$94 a person, or a total of \$14,400,000,000; philanthropy pays about 2.8 cents of each dollar of this total.

Gifts to welfare agencies continued to increase. Funds raised by community chests and united funds for 1955 totalled \$302,500,000, an increase of 4% over those raised for 1954.

All in all, 1955 promised to be a banner year for philanthropy in the U.S. (See also COMMUNITY CHEST; EDUCATION; SOCIETIES AND ASSOCIATIONS, U.S.) (J. P. J.)

[On Dec. 12, 1955, the Ford foundation announced grants totalling \$500,000,000 to increase teacher salaries in privately supported universities and colleges, to extend services of voluntary nonprofit hospitals and to improve instruction in privately supported medical schools. These grants were to be paid out during the following 18 months.]

Drew, George Alexander (1894-), Canadian political leader, was born on May 7 at Guelph, Ont., and educated at Guelph Collegiate institute, Upper Canada college and the University of Toronto. In 1938 he was chosen leader of the Ontario Conservative party

and in 1939 he was a member of the Ontario legislature, being re-elected in 1943 and 1945. In 1943, he was sworn in as premier of Ontario. On Oct. 2, 1948, he was chosen leader of the national Progressive Conservative party and on Dec. 20 of that year was elected to the house of commons. In an unprecedented action the Liberal government appointed him member of Queen Elizabeth II's privy council of Canada on May 13, 1953. He has been leader of the official opposition in the house of commons since 1948.

Although Drew suffered a very serious illness during the winter of 1954-55, he made an excellent recovery, returning to active duty at the end of Feb. 1955. Drew's chief contribution to the work of the 1955 session was a vindication of the responsibility of parliament under the constitution. He led opposition to the granting of permanent status to extraordinary powers vested in the minister of defense production, speaking with great vigor and at great length during the debate which ended only when the government accepted Drew's thesis and the defense minister's extraordinary powers became subject to a time limit of three years. Drew was also successful during the session in his contention that the minister of national revenue ought not to retain his position as director of a trust company while he was a member of the government. When Drew made a motion of censure on June 20, Prime Minister St. Laurent told the house that the minister of national revenue had resigned from the trust company one month previously. (M. L. S.)

Drought: see METEOROLOGY; SOIL CONSERVATION.

Drug Administration, U.S. The Federal Food, Drug and Cosmetic act is enforced by the Food and Drug administration (FDA), a unit of the department of health, education and welfare, and is designed to protect the public from harmful and improperly labelled commodities in interstate commerce.

A report on tests of drugs exposed to atomic explosion, conducted in co-operation with the Federal Civil Defense administration (FCDA), was released in Jan. 1955. It showed that of the 42 important common drug items exposed, only 2 (insulin and vitamin B₁₂) were reduced in potency. Under a delegation of authority to the department from the FCDA, the Food and Drug administration began in June 1955 a training program for state and local officials, to help them safeguard food and drug supplies in case of attack.

To correct the lack of complete reports on untoward effects of drugs, occasionally noticed by hospitals and physicians, the FDA undertook a pilot study on voluntary reporting, in co-operation with several medical and hospital groups. If the study proved helpful, efforts were to be made to extend it to a widespread system of permanent reporting, making the information generally available to physicians and hospitals.

Twenty-nine drug and device recalls were supervised during the year, of products that were below their labelled potency, nonsterile injectables and an eye solution, and drugs marketed without effective new-drug applications, varying from U.S. specifications, packaged defectively, and causing untoward reactions when injected. Two devices with mechanical imperfections were recalled—blood donor and intravenous administration sets.

Illegal sales of prescription drugs were charged in 141 of the 154 drug and device prosecutions. Penalties ranging from nominal

Table I.—U.S. Production and Sales of Medicinals

	1954	1953
Production	65,884,000 lb.	66,585,000
Sales		
Quantity	53,232,000 lb.	54,227,000
Value	\$425,835,000	\$409,068,0
Average value per lb.	\$8.15	\$7.54

Source: U.S. Tariff Commission, *Synthetic Organic Chemicals, U.S. Production and Sales of Medicinals, 1954.*

nal fines to \$5,000 and five jail sentences were imposed. Two of the men sentenced to jail issued prescriptions for dangerous drugs, but were not licensed to practice medicine. Many state pharmacy boards suspended or revoked licences of pharmacists convicted of illegal sales.

Besides the occasional pharmacist who disregards his professional obligations, cases of illegal sales frequently involve peddlers who obtain the drugs illegally. In one instance, a woman running a massage parlor sold amphetamines to overweight patients to curb their appetites and to help them reduce. Reports of sales of amphetamines to truck drivers and other motorists to help them stay awake on long or monotonous drives were under investigation.

Nine of the remaining 13 prosecutions filed involved false and misleading curative claims. Other charges were based on faulty composition and failure to bear mandatory labelling.

Promoters are quick to capitalize on the credulity of the sick and ailing by offering "miracle" drugs and gadgets. One recent fad was an import, "Royal Jelly," the secretion of drones fed to the queen bee. Claims for it included sex rejuvenation, growth of retarded children and treatment of Parkinson's disease and heart trouble. Entry was denied because there were no effective new-drug applications for royal jelly products, including analyses of their composition and evidence of their safety.

A number of seizures were followed by an injunction to stop shipments of a device consisting of a cabinet filled with a sun-lamp and short-wave unit and coloured slides assembled to irradiate jugs of water. The water was recommended for apoplexy, tumours, ulcers and virus infections.

Another device case, in which the defendant was sentenced to 90 days in jail, was based on false and misleading curative claims for colour lamps. The itinerant "health" lecturer claimed that diseases are caused by specific colours. He offered a green treatment to cure jaundice, diabetes and consumption, which he said were "yellow diseases," and a yellow light for laryngitis, goiter and heart trouble, which he termed "violet diseases."

Uranium ore "tunnels," pads, blankets, etc., were offered for treatment of arthritis, which were completely ineffective for any therapeutic purpose. Six seizures were effected and other actions were taken by state authorities. Products with enough radioactivity to affect bodily functions are restricted to the use of qualified operators.

Of 2,991 import drug shipments inspected, 2,515 were refused entry because of failure to meet U.S. requirements. Domestic

passing tests for purity, potency and stability. Also certified were 4,655 batches of coal-tar colours, representing 5,140,202 lb. for use in foods, drugs or cosmetics. (See also NARCOTICS.)
(G. P. L.)

Drug Production and Sales.—A drop of 1% in the volume of drug production in 1954 from the preceding year was revealed in the reports of the U.S. Tariff commission. Sales likewise were off about 2% in quantity, but there was an increase of more than 4% in the total value of sales. As a result, the average per pound value of drug sales rose from \$7.54 in 1953 to \$8.15 in 1954.

Expenditures for physicians' prescriptions were up nearly 10% in 1954. The number of prescriptions increased more than 4%. The average price per prescription rose accordingly from \$2.07 in 1953 to \$2.19 in 1954. Approximately 98% of physicians' prescriptions were filled in the 53,000 drugstores in the United States.

Sales of nonprescription packaged medicines were up a little more than 2% to set a record for the year. Sales of auxiliary health aids also increased, more than 3%. Articles in this category include prescription accessories, first-aid products, foot preparations, veterinary medicines and feminine and baby medicaments.

In the export market U.S. drug producers experienced many difficulties. Trade barriers, currency and foreign exchange restrictions and other discriminations imposed by foreign governments had choked off, and in some instances completely stopped, sales of U.S. drug exporters in some of their overseas markets.

Dulles, John Foster (1888—), U.S. cabinet member, was born on Feb. 25 in Washington. D.C. He graduated from Princeton university, Princeton, N.J., in 1908 and was awarded a law degree at the George Washington university law school, Washington, D.C., in 1911. In World War I he served as a major on the army general staff, and after that war went to the Paris peace conference as U.S. counsel on

Table II.—Value of Medicines Shipped by U.S. Manufacturers

	1953	1952
Pharmaceutical preparations	\$1,514,234,000	\$1,477,772,000
Medicinal chemicals	363,390,000	340,399,000
Inorganic and organic medicinals (bulk type)	346,800,000	322,006,000

drug and device shipments seized totalled 170 actions, based on 299 violative samples. Inspections were made of 1,901 drug and device establishments and 8,259 samples were collected.

Applications for 433 new drugs were allowed to become effective after evaluation of their safety—343 for human use and 90 for veterinary use. In addition, 2,277 supplemental applications went into effect, of which 1,163 were for veterinary preparations. Most of the veterinary drugs were growth stimulants for livestock and poultry. Some of the important drugs considered were preparations for the treatment of arthritis, allergic conditions and tuberculosis; radioactive agents; nonbarbiturate hypnotics; antitussive agents; nonmercurial diuretics; anticholinesterase agents; and antibiotics.

During the fiscal year, 329 batches of insulin and insulin products and 20,643 batches of antibiotics were certified after

"WELL, THIS SHOULD MAKE MY POSITION CLEAR!" a critical view by British cartoonist Vicky of the *London Daily Mirror*

reparations and other financial matters. Between the two wars he became a prominent international lawyer. In 1945 he was a member of the U.S. delegation to the conference to organize the United Nations at San Francisco, Calif.

In 1951, as U.S. ambassador-at-large, he travelled to both Asia and Europe to arrange for agreement among the World War II Allies, the U.S.S.R. excepted, to a peace treaty with Japan, which was signed on Sept. 8 by Japan and 48 noncommunist nations. Dulles prepared the foreign-policy plank of the Republican party platform in 1952 and after the national election of that year was designated Pres. Dwight D. Eisenhower's new secretary of state. He was sworn into office Jan. 21, 1953.

Within two weeks of taking office Dulles began a survey trip of Italy, France, Great Britain, western Germany and the Benelux countries to find methods of strengthening the proposed European Defense Community. He flew to Korea early in Aug. 1953 after the truce agreement had been signed. At Seoul on Aug. 8 he negotiated a mutual defense pact with the South Korean government.

Two important events in Dulles' career during 1954 were his signing of the eight-power southeastern Asia security pact at Manila, P.I., on Sept. 8, and his conclusion of the 15-power Paris pact Oct. 23 creating the Western European union and leading to rearmament of West Germany.

Dulles continued his extensive travels during 1955, attending the SEATO conference at Bangkok, Thailand, in February and the Geneva conference of the heads of the Big Four Powers in July. On May 15 he signed the Austrian peace treaty at Vienna. In October he attended the foreign ministers' conference at Geneva, Switz.

Dulles proposed on Aug. 26, 1955, that the U.S., in conjunction with the United Nations, guarantee a new fixed Arab-Israeli boundary to end clashes in the area which had flared again during the year.

Duplessis, Maurice Le Noblet (1890—), Canadian political leader, was born on April 20 at Trois Rivières, Que., the son of a provincial legislator and judge. He was educated at a seminary in Trois Rivières and at Laval university, after which he practiced

law in his native town. He stood for election to the Quebec legislature from Trois Rivières in 1923 but was defeated. In the general elections of 1927, however, he won the seat, and was re-elected in 1931, 1935 and 1936. In 1933 he was chosen leader of the Conservative party but broke with it just prior to the 1936 elections and formed his own—the Union Nationale—which gained 76 of the then 90 seats in the Quebec legislature. Duplessis was sworn in as Quebec's premier and attorney general Aug. 26, 1936. During this first tenure of office he supported various federal social-benefit laws, such as old-age pensions and unemployment insurance.

After Canada's entry into World War II, Sept. 10, 1939, Duplessis declared that the federal War Measures act endangered Quebec's provincial autonomy and he even threatened secession in the event of a national military draft. His stand was repudiated by Quebec's voters in the elections of Oct. 1939, and he resigned as premier but kept his Trois Rivières seat.

Duplessis made a remarkable political comeback in Aug. 1944 when, after five years as leader of the opposition, he won 41 of the 91 seats and again became premier and attorney general. He greatly increased this majority in the elections of July 21, 1948, when the Union Nationale party won 82 seats. He was again re-elected July 16, 1952, although that time his party's control dropped to 68 of the 92 legislative votes.

Du Vigneaud, Vincent (1901—), U.S. biochemist and Nobel prize winner, was born at Chicago, Ill., on May 18. He received his bachelor's degree at the University of Illinois, Urbana, in 1923 and his master's degree there the next year, taking his Ph.D. from the University of Rochester (N.Y.) in 1927. He also studied at the Kaiser Wilhelm institute in Dresden, Ger., and at the medical school of the University of Edinburgh, Scot. He was chairman of the biochemistry department of George Washington university medical school, Washington, D.C., from 1932 to 1938, when he joined the staff of Cornell university medical college in New York City. There he concentrated his research on the synthesis of two hormones—oxytocin and vasopressin. The former, a complex of amino acids, is important in aiding childbirth, the latter in treatment of diabetes. For his work on these two hormones—recognized by the Royal Swedish Academy of Sciences as "a historic feat in biochemistry," Du Vigneaud on Nov. 12, 1955, was named recipient of the 1955 Nobel prize in chemistry.

Dyes. A marked upswing in the consumption of U.S. dyes over the previous year manifested itself during the first eight months of 1955. With the textile industry operating at a high level, it was expected that the demand for dyes would be reflected in an over-all increase of approximately 10% at the end of the year. Export sales of U.S. dyes were slightly ahead of the figures for 1954. Rising labour and raw materials costs necessitated price readjustments of 5% to 10%. A proposed tariff cut on dyes was strongly opposed by dye-producing firms as having a serious effect upon the industry because of the wide difference in labour costs between workers in the United States and in Europe and the inability of the former to compete on this basis.

Of greatest significance to the textile industry was the continuing approach toward simplifying dyeing techniques involving both new and established fibres. Where formerly the range of available dyes for many of the synthetic fibres was necessarily limited, chemical technology developed complete series

of dyes possessing satisfactory application characteristics and outstanding fastness.

Production of all types of U.S. dyes in 1954, based on preliminary figures published by the United States tariff commission, amounted to 142,982,000 lb., 14% less than the 165,806,000 lb. produced in 1953. In 1954 sales of all dyes totalled 137,463,000 lb. valued at \$160,302,000 compared with 151,675,000 lb. valued at \$167,526,000 in 1953, a decrease of 10% in quantity and 5% in value. The average unit value of sales of all dyes increased to \$1.17 per pound in 1954 from \$1.10 in 1953, primarily because of the greater production and sales of certain higher-priced dyes. The vat-colour group maintained the lead in both production and sales, accounting for 31.6% of the 1954 production and 31.5% of the poundage sold; direct dyes represented 18.3%, sulphur dyes 15.8% and acid dyes 9.6%.

Four chemical classes of dyes accounted for about 85% of the total quantity produced in 1954, azo dyes for 37%, anthraquinone vat dyes for 22%, sulphur dyes for 16% and indigoid and thioindigoid dyes for 10%. With the exception of sulphur dyes, which increased 0.5% in 1954 compared with 1953, the output of the remaining three classes was less than in 1953. Indigoid and thioindigoid dyes declined 35%, anthraquinone vat dyes 19% and azo dyes 8%.

Sales of vat dyes exclusive of indigo amounted to \$43,787,000, direct dyes \$34,674,000, acid dyes \$17,395,000 and sulphur colours \$6,573,000. Foreign invoice value of U.S. dye imports in 1954 increased to \$5,832,097 from \$4,594,000 in 1953. Germany jumped into the lead with 55% of total imports, while imports from both Switzerland and the United Kingdom fell off.

(A. G. BR.)

Other Countries.—In a report on the European chemical industry issued by O.E.E.C. (Organization for European Economic Cooperation), it was stated that between 1950 and 1954 world output of dyestuffs rose from about 270,200 metric tons to about 323,100, an increase of 20%. In 1937 the production was estimated at 243,900 metric tons. Precise details of production were not available for all the non-O.E.E.C. countries.

In O.E.E.C. countries as a whole production was at about prewar level and represented about 50% of world output in 1937, but fell to about 37% (121,200 metric tons) in 1954 because of the rise in production in the U.S. and eastern countries. Productive capacity in O.E.E.C. countries was in excess of actual output. Among causes of surplus capacity were the revival of the German industry and the setting up of the industry in countries hitherto without it. As a result dyestuff exporters had to face the forcing down of prices and the granting of credit terms that some considered too generous.

Resumption of trade with eastern European markets, if only on a limited scale, was hoped for as a result of some of the east-west trade agreements concluded during 1954, which specifically provided for dye exports.

Several leading European producers reported good and, in some cases, record sales abroad.

The Indian tariff commission's recommendations to the government in 1954 were accepted. Control of imports of dyes generally was to continue and only those requirements which could not be met by indigenous production were to be admitted. Tariffs on certain dyes were raised and those on intermediates lowered. The commission urged the establishment of coal-tar distillation in India, so that the dye industry might be supplied with home-produced intermediates; the expansion of production of inorganic heavy chemicals used in dyemaking; a revised program for the manufacture of dyes and intermediates; the setting aside of substantial amounts for research; and the employment of trained research workers.

Pakistan announced its intention to set up a dyestuffs manu-

facturing industry. Two German firms, Hoechst and Bayer, were to start building a production unit before the end of the year, at a cost of Rs. 4,000,000. It was hoped that the plant would be in operation by the end of 1957. The plant would at first concentrate on sulphur black and Congo red, large quantities of which had hitherto been imported. (L. E. Ms.)

Ear, Nose and Throat, Diseases of. ^{The Tonsils and Adenoids.}

noids.—The relation of tonsillectomy to incidence of common respiratory diseases in children was studied by L. P. McCorkle *et al.* in a group of Cleveland families. Included were those illnesses in which symptoms referable to the respiratory tract occurred, after exclusion of specific entities such as the common childhood diseases, streptococcal infections, nonstreptococcal exudative tonsillitis and pharyngitis, the viral and bacterial pneumonias, influenza diagnosed by virus isolation and illnesses considered to be allergic.

The occurrence of the common respiratory diseases among all children of the family population three years of age and older was considered separately for those whose tonsils had been removed and for those whose tonsils were intact; no child under the age of three had had a tonsillectomy. The occurrence of these illnesses among 26 children who had a tonsillectomy while under study were recorded both for the period of observation before and for the period after the operation. Each child did not have the same length of observation before as after tonsillectomy; therefore, these data were not balanced for individual children.

Comparisons of these data require the use of either age-specific or age-adjusted rates because the incidence of common respiratory illnesses changes with age and the posttonsillectomy experience is heavily weighted with older children. In this study too, an additional adjustment was necessary because 10 of the 26 tonsillectomies were performed during May and June. Since the rates for the common respiratory diseases are fairly constant between September and April and lower between May and August, the seasonal adjustment was based in these two groups of months. No adjustment was deemed necessary for the calendar year because of the constancy of the rates from one year to the next.

The studies of McCorkle *et al.* found that attack rates for the common respiratory diseases among children who had a tonsillectomy were similar to those among children of comparable age who had not had this operation.

The 26 children who had tonsillectomy while under observation were found to have had a higher than expected rate of common respiratory disease both before and after the operation. Tonsillectomy did not materially alter this incidence.

The "closed season" for surgery of tonsils and adenoids had been in effect for five years or more because of the increased incidence of bulbar poliomyelitis in tonsillectomized children. This led some clinicians to favour irradiation rather than surgery. Louis Sauer and Anna Hamann stated that none of their irradiated cases contracted poliomyelitis. It had long been known that young lymphoid tissue responds well to irradiation, but not permanently. Recent reports warned of the potential dangers of irradiation in young children relative to impeding growth and development and the possibility of encouraging malignant changes.

Antibiotics in Upper Respiratory Infections.—L. M. Hardy, H. S. Traisman, P. P. Pierce and J. S. Walker participated in a symposium on the uses and abuses of chemotherapy and antibiotic agents for infections in children. Numerous serious infections in children begin with fever, slight sore throat, nasal discharge, vomiting and abdominal pain. These symptoms are also

typical for the onset of the common cold. A small percentage of children (15% to 20%) with these initial symptoms develop complications of the respiratory infection or other disease. Chemotherapeutic agents are not effective against an uncomplicated upper respiratory infection. Instituting their use at the onset of a fever to prevent complications is fraught with danger. Since many of the antibiotics alter the clinical picture of an infection, there is a danger of inhibiting the manifestations to a degree that would lead to an early diagnosis of a serious correctable disease. Chemotherapy and antibiotics are without value in the treatment of upper respiratory infections such as the common cold.

As of 1955 penicillin was the drug of choice for gram-positive cocci, gram-negative cocci and treponemata. Streptomycin and dihydrostreptomycin were recommended for the tubercle bacillus.

There were also the three tetracyclines, known as aureomycin, terramycin, and erythromycin, tetracycline or panmycin, which were in general the choice for *H. influenzae* and *H. pertussis*, Shigellae, rickettsiae, certain of the gram-negative rods and perhaps primary atypical pneumonia and, in some cases, gram-positive cocci. Chloromycetin was the drug of choice in typhoid and salmonella and sometimes in infections caused by proteus and resistant staphylococci. Bacitracin was occasionally used against staphylococcus and polymixin was the drug of choice in pseudomonas infections.

In a panel discussion on the subject of antibiotics, Harry Dowling discussed the use of the commonly dispensed lozenges. In answer to a question, "Should antibiotics ever be given by injection in those instances where it can just as effectively be given by mouth?" the answer, of course, was that it should not—if it could just as effectively be given by mouth. One has to use so much more by mouth that this route is used only in those diseases where the organism is quite sensitive; that is, in beta-streptococcal infections, pneumococcal infections and gonococcal infections. Elsewhere, treatment by mouth is seldom feasible and parenteral therapy is therefore recommended. Troches should never have been produced with antibiotics in them. Certainly penicillin troches should not be used because a person can be sensitized to penicillin. Should he later have a serious disease and receive penicillin parenterally, he may not be able to accept it. An infection can be treated much better if the drug can be gotten into the blood stream rather than on the surface of the mucous membranes.

Cancer of the Nose and Sinuses.—Because tumours of the nose and sinuses are usually slow growing with few early symptoms, patients do not seek treatment until the disease has reached an advanced stage. Claude D. Winborn noted that cancer in this site occurs with sufficient frequency to stress the main factors. Most malignant tumours of the nose and sinuses are epidermoid (skinlike) in form. The lesions are often of moderate cell differentiation, although a malignant transitional cell carcinoma (cancer) is occasionally found.

Adenocarcinomas (glandlike) arise from the seromucinous glands of the upper respiratory tract and, depending upon the fibrous tissue content and blood supply, may be soft or hard. These tumours rapidly invade adjacent vital structures, such as the back of the nose, orbit and brain, and are difficult to delineate and dissect.

Sarcomas (also a type of cancer) may originate in any location in the nose and sinuses. With the exception of osteogenic sarcoma, these lesions are soft polyploid or smooth nodular masses, reddish or grayish red in colour. Spindle-cell sarcomas tend to ulcerate. Myxosarcomas do not metastasize (spread to other regions of the body).

Malignant melanoma (pigment-type tumour) is of mesenchymal origin and occurs principally on the septum (partition of

the nose) or lateral nasal wall. The tumour is radiosensitive, but regional and distant metastases occur early.

Pain is the most common symptom and usually occurs over the cheekbone or under the eye. Initially, when a branch of the trigeminal nerve is involved, the discomfort is vague and slight. In elderly people the pain may be misinterpreted as being a result of dental or neurologic problems.

With involvement of the antrum (the sinus in the cheek) swelling may occur in the cheek, the roof of the mouth, or the orbit. In edentulous patients the initial symptom often is a tumour mass on the alveolar ridge. Patients with teeth may erroneously have extractions in an effort to relieve pain in the area. External swelling occurs late with primary tumours of the ethmoid labyrinth (a honeycomblike nest of cells in the nose) and is usually caused by destruction of the bony lamina papyracea with invasion and secondary infection of the orbit. In most cases, however, unilateral nasal obstruction is noted first and is accompanied by anosmia (loss of sense of smell) and nosebleed.

Diagnosis is usually made by visualizing the tumour mass. Roentgenograms (x-ray films) delineate advanced growths and facilitate to a degree the estimation of operability. Soft-tissue changes with little or no bone involvement are noted in early lesions while in later stages evidence of displacement, decalcification (loss of calcium), and absorption of bony walls are found. Usually, the tumour is more extensive than roentgenograms suggest.

The first treatment (primary adequacy) given has the best chance of curing the patient and should be as radical as necessary to remove all of the tumour. Sacrifice of an eye or jaw is justifiable and cosmesis is to be ignored in the interests of saving the patient's life. This is carried out through a combination of the scalpel and electrosurgery. Radium needles are distributed in the area previously occupied by tumour. External irradiation is applied to the high lymph nodes of the neck. Electrosurgery is used when the tumour approaches the skin. (See also HEARING.)

Eastern European Economic Planning. This article is concerned with the seven people's democracies of eastern Europe (Albania, Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Poland and Rumania), which together cover an area of 392,998 sq.mi. and have a combined population (1954 est.) of 93,564,000. The area is 4.5% the size of the U.S.S.R., but the population represents about 45% of the population of the Soviet Union and is an important addition to the Soviet economic potential.

During 1955, under the supervision of the Council for Mutual

conomic Aid (*Soviet Ekonomicheskoy Vzaimopomoshchi*) founded in Moscow in Jan. 1949, the experts of the U.S.S.R. and the seven European satellites were preparing their plans of industrial development and still closer integration of the whole area. The "new course" of the Malenkov era—some readjustment of industrial investment plans at the expense of heavy industry and a greater emphasis on production of consumer

1938 and 13,070,000 tons in 1954—or 31.8% of the Soviet production in the same year.

New coal mines were opened everywhere and the extraction of hard coal increased between 1938 and 1954 from 59,792,000 tons to 117,930,000 tons. The extraction of lignite also doubled,

The Balance Sheet of Industrialization.—Between World War I and World War II all the governments of eastern European countries were encouraging a balanced measure of industrialization which was the only means of reducing the overpopulation of the countryside and increasing the national income.

Table III.—*Five-Year Plan of the German Democratic Republic, 1951–55*

(In thousands of metric tons; electricity in millions of kw.hr.)

	1936	1950	1953	1954	1955 (Plan)
Coal	3,525	2,800	3,100	3,500	3,500
Lignite	101,100	137,300	175,000	193,000	225,000
Crude petroleum	500	454	692	...	927

Sulphuric acid	1,100	800	1,400
Phosphoric acid	1,000	1,300	1,300
...	302	233	348	400	450

After World War II the Soviet protector encouraged this process in its own way and according to its own interests. It imposed first and everywhere the Communist dictatorship without which no political control was possible. Such a regime enabled the Soviet Union to foster its own kind of economic planning. By depressing the standards of living, sums equalling between 20% and 30% of the national income were invested yearly into heavy industries.

New blast furnaces, coking plants and steel foundries were added to the existing iron and steel works. New iron and steel works were built. By 1954 the steel production of the satellite states had more than doubled: it was 6,067,000 metric tons in

production. The new hydroelectric power stations consisted of high dams and reservoirs which enabled the irrigation of considerable areas of arable lands.

While Poland is the richest country in hard coal, Rumania is the chief supplier in the area of crude petroleum. The Rumanian oil industry is managed by Sovrompetrol, a Soviet-Rumanian joint-stock company, which, together with Sovro-

"MARTEN" BLAST FURNACE, Lenin foundry, Nowa Huta, Pol. The furnace began operations in April 1955 and, together with another furnace completed earlier, made the Lenin works the largest steel producing plant in Poland

masigurare (insurance), Sovromfilm and Sovromquartz (uranium ore), was not included in the agreement of Sept. 18, 1954, on the "sale and transfer" of 12 other joint-stock companies through which the Soviet Union was exploiting Rumania. Rumanian crude petroleum production rose between 1947 and 1954 from 3,819,000 tons to 10,200,000 tons. Eastern Europe's crude petroleum production rose between 1938 and 1954 from 6,878,000 tons to 12,080,000 tons, the latter figure representing 20.5% of the Soviet production.

Production of cement doubled in the area, rising from 5,800,000 tons in 1938 to 11,810,000 tons in 1954, that is, 59% of the Soviet production—a great proportion of the satellite cement output (two-thirds in 1954 in the case of Poland) was being exported to the Soviet Union. In other basic industries there were similar increases.

The industrial production continued to expand in 1955 and, according to the results of the first six months, rose 12% in Poland, the German Democratic Republic and Rumania and 9.5% in Hungary. No progress was recorded in Czechoslovakia, where the 1949-53 five-year plan raised the industrial output 102% above the 1948 level and 119% above 1937. In Slovakia, however, the index number of industrial production stood at the end of 1954 at 468 (1937=100). Industrial production in the country as a whole was scheduled to rise 50% during the second five-year plan 1956-60.

The Price of the Soviet-Type Industrialization.—Housing was in a critical state, and industrial consumer goods and foodstuffs were scarce. Though eastern European standards between the two world wars had been lower than those of western Europe, they were higher than those of the Soviet peoples. After ten years of Soviet planning basic commodities were cheaper in Moscow than in Warsaw, Budapest or Prague, despite the general price cut in foodstuffs and manufactured goods decreed in April 1955 throughout the area.

In the countryside the total collectivization of agriculture was still presented as the only right solution, but the collectivization drive was slowed down. While in Bulgaria 60.5% of arable land was worked by producers' co-operative farms of

the Soviet *kolkhoz* type, in Czechoslovakia the proportion 32.9%, in Hungary 18%, in the German Democratic Republic 15.6%, in Rumania 12.5% and in Poland 9.5%. Forced grain deliveries at low fixed prices did not encourage individual peasants to work hard and produce much. The result was that for a traditionally food-surplus area eastern Europe became one of food shortages. The total average yearly harvest of five basic grains in the six eastern European people's democracies (Albania excepted) was 43,700,000 tons in 1934-38 and 34,100,000 tons in 1948-50. The potato crop for the same periods was reduced from 65,700,000 tons to 48,000,000 tons. No reliable data have been published since 1950, but the import by the area of 4,000,000 tons to 5,000,000 tons of grain a year suggested that the passive resistance of the peasantry to the Communist system continued.

Economics. Continuing in 1955 was a distinct trend in the discipline of economics, away from the interwar model of a decade or two before in economic maturity, the model of static equilibrium, and the theories of the self-generating, inevitable business cycle, toward an emphasis on dynamism and change. This shift was another example of the shaping of theory by developments and events. In the western world total population and new family creations had swung up at a terrific rate. The resulting increase in the demand for and production of housing was accentuated by the unprecedented mobility of the population. On top of these developments were two causes of interrelated dynamic factors: a veritable flood of technological discoveries since 1945 and a spectacular and recently accelerated rise in the standard of living in nearly all parts of the world. Consumer expenditures had kept going higher and higher after World War II with only two or three minor and unimportant interruptions. Private investment including expenditure for housing had remained heavy in volume, and the cold war had kept government expenditures for goods and services at an extremely high level.

Under these circumstances the private, as well as the collective, economics of the world had time after time almost miraculously ridden out incipient distortions that a score or more years earlier would have caused serious difficulty.

By the third quarter of 1955, the gross national product of the United States was booming along at a record-breaking annual rate of nearly \$390,000,000,000. This came after a jitters period in which serious cyclical maladjustments were expected but did not materialize. There was little wonder that the economics of dynamism in 1955 was optimistic.

Some economists, however, were issuing sobering warnings about at least minor difficulties which might soon come to a head. The current prosperity, they said, was based upon two trends that could not continue—the building up of retail inventories and an extremely liberal business and bank policy with respect to consumer credit. They pointed to continuing inflation, called attention to the necessity of a tighter money policy, and warned that what might appear to be a salutary and gradual approach

on of brakes to credit extension could grip the wheels and force the economy into an embarrassing, or more serious, skid. They stressed the fact that the housing supply seemed to be catching up with the demand and that the markets for durable consumables like automobiles and television sets were somewhat dependable.

While recognizing that the prolonged bull stock market was safer and more logical than that of the late 1920s, they did not dismiss the possibility of a downturn that might develop into a minor stampede; while recognizing that agriculture might eventually be saved, at least in the United States, by a rising population and improving consumption standards, they expressed concern over the fact that farm income in general remained low. They were concerned about the possible effects of the curtailment of governmental expenditures, especially if such a policy were to conjoin with other factors which would tend to slow down production. No one, however, expected anything in the way of a depression even vaguely similar to that of the early 1930s.

Price theorists were becoming less concerned in 1955 over competition in the traditional sense and more concerned with the possibility of achieving the types of effective compromise between competition and oligopoly suggested by such phrases and concepts as "workable competition" and "countervailing power." Some were inclined, in fact, to the opinion that price policy should be directed less to the preservation of competition, as such, and more to the maintenance of tolerably workable total situations, even though the latter might contain elements of unvarnished monopoly. The problem was less a matter of maintaining competition than of defending the interests of consumers in plentiful and cheap goods, of producers in low costs and adequate revenues and of everyone in an effective allocation of resources, however these desiderata might be accomplished. (G. J. C.)

Ecuador. A republic on the west coast of South America, straddling the equator, after which it was named, Ecuador is bounded on the north and east by Colombia, on the east and south by Peru and on the west by the Pacific ocean. It has an area of 105,743 sq.mi. (including the Galápagos Islands, a dependency of 3,029 sq.mi.) and a population (1950 census) of 3,202,757; (1954 official estimate) 3,567,000. About 75% of this figure represents Indians, 30% mestizos, 9% "whites" and 1% Negroes. Quito (pop., 1950 census, 209,932; 1954 est., 212,873) is the capital; other major cities (with 1950 census, 1954 est. in parentheses) are Guayaquil, the main port, 1,89,666; Cuenca 39,983 (53,871); Riobamba 29,830; Jipijapa 15,59 (8,000); Vinces 3,748; Chone 8,046 (10,000); Ambato 15,312; Loja 15,399 (18,000); and Latacunga 10,389 (18,000). The predominant religion is Roman Catholic. President in 1955: José María Velasco Ibarra.

History.—Although the year 1955 opened with the memory of an abortive revolt hanging over it, internal political order was maintained by the government. The minister of interior resigned in January, apparently in response to pressure from military and civilian elements. A second change in the interior department occurred in June. The minister resigned in the midst of a crisis that had arisen over the insistence of the government's executive branch that the judicial branch could not interrogate police officers who had been involved in an assault (April 1955) upon the editor of Guayaquil's *El Universo*.

The government arrested a handful of opposition spokesmen

in April and May for "disrespect" toward the executive or for suggesting that the government would fall. The former charge resulted in the closure in June of radio station Gran Colombia and the chastisement of *La Tierra*. In early July the government attributed a railroad workers' strike to Communist influence. Following the dissolution of the union, the labourers became public employees. Most of them resumed work by July 4 and management of the road reverted to the civilian operators at the end of the month. A second reportedly Communist-inspired strike was called in July by banana workers in the Esmeraldas area.

On Sept. 8 Ecuador informed the Council of the Organization of American States that Peruvian armed forces were poised to attack. Reacting quickly, the council had representatives of the Rio de Janeiro protocol guarantors convene in the Brazilian capital. Shortly thereafter the military attachés of the guarantor nations in Quito and Lima were instructed to form inspection teams. After viewing the tension area, the inspectors reported that the military situation was normal. In late September the Ecuadorian government withdrew its earlier appeal for aid, attributing the maintenance of peace to the prompt response of the O.A.S.

The Export-Import Bank of Washington granted a \$2,700,000 loan to Ecuador for further work on the Quevedo-Manta highway. Another \$900,000 was made available to construct terminal facilities at the Quito and Guayaquil airports. An agreement calling for the sale of U.S. farm surpluses to Ecuador was negotiated in September. (R. Hn.)

Education.—In 1952 there were 3,706 primary schools with 7,487 teachers and 352,396 pupils and 182 secondary schools with 1,031 teachers and 32,390 pupils. Institutions of higher learning included four public universities, the Catholic university of Quito and the polytechnical school; they had a total of 411 teachers and 4,562 students in 1952. According to the 1950 census, 43.7% of those 10 years of age and over were illiterate.

Finance.—The monetary unit is the sucre, valued during 1955 at 6.6 cents U.S. currency, official rate, and on Aug. 31, 1955, at 5.68 cents, free rate. Ordinary revenue in 1954 was 607,930,000 sucres; ordinary expenditure, 595,927,000 sucres. The foreign debt on Dec. 31, 1954, was \$33,701,446; internal, 268,632,994 sucres. Currency in circulation (July 31, 1955) was 634,000,000 sucres; demand deposits, 595,000,000 sucres. The U.S. department of commerce estimated U.S. direct investments in 1954 at \$20,000,000. The cost-of-living index (Quito) stood at 114 in June 1955 (Aug. 1950-July 1951=100). National income was estimated at 8,637,000,000 sucres in 1954.

Trade and Communications.—Exports in 1954 (Ecuadorian ports) totalled \$101,861,000; imports through the port of Guayaquil, \$86,045,497. Chief exports were cacao (34%), bananas (27%), coffee (27%) and rice (3%). Important imports included machinery, instruments and vehicles (31%), food, drink and tobacco (14%), textiles (12%) and metals and manufactures (11%). Leading customers were the U.S. (65%), Colombia (8%), western Germany (7%) and Belgium (5%); leading suppliers, the U.S. (53%), western Germany (11%), Canada (6%) and the U.K. (6%).

The length of the nine nationalized railroad lines in operation in 1949 was 698 mi.; they carried 513,020 metric tons of freight and 1,866,872 passengers in 1954. Mileage of all highways was estimated at 6,143 in 1951, of which 2,943 mi. were paved. On Jan. 1, 1954, there were 5,500 automobiles, 10,000 trucks and 2,300 buses. Telephones (Jan. 1, 1954) numbered 11,500, 60.9% of which were automatic and 52% of which were located in Quito.

Agriculture.—Production estimates in the 1954-55 crop year included coffee 425,000 bags of 132 lb. each; rice (rough) 260,000,000 lb.; cacao 55,787,000 lb.; cotton 12,000 bales of 480 lb. each. Exports in 1954 included cacao 29,735 metric tons; bananas 21,700,000 count bunches (50 lb. each); rice 19,455 tons; coffee 351,000 bags. Unofficial estimates placed the number of cattle at more than 2,000,000 and the number of sheep and goats at 2,000,000 in 1952. Forest exports in 1954 included tagua nuts 7,410 tons; balsa wood 4,029 tons. No rubber was exported in 1953 or 1954.

Manufactures.—Production estimates for 1954 included sugar 52,106 metric tons; cement 94,807 tons; salt 34,875 tons; beer 58,160,000 bottles. Exports of *toquilla* (Panamá) hats totalled 1,982,700.

Minerals.—Production in 1954 included gold 18,942 troy ounces; silver 56,600 troy ounces; copper 13,400 kg.; lead 114 metric tons; crude petroleum 3,146,430 bbl. (J. W. Mw.)

Eczema: see DERMATOLOGY.

Eden, Sir (Robert) Anthony (1897—), British statesman, was born at Windlestone hall, near Bishop Auckland, Durham, Eng., and

was educated at Eton college and at Christ Church, Oxford. In 1923 he was elected to the house of commons. In 1931 he became undersecretary of state for foreign affairs. He was made lord privy seal in 1934 and minister for League of Nations affairs a year later. Eden became foreign secretary in 1935 but resigned in 1938 because of disagreement with Neville Chamberlain's policy toward Italy. At the outbreak of World War II he returned to government as dominions secretary, and when Winston Churchill became prime minister in 1940 Eden was appointed secretary of state for war and, later that same year, foreign secretary. In 1942 he was leader of the house of commons, and in 1945, when his party was defeated, he was deputy leader of the opposition. When Churchill was returned as prime minister in 1951, Eden was appointed deputy prime minister and foreign secretary.

On April 6, 1955, after being Conservative member for Warwick and Leamington for 32 years, Eden was appointed prime minister. He announced on April 15 that a general election would take place on May 26. He conducted a strenuous election campaign, travelling more than 2,000 mi. and addressing 40 meetings. On April 21 he was elected the new leader of the Conservative and Unionist party, in succession to Sir Winston Churchill who described him as "a leader worthy of their cause."

In July he represented Great Britain at the Geneva conference of the heads of state of the Big Four powers, where he proposed a mutual security pact between the Big Four and a reunited Germany. This, and his suggestion of a demilitarized area between east and west Germany to act as "a protective pad," were a modification of the "Eden plan," put forward at Berlin in 1954.

After his return from Geneva Eden devoted much attention to home affairs. In October he attended the Conservative party conference at Bournemouth (Oct. 6-9), where his announcement that he contemplated no immediate changes in the cabinet resulted in criticism in the press. He also announced at the conference that there would be a total reduction of 100,000 in the U.K. armed forces by April 1958.

In November Eden and other members of the government convened a meeting with the Trades Union congress leaders as a result of their criticism of the autumn budget. As a result of the public concern at the Burgess-McLean affair, Eden announced (Nov. 8) that he would preside over an informal conference of privy councillors to inquire into security procedure. On Nov. 9, in the traditional Guildhall speech at the lord mayor's banquet, he offered to give any help necessary to maintain peace between Israel and the Arab states.

Education. The outstanding events in education in the U.S. from Oct. 15, 1954, to Oct. 15, 1955, included the following: (1) the continuing shortage in faculties, facilities and funds; (2) the free immunization of millions of school children with the Salk antipolio vaccine; (3) the steady rise in school attendance for the eleventh year in succession; (4) the unanimous decision by the U.S. supreme court in May making local school authorities responsible for desegregating the schools as soon as feasible; (5) the slow but definite progress in the integration of the education of the white and Negro races in spite of open opposition in some areas of the south; (6) the rise in college and university enrolment for the third consecutive year; (7) the efforts by the educational profession, governmental bodies and other interested parties to combat juvenile delinquency and vandalism; (8) the increase in grants and scholarship funds by business corporations and industries to higher education; (9) the state conferences on educational problems in preparation for the White House Conference on Education late in November; and (10) the continuing controversy

among educators and in public circles over the content methods in the public schools, especially with reference to teaching of reading.

Statistics.—The annual estimate of enrolment by the office of education, department of health, education and welfare for the year 1955-56 indicated the following figures: kindergarten through grade eight, 29,038,000, an increase of 1,300,000 over the previous year; secondary schools (grades nine through twelve), 7,680,000, a rise of 258,000; higher education, 2,800,000, or 99,000 more than in 1954-55; private commercial nurse training schools, 215,000. The grand total of 39,772,000 represented an increase of 1,865,500 and made up 24.1% of the entire population of the U.S.

Among the other significant facts reported by the office of education were the following: the shortage of 141,300 qualified teachers in the elementary and high schools would have to be met by more teachers with emergency certificates, the appointment of former teachers and more overcrowded classrooms; need of providing at least 52,000 classrooms more than available during the previous year; and the probable lower rate of increase in elementary school enrolment toward the end of the 1964-65 period.

Federal Participation in Education.—In his message to congress, Feb. 8, Pres. Dwight D. Eisenhower urged the enactment of a three-year co-operative program involving federal, state and local authorities in providing \$7,000,000,000 for the construction of schools. Included in his program was a request of congress to set aside \$220,000,000 in federal funds and \$200,000,000 in loans for this purpose. At the basis of his proposal was the conviction, expressed by him in 1954, that the major responsibility for education lay in the state and local governments, rather than in the federal authorities. The presidential plan was supported by Mrs. Oveta Culp Hobby, secretary of the department of health, education and welfare, Samuel M. Broner, U.S. commissioner of education, and members of the Democratic publican party in congress. On the other hand, the Democrats and most educators tended to oppose or at best to be skeptical of the proposed program. Despite talk of compromise, there was no positive action by congress to pass any of the school bills.

During the year, many state conferences took place in order to prepare for the White House Conference on Education which began on Nov. 28 in Washington, D.C. These meetings were rehearsals on a small scale of the national conference, which discussed fundamental problems in education. One of the significant issues taken up by the 2,000 delegates in Washington was that of federal aid to education, which Pres. Dwight D. Eisenhower called for in limited form.

In July Mrs. Hobby resigned and was replaced by Mario Folsom. During the same month, the Air Force academy opened with 306 cadets at Lowry Air Force Base, Denver, Colo. Also of interest was the passing of a bill by congress in February extending full educational benefits to 1,400,000 veterans.

Elementary and Secondary Education.—The announcement in April that the vaccine against poliomyelitis discovered by Jonas E. Salk was declared effective by medical authorities led to steps to inoculate millions of school children all over the country. In spite of some initial difficulties in the administration of the inoculation program, it was clear that an important contribution had been made toward the eradication of a dread childhood disease.

With relation to curriculum, the National Council for the Social Studies pointed out in Nov. 1954, that the high schools were weak in their teaching of world history and geography. Various surveys called attention during the year to the drop in high school enrolments in science and mathematics. A report by the Metropolitan School Study council of New

revealed in Oct. 1955 that children in the public schools are learning little about the significant problems of public education.

The weaknesses of vocational training in the high schools are stressed in the report of the National Manpower council December, 1954. Unsatisfactory counselling or guidance in elementary schools was mentioned as an important cause of failures and dropouts in high school in the 1955 yearbook of the Association for Supervision and Curriculum Development of the National Education association.

Other surveys during 1955 indicated that the nation's gifted youth was going to waste because of lack of opportunity to enter or to remain in college.

Probably the most sensational event in connection with the teaching program of the schools was the publication of Rudolf Schick's *Why Johnny Can't Read; and What You Can Do About It*, a severe critique of the prevailing methods of teaching reading by having the child learn the word as a whole. The suggestion and exposition by the author of the older phonetic method led to a spate of articles and booklets by educators in justification of their own procedures and in criticism of Flesch. The fact that this book enjoyed a wide sale as a best seller spurred the educators to greater efforts to convince the public that they were doing the best possible job of teaching the art of reading to children.

A disturbing situation was disclosed in July in the report of study carried on by the Commission for the Defense of Democracy through Education of the National Education association of the problems faced by 3,400 representative teachers. This survey concluded that discipline had weakened perceptibly in schools all over the country, with pupils exhibiting restlessness, frequent disobedience and signs of anxiety.

National attention was drawn in February to the plight of teachers in New York, which was threatened by the state department of education with the loss of state funds unless it improved its school system by the end of the year. Other events included the decision by the New York state department of education in March compelling New York city to promote children from kindergarten on the basis of ability rather than age; the dissolution of the Progressive Education association in July after more than 20 years of campaigning in behalf of modernizing the philosophy and methods of the schools; the introduction by New Mexico in the fall of a bilingual program of teaching Spanish and English in the elementary schools; the recommendation in September by Harold C. Hunt, new undersecretary of health, education and welfare, that high school buildings be used after hours for instruction on the junior college level, in line with President Eisenhower's suggestion for a national system of free junior colleges; and the reintroduction, on a trial basis, by the elementary schools of the District of Columbia in the fall of the letter-type report card with the grades of A, B and C.

Higher Education.—The steady increase in enrolment in colleges and universities was shown in the figures announced in October 1954 by the U.S. office of education (2,472,000, or 10% more than in 1953) and by Pres. Raymond Walters of the University of Cincinnati in the Dec. 11 issue of *School and Society* (895,280 in 846 approved institutions, a 7.6% increase). A report by the Veterans administration in Nov. 1954 showed an enrollment of 451,000 Korean veterans, twice as many as the year before, and 168,000 veterans of World War II, a decrease of 10,000 since 1953. Much attention was given by higher educational authorities to the problem of maintaining academic standards in the face of the rapidly rising numbers in the years to come. This question was seriously discussed at the Oct. 1955 convention of the American Council on Education, as were the instruction of gifted students, the shortages of students in the

scientific and engineering fields, and the rising costs of attending colleges.

There was much sentiment for more scholarships to worthy students.

Close upon the revelation in 1954 that half of the colleges in the U.S. were operating under a deficit came announcements of gifts and grants by the General Electric company, the Standard Oil Company of New Jersey, and the General Education board of the Rockefeller foundation. In the fall of 1954 the last-named granted \$2,500,000 toward the improvement of the teaching staffs of southern colleges and universities. General Motors announced in January an annual gift of \$2,000,000 to more than 300 institutions, while the U.S. Steel foundation promised in May a grant of \$1,052,000 to colleges in 43 states. In July, John D. Rockefeller, Jr. added \$4,000,000 to the \$1,000,000 he had given a month earlier to Brown university without restriction of any kind as to use.

In Oct. 1955, the Standard Oil Company of New Jersey and its affiliates organized the Esso Education foundation and pledged \$1,500,000 for private higher education, and two days later John Hay Whitney donated \$2,500,000 for the purchase of buildings to expand the facilities of Yale university.

The largest grants were announced in March and December by the Ford foundation, the distribution of a total of \$260,000,000 to aid colleges and universities to increase the salaries of their faculties. Still another substantial gift was the five-year program of financial aid of \$5,000,000 to colleges and universities made in March by the Westinghouse Education foundation.

Among the larger grants for specific academic purposes were \$20,000,000 by John D. Rockefeller, Jr. in January for Protestant theological education; \$4,650,000 by the Ford foundation in January for training and research in international legal problems in the law schools; \$3,321,738 by the Commonwealth fund during 1954 for medical education; \$400,000 by Charles E. Merrill for the establishment of a professorship of medicine

specializing in heart diseases at Harvard university; \$1,281,000 to the Carnegie Corporation of New York to various institutions for the study of international affairs, American culture and other fields; and \$500,000 by the Rockefeller foundation in January for the special program in near eastern studies at Princeton university. A study by the John Price Jones Co., consultants for the financing of higher schools, revealed gifts of \$32,347,000 to fifty colleges during 1953-54, a gain of 13.9% over the previous year and 637.2% over 1920-21. In May, Wilson Compton, president of the Council for Financial Aid to Education, estimated voluntary financial support to the colleges from corporations as between \$75,000,000 and \$90,000,000 a year. He also stressed the fact that the operating deficits of private institutions, now less than \$30,000,000 each year, were being reduced. Other competent observers shared this optimistic view of the financial status of higher education.

The financial problem of colleges and universities was attacked from another angle. In order to raise revenue to raise the salaries of professors, a number of prominent institutions increased the tuition fees. Large increases in faculty salaries were reported by Princeton and New York universities. Others adjusting tuition and salaries were Cornell university, Ithaca, N.Y.; Syracuse university, Syracuse, N.Y.; Bryn Mawr college, Bryn Mawr, Pa.; and Mt. Holyoke college, Hadley, Mass. Several educators pointed out the danger of rising tuition costs in that qualified students lacking sufficient funds would be unable to attend college. One promising venture to assist students of exceptional ability was the founding in September of the National Merit Scholarship program, a plan administered by an independent, nonprofit corporation consisting of representatives of higher education, business and industry. A source of help to university and other research workers was the decision by the tax court of the U.S. in November that recipients of funds for research purposes from philanthropic organizations would not be required to pay any income tax on such grants.

At the annual conference in January of the Association of American Colleges, much stress was laid on the need for promoting the study of the liberal arts in higher institutions of learning, discouraging too much specialization, including previous education in the curriculum and improving the processes of teaching. The importance of the liberal arts was underlined in a report in May of an 18-months' study by a faculty committee at Yale university. The program recommended by the faculty would take effect in the academic year of 1956-57 and would feature more required and less elective courses than heretofore, more stringent entrance requirements, seminars and interdepartmental curriculum. Later that month, Yale announced that its experimental program to accelerate the education of gifted students who had not completed high school was a success. Of the original 52 students who entered Yale under this plan in 1951, 34 were able to obtain their degrees. St. John's college, Annapolis, Md., published in May an extensive report which upheld its faith in the teaching of the liberal arts by plans of the careful and thorough study of the *Great Books of the Western World*.

In Nov. 1954, the *New York Times* made public the results of its survey of the teaching of Russian and other Slavic languages in the colleges and universities of the U.S. Since 1950, there was a drop of 35% in enrolment, with only 5,000 students learning Russian in 183 colleges, Polish in 22 and Czechoslovak in eight others. Among the factors cited by the report for this decline were the students' fears for taking courses dealing with the Soviet Union lest some day suspicion be directed against themselves, pressure by parents or friends and the feeling that Russian is too difficult to master. From the positive standpoint, college officials were cited as agreeing that a knowledge of

Russian was of increasing importance, especially in the study of science.

All through the year, there were expressions of serious concern on the part of educators and leaders in government and industry over the insufficient number of persons being prepared in the fields of physics, engineering, medicine, nursing and pharmacy. In his annual report to the trustees in Oct. 1955, Pres. James R. Killian, Jr. of the Massachusetts Institute of Technology laid emphasis on the need for improving the training of engineers. A major change in policy was publicized in January by the Harvard Divinity school when it stated that it would admit women in the fall of 1955 as regular students in the undergraduate and graduate programs.

There were some notable developments in the field of intercollegiate athletics during the year. Fordham university announced in Dec. 1954, that it would give up varsity football on account of "continuing financial loss," thus leaving New York city with only one major college team. One month later, an evaluation by the Middle States Association of Colleges and Secondary Schools disclosed that the University of Maryland "violated the rules" of the National Collegiate Athletic association by recruiting athletes, facilitating preferential scholastic treatment and providing easy jobs for players. The response by the university was immediate and plans were at once under way to regain its accredited status in 1956. In April, the National Collegiate Athletic association placed the University of Oklahoma and the University of Cincinnati, O., on probation for two years and one year respectively because of infractions of athletic policies and rules. On the whole, however, the athletic situation in colleges and universities looked better in 1954-55 than in previous years.

The Teacher Situation.—A report by the research division of the National Education association in Dec. 1954 indicated a total of about 80,680 new teachers who lacked full qualifications for the standard teaching certificates. This figure represented 2,000 more emergency teachers than in the previous year. Moreover, according to this report, at least 75,000 trained teachers were to be expected to leave their classes during the year because of higher salaries in industry and other reasons; and 30 states anticipated a shortage in high school teachers in the next three years. A later report issued in March by the same division, the Teacher Supply and Demand report, asserted that 86,696 qualified candidates for teaching posts would be graduated from colleges in the spring of 1955. Of the 35,278 persons available to teach in the elementary schools, only 27,800 could be expected to be on the job in the fall; while of the 51,418 graduates qualified for high schools, only a little over half would probably accept positions. With about 60,000 elementary teachers leaving the profession each year and many others giving up their jobs in the high schools, a much larger number was needed than the graduates available for the schools.

The U.S. office of education estimated in September that only about 63,000 of the 100,000 eligible graduates would go into teaching. The lot of the teacher was made by no means easier by the fact that about 500,000 pupils attended half-day classes on account of the lack of classrooms, in spite of the record construction of 60,000 classrooms during the year. According to the office of education, there were about 138,000 less teachers than necessary to conduct a sound program of instruction in the nation and about 91,000 teachers who fell short of professional standards of training.

In June, the Carnegie Corporation of New York granted \$300,000 to the American Association for the Advancement of Science for the purpose of improving the teaching of science and mathematics in the high schools.

The American Association of Collegiate Schools of Business

issued in August a report with disquieting data about shortages of teachers of business administration in colleges and universities. This situation was regarded with seriousness, particularly because one out of every eight college students was studying business.

According to a survey reported in May, most state legislatures had made all-out attempts to improve the status of education by increasing financial aid to the schools and including provisions for the raising of the salaries of teachers. In October, Missouri voters approved a state cigarette tax to raise funds toward the equalization of educational opportunities in the state and the lifting of teachers' salaries to the national level. A study released by the Fund for the Advancement of Education in Dec. 1954, showed that the single salary schedule for elementary and secondary teachers, which had developed into a controversial problem in New York city, was working out satisfactorily in many of the 25 largest cities all over the country.

Late in 1954, Temple university received a grant from the Fund for the Advancement of Education for the initiation of a five-year co-operative experiment in preparing liberal arts graduates to teach. New York city teachers seeking licences as principals were examined in April by means of a closed circuit television exhibition of a classroom in action. Also in April, the National Education association made public the results of an inquiry showing a total of 160,000 substitutes, or one for every six regular teachers, in the U.S. At its convention in August, the American Federation of Teachers charged that the NEA did not represent teachers, since it was dominated by school administrators.

Adult Education.—The National Commission on Adult Education Finance of the Adult Education association reported in Nov. 1954, that more than 3,000,000 persons attended adult education programs in 6,000 public schools throughout the country, that the cost of adult education per person each year was \$26.60 as compared with \$235 per year for each child, and that one third of the nation's adults lived in school districts which lacked educational provisions for grown-ups. At the same time, the National Conference on Adult Education charged a lack of proper appreciation in high government circles of the value of adult education to the country. In April, the Fund for Adult Education revealed that it had furnished \$4,578,000 for educational television during 1953-54. The library situation was not a good one according to L. Quincy Mumford, librarian of congress, who asserted in July that 27,000,000 Americans had no access at all to a local public library and that more than the 7,500 public libraries were essential to the U.S.

Communism and Education.—The problem of subversive affiliation continued during 1954-55 to arouse discussion and debate. A report by a special committee of the house of representatives claimed in Dec. 1954 that some of the tax-exempt foundations had "directly supported subversion" by distributing funds to questionable educational causes. In Sept. 1955, the senate permanent subcommittee on investigations started an inquiry concerning communist influence in private trade schools attended by Korean War veterans with the aid of G.I. bill funds. Ten teachers resigned from the New York city public schools rather than testify under oath about connections with communists. A U.S. supreme court decision in February upheld the dismissal of 13 New York city teachers who had refused to answer questions of a senate subcommittee regarding membership in the Communist party. The Newark, N.J., board of education discharged in June three teachers who had invoked the fifth amendment in refusing to tell the house committee on un-American activities about communist affiliations.

A lively nation-wide debate was precipitated in Nov. 1954,

when the U.S. Military academy at West Point, N.Y., and Naval academy at Annapolis, Md., refused to permit their debating teams to discuss the question of whether the U.S. should recognize Red China. In spite of urging by President Eisenhower and Senators William E. Jenner and J. William Fulbright to allow discussion of this issue, the service academies did not change their policies. Civilian institutions as a rule, however, continued to argue the pros and cons of this topic in the debating circles.

Among the other incidents dealing with the problem of communism in education were the resignation in Oct. 1954, of a librarian of Lafayette college after he had been named by a senate subcommittee as having once been a communist; a grant by the Fund for the Republic in January of \$250,000 for objective historical studies by university scholars of the extent of communist influence in American life; the disapproval in March by the Virginia state board of education of an elementary school textbook which contained passages described by Gov. Thomas Stanley as "un-American"; the dropping in April by the department of defense of the oath taken by students taking basic courses in the Reserve Officers Training corps that they had never belonged to a subversive group; the opinion in July by the N.Y. State Education Commissioner Lewis A. Wilson in New York that boards of education could not force teachers to testify about communist connections of other teachers, a statement which apparently questioned the earlier policy of the New York city board of education; and the affirmation by the California supreme court in July of the dismissal of a professor at San Diego State college for refusing to answer the questions by the state board of education as to membership in the Communist party.

Juvenile Delinquency and Crime.—As in previous years, the problem of curbing youthful delinquency, vandalism and crime proved to be a formidable one in 1954-55. Serious efforts were made by the Comics Code authority to tone down violence and other objectionable material in comic books for children. The charge by the New York state legislative committee investigating comic books in its report in February that these writings still stressed sex, sadism and crime led to a promise by the administrator of the code that the campaign to clean up the comic books would be intensified. An Associated Press survey in July showed that 13 states had passed laws banning or curbing the sale of such writings. The U.S. government was especially active in the campaign against juvenile delinquency, with the president including the sum of \$3,000,000 in his January budget message for this purpose. The senate committee on juvenile delinquency recommended in February that publishers purge their comic books, urged in March that the government and the states undertake action to reduce juvenile crime, and recommended in August that strict federal control and private restraint should be applied to remove crime violence from television programs designed for children. That these measures were needed was evident from the persistence of acts of juvenile vandalism and crime in all parts of the country during the year.

The Race Problem.—In reply to the historic U.S. supreme court decision of May 17, 1954, which declared segregated public schools unconstitutional, the people of Georgia and Louisiana voted in Nov. 1954, to amend their constitutions. The voters of Mississippi followed suit in December to maintain separate schools for the white and Negro races. In March 1954 the Florida supreme court criticized the decision against segregation as "a great mistake." From this time until the anticipated second decision of the U.S. supreme court in spring, the two opposing camps busied themselves in advancing their respective interests. The foes of segregation b

the process of petitioning for the abolition of separate schools in the south, and in many states steps were actually taken or considered to bring about integration. The defenders of the segregated system of schools made use of boycotts, secret organizations and legal devices to prevent the mixing of the races in the schools.

The long-awaited decision was handed down unanimously by the U.S. supreme court on May 31, 1955. This ruling ordered the states to "make a prompt and reasonable start toward full compliance" with the 1954 decision, and directed the regional federal courts to determine whether the local school authorities were carrying out the judicial order "at the earliest practicable date." Since the court recognized the difficulties that prevailed in local areas, it made no provision for a specific deadline. This policy of "practical flexibility" led to much debate in the south as to the interpretation of the court's decree, with some southern authorities expressing the belief that integration could be stalled off for a long time. Negroes affiliated with the National Association for the Advancement of Colored People adopted the policy of applying for the admission of their children to white schools and, if denied, to file suits in federal courts to obtain justice in accordance with the U.S. supreme court decisions. A survey by the N.A.A.C.P. disclosed in September that only six states—Alabama, Florida, Georgia, Louisiana, Mississippi and South Carolina—had made no move at all toward desegregation of their schools, but that in the other eleven southern states some positive action or plans had taken place. According to a study released in Oct. 1955, by the Southern Education Reporting service, 134,000 Negro children were enrolled in the fall in the schools of the District of Columbia and eight states which had formerly segregated them from the white children. The largest single group was in the nation's capital, where more than 63% of the 106,000 school children were Negroes. Reports from leading cities, such as Washington, D.C., Baltimore, Md., and Kansas City, Mo., as well as from smaller communities stressed the lack of upward incidents in the setting up of integrated schools. It was apparent to many observers that full equality was a matter of time but inevitable.

There were several developments unfavourable to desegregation. A circuit court in Virginia ruled in June that a county could not use 1953 school bonds to build mixed schools. The Georgia state board of education resolved in August to revoke the licences of teachers who were members of the N.A.A.C.P. Later that month, the board rescinded this resolution, as well as one passed in July to revoke the licences of teachers approving or agreeing to teach mixed classes. Also in July, the Alabama legislature overruled Gov. James E. Folsom's veto of a law to bypass integration, and federal courts in Virginia and South Carolina avoided setting a deadline for desegregating the schools in the areas affected by their respective decisions.

International Educational Relations.—The annual survey of the Institute of International Education indicated the presence of 34,232 students from 129 foreign nations in U.S. colleges and universities during 1954–55. The department of state permitted in April 76 Chinese students to return to their homes in mainland China. During the year, the U.S. Foreign Operations administration arranged for U.S. educators and specialists to aid many countries, such as Ecuador, China (Formosa) and Ethiopia. The Lafayette Fellowship foundation was organized in September to enable French students to attend American colleges.

The 8th general conference of the United Nations Educational, Scientific and Cultural organization (UNESCO) met from Nov. 12 to Dec. 11, 1954, at Montevideo, Uruguay, with the U.S.S.R. taking part for the first time and with the satellite

countries of Poland, Hungary and Czechoslovakia returning to the fold. The conference adopted an increased budget of \$21,617,830 for 1955 and 1956. UNESCO admitted Paraguay and Ethiopia to its membership, now reaching 74 nations, but rejected Rumania and Bulgaria. In April 1955 South Africa withdrew from UNESCO on account of its "interference in South Africa's racial problems." In September the Universal Copyright convention sponsored by UNESCO came into force. Criticism of UNESCO was expressed by several large American groups for alleged subversion and atheism during 1954–55.

Educational relations among nations were promoted at the Bandung conference in Indonesia during April. Ways of improving education the world over were considered at the International Conference on Public Education convened in July at Geneva, Switz., and at the conference of the World Confederation of Organizations of the Teaching Profession meeting in August at Istanbul, Tur.

World Trends.—Sir David Eccles became minister of education in Great Britain in Oct. 1954. The principle of equal pay for men and women teachers was put into effect in September in Scotland. Proposals for school reform in France during the spring suggested the raising of the school leaving age to 16, the abolition of the present examination systems, and other changes designed to liberalize the traditional educational system of the French people. Catholic objection to proposed legislation in Belgium reducing grants to Catholic schools led to teachers' and students' strikes, riots and other forms of protest during 1954–55. Approximately 91,000 secondary school teachers in Italy went on strike late in May for higher pay, but returned to school after government threats. In West Germany, church-state conflicts arose in connection with education in the states of Lower Saxony and Bavaria. Reports from East Germany indicated a strong campaign to control the minds of university students by a compulsory spy system and by encouraging study in Moscow. In March, the secondary school teachers in Greece waged a three-day strike for higher pay. The Technical school in Prague, Czechoslovakia, reputed to be the oldest public technical college in the world, observed in April its 250th anniversary. The Polish ministry for culture prohibited in January religious teaching in all primary schools. All during 1954–55, newspapers, periodicals and individuals laid stress on the progress made in the U.S.S.R. in the training of scientists, engineers and technicians, often with the added warning that the U.S. lead was being reduced in this field. Beginning in the fall, the U.S.S.R. schools undertook to give more attention to physics, mathematics, and manual and physical training, and less time to the study of the humanities. The Soviet press denounced often those school authorities who had failed to carry out efficiently the communist program for universal education.

Communist China strengthened its hold on education not only in its own territory, but also by attracting students from various Chinese colonies in Asiatic countries and by intimidation of teachers and students in Chinese schools in Singapore. The census report for 1951 on literacy in India, published in Feb. 1955, stated that only 16.6% of the population was able to read. Among the other developments in India were the act banning the import of horror comics and the elimination of English as a medium of instruction at Gujerat university, at Ahmedabad. The proposal to abandon the phonetic methods of teaching reading gave rise to a controversy in Thailand. Saudi Arabia announced new restrictions on education and foreign travel for women. The Bar-Ilan university opened in September in Israel.

The racial segregation policy went ahead in South Africa when the Bantu Education act came into force in April. The attempt by the Perón government in Argentina to extend its con-

trol over education by eliminating the teaching of religion came to naught with the overthrow of his regime. In September, the Argentine universities reopened as free schools after eight years of political control.

(W. W. BN.)

Canada.—According to the most recent figures, there were in June 1954, 2,823,206 pupils taught by 105,209 teachers in public elementary and secondary schools; of these pupils 1,600,000 were in the central provinces of Ontario and Quebec. The latest dominion bureau of statistics report (1952) stated that there were 63,000 full-time students in university courses leading to degrees.

Increasing school enrolment gave rise in 1955 to two major concerns in education: methods of financing education, and meeting the critical teacher shortage. Regarding the former, British Columbia introduced a new formula for payment of provincial grants toward local education costs, designed primarily to provide greater financial assistance and to reduce the disparity between rural and urban resources in meeting these costs. In Nova Scotia and New Brunswick, royal commissions studied educational finance, their reports being tabled in Nov. 1954, and March 1955, respectively. Nova Scotia incorporated most of the recommendations into legislation in the spring. Nationally, a committee of the Canadian School Trustees' association, after 2½ years' study, published a 229-page report on educational finance. Among its recommendations were equalized property assessments within each province and federal aid (\$50,000,000) to the public schools.

Provincial school authorities increased their efforts to recruit young people for the teaching profession, through intensified publicity, more financial assistance for training, and some revision of training programs.

In the field of school health, federal and provincial health authorities co-operated in a policy of inoculating pupils with Salk poliomyelitis vaccine. Generally, children in grades I and II were inoculated, with grade III and kindergarten sometimes included. Between the beginning of April 1955, and the end of June, about 1,000,000 children received at least two doses of the vaccine.

Eggs. Chicken egg production in the United States during 1955 was indicated as at least 1% in excess of the 1954 record of 65,375,000,000 eggs. For the first nine months of 1955 the total was 51,521,000,000 eggs as compared with 49,535,000,000 eggs for the same period in 1954.

The 397,000,000 layers on farms at the beginning of the year, as compared with 387,000,000 a year earlier, because of favourable egg-price-feed ratios and anticipated price improvement were not heavily culled as was officially anticipated; about 347,090,000 remained on hand in September as compared with 350,015,000 a year earlier. The rate of lay was record high, averaging 148 eggs per hen for the first nine months of 1955 as compared with 144 in the comparable period of 1954.

Egg prices were more favourable than in 1954. Though 15% fewer chickens were raised on U.S. farms in 1955 for laying flock replacement than in 1954, late season indications were that egg prices and feed costs were sufficiently favourable to hold laying flocks at a level not much below 1955.

World egg production in 1955, as roughly indicated by esti-

mates for some of the more important producing countries, slightly larger than in 1954. Western Europe generally increased production, the Netherlands to 4,200,000,000 eggs as compared with 3,750,000,000 in the previous year. Canada showed a decline of 1% to 4,400,000,000 eggs. The U.K. board of price review in February set minimum prices below which any guaranteed prices would not be allowed to fall: 1955-56, 4 cents per dozen; 1956-57, 45.6 cents per dozen; and 1957-58, 43.2 cents per dozen.

World trade in eggs increased. The Netherlands in 1954 exported 170,800,000 doz., Denmark 149,500,000 doz. and the U.S. 48,000,000 doz. West Germany was the principal importer (200,000,000 doz.), followed by the U.K. (119,700,000 doz.).

(J. K. R.)

Egypt. A republic of northeast Africa, Egypt is bounded north by the Mediterranean, south by the Anglo-Egyptian Sudan, east by Israel and the Red Sea, west by Libya. Area 386,100 sq.mi. Pop.: (1947 census) 19,021,840; (1955 est.) 23,240,000. Language: 97% Arabic, with minorities speaking Greek, Italian, Armenian, etc. Religion: Moslem (mainly Sunni) 91.4%; Christian (mainly Copt) 8.19%; Jewish 0.4%. Chief towns (pop. 1952 est.): Cairo (cap.), 2,367,900; Alexandria 1,071,000; Port Said 186,300; Tanta 147,800; Gizeh 135,100; Mehalla el-Kubra 131,000; Suez 115,200; Mansura 118,100. Premier and head of the Revolutionary Council in 1955, Lieut. Colonel Gamal Abd-el-Nasser.

History.—During the year 1955 the stability of the regime in Egypt, although it was certainly not free from grave difficulties both external and internal, gave the appearance of being undiminished. Its two most serious internal opposition parties, the Moslem Brotherhood and the Wafd, appeared to have been so effectively crushed as to have ceased for the time being to exist as organized political forces. Whether or not the bluff popular self-styled "peasant" personality of Colonel Nasser had in fact succeeded in bringing about the start of a diminution in the incidents of the almost endemic Egyptian political and administrative complaint of corruption could only be determined by historians in the future, for the present there seemed good ground for the claim that Egyptian public opinion was more honest than it had been for many years and a good augury for the regime in the fact that this belief appeared to be widely held throughout the country.

An important stage in the regime's attack upon its internal enemies was completed early in the year with the conclusion of a series of trials directed against adherents of a Movement of National Liberation and against alleged Zionists which had been begun in Dec. 1954. After three trials of persons accused of spying, sabotage and of spreading alarm in the interests of Israel, many persons were sentenced to terms of imprisonment and two alleged Zionists to death. These latter were executed in spite of strong protests from the Israeli and French governments and from other bodies. Shortly afterward more than 300 persons alleged to have been engaged in activities directed against the security of the state, under the aegis of the Moslem Brothers, were sentenced to imprisonment: 15 death sentences passed at the same time were all commuted to terms of imprisonment. There was a further indication of the existence of internal difficulties for the regime when in August, after it became clear that the relations between the Egyptian and Sudanese governments had undergone a very serious deterioration, it was announced that Maj. Salah Salem had been placed upon "indefinite leave of absence" and that Nasser himself had taken over his function as minister of national guidance and of Sudan affairs.

A new sterling agreement, as a result of which Great Br

EGYPTIAN TROOPS running for cover toward the remains of a dynamited police station on Sept. 8, 1955, during fighting with Israelis on the Gaza Strip

ed another £15,000,000 for Egyptian use, had been announced in Dec. 1954. This was extended and supplemented by further agreement, signed in Cairo on Aug. 29, 1955, whereby Great Britain undertook to release £20,000,000 in each year from 1955 to 1960 inclusive, £10,000,000 in each of 1961 and 1962 and such sums as might remain in 1963. Meanwhile the Egyptian government undertook to discontinue discrimination against sterling goods. Against this development and against the ready implementation of the terms of the Anglo-Egyptian agreement with regard to the Suez Canal base, must be set minor conflicts between the two governments arising from the fact that British ships were fired on and stopped by Egyptian armed forces in the Gulf of Akaba in April and again in July. Further, the Egyptian government complained that, in spite of the sale in May of two British destroyers to Egypt, which was announced in the house of commons in July, Egypt was not getting from the United Kingdom the delivery of arms which it had felt itself entitled to expect.

At the Bandung (Indonesia) Asian-African conference in April, Egypt, represented by Nasser, sided with India and China and appeared as one of the leaders of the neutralist or pro-communist as distinct from the pro-western group of the powers assembled there. In a speech at the conference Nasser laid down two requirements for world peace, namely noninterference in the right of each country to develop its own social and economic system. He strongly criticized what he described as the oppressive and imperialist policies of the French government in north Africa. These views found more practical expression in the strongly anti-French sentiments which were directed to the Cairo radio to the Arabic-speaking peoples of French north Africa.

Meanwhile Egypt had met with a rebuff in its relations with Arab neighbours. Iraq's treaty with Turkey was bitterly denounced in Cairo as a threat to Arab unity. In this attitude the Egyptian government was supported by Syria and Saudi Arabia and a conference of Arab powers, which met in Cairo at the end of January, failed principally because Nasser refused to meet the Iraqi premier, Nuri es-Said.

It was announced simultaneously in Cairo, Damascus and Baghdad in March, that Egypt, Syria and Saudi Arabia had signed a treaty for military and economic co-operation. The terms included provision for the co-ordination of the military forces of the three countries, for the setting up of an economic council and an Arab bank and for the establishment of a common Arab currency. But other Arab states showed little enthu-

siasm for an invitation to join with the three powers and the project of a conference to be held in Cairo was not pursued.

At the end of September came the news that Egypt had successfully approached the U.S.S.R. in its search for arms. Colonel Nasser announced on the Cairo radio that, after first approaching the U.S.S.R., Egypt had concluded a commercial agreement with Czechoslovakia by which Egypt was to receive arms in return for cotton and other goods. Nasser also stated that the attitude of the Israeli government and the activities of Israeli armed forces had become increasingly menacing and in his speech to the cadets (Oct. 2) quoted passages which he declared were extracts from British and French military intelligence documents that had come into the possession of the Egyptian government, designed to show that Israel was better armed than Egypt and that its intentions were patently more aggressive. He denied that the agreements indicated sympathy with Communism and quoted in this connection the measures which his government had taken against the Egyptian Communists. Meanwhile, on Oct. 1, the British, French and U.S. governments had all expressed their "grave concern." The Israeli government protested vigorously and began a renewed search for supplies of arms. In western countries the incident was held to be significant of a powerful Soviet diplomatic offensive in the middle east and was in consequence the occasion of great diplomatic activity.

On Oct. 14 the New China News agency announced the signature of a three-year Sino-Egyptian trade agreement which provided for most-favoured-nation terms between the two countries, for arrangements for balanced trade and for payments in transferable sterling, for the establishment of commercial offices in Peking, China, and Cairo. Among other things, Egypt was to receive deliveries of light machinery.

In June it had been announced that the Alexandria market in cotton futures was to be reopened. The market had been closed in Nov. 1952, because of alleged financial abuses. The Egyptian finance minister, Abd-ul-Moneim el-Kassuni, announced that the safeguards similar to those applied in the Liverpool cotton exchange would be enforced and stated that he had negotiated an agreement with the Liverpool cotton exchange which had only dealt in U.S. cotton since its reopening in 1954. (See also ANGLO-EGYPTIAN SUDAN.) (H. S. D.)

Education.—State schools (1953-54): primary 7,492, pupils 1,493,797; secondary 595, pupils 361,650; vocational 85, pupils 26,629. Teachers' training colleges 80, students 23,051. Institutions of higher education 5, students 75,000, of which 3 state universities, students 45,763.

Finance and Banking.—Monetary unit: Egyptian pound with an exchange rate of £E 0.975 to the pound sterling and £E 0.348 to the U.S. dollar. Budget (1955-56 est.) balanced at £E 315,300,000. Currency circulation: (Dec. 1954) £E 189,600,000; (June 1955) £E 172,100,000. Bank deposits: (June 1954) £E 157,100,000; (Oct. 1954) £E 168,500,000. Gold and foreign exchange: (Dec. 1954) U.S. \$732,000,000; (April

1955) U.S. \$746,000,000.

Foreign Trade.—(1954) Imports £E159,660,000; exports £E138,270,000. Main sources of imports: U.K. 13%; other sterling area 9%; France 10%; Italy 8%; other continental European Payments Union countries 30%; U.S. and Canada 12%. Main destinations of exports: France 12%; Italy 8%; other continental European Payments Union countries 19%; U.K. 10%; other sterling area 16%; U.S. and Canada 5%. Main export: cotton 82%.

Transport and Communications.—Roads (1953): 51,700 km. Motor vehicles in use (1953): cars 69,400, commercial vehicles 19,400. Railways (1954): 5,797 km. Shipping, merchant vessels, 100 gross tons and over (July 1954): 68; total tonnage 113,795. Telephones (Jan. 1954): 135,388. Radio receiving sets (1953): 405,000.

Agriculture.—Main crops (metric tons, 1954): maize 1,752,000; wheat 1,729,000; barley 116,000; rice 1,118,000; sugar, raw value 262,000 (1955 est.) 300,000; broad beans 234,000; lentils 60,000; cotton, lint 348,000; cottonseed 623,000; onions 746,400 (1955 est., 791,500). Live-stock (Sept. 1952): cattle 1,356,000; horses 39,000; mules 10,000; asses 816,000; pigs 27,000; buffaloes 1,212,000; sheep (Sept. 1953) 1,216,000. Fish landed (1952): 53,800 metric tons.

Industry.—(Metric tons) Crude oil production (1954): 1,970,000; raw materials (1953): phosphate rock 508,000; manganese ore 75,000; salt 387,000. Manufactured goods (1954): cement 1,237,400; cotton yarn 64,340; woven cotton fabrics 240,000,000 (metres).

Eire: see IRELAND, REPUBLIC OF.

Eisenhower, Dwight D. (1890—), 34th president of the United States, was born Oct. 14 at Denison, Tex.; his parents moved to Abilene, Kan., when he was a year old. He was graduated from the U.S. Military academy at West Point, N.Y., in 1915. (See also his biography in *Encyclopædia Britannica*.) In June 1942, during World War II, he was named Allied commander of the European theatre of operations and headed the invasions of North Africa and Europe that led to defeat of Italy and Germany.

After serving as chief of the army staff at the end of the war, he resigned from active service on Feb. 7, 1948, to become president of Columbia university, New York city. He was recalled to active duty in Dec. 1950 as head of the North

Atlantic treaty forces in Europe.

He resigned that post as of June 1, 1952, to campaign for the Republican presidential nomination. He was nominated July 11, and with his running mate, Sen. Richard M. Nixon of California, elected on Nov. 4.

The nation was shocked when the seemingly healthy Eisenhower was stricken with a heart attack on Sept. 24, 1955, in Denver, Colo., where he had been vacationing. His personal physician, Maj. Gen. Howard M. Snyder, diagnosed the illness as a "mild coronary thrombosis," and placed the president in an oxygen tent at nearby Fitzsimons Army hospital. Paul Dudley White of Boston, leading heart specialist, was called for consultation immediately.

The president was kept under a strict regimen of diet, rest, and treatment and showed steady improvement. He returned to Washington on Armistice day, Nov. 11, but left in a few days for his farm at Gettysburg, Pa., for a rest of an indeterminate period.

Eisenhower's illness had political and economic repercussions. The Republicans were panicked at the thought that he might not be able to run for re-election in 1956, for they had been confident of victory with him at the head of the ticket. But on the same token, the Democrats took new heart, figuring that Eisenhower's 1956 chances would improve if such a popular figure as Eisenhower were removed from the political scene.

Even before the president's heart attack, there had been doubt that he would stand for renomination in 1956. Eisenhower was known to be opposed to it. He himself had emphasized that he did not believe in the theory of the "inevitable man" and had urged the Republican party to "bring out" "young men" for office.

European statesmen showed grave concern over the president's health because of the impetus toward world peace that he had provided at the Geneva conference of the heads of the Big Four Powers in July. This meeting brought together the heads of the Big Four Powers for the first time since Potsdam and the death of Stalin—Eisenhower, Prime Minister Sir Anthony Eden of Britain, Premier Nikolai A. Bulganin of the U.S.S.R. and Premier Edgar Faure of France. Its purpose was to alleviate tensions and to terminate the "cold war," if possible.

On leaving for Geneva July 15, Eisenhower expressed the hope that a spirit of "conciliation, tolerance and understanding" would flow from the conference, provided the Russians were sincere in their professions of peace. He pledged himself to abolish the attitudes of mutual distrust which had plagued the nations since World War II.

"Such a change," he said, "could be the greatest step toward peace, toward future prosperity and tranquillity that has ever been taken in the history of mankind."

On arriving at Geneva, he said:

"Some years ago, I came to Europe with an army, navy, and air force, with a single purpose to destroy nazism. . . . Now, at this time, I come armed with something far more powerful—the goodwill of America—the great hopes of America—the aspirations of America for peace."

Assuming leadership of the conference, Eisenhower proposed a bold disarmament formula. He suggested establishment of an "alarm clock" system, under which the nations would exchange military blueprints, and permit periodical aerial inspection of their military installations. Such a system, he said, would prevent "surprise attacks" and, therefore, act as a deterrent to aggressors. His proposal won general acclaim save from the Communists.

While at Geneva, Eisenhower displayed his winning personality. Followed by a Pied Piper crowd, he walked through the narrow crooked streets to a small shop, where he spent

ys for his grandchildren.

In the conduct of domestic affairs, Eisenhower was relatively successful. His conservative appointees managed the economy and finances in such restrained and orthodox manner that the Democrats attacked the administration as "too friendly to big business." But employment, wages, production and sales reached new peaks. Unlike his predecessors, Eisenhower refrained from politicizing the opposition, and had good relations with congress. Their differences were trivial.

In the field of foreign affairs, congress approved mutual defense pacts with southeast Asia and with the Nationalist Chinese government on Formosa. It empowered the president to intervene if Red China attacked Formosa. It agreed to rearming of western Germany and termination of the four-power occupation of Austria. Finally, it gave approval to his Geneva attempt to negotiate with the Russians.

Despite sharp opposition, Eisenhower won his fight for flexible instead of rigid 90% parity price supports for basic farm commodities. Congress raised the hourly minimum wage from 75 cents to \$1, whereas the administration had asked for 90 cents. Eisenhower sought \$54,000,000,000 for the fiscal 1956 budget, and obtained \$52,200,000,000, of which \$32,000,000,000 was for national defense.

President Eisenhower led a relatively quiet life even before his heart attack, and there were no signs of ill health. His principal exercise was golf at the Burning Tree club in nearby Maryland, and he made several trips to Augusta, Ga., where a house had been built for him alongside the course laid out by Bobby Jones. He journeyed to Treasury Secretary George M. Humphrey's Georgia plantation for hunting in the spring, and until his illness he golfed and fished almost daily during his vacation at Denver. He frequently invited business or military friends to the White House for an evening of bridge.

But his principal relaxation was frequent week-end visits to his farm at Gettysburg, to watch the reconstruction of his future home and to observe the development of his fine herd of cattle. His obvious enjoyment of this bucolic retreat first inspired speculation that, despite the state of his health, he would not run again.

As further evidence of his thoughts, he once explained that he found the presidency a "fascinating experience," but he

added that he "did not like politics in the derogatory sense of the word."

(See also ELECTIONS, U.S.; POLITICAL PARTIES, U.S.; UNITED STATES.) (R. T. U.)

Elections, U.S. A Democratic trend that began in 1953 and coursed through 1954 continued in scattered local elections in 1955. The Democratic national chairman, Paul M. Butler said the 1955 results showed his party would enter the 1956 presidential contest in "a much stronger position at the state, county and local level than at any time since the 1930s." The Republican national chairman, Leonard W. Hall dismissed the results as having "no national significance."

Democrats held on to their control over two of the nation's large cities, Chicago and Philadelphia. In Chicago the Democratic nominee, Richard J. Daley, won election after he had ousted Martin Kennelly, the incumbent, in the Democratic primary.

Daley was backed in the primary and general election by Adlai E. Stevenson, the 1952 Democratic presidential nominee, who was trying again for his party's nomination. Stevenson also was friendly to Richardson Dilworth, Democrat who swept to victory over Republican W. Thatcher Longstreth in the Philadelphia mayoralty contest.

Dilworth's victory was a double blow to Republicans. They had hoped to regain a foothold in Philadelphia, which they had ruled until recent years. Longstreth had been endorsed by Pres. Dwight D. Eisenhower but the president's reputed popularity did not seem to rub off on the local candidate.

Elsewhere in Pennsylvania, the Democrats ended Republican control of six cities while losing only two to the G.O.P.

In Indiana, a farm belt area where there was evident dissatisfaction over declining agricultural prices, Democrats won control of most of the larger cities and many of the smaller towns where the Republicans had been entrenched. Democrats ousted Republican mayors in South Bend, Hammond, Evansville, Muncie and Richmond as well as in Indianapolis, the state capital.

Republicans retained control of the New Jersey state legislature but lost three state senate seats there to the Democrats. A referendum for a proposed \$100,000,000 water supply program was roundly beaten.

In Connecticut, Democrats won the mayor's office in Waterbury, which they had lost to the Republicans eight years previously, ousted an independent mayor in Norwalk and held on to New Haven. They elected five members of the board of aldermen in Bridgeport, but failed to defeat the 77-year-old socialist mayor, Jasper McLevy in that city.

The results in New York were inconclusive from a party standpoint, although both sides claimed gains. In 48 mayoralty contests, the Democrats picked up a net of one seat. Democrats elected mayors in eight cities which previously had chosen Republicans. Republicans in turn ousted seven Democratic mayors.

On the basis of the returns, New York Gov. Averell Harriman said that "the Democratic trend which started two years ago is continuing and growing." Carmine G. DeSapio, Democratic national committeeman and Tammany Hall leader, said "it is evident that the successive Democratic victories since 1952 will continue throughout the country in 1956." But the Republican state chairman, L. Judson Morhouse declared that "The Tammany attempt to high-pressure upstate voters has been stopped cold."

New York state voters defeated a proposed \$750,000,000 state highway bond issue but approved low-rent housing, absentee voting and other state amendments. The general conclusion about the results was that the voters had rebelled against added

IES. DWIGHT D. EISENHOWER posing for news photographers with members of the medical staff of Fitzsimons army hospital, Denver, Colo., where he was recovering from a heart attack in Oct. 1955

CONTROVERSIAL PHOTOGRAPH showing three persons in a polling booth with the curtain closed during the Chicago, Ill., mayoralty election of 1955. The Chicago board of election commissioners claimed that the action was not illegal, as a voter is permitted to have the assistance of two election judges—one of each major party—in the booth. According to the source of the photograph, however, such assistance is not permitted with the curtains closed as shown in the photograph

taxes and expanded state spending.

Ohio voters gave a resounding setback to a proposal of the Congress of Industrial Organization permitting supplemental layoff pay and bigger unemployment benefits for workers in industry. Their decision delayed, but did not necessarily prevent, the eventual effectiveness of a plan which compromised the guaranteed annual wage demands made originally by the unions on the automobile manufacturers.

Under the agreements made by the union and the auto companies, laid-off workers would get 60% to 65% of their usual take-home pay. But such contracts were conditioned on approval of dual payments of states in which two-thirds of a company's employees work.

Across the Ohio border in Kentucky, A. B. (Happy) Chandler won back the governorship he once had held and had relinquished for a seat in the U.S. senate, and later the job as commissioner of baseball. Chandler defeated Republican Edwin R. Denny after Democrats outwardly healed a split in their party primary in which Chandler won the nomination.

The only other governor's race found no Republican candidate in the running in the general election. Democratic Atty. Gen. J. P. Coleman was elected governor of Mississippi without opposition.

In Virginia, which gave President Eisenhower a majority in the 1952 presidential contest, Republicans made some slight gains. They picked up one seat in the house of the general assembly, giving them six there, and retained their three seats in the senate. The G.O.P. won some county offices in Fairfax county (near Washington), for the first time.

Democrats succeeded in ousting Republican Mayor Pratt Remmel of Little Rock, Ark., breaking a four-year G.O.P. hold on that city. Elected was Woodrow Wilson Mann, a political novice.

Republicans came back in Salt Lake City, Utah, to replace veteran Democratic Mayor Earl J. Glade with Republican Adiel F. Stewart. Riverton, Wyo., elected its first woman mayor, Willa Wales Corbitt, a retired school teacher, in nonpartisan balloting.

In San Francisco, a Republican defeated a Democrat for mayor's office in an election conducted on a nonpartisan basis and without party labels. George Christopher, president of the board of supervisors, won the office over George R. Rea, a member of the state board of equalization.

Boston's Mayor John E. Hynes won a third term over another Democrat, John E. Powers, in a nonpartisan contest. In only special election involving a congressional seat, John Dingell, Jr., 24 years old, was elected to succeed his father, Michigan's 15th congressional district. Dingell, an attorney and a former assistant prosecutor, won over Republican Thomas Brennan, 26-year-old attorney, in the strongly Democratic district. (See also DEMOCRACY; POLITICAL PARTIES, U.S.; CONGRESS; and under various states.) (J. L. BE)

Electrical Industries. Sales of energy by electric utilities in the United States rose 15% during 1955 to a total of 476,000,000,000 kw.hr. Industry, the largest user, consuming 320,000,000,000 kw.hr. Of that amount, 244,000,000,000 kw.hr. was purchased from utilities and 76,000,000,000 kw.hr. was generated by industrial plants for their own use. The 244,000,000,000 kw.hr. purchased from industry was 51.3% of all the energy sold by utilities.

During 1955 the use of electric energy in manufacturing reached 212,000,000,000 kw.hr., a 10.4% increase over the previous year. Added to manufacturing consumption was the purchase of 47,000,000,000 kw.hr. for use by Atomic Energy Commission installations. This was slightly more than twice the amount purchased by the AEC in 1954. Other industries, including aluminum and magnesium, used 61,000,000,000 kw.hr. in 1955, 212,000,000,000 kw.hr. used by manufacturing, 47,000,000,000 kw.hr. by the AEC and 61,000,000,000 kw.hr. by other industries made up the total industrial use of 320,000,000,000 kw.hr.

Sales to Residential Customers.—During 1955 the use of energy by the average residential customer showed a real increase of 218 kw.hr. This brought consumption by the average customer to 2,767 kw.hr. per year. Electric utilities also added 1,300,000 new residential customers during the year, bringing the total number of customers to 44,400,000.

These 44,400,000 customers purchased 121,200,000,000 kw.hr. an increase of 12.7% over 1954 and representing 25.5% of the energy sold by the electric utilities. The customers paid an average of 2.65 cents per kilowatt-hour for this energy, and at this price the average customer's use of 2,767 kw.hr. cost \$73.33. The total cost of the energy used by all residential customers amounted to \$3,200,000,000.

Sales to Commerce.—Sales of energy to customers classified as small light and power showed a 9.1% gain during 1955. This gain brought the total use by commercial establishments to 100,000,000,000 kw.hr., or 17% of the total sold by utilities. The conditioning of office buildings and commercial establishments was a prime cause of the increase, although other factors such as lighting and commercial cooking also contributed to it.

Sales to other less important classifications, 6.4% of the total, rose 5% to 30,000,000,000 kw.hr. during 1955.

The increase of 10.4% in industrial sales, 12.7% in residential, 9.1% in commercial and 5% to other classifications brought total sales to 476,000,000,000 kw.hr., and the total gain over 1954 sales to 15.7%.

To meet this demand for energy the nation's major electric utilities (classified as class I electric systems) made available

44,000,000,000 kw.hr. To do this they used 117,000,000 kw. of generating capacity. This equipment experienced a non-coincident peak load of 98,000,000 kw. As a result these systems showed a gross margin (generating capability over peak load) of 19,000,000 kw., or 19% of peak load.

Private companies owned approximately 80% of the nation's generating capacity. Ownership of the remaining capacity was divided among rural electric co-operatives, municipalities, public power districts, state agencies and the federal government.

Electrical Manufacturing.—Manufacture of heavy electric power equipment continued at a high rate during 1955. Although deliveries of steel, particularly heavy plate, lengthened, no serious problems were created. Copper, on the other hand, was in short supply and as a result its price rose drastically. Production manpower was ample but a shortage of technical and engineering talent threatened to become a bottleneck.

The production of electric generating equipment both thermal and hydraulic scheduled for shipment during 1955 was about 1,630,000 kw. Of this amount 10,674,000 kw. was scheduled for shipment to U.S. electric power systems. The remainder was scheduled for export or to U.S. industrial plants. Of the 11,630,000 kw. scheduled for shipment 10,105,000 kw. was thermal. The remaining 1,525,000 kw. were hydraulic turbine generators. Steam generators (450 lb. per square inch pressure and higher) capable of delivering 62,160,000 lb. of steam per hour were scheduled for shipment in 1955. This amount was only 1% of that actually shipped in 1954 and only 54% of the 1953 shipments. New orders for steam generators during the first half of 1955 were 21% greater than those placed during the last six months of 1954. However, new orders for steam generators did not keep pace with orders for new thermal electric generating capacity.

During 1955 there were on order two atomic power reactors for U.S. electric power systems. They were to be used for the production of steam in new thermal power projects having a combined capacity of approximately 300,000 kw. Preliminary study of a number of other atomic power plants was started during 1955.

The production of nearly 60,000,000 kva. of power transformer capacity in 1954 was the highest on record. Scheduled production for 1955 was only 40,000,000 kva.

Appliance Sales.—Sales of electrical appliances during 1955 were generally well above those of 1954. During the first half of 1955 manufacturers of electric refrigerators sold nearly 2,200,000 units. Sales during all of 1954 totalled only 3,600,000 units.

During the first half of 1955 about 3,800,000 television sets were sold, or 34.6% above the sales during the same period of 1954. Total sales during 1954 amounted to 7,300,000 units.

Other appliances which enjoyed a healthy increase in sales during the first half of 1955 were electric ranges, 700,000, up 9% over the first half of 1954; washing machines, 2,100,000, up 29.8%; clothes dryers, 900,000. Sales of ranges during all of 1954 amounted to 1,200,000 units, washing machines 3,600,000 and dryers 900,000.

During the first nine months of 1955 retail sales of air conditioners amounted to 1,300,000 units as compared with 1,000,000 units during 1954. Production during 1955 probably fell below 1954 level because of the high inventory (600,000 units) at the start of 1955. (See also FEDERAL POWER COMMISSION; PUBLIC UTILITIES; RURAL ELECTRIFICATION ADMINISTRATION; TENNESSEE VALLEY AUTHORITY.) (Ar. Mo.)

Canada.—During 1954, 2,420,000 kw. of new generating capacity was brought into operation, raising the total to 13,110,000 kw. While hydro generation accounted for 11,669,000 kw. and thermal generation for only 1,441,000 kw. of total capacity,

the steady growth of thermal capacity over the past few years had been significant in a country blessed with abundant cheap water power. In 1954 thermal capacity accounted for 11% as against 7% in 1950. An electric power survey published by the dominion bureau of statistics in March 1955 forecast a generating capacity of 16,403,000 kw. in 1958, of which 2,295,000 kw., or 14%, would be thermal generated.

Of the presently developed generating capacity, 41% was located in the province of Quebec, 30% in Ontario and 13% in British Columbia.

Among major new power developments under construction were the joint Canadian-U.S. St. Lawrence river project, built in conjunction with the St. Lawrence seaway, the Bersimis river project in Quebec province and the expansion of the Kitimat power plant of the Aluminum Co. of Canada in British Columbia.

Surveys were continuing on two gigantic projects in Canada's north country, the Northwest power project in the Yukon Territory and the Hamilton river project in Newfoundland.

As a joint undertaking of the Canadian government, the Hydro-Electric Power Commission of Ontario and private firms, a start had been made on Canada's first \$16,000,000 atomic power plant near St. Joachim, Ont., expected to be completed in 1958.

(R. Rr.)

Other Countries.—The International Conference on the Peaceful Uses of Atomic Energy at Geneva in August drew attention to the efforts being made, especially by Britain and the United States, to capture the world market for nuclear power plants. The very high capital investment needed for the development of such plants was likely to confine their manufacture to the larger industrialized countries, and several groups of

δ Coverage incomplete, about 95% of total production.

engineering manufacturers were formed to undertake this development.

The British Nuclear Energy conference was formed for the discussion of developments in this field, and its inaugural meeting was on Nov. 30.

The British Electricity authority used 40,830,000 tons of coal and coke and 240,000 tons of oil and other fuels during the year ended March 31, 1955, and there were signs that the National Coal board would not be able to meet the increasing demands for coal. Nuclear energy was the most promising long-term solution for this difficulty, and 12 nuclear power stations, costing

about £300,000,000 and having a total capacity of between 1,500 and 2,000 Mw., were to be built and commissioned by 1965. Meanwhile, it was decided that the use of imported oil fuel, particularly at coastal power stations, should be greatly increased, rising to about 3,000,000 tons a year by 1960.

Denmark, the German Federal Republic, Greece, Norway and Switzerland were all planning to build nuclear power plants.

The largest hydroelectric station in the world, Zhiguli, on the Volga river, was nearing completion in late 1955, and details were given of the new five-year plan for electrification in the U.S.S.R. This would include a 600-mi. 400-kv. line from the lower Volga to Moscow and a distribution scheme for the whole of European Russia. (E. W. G.)

Electric Transportation: see URBAN TRANSPORTATION, U.S.
Electrification, Rural: see RURAL ELECTRIFICATION ADMINISTRATION.

Electronics. **Radar.**—An announcement from the U.S. army in Aug. 1955 revealed that more than 50 radar stations were being built along the Arctic coastline of Canada, as part of the U.S.-Canadian DEW (Distant Early Warning) line, a radar chain which was intended to give as much as six hours warning of bombing planes approaching North America over the polar regions.

Already seven stations were operating in Alaska, along with additional stations in Greenland, at the other end of the 3,000-mi. line. The new stations would fill in the middle.

The most powerful airborne search radars yet developed, designed for additional stakes in the radar fence guarding North America from a sneak attack by air, were announced by the General Electric company. These were to be installed in the navy's new radar picket blimps, built by the Goodyear Aircraft Corp. Each blimp was 342 ft. long and contained nearly 1,000,000 cu.ft. of helium. They were capable of remaining aloft on patrol for several days. The radar was housed under the blimp's two-deck control car.

Since radar beams cannot bend around the curve of the earth, they are unable to travel much beyond the visible horizon. Hence raising the radar several thousand feet in the air greatly extends its range, so that a blimp radar can, in some cases, detect a low-flying plane at twice the distance possible for a ground radar. The new radar was also being used in navy and air force aeroplanes.

Aerial Navigation Aid.—An electronic aid to aerial navigation, announced in 1954, was the automatic photoelectric sextant, developed by engineers of the Kollsman Instrument corporation. It automatically sights and follows the sun during the day, and the stars and planets at night and indicates, on a dial at the control panel, the average altitude over a selected period. The sextant tracking device, with its photoelectric telescope, may be installed in any part of the aircraft where it has an unobstructed view of the sky.

Electronic Computers.—A miniature electronic brain or computer, capable of use in aeroplanes flying faster than the speed of sound, was developed for the U.S. air force by the Bell Telephone laboratories. Known as TRADIC (for TRANsistor-DIGital Computer), the device uses nearly 800 transistors in place of the thousands of vacuum tubes in earlier computers. Because the transistor, which performs many of the functions of a vacuum tube, does not generate excess heat, TRADIC requires less than 100 watts to operate, about a twentieth of the power needed by comparable vacuum tube computers.

Progress in the use of electronic computers in foretelling weather was reported in a joint effort by the U.S. weather bureau, the navy and the air force, called the Joint Numerical

Weather Prediction unit.

The computer is fed data on air pressure at 50 different stations. From these, in about an hour, and after performing millions of computations, it yields numbers from which winds at three levels (ground, 20,000 ft. and 30,000 ft.) may be charted and then used, along with figures on rainfall, in forecasting the weather.

Another use of an electronic brain, in controlling the electric power generated by an entire utility system, was announced in April. The Kansas City Power and Light Co. had installed on its power system an automatic dispatching system, built by the General Electric Co. It regulates 500,000 kw. of electricity produced in three plants in the Kansas City area. While maintaining the frequency and scheduled power flow over transmission lines to neighbouring utilities, this new automatic control also adjusts the output of the generators to use the least possible amount of fuel.

In the past, even though automatic controls had been used, it was necessary for human operators to estimate the power required throughout such a system, determine the most economical schedule, and then manually set the controls determining which generators would supply the required power. The new system, which began operation late in 1955, automatically analyzes the information received from the power system and adjusts the throughput of the generators accordingly, to obtain optimum efficiency.

Use of Solar Power.—Direct use of solar power to operate a rural telephone line began in October, in experiments conducted in Georgia by the Bell Telephone laboratories and the Southern Bell Telephone Co. Those made use of the solar battery, announced by the laboratories in 1954 and whose efficiency had been materially increased since then.

The battery, which is encased in an aluminum housing smaller than a yard square and is covered with glass, contains 432 cells made of silicon and capable of converting into electrical power as much as 11% of the solar energy which falls upon them. Excess current, not needed for immediate operation of the

MUSIC SYNTHESIZER, an electronic device said to be capable of reproducing the sound of any musical instrument or group of instruments, demonstrated by H. F. Olson of the David Sarnoff Research centre of the Radio Corporation of America, Jan. 31, 1955

is fed into a storage battery to provide power at night and in cloudy weather. The telephone system makes use of transistors, in place of vacuum tubes, and so requires only small amounts of power.

Photographic Paper.—An electronic method of preparing at low cost a sensitive photographic paper that can make contact prints in exposure of a fraction of a second and requires no chemical processing, was developed by the Radio Corporation of America. It is called Electrofax and can be used to make permanent prints from photographic negatives, or enlargements from projected images.

A coating of a special zinc oxide in a resin binder is applied to the paper, which may be a low-cost wood pulp or a high-strength bond, according to requirements. Thus coated, it is insensitive to light. However, when electrons are sprayed on it in the dark by moving a charged wire across the surface, the paper acquires a negative electrostatic charge, making it sensitive, and it then must be protected from light.

Exposure is made through a photographic negative, as with conventional photographic printing processes. Where light falls, the negative electrical charge is reduced, thus producing a latent electrostatic image. Development is accomplished by dusting the exposed paper with a magnetic "brush," consisting of iron filings mixed with a pigmented resin powder, picked up on the end of a permanent magnet. The powder particles become positively charged and are attracted by the remaining negative charges on the unexposed parts of the paper. This image is fixed permanently by baking the sheet for a few seconds at a temperature that melts the resin powder and fuses it with the coated surface.

Amplification of Light.—Scientists of the General Electric research laboratory demonstrated a means of direct amplification of light which was an outgrowth of studies of the phenomenon of electroluminescence, whereby an electrical field applied directly to a phosphor causes it to glow. A G-E scientist, Donald A. Cusano, developed a phosphor which does not glow merely with application of the electrical field. However, when ultra-violet radiation shines upon it in addition it glows brightly.

As demonstrated, an ordinary lantern slide projector, equipped with an ultra-violet source, projected a picture on the phosphor screen, and a faint yellow image was visible. But when the voltage on the screen itself was applied and increased, the image became many times brighter. The scientists measured the number of photons, or light-units, striking the screen, and the number given off. These increased more than ten times, thus showing true light amplification.

Possible applications of the principles of the device in television, to give a picture-on-the-wall television screen, and also in X-ray fluoroscopy, photography and "seeing-in-the-dark" devices, were foreseen.

Electronics Applied to Medicine.—An electronic physiological monitor for patients under anesthesia was developed by R. Gilford and H. P. Broida, of the national bureau of standards, in a project sponsored jointly by the bureau and the Veterans administration. It automatically indicates changes in blood pressure, pulse, respiration and the volume of air taken into the lungs each minute.

A method which might make it possible to treat kidney stones with ultrasound instead of a knife was devised by Harold Lambort, of the Yale school of medicine, and Herbert F. Newman, of Gouverneur hospital in New York city. The high-frequency vibrations, of 25,000 cycles per second, well above the highest pitched sound waves, pass from the generator to a drill tip so small that it can be passed through the urinary duct to the stone, located in the passage or near the kidney. As it vibrates with a movement that is hardly visible, the stone is broken up.

Surrounding body tissues, which are elastic, vibrate freely with the applicator and are undamaged.

The experiments were made on cadavers, in which plaster of Paris stones had been placed to simulate those formed naturally, and it was found that between five and ten minutes were required to cut one. The physicians said that actual trials on patients might be possible in one to two years.

A new technique for magnifying microscopic details of a pathological specimen and projecting their images, by full-colour television, on to a 6-ft. screen, was demonstrated in February by the General Electric Co., before an American Medical association conference on uses of television in postgraduate medical education. The TV colour camera, looking into the microscope, views the magnified image and transmits it to a television projector.

With several hundred times less light than would be normally required on the specimen, it was said, an image can be secured that is more than a hundred times brighter than with conventional magnifying methods. This would make it possible for large groups of students in a medical classroom to observe with great detail and fidelity of colour, specimens which could otherwise not be viewed because of their sensitivity to light and heat.

Music Synthesizer.—A music synthesizer, that produces by electronic means any known or imaginable musical tone or combination of tones, was demonstrated at the Radio Corporation of America laboratories. Any sound may be described by its physical characteristics, including frequency, intensity, growth, duration, decay, portamento (glide between tones) timbre and vibrato. Each of these may be generated electronically and the synthesizer is a system of circuits which can generate them and combine them in any way desired. This is accomplished by means of a paper tape, punched out by an operator at a special keyboard.

Only a series of single tones can be produced at a time, but a whole orchestra can be simulated by synthesizing each tone series separately and recording it, then later combining the various records.

Electronics Applied to Oceanography.—The direction of flow and speed of water in a stream is recorded with the aid of ultrasonic waves in an instrument developed by Keefer S. Stull, Jr., of Johns Hopkins university, for the office of naval research. Another application of electronics to oceanography was described at the ninth annual National Electronics conference in Chicago. This device, developed by S. S. L. Chang, of the department of electrical engineering at New York university for the Beach Erosion board of the U.S. army corps of Engineers, records frequency spectrum of the power of a wave striking a beach. Previously an involved mathematical analysis was required to obtain such a spectrum, but the new device gives it automatically.

Compared with usual frequencies encountered in electronic circuits, these of the wave power are quite slow, one in a number of seconds. Therefore the method employed is to record the vibrations on magnetic tape and then to play it back at a speed 4,000 times as fast as that at which it was recorded. The speeded-up signal is detected with circuits commonly used in a frequency meter. In this way it was found that there is a peak of power at about one cycle in nine seconds. Elizabeth II

(ELIZABETH ALEXANDRA MARY) (1926–), queen of Great Britain, was born in London, April 21. She spent her early years at the London home of her father, then duke of York, at Windsor and at Balmoral castle. She was educated by her governess, Marion Crawford, and Sir Henry Marten, then vice-provost of Eton. During World War II she joined the Mechanical Transport Training centre, Aldershot. In 1947 she visited South Africa with the king and queen and Princess Margaret, and from there on her 21st birthday she broadcast to the empire, promising "My whole life shall be devoted to your service." Her engagement to Prince Philip of Greece (who later became the duke of Edinburgh) was announced in July 1947; they were married in Westminster abbey on Nov. 20. Prince Charles was born on Nov. 14, 1948; Princess Anne on Aug. 15, 1950. In 1951 she toured Canada and visited Washington, D.C., with the duke of Edinburgh, but in 1952 her tour of Australia and New Zealand was cut short by the death of her father on Feb. 6. She was crowned at Westminster abbey on June 2, 1953. In Nov. 1953 the queen and the duke left by air for their postponed commonwealth tour, returning to London in R.Y. "Britannia" in May 1954 with the royal children, who joined their parents at Tobruk. During June 24–26, 1955, they paid a three-day state visit to Norway. They made a three-day tour of south and west Wales, Aug. 6–8, and spent a day on the Isle of Man (Aug. 9). The queen dined at Downing street with Sir Winston Churchill on the eve of his resignation on April 4, and opened the new parliament on June 10. She launched the 24,000-ton passenger liner "Empress of Britain" at Glasgow on June 22, participated in a sale of work at Abergeldie castle, near Balmoral, to raise funds for Crathie church (Aug. 20) and unveiled the King George VI memorial statue on Oct. 21. On Christmas day she broadcast to the peoples of Great Britain and the commonwealth.

Employment. **United States.**—The total labour force of the United States increased by 470,000, from 67,786,000 in May 1954 to 68,256,000 in May 1955. At the later date, the total labour force represented 58% of the working population (the noninstitutional population, 14 years of age and over).

Total employment increased by 1,584,000 during this period (from 61,119,000 to 62,703,000). This increase was accounted for by a rise of 767,000 in the size of the civilian labour force (from 64,425,000 to 65,192,000) and a fall of 816,000 in the number of unemployed (from 3,305,000 to 2,489,000). Because of rounding, the individual figures do not necessarily add to group totals.

Male employment behaved in a manner similar to total employment. Male employment rose from 42,274,000 (May 1954) to 43,149,000 (May 1955), an increase of 875,000. This increase was accounted for by an increase of 302,000 in the male civilian labour force (from 44,471,000 to 44,773,000) and a decrease of 573,000 in male unemployment (from 2,197,000 to 1,624,000). During this period, the total male labour force rose by 10,000 (from 47,791,000 to 47,801,000), a figure smaller than the growth in the male civilian labour force.

Females in the civilian labour force numbered 20,420,000 in May 1955, and represented an increase of 466,000 over the level of May 1954. Female employment rose by 709,000 (from 18,

846,000 to 19,555,000), and the number of unemployed females decreased by 243,000 (from 1,108,000 to 865,000). The female civilian labour force accounted for 30% of the total civilian labour force, in May 1955.

A reversal of the downtrend in the number of employees in nonagricultural establishments was the outstanding employment development in 1954. Nonfarm employment continued to decline during the early part of 1954. Although this downtrend continued through most of the year, the over-the-month employment reductions were progressively reduced. The decline was ended in the fall, and employment expanded in the last three months of the year. In the first half of 1955, 1,600,000 workers were added to nonfarm payrolls. This represented the sharpest five-half rise since 1950. The June 1955 level of nonfarm employment (*i.e.*, the number of employees in nonfarm establishments), 49,300,000, was 1,100,000 greater than the June 1954 level. Nevertheless, it was still 616,000 less than the record figure for June 1953. (The data for June 1955 were preliminary, and all the data stated below have been adjusted by the bureau of labor statistics to first-quarter 1954 bench marks.)

During the period June 1954 to June 1955, employment in mining fell by 14,000 to 757,000, and contract construction employment was reduced by 19,000 to 2,610,000. The remaining industry divisions of nonfarm employment experienced increases in employment during this period. Manufacturing employment expanded by 646,000 to 16,481,000. Seventy-eight per cent of this increase was attributable to the increased employment in the production of durable manufactured goods. Employment in the latter group rose by 502,000 to 9,568,000, whereas employment in nondurable manufactured goods increased by 144,000 to 6,913,000. Employment in transportation and public utilities increased by 61,000 to 4,078,000, and employment in finance, insurance and real estate grew by 74,000 to 2,202,000. The growth of employment in wholesale and retail trade was primarily accounted for by the expansion in retail trade. Employment in wholesale and retail trade increased by 209,000 to 10,598,000. Retail trade employment increased by 153,000 to 7,781,000 and wholesale trade employment increased by 56,000 to 2,817,000. The employment in service and miscellaneous occupations rose by 63,000 to 5,778,000. An increase occurred in government employment, and was entirely accounted for by the increase in state and local government employment. Total government employment rose by 116,000, thus bringing total government employment to 6,832,000 and state and local government employment to 4,668,000. Federal government employment remained constant at 2,164,000.

Rises in employment in the transportation equipment (+140,900) and the primary metals industries (+137,200) accounted for 55% of the rise in employment in the durable-manufactured goods industries. The only category of the durable goods industries (cited in Table I below) that showed a decline in employment was ordnance and accessories. Employment in ordnance and accessories declined from 151,700 in June 1954 to 132,300 in June 1955, a decline of 19,400.

There was a greater divergence of employment trends in the nondurable-goods sector of the manufacturing industries than in the durable sector. Losses of employment occurred in food and kindred products (−11,800), tobacco manufactures (−1,500), textile-mill products (−1,000) and products of petroleum and coal (−1,000). Gains in employment in the nondurable-manufactured goods industries, during the period June 1954 to June 1955, were found in apparel and other finished textile products (+58,800), chemical and allied products (+28,900), rubber products (+26,300), leather and leather products (+18,900) and paper and allied products (+18,300).

The decline in nonfarm employment for the period 1953–

was influenced by inventory liquidations, a decrease in defense expenditures for military hard goods and a reduction in outlays for producer and consumer durables. During the period June 1954 to June 1955, there was a reversal of this trend of expenditure; and the repercussions of this reversal affected nonfarm employment. During the latter period, net inventory liquidation declined and there was a subsequent rise in net inventory investment. Consumers continued to spend more for durable goods, nondurable goods and services. Investment expenditures for new construction and producer's durables (combined) rose during this period. The cutback of national security expenditures slackened, and state and local expenditures rose.

The employment indexes for manufacturing industries reflect this increase in the level of expenditures. The index (1947-49=100) of employees in manufacturing rose from 106 in June 1954 to 110 in June 1955. Using the same base, the index of total employees in nonagricultural establishments rose from 110 to 113.

Great Britain.—The working population of Great Britain (analogous to the labour force in the United States) was 23,349,000 at the end of May 1955. Two-thirds of the working population consisted of men and 7,803,000 consisted of women. At that date 22,852,000 men and women were in civilian em-

forces and women's services (30,000). Ninety-four per cent of the increase in civilian employment was accounted for by the manufacturing industries. Employment in the basic industries (mining, gas, electricity and water, transport and communication, agriculture and fishing) declined, as did employment in building and contracting. On the other hand, employment in the distributive trades and in professional, financial and miscellaneous services increased from end of May 1954 to end of May 1955.

Canada.—The civilian labour force of Canada increased from 5,413,000 to 5,537,000, during the period May 22, 1954 to May 21, 1955. The total number of people with jobs also in-

employment, 180,000 were wholly unemployed and 811,000 were serving in the armed forces and women's services. Approximately two-thirds of the number in civilian employment consisted of men.

The number of civilian employment increased by 282,000 from the end of May 1954 to the end of May 1955. This increase was essentially accounted for by increases in the working population (191,000), and by decreases in the number wholly unemployed (62,000) and in the number serving in the armed

creased from 5,195,000 to 5,324,000, and the number without jobs and seeking work fell from 218,000 to 213,000 during this period. On May 21, 1955, 873,000 of the civilian labour force with jobs were employed in agricultural employments, and 4,451,000 were employed in nonagricultural jobs. The index of total employment in manufacturing (1949=100) fell from 108 in April 1954 to 107 in April 1955. Employment in the manufacture of nondurable goods was stable, but the index of employment in the manufacture of durable goods fell from 118 in April 1954 to 115 a year later. The employment index in forestry (1949=100) also fell (70 in April 1954 to 68 in April 1955). On the other hand the index of employment in mining rose from 108 (April 1954) to 110 (April 1955), the index of employment in trade rose from 111 to 113, the index of employment in finance insurance and real estate increased from 126 to 132 and the index of employment in service rose from 107 to 109, during the period April 1954 to April 1955.

Australia.—The general employment index (1948=100), excluding agriculture but including forestry, fishing and trapping, rose from 111 in March 1954 to 115 in March 1955. Employment in manufacturing (1948=100), including wage earners and salaried employees, increased from 110 in March 1954 to 113 in March 1955.

France.—The general employment index (1948=100) for France, excluding agriculture and certain public services, rose from 104 in April 1954 to 106 in April 1955. Using the same base year, the index of manufacturing employment, including wage earners and salaried employees, increased from 104 in April 1954 to 105 in April 1955.

Japan.—The Japanese index of general employment (1948=100), excluding agriculture but including fishing, rose from 125 in March 1954 to 132 in March 1955. With July 1950=100, the index of manufacturing employment, including wage earners and

salaried employees decreased by one point, from 121 in March 1954 to 120 in March 1955.

Norway.—The index of general employment, excluding agriculture (1948=100), for Norway increased from 110 in April 1954 to 112 in April 1955. The index of employment in manufacturing, on the same base, and including wage earners and salaried employees, increased from 110 in April 1954 to 113 in April 1955.

Union of South Africa.—The index of general employment (1948=100) rose from 116 in 1953 to 119 in 1954. This index covers mining, quarrying, transport, manufacturing, building, construction and electricity undertakings. Using the same base year, the index of employment in manufacturing, including wage earners and salaried employees, rose from 123 in 1953 to 125 in 1954.

West Germany.—The index of general employment, excluding agriculture (1948=100), rose from 124 in March 1954 to 130 in June 1954 to 132 in Sept. 1954. The index for the year 1953 was 122. The index for employment in manufacturing (the average of June, September and December 1948=100), including wage earners and salaried employees, rose from 133 in March 1954 to 138 in June to 141 in Sept. 1954. The index for the year 1953 was 130. (See also BUILDING AND CONSTRUCTION INDUSTRY; BUSINESS REVIEW; CENSUS DATA, U.S.) (P. TA.)

Endocrinology. **Pituitary.**—The theory that the posterior pituitary hormones are elaborated in the hypothalamus has rested primarily on the demonstration in animals of an intensely staining material both in cell bodies of neurones of the supraoptic nucleus and along their axones as they pass down the supraopticohypophyseal tract to the posterior pituitary. In studies on human tissues obtained at necropsy and with the utilization of a new staining technique, strong evidence was obtained to strengthen the hypothesis that posterior pituitary lobe hormones are elaborated in the hypothalamus. Because of the distribution of the stained material and its high content of cystine, it was felt that the material could be reasonably identified with posterior pituitary hormone. The synthesis of postpituitary hormones, *i.e.*, the oxytocic and antidiuretic principles, established that these are octapeptides rich in cystine.

Attempts to clarify the role of the hypothalamus and the posterior pituitary gland in the release of adrenocorticotrophin (ACTH) were intensified during 1955. A purified preparation of vasopressin, but not oxytocin, stimulated the release of ACTH. On further purification of the vasopressin, the ACTH-releasing activity was lost. The activity was recovered in an impurity in the original vasopressin preparation. The active substance was isolated by paper chromatography.

A new though somewhat radical approach was suggested in the management of malignant diabetes in young adults. Based on the experimental evidence of the diabetogenic action of growth hormone (GH) and ACTH and on reported regression of diabetes in several cases of hypophyseal deficiency, the pituitary gland was removed. It was felt that this operative procedure might prevent the damaging sequela of malignant diabetes such as blindness and irreparable renal damage.

Adrenals.—Two new synthetic corticoid preparations, prednisone and prednisolone, were developed and found to be superior to cortisone and hydrocortisone in the management of rheumatoid arthritis and equal or superior in effectiveness to cortisone or hydrocortisone in other acute and chronic inflammatory diseases, including intractable asthma, lupus erythematosus, gout, adrenocortical hyperplasia, nephrosis, etc. Furthermore, fewer side effects were obtained with the new synthetic steroids. The structures of prednisone and prednisolone are similar to corti-

sone and hydrocortisone, respectively, except that they have additional unsaturated bond on one of the four carbon rings. Unlike the two older hormones, prednisone and prednisolone do not cause significant retention of sodium or depletion of potassium. Milligram for milligram, these new steroids were estimated to be about four or five times more potent than cortisone and hydrocortisone.

The amorphous fraction of adrenal extracts, *i.e.*, the portion remaining after removal of all known crystalline substances, was found highly effective in maintaining the life of animals after adrenalectomy had been performed. Subsequently the active principle was crystallized and the chemical structure established. This new steroid was at first named electrocortin because of its tremendous effect on electrolyte balance, but it is now known as aldosterone. This adrenal steroid differs from corticosterone in that there is an aldehyde rather than a methyl group at C-11 position. An announcement was made at the 14th International Congress of Pure and Applied Chemistry that the complete synthesis of this compound had been achieved. Synthetic aldosterone is indistinguishable chemically from the natural hormone obtained from the adrenals of cattle. Aldosterone is 30 times as effective as desoxycorticosterone in maintaining electrolyte balance and well being in patients with hypoadrenocortical function, and about one-third as effective as cortisone in causing deposition of liver glycogen and in lowering the eosinophil count in mice in which adrenalectomy has been done.

The discovery of this new steroid prompted great interest in the role of this hormone in health and disease. A hitherto unrecognized clinical syndrome was described known as "primary aldosteronism." All patients suffering from an unexplained hypokalemic (low serum potassium) alkalosis are potential candidates for adrenal surgery to combat the metabolic abnormality caused either by adrenal cortical hyperplasia or tumor resulting in excess production of aldosterone. The first case history recorded with primary aldosteronism suffered from intermittent tetany, parasthesias, chronic severe muscular weakness, polyuria, polydipsia and hypertension without edema. Laboratory studies revealed high titers of a sodium-retaining substance in the urine, low serum potassium and high sodium levels, and alkalosis. At surgery, an adrenal cortical adenoma was found and after its removal the patient's clinical symptoms and metabolic abnormality disappeared.

Thyroid.—The concept that hyperthyroidism is caused by a pituitary "thermostat" set to maintain too high a blood level of thyroid hormone, or that the pituitary becomes hyperactive and cause the thyroid in hyperthyroidism secretes an abnormal thyroid hormone that cannot suppress the pituitary, had been questioned, and new evidence was presented that hyperthyroidism is not hyperpituitarism. The new evidence suggested that an excess of thyrotropin was present in hyperthyroidism but that the intrinsic iodine-trapping mechanism of the thyroid gland, which is not under pituitary control, is deranged. The study implied that when the administration of iodides is followed by amelioration of hyperthyroidism, the result is due not to the action of iodides inhibiting the effect of thyrotropin, but rather to direct action on the overactive thyroid cells by partly inhibiting release of thyroid hormone.

Favourable reports appeared on the use of L-triiodothyronine both as a test material and in therapy. The levorotary form, L-triiodothyronine, appears to be an extremely potent, orally active hormonal substance which manifests a unique thyroid activity directly at the cellular level. It proved effective in several cases of thyroid-resistant myxedema refractory to both thyroxine and L-thyroxine and in pituitary myxedema after thyroxine extract had failed to evoke any response.

In conjunction with I^{131} tracer tests, triiodothyronine ad-

stration provided an effective method for differentiating euthyroidism from hyperthyroidism.

The use of triiodothyronine was found to have great diagnostic value, since failure of suppression of thyroidal uptake is indicative of hyperthyroidism.

Gonads.—Sperm clumping often had been noted by investigators studying semen samples in fertility surveys. Explanations for this phenomenon were many. An advance in the knowledge of testicular physiology was made when sperm agglutination in sterile men was shown to be caused by the presence of agglutinins in the seminal fluid.

Sperm agglutinins were also detected in the blood sera of the two cases under study.

Attention was drawn to a syndrome of gonadal dysgenesis with adrogenic manifestations. The syndrome was reported in two females of short stature, webbing of the neck, with hirsutism and enlargement of the clitoris. It was believed that this syndrome was a variant of Turner's syndrome, and probably represented a transition between gonadal dysgenesis and male pseudohermaphroditism.

Steroid Anaesthesia.—The possibility of using steroid anaesthesia in humans had been entertained by various investigators ever since it was shown that certain steroids produced varying degrees of depression and anaesthesia in laboratory animals. On studying a large number of water-soluble steroids to determine their anaesthetic activity, it was found that the most promising was 21-hydroxypregnanedione sodium succinate. After study on laboratory animals, it was learned that there was a wide margin of safety and that in anaesthetic doses it did not produce significant hormonal effects nor did it cause salt retention or damage any vital organ. This steroid hormone was then used in humans as an intravenous drip, and in preliminary reports it was concluded that it is a true anaesthetic agent as evidenced by its ability to control pain, obtund reflexes, produce relaxation and sleep, all without depression of vital functions.

Chromosomal Sex Detection.—The skin biopsy test for chromosomal sex as an aid to differential diagnosis in errors of sex development such as hermaphroditism and gonadal dysgenesis was greatly simplified and the accuracy increased. The use of smears from the oral mucosa circumvented the inconvenience of obtaining skin biopsies and the staining difficulties occasionally encountered. Smear preparations were easier to interpret than skin biopsies and required less experience in cytology. The characteristic female sex chromatin was clearly visible in the epitelial cell nuclei of females in the range of 20%–79% of the cells studied, while a similar chromatin mass was absent or only present in the cells of the male in the range of 0%–4%. The sex chromatin of female cells was thought to be formed by heterochromatic portions of two X chromosomes adhering to each other in intermitotic nuclei.

For reasons that were only partly understood, the XY sex chromosomes of male nuclei did not form a distinctive mass of chromatin.

England: see GREAT BRITAIN & NORTHERN IRELAND, UNITED KINGDOM OF.

English Literature. **General.**—A courageous and large-minded attempt to survey the whole international field and delve beneath its surface was made in 1955 by Sir David Kelly in *The Hungry Sheep*. His wide diplomatic experience backed up by a study of ideas and influences led to a plea for more intermingling of spiritual values with economic motives, to check a dangerous conflict of interests leading to collapse. In something near to that conviction Jacquetta Hawkes and J. B. Priestley, examining personally two adjoining regions in America, pointed a symbolic contrast between the dignified, ancient culture of the Pueblo Indians in New Mexico and the newest, noisiest urban civilization of Texas. The latter typified the hollow craze for productivity, advertisement, debased culture and the creation of a mass mentality, for which, in *Journey Down a Rainbow*, they coined the expressive word "Admass." England had its own critics and examiners who aired some specific grievances in eloquent if controversial argument. For example, the pernicious influence of children's horror comics was strikingly urged in Fredric Wertham's *Seduction of the Innocent*; and Air Chief Marshal Sir Philip Joubert raised a storm by his allegations in *The Third Service* concerning governmental and inter-service treatment of the Royal air force. Geoffrey Gorer was on more genial territory in *Exploring English Character*, based on the results of a varied and widely circulated questionnaire.

The explorer of other countries usually allowed no firm line to be drawn between sociology and travel, or, on the other side, between his personal venture and the local scene. In an age when even the mountains and the poles are almost conquered, the writer of anything beyond a guidebook must be political or personal to earn his salt. Thus *The Dark Eye in Africa* took Laurens Van der Post back to a familiar setting to focus his knowledge and insight on the colour problem, and direct a searchlight on the obscure roots of prejudice. In contrast F. Spencer Chapman was all for *Lightest Africa*, journeying with his family party in a van. Peter Mayne examined the tangled politics of India's north-west frontier; but problems of a physical nature confronted Sir Edmund Hillary whose *High Adventure* brought the story of his mountain climbing to a climax on Everest the more compelling for its unpretentious narrative style. Veering further toward the consciously literary was Laurie Lee's *A Rose for Winter*, thinly but poetically presenting his view of Spain; and Patrick Anderson's emphatically individual impressions, in *Snake Wine*, of a Malayan university.

Individual reactions to an impermanent and alien mode of life were at the very heart of T. E. Lawrence's long-awaited memoirs of his retreat into the Royal air force. *The Mint* was generally felt to be disappointing and circumscribed in vision and observation, because Lawrence had chosen to restrict, as it were, his wisdom from seven pillars to a single post. Writers who looked back on their own natural environment and progress made a far deeper appeal. Richard Church's *Over the Bridge* had the captivation of a normal middle-class childhood vividly recalled by a poetic mind; just as C. S. Lewis, in *Surprised by Joy: the Shape of My Early Life*, gave a frank and inspiring account of all that had served to direct his spiritual progress. Two representatives of literary families wrote personal memoirs that stirred bygone coteries into uneasy life: David Garnett's lightly written *The Flowers of the Forest* showed the "Bloomsbury set" as a pallid and brittle foreground to the 1914 war, while John Lehmann, more seriously involved with his own development in *The Whispering Gallery*, moved among the left-wing intellects of the thirties.

Some more stable and significant portraiture came from biographers handling 19th-century figures; especially such disruptors of religious tradition as Darwin and Huxley who were

treated jointly by William Irvine in *Apes, Angels, and Victorians*. Several eminent women of that century were given a brave showing; after D. L. Hobman's *Olive Schreiner* and Averil Mackenzie-Grieve's *Clara Novello* came a triumphant revival of that once sensational novelist *Elinor Glyn* by her grandson Anthony Glyn. Historians tended to choose earlier periods: C. V. Wedgwood's *The King's Peace* was a finely balanced opening volume of her study of the Civil War; G. R. Elton's *England Under the Tudors* surveyed every aspect of a changing state. But a twentieth century history of equal scope and exhaustiveness was C. L. Mowat's *Britain Between the Wars*. To turn from historical periods to historic figures was to find plentiful and first-hand domestic detail of some famous diarists: *The Letters of Samuel Pepys and His Family Circle* were presented by Helen Truesdell Heath; and *The Grand Tour*, vol. ii of *The Boswell Journal*, edited by F. Brady and F. A. Pottle, lost the irrepressible traveller some affection through his callous behaviour to a dog.

Other books of the year included:

BIOGRAPHY.—E. C. Mossner, *The Life of David Hume*; Robert S. Paul, *The Lord Protector*; R. W. Ketton-Cremer, *Thomas Gray*; A. J. P. Taylor, *Bismarck: the Man and the Statesman*; Lewis Broad, *Anthony Eden: the Chronicle of a Career*; Peter Quennell, *Hogarth's Progress*; Richard Aldington, *Lawrence of Arabia*; J. C. Trewin, *Mr. Macready*; Percy Young, *Elgar, O. M.*; Robert Blake, *The Unknown Prime Minister: the Life and Times of Andrew Bonar Law, 1858-1923*; Anthony Bertram, *Paul Nash*; C. M. Maclean, *Mark Rutherford: a Biography of William Hale White*.

MEMOIRS AND LETTERS.—L. E. Jones, *A Victorian Boyhood*; Sarah Gertrude Millin, *The Measure of My Days*; W. B. Yeats, *Autobiographies*; King Peter II of Yugoslavia, *A King's Heritage*; Maurice Browne, *Too Late to Lament*; Barbara Winchester, *Tudor Family Portrait*; J. E. Norton (ed.), *The Letters of Edward Gibbon*; G. H. Healey (ed.), *The Letters of Daniel Defoe*.

LITERARY CRITICISM.—Peter Alexander, *Hamlet, Father and Son*; M. D. Parker, *The Slave of Life: a Study of Shakespeare and the Idea of Justice*; Sir C. M. Bowra, *Inspiration and Poetry*; Stephen Spender, *The Making of a Poem*; Lionel Trilling, *The Opposing Self*; F. L. Lucas, *Style*; Henri Peyre, *The Contemporary French Novel*; A. O. J. Cockshut, *Anthony Trollope: A Critical Study*; Robert Liddell, *The Novels of I. Compton-Burnett*.

TRAVEL.—Elizabeth Balneaves, *The Waterless Moon*; Nina Epton, *The Valley of Pyrene*; F. D. Ommanney, *Isle of Cloves: a View of Zanzibar*; Allan Chappelow, *Russian Holiday*.

HISTORY, SOCIOLOGY AND SCIENCE.—A. L. Rowse, *The Expansion of Elizabethan England*; David Ogg, *England in the Reigns of James II and William III*; James Bishop, *The Day Lincoln Was Shot*; Sir F. M. Powicke, *Modern Historians and the Study of History*; Guy Chapman, *The Dreyfus Case*; John Stuart Collis, *The Moving Waters*; J. S. Weiner, *The Piltdown Forgery*; Sir George Thomson, *The Foreseeable Future*.

MISCELLANEOUS.—*The Guinness Book of Records*. (S. NN.)

Fiction.—If many writers of note were absent from the fiction list of 1954, a good many reappeared in 1955, though few of them at their best. In fact, the only writer who appeared to add to an already firm reputation was I. Compton-Burnett, whose *Mother and Son*, though less sturdily constructed than some of her earlier books, showed a striking advance in the development of character and a new, more open, strain of comedy. Anthony Powell's *The Acceptance World*, shrewd and agreeable as it appeared in his continuing study of the social world between wars, left the total intention of the series still in doubt. This was the third volume of *The Music of Time*, but no sign of an architectural plan was as yet apparent. Elizabeth Bowen's *A World of Love*, an allusive, dryly romantic story of a young girl awakening from an infatuation, lacked the bite of her best work and emphasized her most notable weakness, which was to move her characters a little too far beyond the range of common earth. Joyce Cary, in *Not Honour More*, concluded his Chester Nimmo trilogy in high histrionic style, bringing his dubious statesman to a violent and ludicrous end; but the method of narration he chose for himself gave the book a singular effect of strain.

L. P. Hartley's *The Perfect Woman* suffered from a weary plot; the manner was excellent, the observation, in its oddly angled way, both narrow and deep; yet the character of the writer using women merely for his callous literary ends defeated Hartley as it had defeated others before him. Graham Greene's

thriller of political and amorous intrigue, set in Indochina, was his first novel for a long time to be almost devoid of religious motive. *The Quiet American*, though excellently constructed, vigorous and liberal in tone, had an air of belonging rather more nearly to the author's "Entertainments" than to his more serious work. Evelyn Waugh's *Officers and Gentlemen* brought abruptly to an end what was originally intended as a trilogy, in which, apparently, Waugh felt himself unable to sustain beyond a second volume. Guy Crouchback was never, perhaps, a figure interesting enough in his own right to prop up a comic epic, and the impression of *Officers and Gentlemen* was more so than more etiolated than that of *Men at Arms*. It was courageous and probably wise of the writer not to press to the end an intention which seemed to have failed its purpose.

Kingsley Amis, whose *Lucky Jim* was the most conspicuous first-novel success of 1954, marked time with his second book, *That Uncertain Feeling*. Here his highly comic verbal gift found no comic situation worthy of it, and the handling of the serious, consciously moral dénouement was something less than admirable. Nevertheless, it was plain that Amis' talent was a robust one and that he would have much more to say in the future. John Wain, a writer of Kingsley Amis' school, similarly disappointed somewhat with his second novel, *Living in the Present*, which made too raucous a protest, in terms too narrow, against the writer's concept of contemporary society; but he, too, made clear that young writers now had something new, if not always pleasing, to say.

Aldous Huxley's *The Genius and the Goddess*, though it had the flash of the writer's old nervous skill, had nothing in it to provoke or to startle.

One of the most praised novels of the year was Nigel Dennis' *Cards of Identity*, a dense, highly intellectualized satire on the personality of man in modern society and the pressures that may be put upon it. A novel only by courtesy, turgid at times, but at others brilliantly original, *Cards of Identity* was a philosophical experiment of considerable interest. P. H. Newby's first comic novel, *The Picnic at Sakkara*, amused and surprised a good many critics, and William Golding's *The Inheritors*, a construction of Neanderthal man faced with his own extinction, showed a high imaginative gift.

Other works of fiction published during 1955 included: *The Hidden River*, Storm Jameson; *A Sign of the Times*, Robert Kee; *The Guardians*, J. I. M. Stewart; *The Fall of the Sparrow*, Nigel Balchin; *The Stepmother*, R. C. Hutchinson; *The Liberator*, Gillian Freeman. (P. H. JN.)

Poetry.—During 1955, as in previous years, several well-known poets produced their *Collected Poems*. Chief among them were Stephen Spender, Kathleen Raine and William Empson. Empson's volume, in particular, was something of an event. The impact of this difficult poet on the work of certain of his juniors had been obvious for some time, but for most readers Empson was far better known as the author of such critical works as *Seven Types of Ambiguity* than as a poet.

Of new individual volumes the most impressive were *Nightfishing* by W. S. Graham and *The Tree of Idleness*, by Lawrence Durrell. Graham's previous work had been somewhat heady and undisciplined, with Dylan Thomas' influence only half-digested. In *The Nightfishing* his strongly evocative powers were still evident, but much more under control. The title poem, in particular, describing a night's work in a herring trawler, had a fine sweep and tang in marked contrast to the subdued, precise quality of much other poetry being written at this time. Durrell, a poet of more classical temper than Graham, produced probably his best book to date: sensuous, witty, rich in Mediterranean life and lore.

The volumes mentioned above, together with new collect-

by Herbert Read (*Moon's Farm*) and W. H. Auden (*The Shield of Achilles*), were probably the most important to be published during the year. Several other volumes of merit must, however, be mentioned. Laurie Lee's *My Many-coated Man* was certainly the slimmest book of the year, but what it lacked in size it certainly made up for in quality. Within his strictly limited range Laurie Lee again proved himself a lyrical poet of great charm and precision; the complete lack of any intellectual stiffening in his work, while making in some ways for thinness, was not unwelcome after the laboured utterances of some other poets. *Poems* was a first collection by Robert Conquest, a poet of wide interests, social as well as artistic, which impressed by its intelligence rather than by any great poetic power; indeed, the tone of these poems seemed almost flat at times. In *A Shot in the Park* William Plomer again showed his flair for light balladry, although, paradoxically, the most admired poem in his new book, "The Bungalows," was quite serious in mood. *A Way of Looking* was the second collection by a poet of delicate psychological perception, Elizabeth Jennings. The main weakness of her work seemed to derive from a certain lack of compelling experience, reflected in the rhythmical monotony of her poems when read as a whole. Nevertheless, her position as one of the most gifted of the younger poets was confirmed by this new collection. Epidemiology. The use of tissue cultures has made possible rapid strides in the epidemiology of virus diseases, both in terms of precise identification of infected persons and in the determination of the immune status of population groups. Tissue cultures have also provided the means by which poliomyelitis virus can be grown in the large amounts required for the making of a vaccine. The use of tissue cultures or virus isolation has resulted in the discovery of new viruses, whose relation to human disease remains to be explored.

In bacterial diseases, the modern antibiotics have reduced the severity of disease so much that many diseases are of comparatively little significance, in terms of human suffering, long-term complications, death or loss of time. Antibiotics may rid the patient of the bacteria causing the disease, so as to lessen considerably the need for isolation and quarantine. Many bacteria become resistant to antibiotics and scientists are busy trying to keep one step ahead by developing new antibiotics. However, the over-all effect is that antibiotics have helped to cut down some major communicable disease problems into minor problems. A third aspect of communicable diseases is the continued effort to apply methods of control, of proven value, to the major focuses of diseases. This is the responsibility of the World Health organization and of national and local governments. Application may be difficult because of insufficient funds and personnel, transportation problems and lack of public acceptance. Some of these disease problems are intimately connected with a low standard of living, which should be tackled at the same time.

The status in 1955 of certain diseases of international importance follows.

Poliomyelitis.—(The results of the field trial, conducted in 1954, of the poliomyelitis vaccine developed by Jonas Salk, and of the temporary disappointment and renewed hope for the prevention of paralytic poliomyelitis by vaccination, are reported in the article POLIOMYELITIS. They were therefore omitted from this survey.)

Cholera.—Cholera was confined to Asia. The pilgrimage to

Mecca had not disseminated the disease since the time when vaccination against the disease was made compulsory. Epidemics occurred in East Bengal, spreading to Calcutta and in Bihar and Assam. Inadequate water supplies were an obstacle to control. Other parts of India were affected to a lesser degree. The situation in China remained obscure.

Influenza.—Influenza in the winter of 1954-55 resulted mainly from virus B. The disease was mild and not very prevalent. The first outbreaks were reported from Wales and northern England in Sept. 1954, from which they spread to the rest of the country, but waned in Feb. 1955. Yugoslavia was affected from Dec. 1954 to March 1955. In Jan. 1955 an outbreak occurred in northern Netherlands, and in the next month had spread throughout the country. Parts of Germany were affected in January and February. An outbreak was reported from Helsinki in January. Austria, Norway, Sweden and Switzerland were attacked in February and March.

The first outbreak of the influenza season in North America was in Calgary, Alta., in January. Soon thereafter an outbreak took place in Ontario and scattered outbreaks occurred in parts of Oregon, Illinois, New York state and Maine. In the far east, Japan reported influenza in January and February.

In general the disease year was characterized by spotty outbreaks rather than by widespread prevalence. The disease was mild and caused very few deaths. Influenza A caused sporadic cases.

Malaria.—Progress was made in eradication campaigns. An estimated 230,000,000 people had been liberated from this danger, but about 370,000,000 more remained to be protected. The chief weapon was residual DDT spray applied to dwelling places. This does not attempt to eradicate the mosquito which is the vector but rather aims to kill infected insects before they can transmit malarial parasites to humans. Thus, while the vector might persist, eventually there would be no human reservoir and no parasite for the vector to transmit. However, the drawback to this control method is the danger that in programs of limited scope the vector might be reinfected and the whole problem might recur. Actually, eradication campaigns had progressed extremely well in many parts of the world, but some mosquitoes were developing resistance to DDT.

The Pan American Sanitary bureau sponsored a program to eliminate malaria in the western hemisphere. It was believed that eradication could be achieved in less than five years if the governments concerned would co-ordinate their activities. This high-level co-ordination was considered necessary to prevent reinfestation across national boundaries. If an intensive drive could be put on, it was felt that malaria could be eradicated before DDT resistance in mosquitoes became a serious impediment. Actually, malaria eradication programs were far advanced except in two countries, and these two had begun extensive programs. British Guiana had achieved eradication, and the problem was almost solved in the United States, Argentina, Brazil and Venezuela. Chile and Uruguay reported no malaria. There were 135,000,000 people in the malarial zones of the Americas, and protection of greater or less degree had been achieved for 105,000,000 of them; 30,000,000 had not as yet been covered by these control programs.

Malaria eradication had been excellent in Europe, with only a few cases reported from Greece (formerly severely involved), Portugal and Spain. The disease was endemic in much of Africa. The biggest problem was there and in Asia, where the problem of attempting nation-wide control was most difficult. India had begun an ambitious program, and Thailand anticipated effective control within a few years. In this part of the world only two relatively small countries, Lebanon and Ceylon, had actually achieved eradication.

Plague.—Little human plague occurred in the Americas and Africa. Europe and the Mediterranean countries had had no human cases since 1947. Asia contained the most active endemic focuses. Little was known about the situation in communist China. India continued to maintain a record of successful control by means of residual DDT sprays to kill the rat fleas. Other focuses existed in Burma, Cambodia and Java. Thailand had had no human cases since 1951.

Rabies.—Rabies was found in insectivorous and herbivorous bats in several parts of the United States. This was expected to stimulate a search for other animal reservoirs, which could lead to a better knowledge of the epidemiology of this disease and thus to more fundamental control methods than the protection of domestic animals and humans.

Smallpox.—Smallpox was rife in parts of Asia and in Africa south of the Sahara. It had, practically speaking, been eliminated from the United States. There was some doubt as to whether the handful of cases reported in the United States were actually smallpox. Central America had little smallpox. It was still widespread in parts of South America, although usually in a mild form, alastrim. In Europe there were possibly some endemic focuses in Portugal and Spain. The Pacific, including Australia and New Zealand, was free of the disease. Nevertheless, smallpox can readily be brought into countries by travellers. Several examples had occurred in Europe and Great Britain in the past few years. The most recent happened when a soldier returning from Saigon to France started an outbreak of the severe type. It was interesting that the soldier had no signs of the disease. Seventy cases developed, of whom 15 died. Many of the cases were physicians who contracted the disease from their patients. Wide-scale vaccination brought the outbreak to an end. Outbreaks of this type were rather rare, in spite of the fact that vaccination against smallpox and the maintenance of immunity by revaccination were not at a very satisfactory level. The international quarantine regulations appeared to be quite effective.

Efforts to hasten the decline of smallpox were handicapped in some areas where refrigeration facilities were lacking. It was necessary to refrigerate the glycerinated lymph smallpox vaccine to keep its potency. With the development of a dry vaccine that would remain potent for a long time without refrigeration, it now became possible to take more active steps toward the eventual goal of elimination of the disease.

Epidemic Typhus (Louse-Borne).—Typhus had been decreasing in the Americas. In Central America it was no longer a serious public health problem, because of the vaccination and delousing campaign. In western Europe only Yugoslavia reported cases. There was little in the near east and the Mediterranean coast of Africa. Iran and Ethiopia had active focuses, however, and some occurred in South Africa. The disease persisted in central and southern Asia.

Yellow Fever.—The Mexican people were expecting to be menaced within a year or so by the northward march of yellow fever. Vaccination against yellow fever had been ordered in the southern United States, and mosquito control was intensified. Yellow fever began to head north from Panamá in 1948, and by 1955 had reached Nicaragua and Honduras. It was expected that Guatemala would soon be involved. The disease had been proceeding at a rate of 160 mi. a year. This was jungle yellow fever, which spreads only in forested areas, is borne by the *Haemogogus* mosquito and attacks the monkey, but rarely man. Its danger lies in the possibility that the disease may spill over from the jungles to areas harbouring the *Aedes aegypti* mosquito, and thus give rise to urban yellow fever in which man is the principal and a frequent victim. Man can be protected by vaccine, but more fundamental control,

based on eradication of *Aedes*, is a better approach. *Aedes* eradication had been a goal since 1928. Many countries South America and the Caribbean were now free of *Aedes*. Panamá, Costa Rica and Nicaragua had also been freed. But the possible zone of jungle yellow fever extends up to southern Mexico, and *Aedes aegypti* mosquitoes are found not only in Guatemala and Mexico but in the southern third of the United States. The only other area of yellow fever was Africa. In the jungle and urban types were probably widespread there. *Aedes* had always been free.

Control of disease may be sought in a variety of ways. An unusual method, not applied as yet to human illness, was the control of screwworms which are pests of cattle. The female screwworm mates only once in its life. In Curaçao thousands of male screwworms are sterilized by gamma-rays and liberated. The matings did not result in pregnancy, the females lost their chance and the screwworm disappeared. Eritrea: see ETHIOPIA.

Estonia. A Soviet Socialist republic, Estonia is bounded north by the Gulf of Finland, east by the Russian S.F.S.R., south by Latvia and west by the Baltic sea. Area: 17,413 sq. mi. (18,359 sq. mi. before 1940). Pop. (1954 est.) 1,200,000. Language: Estonian and Russian. Religion: Lutheran and Greek Catholic. Chief towns (pop. 1939 est.): Tallinn (cap.) 146,400; Tartu 60,100; Kohtla-Järve (1950 est.) 30,000. First secretary of the Estonian Communist party in 1955, Ivan Kabin; chairman of the presidium of the supreme soviet, August Jakobson; chairman of the council of ministers, Aleksey Müürisepp.

History.—The 1954 plan for industrial production in Estonia was reported overfulfilled by 5% and the total value of production in 1954 was 75% greater than in 1950. On Oct. 4, the first unit of the hydroelectric station on the Narva river started production. It supplied the Leningrad industrial area to the amount of about 120,000,000 kw.hr. yearly, i.e., two-thirds of Estonian total 1939 production.

Estonian agriculture in 1955 was organized in 912 kolkhozes or collective farms and 69 machine and tractor stations; more than 50% of the kolkhoz workers were women.

Despite the "thaw" in Soviet home politics nothing was known by 1955 of the thousands of Estonians deported to northern Russia and Siberia in June 1941 and after the second "liberation" of 1944-45. A Finnish newspaper reported that only Konstantin Päts, 81-year-old former president of Estonia, deported in July 1940, had been allowed to return.

In the new council of ministers formed after the Feb. 1955, election of a new supreme soviet of the Estonian S.S.R., a Russian was deputy premier and another Russian, Ivan Karpov, head of state security.

In March 1955 Archbishop Jaan Kiivit, head of the Estonian Lutheran Church, published an appeal asking for the prohibition of atomic experiments and weapons. (See also LATVIA; LITHUANIA.) (K. SM.)

See U.S. House of Representatives, 83rd Congress, Second Session, *Baltic States: a Study of Their Origin and National Development, Their Seizure and Incorporation Into the U.S.S.R.*, Third Interim Report of the Select Committee on Communist Aggression (Washington, D.C., 1955); Erika Viirsalu, *Women and Youth in Soviet-Occupied Estonia* (Stockholm, 1955).

Education.—Schools (1950): primary 1,148, pupils 142,500; second pupils 13,500; vocational, pupils 14,000. In 1953 Estonia had 7 institutions of higher education with about 10,000 students.

Finance.—Budget: (1954 est.) balanced at 1,179,168,000 roubles (1955 est.) balanced at 1,161,466,000 roubles.

Ethiopia. An independent empire of northeastern Africa, including (from Sept. 15, 1952) the autonomous province of Eritrea, Ethiopia is bounded west by the Anglo-Egyptian Sudan, northeast by the Red sea and French Somaliland and (British) Somaliland Protectorate, and southeast and south by (Italian) Somalia trust territory and Kenya. Area: about 457,722 sq.mi., including Eritrea 47,876 sq.mi. Pop. (1951 est., no census ever taken): 16,104,000, including Eritrea 1,104,000. Language: Amharic, official language; also Galla, Tigrinya, Somali, etc. Religion: Christian monophysite (in communion with the Egyptian Coptic church) 57%; Moslem 20%; other 23%. Chief towns (1951 est.): Addis Ababa (cap.) 401,000; Asmara 117,000; Harar 45,000; Dessie 35,000; Dire Dawa 30,000. Ruler, Emperor Haile Selassie I; prime minister in 1955, Aklilu Habtemariam; chief executive in Eritrea, Aklilu Asfaha Woldemikael.

History.—In 1955 the Emperor Haile Selassie I completed 25 years of his reign. A Silver Jubilee Trade exhibition was organized in Addis Ababa as part of the celebrations and attracted many visitors and exhibits from abroad. Economically the country remained on an even keel although the rate of expansion was slightly checked by the fall in world coffee prices, coffee having become the dominant export crop. During 1954–55 the value of coffee exported fell substantially below that of the previous year despite a small increase in the quantity exported. Nevertheless, the finances and economy remained in a healthy condition.

On March 1, certain areas of the Ogaden, which had been under British administration since the liberation in 1941, were transferred to Ethiopian administration under the terms of an agreement concluded at the end of 1954. Grazing rights of British-protected Somalis in the areas were confirmed and liaison arrangements between British and Ethiopian officials were set up. Objection was raised by certain of the British-protected tribes, who sought to raise the question in the United Nations on the ground that the Anglo-Ethiopian Treaty of 1897, which recognized the territory as Ethiopian, was made over the heads of the Somalis concerned.

In August, an Anglo-Ethiopian exchange of notes provided for the return to Ethiopia in 1956 of the Gambella enclave leased in 1902 to the Anglo-Egyptian Sudan for trading and administrative purposes.

Development of the empire made progress. A detailed survey was made to find a site for a new airport at Addis Ababa was completed and a survey of the port of Assab as a preliminary to its expansion was begun. Negotiations were begun with the Export-Import Bank of Washington for a loan to develop aviation facilities. A concession for rice cultivation, practically a new crop for Ethiopia, was granted to a Dutch company and work began. A new automatic telephone exchange was opened in Addis Ababa in March, and large-scale works were carried out in the city under the town planning recommendations of Sir Patrick Abercrombie. The United States "Point Four" aid in funds and staff continued, notably in education. Official trade missions visited Addis Ababa from the United Kingdom, Czechoslovakia, Poland and Egypt and a commercial *modus vivendi* was signed with Canada in June.

(F. E. St.)

Education.—*Ethiopia.*—Schools (1953–54): government primary 431, pupils 69,000; secondary and vocational 11, pupils 2,155. Teacher training colleges 2, students 500. University college and college of engineering, students 405 (including 200 at university college extension classes). *Eritrea.*—Schools (1952): primary 100, pupils 13,500; secondary and technical 16, pupils 1,367. Teachers in training 80.

Finance and Banking.—Monetary unit: Ethiopian dollar, with an exchange rate of Eth. \$2.5 to the U.S. dollar. Budget: *Ethiopia* (1953–54 est.; 1954–55 est. in parentheses): revenue Eth. \$121,340,000 (Eth. \$128,000,000); expenditure Eth. \$121,295,606 (Eth. \$108,170,341). *Eritrea* (1954–55 est.): revenue Eth. \$11,486,113, expenditure Eth. \$11,216,900. Currency circulation: (Dec. 1953) Eth. \$114,600,000, (Dec. 1952) Eth. \$94,900,000. Deposit money: (Dec. 1953) Eth. \$103,000,000,

(Dec. 1952) Eth. \$58,300,000.

Foreign Trade.—(1954) Imports Eth. \$155,180,000; exports Eth. \$174,590,000.

Transport and Communications.—*Ethiopia.* Roads (1955): first class 4,075 km.; others 10,622 km. Motor vehicles in use (1954): passenger cars 8,300; commercial vehicles 3,700. Railways (1955) 784 km. Air transport (Ethiopian Airlines, 1953) 3,129,000 km. flown; (1954) 41,350,000 passenger-km.; freight, 2,610,000 ton-km. Telephones (Jan. 1954) 4,776. *Eritrea.* Roads (1955): first class 889 km.; others 2,240 km. Railways (1955) 306 km.

Agriculture.—Main crops (metric tons, 1954): millet (Ethiopia) 1,660,000, (Eritrea, 1953) 43,000; barley 600,000; coffee 45,000; bananas 20,000; chick-peas (1952) 4,000; (1951): dry beans 275,000; wheat 100,000; maize 150,000; sesame 35,000; lentils 30,000. Livestock: cattle (Ethiopia, 1953) 21,000,000, (Eritrea, Sept. 1954) 1,150,000; sheep (Ethiopia, 1953) 19,000,000, (Eritrea, Sept. 1954) 950,000; (Ethiopia only, 1953): horses 1,000,000; mules 1,000,000; asses 3,000,000; goats 12,500,000; camels 500,000.

European Unity. On May 9, 1955, was celebrated the fifth anniversary of the founding of the European Coal and Steel Community (E.C.S.C.). The great hopes for a close integration of western Europe which were then aroused had not been fulfilled. The community was regarded as the first step toward European unity. But no second step was taken. The outstanding protagonists of this idea had lost influence in recent years: Alcide de Gasperi of Italy was dead, Robert Schuman of France was no longer in office, and Konrad Adenauer of the German Federal Republic was almost 80 years old and his position had been weakened by the setback suffered by the idea of European unity. The only part of it which was still functioning was the E.C.S.C., to which belonged France, Italy, Germany, Belgium, Luxembourg and the Netherlands.

Benelux Proposals.—Whereas France turned more and more from European to national economic solutions, the three smaller nations, Belgium, Luxembourg and the Netherlands (Benelux), urged an expansion of European integration.

At the beginning of June 1955 the foreign ministers of the six nations met in Messina, It. They elected René Mayer of France as chairman of the High Authority of the European Coal and Steel Community, succeeding Jean Monnet of France, who had resigned to dedicate himself to the furtherance of European unity. Following the lead of the Benelux countries, it was decided that further progress toward European unity should be the subject of studies which would cover problems of unification of transportation, gas and electricity, and the development of atomic energy for peaceful purposes, and even more important, the establishment of a general common market through a customs union and the harmonization of the various systems of social policy existing in the different countries. While the ministers decided to study these subjects, they did not accept the Benelux proposal for the need to delegate authority to a common executive with powers to act in the interests of all the member countries as a whole.

Several factors worked against the growth of European unity. With the war damages repaired and economic prosperity restored, the need for integration was no longer felt with the former urgency. The outwardly more peaceful attitude of the U.S.S.R. after Stalin's death seemed to remove the danger of an immediate war. Moreover, nationalism reasserted itself in Germany and in France and the struggle for the Saar inflamed na-

tionalist passions and was not conducive to the realization of European unity, which depended above all on Franco-German amity. It was frequently overlooked that Soviet policy, supported by the communist parties everywhere, was directed against the co-operation and integration of the western democracies, and that the peaceful gestures of the Soviet Union were the result of the unity of the western nations, a unity which owed much to the Soviet aggression in the years following World War II.

Britain and Europe.—France, in its growing distrust of Germany and of the latter's rapidly increasing strength, turned more and more toward Britain. At the end of 1954 an agreement was signed between Britain and the E.C.S.C. which was regarded as a model for a possible future link between Britain and a European community, a developing relationship that would grow with time. The agreement, signed on Dec. 21, 1954, became operative on Sept. 23, 1955. It established a standing council of association between the United Kingdom and the community's High Authority. Through this agency, information was to be exchanged and consultations held on matters of common interest concerning steel and coal. The council would meet alternately in Luxembourg, the seat of the High Authority, and in London. It left complete freedom to Britain, however, to determine its own policies on coal and steel and committed Britain only to the exchange of information and mutual consultation.

More important was Britain's co-operation in the military field. At the end of 1954 agreements were concluded establishing a Western European union (W.E.U.) for common military defense, consisting of Britain and the six nations of the European Coal and Steel Community. By the close margin of 287 to 260 the French national assembly voted on Dec. 30, 1954, to ratify the treaty creating the Western European Union, which was to include a rearmed Germany within the framework of the North Atlantic Treaty organization (NATO). The French government intended to broaden this co-operation by a gradual centralization of arms production on the European continent, beginning in 1957. The French premier, Pierre Mendès-France, suggested the establishment of a board, resembling the supranational High Authority of the European Coal and Steel Community, to direct the joint arms production program. He also proposed that the United States be asked to agree that all the arms production orders which it financed in the European continental member nations would require the approval of the new agency for the control of armaments, so far as they affected standardized war material. This plan was not acted upon, however, and the standardization of armaments, demanded also by NATO for its members, hardly made a start. Instead of the international arms production pool proposed by the French, the seven nations of the W.E.U. decided in May 1955 to establish a standing committee instructed to encourage agreements on "development, standardization, production and procurement of armaments" in close relation with NATO.

On March 10, 1955, U.S. Pres. Dwight D. Eisenhower in a message to the prime ministers of the seven nations of the Western European union, assured them that the United States would not reduce its ground, air and naval forces in Europe without consulting its allies. The president declared that the U.S. would be ready, if so desired, "to consult with the agency for the control of armaments of the Western European Union with the view to assisting in the achievement of its objective of controlling armament and preventing unjustified military preparations within the members of the Union." This assurance was intended to quiet French fears of too threatening a German armament.

On March 18, 1955, the German parliament completed approval of the pacts establishing the Western European union. By May 5 all the necessary ratifications of the pact were achieved.

The German Federal Republic was recognized as a sovereign state, and on May 7 the foreign ministers of the seven nations met in Paris, sitting as the Council of the Western European union, its supreme governing body. The chairmanship of the council was to rotate in bimonthly intervals. Louis Goffin of Belgium was elected secretary general of the permanent civil staff, which would have its seat in London, whereas a standing arms committee would operate in Paris in conjunction with NATO. The standing arms committee, which would have purely advisory powers, was the remnant of the original French proposal for pooling the members' arms production.

The Council of Europe.—The question was also taken up at the Paris meeting of how to co-ordinate the new military Western European union with the Council of Europe, which was inaugurated at Strasbourg, Fr., in Aug. 1949. The Council of Europe, on which 15 nations were represented, had not fulfilled the hopes which many of its friends put in it. Though it was the only existing sounding board of west European political opinion representing all political groups except the communists, it was purely an advisory body, the exact role of which in European political life had not yet been clarified. Its Consultative Assembly approved on Dec. 11, 1954, by a vote of 82 to 7 with 14 abstentions, the Paris agreements establishing the Western European union. It requested a close co-operation between the Council of Europe and the assembly envisaged for the W.E.U. Accordingly the Council of the Western European Union decided in Paris that the Assembly of the Western European Union, representing the parliaments of the member nations, should have the same membership as the Consultative Assembly of the Council of Europe, and that the two should meet in Strasbourg simultaneously.

The Problem of the Saar.—An integral part of the Western European union pact was the agreement reached between France and the German Federal Republic providing for the Europeanization of the territory of the Saar. The Consultative Assembly of the Council of Europe approved the agreement by a vote of 77 against 5 with 5 abstaining. Only the representatives of the German Socialists voted against it. The Europeanization of the Saar was being strongly opposed by the extreme German nationalists and the German Social Democrats. The chancellor of the German Federal Republic, Konrad Adenauer, a dedicated friend of European integration and of the west, achieved a full agreement with the French authorities on Franco-German economic co-operation and on the encouragement of cultural exchange between the two countries. According to the agreement, a joint commissioner would be appointed responsible to the W.E.U. who could appeal to the union's council when he believed the Saar statute had been violated either by the Saar legislature or from without. A Franco-German agreement was also reached about the joint purchase by the two governments of the Röchling steel works in the Saar. The board of directors of the Franco-German company was to be composed equally of French and German members, but the chairman would be French and would have the deciding vote. Thus the territory of the Saar would have become, if approved by the voters, a responsibility of the Western European union, until at the conclusion of the final peace treaty with Germany the question of the status of the Saar territory would be again taken up. But the popular vote of the Saar voted by a two-thirds majority on Oct. 23, 1955, rejected the European status. The vote struck a blow to European unity and to Franco-German *rapprochement*. The future of the Saar would doubtless form the subject of further Franco-German negotiations.

European Education.—Useful spade work for a future unification of Europe was being accomplished by a small number of newly created educational institutions. The oldest of these

the European college in Bruges, Belg., which was founded in 1949 and financed by the countries of the European Coal and Steel Community. It accepted only graduate students in residence according to a quota system, five each from Britain, France, Germany, Italy and Scandinavia, two from Switzerland, one each from Ireland and Greece, while three places were reserved for refugees from eastern Europe. Similar colleges were founded in Saarbrücken, where the French and the Saar governments provided a number of scholarships; in Turin, It., where the lectures were given in Italian, English and French; and in a somewhat modified form in Hamburg, Ger., where the students could pursue their undergraduate studies at Hamburg university. See also ARMIES OF THE WORLD; FOREIGN AID PROGRAMS, U.S.; NORTH ATLANTIC TREATY ORGANIZATION.)

Events of the Year: see CALENDAR OF EVENTS, 1955, pages 1-16.

Exchange Control and Exchange Rates.

In general, world economic conditions continued to develop favourably in the last months of 1954 and the first half of 1955, and further steps were taken in various countries to relax exchange restrictions which had been imposed in response to balance of payment difficulties. These measures were often of small significance in themselves, but taken together they undoubtedly made a significant contribution to the continued increase in world trade. Nowhere was the movement more noticeable than in western Europe, where, with industrial production continuing to rise, countries such as Switzerland, Belgium and the Netherlands found it possible to bring such controls virtually to an end. In the spring and early summer, indeed, there was considerable talk of a return to conditions of currency convertibility in western Europe, and in the renewal of the European Payments union provision was made for this transition. More and more, restrictions on imports reflected a protectionist desire to shield individual sectors of the economy, and in particular agriculture, from the effects of international competition.

As the months passed, however, it became increasingly clear that the hopes for an early return to convertibility were not to be realized. With buoyant business conditions came new problems such as the threat of inflation and the consequent loss of foreign exchange reserves. This was most clearly exemplified in the sterling area and notably in the United Kingdom. In the spring the Bank of England found it necessary to support the exchange rate for transferable sterling in New York city. In July and again at the meeting of the International Monetary Fund in September, the British chancellor of the exchequer announced that no changes in the sterling exchange system were contemplated. Considering the pivotal importance of sterling, this meant that no decisive action would be taken to restore general currency convertibility.

There were few exchange rate changes in 1955. In some Latin-American countries and also, for example, in Turkey and Thailand changes amounting to depreciations were made in multiple rate structures. These changes were brought about by local rather than general causes, such as a weaker export position for an important raw material export, continuing internal inflation or both.

United States.—Again in 1955 transactions of the United States with the rest of the world had a very great influence on the world economy. U.S. imports ran at an annual rate of \$12,000,000,000 (about 15% of world imports) in the first half of

the year. Military aid, though only about half as large as in the corresponding period of 1954, was still flowing out at a rate of well over \$1,000,000,000 per annum. Furthermore, expenditures abroad by U.S. troops and tourists and outflow of U.S. private and government capital also rose sharply. As a result the United States gold stock remained virtually stationary at just below \$22,000,000,000, and other countries continued to add gold and dollars to their reserves and thus strengthen their positions. The accumulation by other countries of gold and dollars amounted to \$766,000,000 in the first half of 1955, about the same as in the corresponding period of 1954.

Except in Canada the U.S. dollar remained at a premium in the free markets around the world. In general that premium was not large. Where it was substantial, it reflected unhealthy economic conditions in the country in question rather than a disequilibrium in payments between the United States and the rest of the world.

Canada.—Canada continued to maintain freedom from exchange controls and allow the rate of exchange to be determined by the play of market forces as it had done for the preceding few years. The country's payments position remained strong. Both exports and imports rose, and the current account deficit, at \$162,000,000 in the second quarter of 1955, was \$27,000,000 less than in the corresponding period of the previous year. On the other hand the net inflow of capital continued, with increased receipts of short-term funds more than offsetting a fall in Canadian receipts of long-term capital. Gold and U.S. dollar reserves still tended to rise, though more slowly than in 1954, and stood at \$1,939,000,000 at the end of June 1955 compared with \$1,869,000,000 a year before. Reflecting these developments the exchange rate for the Canadian dollar, which stood at around U.S. \$1.03 in New York in the latter part of 1954, weakened slightly early in 1955 and in October dipped below U.S. \$1.01 for the first time in two years.

Latin America.—On the whole, exchange rates were relatively stable in Latin America in 1955. Only in countries where domestic inflation, or weakening market conditions for important export products, particularly coffee, or both, caused the balance of payments position to deteriorate were further measures of currency depreciation taken or additional exchange restrictions imposed.

With tin exports lower in volume and inflationary conditions persisting internally, the international economic position of Bolivia remained weak. Gold and foreign exchange holdings continued to fall, reaching a low of U.S. \$4,500,000, or less than one month's imports, in March 1955. In an effort to rectify the position, the scale of surcharges on imports, which varied with the degree of essentiality of the goods in question, was revised sharply upward in May 1955. Despite this, however, the free rate for the boliviano rose to 3,000 per U.S. dollar at the end of May compared with 1,465 at the end of Sept. 1954.

In Brazil, too, inflationary conditions continued and were even aggravated. At the same time buyers of coffee abroad balked at the high prices asked, and Brazilian exports dropped, particularly to the United States. The country's foreign exchange reserve position went on deteriorating, and the large accumulated commercial arrears were either refunded, in the case of U.S. dollars, or reduced by special payments agreements as in the case of the United Kingdom and Germany. Although some minor modifications were made in the exchange system in force, basically it remained the same, at least until Oct. 1955. It was characterized by an auction system for imports wherein effective rates were determined by the basic rate plus a tax plus the price of an import certificate as determined at auction. Imports were divided into several categories according to whether they were considered necessities or luxuries, and the price of import

certificates was higher for the latter than for the former. Bonuses were granted to encourage exports, with the size of the premium being least for coffee and greatest for minor exports which found it difficult to meet international competition. These bonuses also varied with the currency received. For a time the export premiums were allowed to fluctuate in accordance with the free market rate, but from Jan. 1955 fixed bonuses were re-established, first for coffee and then for other exports, and there was an appreciable shift of commodities from the less depreciated to the more depreciated rates. As a result of these changes the exchange rate applicable to exports of coffee going to the dollar area, for example, moved from 23.36 cruzeiros to 31.50 cruzeiros to the dollar late in 1954 and to 37.06 cruzeiros to the dollar in Jan. 1955. As coffee exports and the amounts of dollars offered for auction declined, so the price of import certificates rose and with it the effective import rates. The free rate, applicable in general to invisible transactions, also weakened. From 58 cruzeiros to the dollar in the second quarter of 1954 the rate fell to a low of 83 in March 1955, subsequently recovering somewhat to 71 cruzeiros per U.S. dollar in August.

Inflationary conditions also persisted in Chile, and since the peso was overvalued, the balance of payments position was severely strained. In Nov. 1954 the rate applicable to major exports and imports was raised from 110 pesos to 200 pesos per dollar. In the summer of 1955 additional changes were made, the effect of which was to depreciate the currency further by applying rates of around 300 pesos per dollar to more and more commodities. By fall 1955 this had become the rate applicable to most exports.

A sharp decline in the price of and demand for coffee caused Colombia's foreign exchange position to deteriorate substantially in the fall of 1954, and as a result the trend toward the elimination of the payments restrictions which had been evident in the past few years was at least temporarily reversed. Taxes were increased on various imports, for example automobiles, the granting of exchange for imports on order was suspended, and substantial commercial arrears accumulated. Although these were wiped out fairly quickly, imports remained high, and further graduated taxes had to be imposed on imports to discourage demand. Furthermore, to stimulate coffee exports the rate of exchange applicable to them was raised from 2.385 pesos to 2.50 pesos per U.S. dollar.

Minor changes were made in the multiple exchange rate system in effect in Ecuador. The effect of these was to restrict some imports further and to stimulate minor exports which were finding it difficult to compete in world markets.

Effective July 1, 1955, the par value of the Nicaraguan córdoba was changed from 5 to 7 córdobas per U.S. dollar. The change was, however, more formal than real since the new par value had been the basic rate for several years, and only government transactions had taken place at the 5-córdoba rate.

In Uruguay prices continued to rise though at a moderate rate. To avoid a loss in reserves some minor adjustments were made in the multiple rate system in effect. Surcharges were imposed on luxury imports and the proceeds used to subsidize high-cost exports such as rice and linseed oil.

Sterling Area.—By far the most noteworthy development in the latter part of 1954 and the first half of 1955 was the deterioration in the position of sterling. Gold and dollar reserves of the United Kingdom, which acts as banker for the whole sterling area, stood at \$3,017,000,000 at the end of June 1954. By the end of December they had fallen to \$2,762,000,000 and by the end of Aug. 1955 they were down to \$2,457,000,000, less than \$500,000,000 above the generally accepted critical point of \$2,000,000,000.

Some of the causes of the worsening of the balance of pay-

ments were temporary, such as dock and railroad strikes and uncertainty about the outcome of the general elections. Underlying it all, however, was a tendency in the United Kingdom and also in some overseas sterling area countries such as Australia, to import more than their economies could currently afford to pay for. In the first quarter of 1955 United Kingdom and Australian imports were respectively 18% and 29% above the levels recorded in the corresponding period of 1954.

The adverse movement in the sterling area's transactions with the rest of the world was reflected in a decline in sterling exchange rates. By Jan. 1955 the selling rate for Canadian U.S. account sterling—which was traded within the limits \$2.78 and \$2.82 per pound—had fallen almost to the lower limit while transferable sterling stood at around \$2.72 per pound and discount of about 3%. After gold and dollar reserves had fallen by \$82,000,000 in the month of February, the United Kingdom took decisive action. This action was noteworthy in that instead of tightening exchange restrictions as had been done in similar situations in earlier postwar years, the government in March raised the discount rate from 3½% to 4½%, tightened restrictions on domestic credit and authorized the Exchange Equalization fund to intervene to support the pound in overseas markets where transferable sterling was being traded at a discount. For the first time in a quarter of a century a threat to British financial equilibrium had been met with monetary weapons alone. Further, the action had been taken before the difficulties of the sterling area had assumed the proportions of a full-blown crisis.

Although the official purchases were reported to have cost tens of millions of dollars in the weeks that followed, the substantial official intervention does not appear to have lasted long. The exchange rate for transferable sterling rose fairly rapidly above \$2.75 per pound and to more than \$2.77 in April when spot sterling in New York had recovered to almost \$2.80. In the first half of 1955 the United Kingdom balance of payments showed a surplus equivalent to \$47,600,000. But this included \$93,000,000 in U.S. defense aid, and although it represented improvement over the figures for the second half of 1954, it was still \$414,000,000 less than the surplus recorded in the first half of 1954. Although the prices for most of the primary products of which the sterling area was a major producer remained stable, it was not yet clear whether the measures taken by the government would be sufficient.

Among the other sterling area countries the deterioration in Australia's balance of payments was noteworthy. As a result of lower wool exports and a sharp rise in imports, stemming mainly from a high rate of investment and an expansion of consumer credit, the current account deficit was £A96,000,000 in the second half of 1954 compared with a surplus of £A54,000,000 in the corresponding period of 1953. The current account deficit with the dollar area almost doubled, and Australia drew substantial amounts from the sterling area dollar reserves. Currency controls alone were insufficient to correct the situation, and certain public works were postponed, while a stricter import licensing policy was also put into effect.

The only exchange rate change in the sterling area took place in Pakistan when on July 31 the par value of the rupee was changed from Rs. 3.309 per U.S. dollar to Rs. 4.762 per U.S. dollar. Unlike practically all the rest of the sterling area countries, Pakistan had not devalued in Sept. 1949. The new value of the rupee represented a devaluation of 30% which brought Pakistan's currency into line with the par values established in the rest of the sterling area almost five years before.

Continental Europe.—As in 1954, international economic conditions were on the whole very favourable in western Europe. Production and trade continued to expand, sometimes extror-

apidly, and prices in general remained stable. In the circumstances it was not surprising that there were no significant changes in exchange rates, that further progress was made to relax exchange controls in many countries and that discrimination against imports from the dollar area was diminished. In only one major country, Turkey, did conditions deteriorate. There were no important developments in the exchange systems of eastern Europe or the Soviet Union.

Belgium had long been one of the leaders in the drive for convertibility. In 1954 that country had taken important measures to free capital movements. Residents of all other E.P.U. (European Payments union) countries, for instance, were allowed to purchase securities traded in Brussels (including dollar securities), the proceeds being placed in special financial accounts and being freely transferable among residents of the E.P.U. countries. On April 1, 1955, these facilities were extended to all nonresidents of the Belgo-Luxembourg Economic union, including those of dollar area countries. A month later residents of Belgium or Luxembourg, who were already authorized to trade in nondollar currencies and in dollar securities in a free market, were permitted to put certain current and capital transactions in dollars through the free market, and nonresidents were allowed to convert their financial accounts into dollars in the Brussels free market. In practice this made the Belgian and Luxembourg francs, in the case of such capital transactions, convertible for residents and nonresidents at free market rates.

The international economic position of France improved in the course of 1955, and foreign exchange reserves rose from \$1,136,000,000 at the end of Sept. 1954 to \$1,754,000,000 at the end of May 1955. This spectacular rise overstated the improvement in underlying conditions somewhat, however, for U.S. offshore purchases and other forms of military aid still supplied a very substantial amount of dollars. French costs of production often appeared high, and confidence in the franc was still shaky. This was emphasized in the late summer and fall when the aggravation of unrest in North Africa and the concomitant political difficulties in France brought the black market rate to more than 390 fr. per U.S. dollar in early October, a higher level than had been quoted for several years.

West German exports continued to expand rapidly, as they had done ever since the postwar currency reform, and the balance of payments remained favourable. As a result of the measures taken in 1954 to relax controls on imports, however, the rise in gold and foreign exchange reserves slowed down, and these stood at \$2,868,000,000 at the end of June 1955 compared

with \$2,359,000,000 a year before. Official statements continued to emphasize the importance of a return to convertibility, but the measures taken to relax exchange restrictions were relatively minor.

In Greece significant progress was made in the liberalization of exchange restrictions. Most of the remaining export taxes imposed when the drachma was devalued in 1953 were removed, and by October there remained only the tax on exports of certain categories of olive oil, which resulted in an effective rate of dr. 27 per U.S. dollar compared with the official rate of dr. 30. Tourist allowances were also raised slightly, and discrimination against imports from the dollar area was reduced to insignificance.

The international financial position of the Netherlands remained strong. Its foreign exchange reserves stood at around \$1,300,000,000 throughout the year. They no longer rose because the previous improvement had made it possible to relax import and exchange restrictions applicable to transactions with the dollar area as well as other countries. As a result the Netherlands treated the dollar area and other countries almost alike. As regards capital transfers, U.S. and Canadian residents were allowed, as from Aug. 1, 1955, to repatriate holdings by converting their balances on capital accounts directly into dollars. As a result of the greater confidence in the Netherlands' exchange rate and economic outlook, there was a very substantial inflow of dollar capital to buy securities of Dutch companies, and this was largely used to make advance payments on external debt of the government.

Turkey, where financial conditions were weak in 1954, was almost the only country on the continent of Europe where the situation worsened significantly in 1955. The money supply continued to rise rather sharply, as a result both of a budget deficit and of the expansion of credit to business. Imports remained at a rather high level despite the imposition of more stringent restrictions, and the deficit in the balance of payments was financed to a significant extent by short- and medium-term suppliers' credits. Curb rates for foreign currencies went on declining, the U.S. dollar standing at 8.7 liras in August compared with 6.3 a year before and with the official rate of 2.80 liras.

Middle East.—With royalties from oil production continuing to rise and prices of other exports stable, economic conditions in the middle east as a whole improved in 1955, and there were practically no significant changes in exchange systems.

In Egypt cotton prices and domestic wheat production rose, and it was possible to relax exchange restrictions somewhat.

Arrangements to pay for imports with "export pounds" were terminated, procedures governing certain dollar and Swiss franc payments were liberalized, and exporters were allowed greater freedom to use their earnings to purchase imports.

With oil production getting under way again after the settlement of the dispute with the Anglo-Iranian Oil company, and with U.S. aid payments coming in again, the foreign exchange position of Iran improved, and further measures were taken to raise the exchange value of the rial, which had deteriorated significantly, and to unify the

Exchange Rates of Selected Countries
(In cents per unit of foreign currency)

Note: Includes only currencies regularly quoted in New York during 1955. Averages of certified noon buying rates for cable transfers. *Beginning Aug. 27, 1951, quotations on the Straits Settlements dollar were discontinued and quotations on the Malayan dollar substituted.

†Based on quotations beginning April 1, 1954.

‡Including Pakistan.

§The Mexican peso was devalued, effective April 19, 1954, from a par value of 8.65 to 12.50 pesos per U.S. dollar.

rate structure. In Feb. 1955 the rates applicable to most exports and to noncommercial transactions, 82 and 78 rials per dollar, respectively, were both fixed at 75 rials per dollar. The major import rate was changed from 84.5 to 79.5 rials per dollar in February and to 76.5 rials to the dollar in August.

In Israel black market rates for the Israeli pound fell in response to the improved commodity supply position and the slowing down of wage and price increases. From July on, residents, who had previously been obliged to convert foreign exchange receipts into Israeli pounds immediately, were allowed to keep deposits in foreign currencies with authorized banks.

Far East.—In response partly to improved prices for rubber and tin and partly to a substantial fall in imports, Indonesia's foreign exchange position improved in 1955. The exchange system was modified significantly in July. The system of import rights given to exporters as an incentive was abolished. Imports were reclassified into four categories ranging from essentials to luxuries and were subjected to varying levies. Thus effective exchange rates were established for imports ranging from 11.48 rupiahs per U.S. dollar for essentials to 45.90 for luxuries. In September imports of luxuries were shifted to auction rates.

The foreign exchange position of Japan also improved in 1955, and as a consequence the retention quota system, which had been introduced in 1953 to encourage exports, was modified. From March 1955 the percentage quota of export proceeds which exporters were allowed to retain for their own use was reduced from 10% to 5%.

Korea became a member of the International Monetary fund but no par value was fixed. The official exchange rate of 180 hwan per dollar was maintained, but free market rates were considerably lower. From Aug. 15 a rate of 500 hwan per U.S. dollar was applied to currency purchases by U.S. forces and in determining the value of U.S. goods sent to Korea under the aid program.

Primarily because imports rose and exports of commodities such as sugar declined, Philippine foreign exchange reserves fell to around \$190,000,000 early in 1955 compared with about \$250,000,000 a year earlier. In the circumstances, and particularly to avoid a large budget deficit, the 17% tax was maintained until August on all purchases of foreign exchange except those for the import of essentials. Thereafter it was replaced by a special levy on imports which had the same effect.

In response to a deterioration in the balance of payments an exchange certificate system was introduced in Formosa (Taiwan) in March 1955. The buying rate of NT\$15.55 per dollar was retained, but exporters were in addition given an exchange certificate which could be sold to importers in the market at a fixed price. The exchange certificate rate was fixed at NT\$21.55 per U.S. dollar.

With the world market outlook for rice, its principal export, remaining unfavourable, Thailand undertook in Jan. 1955 far-reaching revisions in its rice export procedures, the net effect of which was to increase the proportion of exchange which the exporter retained for sale in the free market and thus to introduce a mixed rate involving a depreciation of the baht from 12.45 to more than 16 baht per U.S. dollar. In August the entire proceeds of rice exports were required to be sold in the free market and a further depreciation took place, the new rate, 21.90 baht per dollar, thus being in line with those other exports to which the free rate was already applicable. Exploration and Discovery. During the year 1955 the outstanding voyage of ex-

ploration was that of a party aboard the U.S.S. "Atka." voyage made by this ship was for the purpose of exploring possible locations for United States bases in the antarctic, to occupied during the International Geophysical year, 1957-58. To do this, the "Atka" first went to Wellington, N.Z., and from there straight south to the antarctic continent. It first touched the Ross sea ice, close to the old site of Little America. Considerable changes had taken place in this region since it was last visited. Great parts of the ice barrier had broken away and drifted out to sea. The Bay of Whales had ceased to exist. The site of the former Little America, which at one time had been reached from the sea on the ice, was now next to the sea, and the ice had broken away completely, including approximately half of Little America IV of 1947.

The expedition next circumnavigated almost half the antarctic continent. They went through the Bellingshausen sea, close to the Palmer Land peninsula, and into the Weddell sea. There they again touched land at Coats Land. They followed the coast along the Queen Maud Land coast to Admiral Byrd bay, which is almost exactly at longitude zero, and thence went north again through the South Atlantic to Buenos Aires, Arg., and returned to the United States. They reported seeing a tabular iceberg of enormous extent, perhaps 50 mi. in length, floating in the Pacific sea. The ship carried extensive scientific equipment, including bathythermographs, cosmic ray equipment, meteorological instruments, other oceanographic instruments, as well as ionospheric equipment. In this latter field, especial emphasis was laid on the search for "whistlers" which are thought to be signals originated by lightning which travel along lines of magnetic force away from one hemisphere, and then are reflected back from the other hemisphere. The voyage of this ship was the first important reconnaissance of Antarctica for several years. The ship, accompanied by two others, returned to the antarctic in late 1955.

During the summer of 1955, an icebreaker operated by the Canadian government circumnavigated the North American continent. The ship left Halifax, N.S., went to Hudson bay, then north skirting the ice around the Boothia peninsula, spent some time in the vicinity of the north magnetic compass pole, then through the northwest passage into the Beaufort sea. The ship carried a number of scientists, who made observations on the fields of aurora, cosmic rays, oceanography and many other disciplines on the voyage. The ship returned via Bering strait south in the Pacific, through the Panama canal and north to Halifax.

The world's third highest mountain, and perhaps the most difficult to surmount, was successfully climbed on May 25 by a party led by Charles Evans. Kanchenjunga, a peak in the eastern Himalayas near Darjeeling, India, 28,146 ft. in altitude, has long been regarded as one of the world's most difficult ascents. Several expeditions had attempted it in the past, and several people had been killed on it. The British party that succeeded was numbered among its members several, including the leader, who were on the successful Everest expedition two summers earlier.

University peak, 15,030 ft. high and North America's highest unclimbed mountain, near the Alaska-Yukon border, was climbed by the John McCall memorial expedition on July 4. The expedition, consisting of six men, also made a first ascent of near McCall peak.

In the Chugach range, Alaska, Robert C. West, Jr., and West and Jim Maxwell participated in an expedition led by Lawrence Nielsen of Springfield, Mass. The party carried out scientific studies and explorations, were turned back at 11,000 ft. by bad weather on Mt. Witherspoon (the highest there), succeeded in ascents of three nearby peaks of 10,000-11,000 ft. elevation.

The Logan mountains, Northwest Territories, were visited

"NORTH POLE-5," Soviet ice floe research station set up in the arctic in April 1955

uly by Arnold Wexler, Sterling Hendricks, Don Hubbard, Dave Vernays and Ray D'Arcy, who made 16 first ascents. The mountains, just above 9,000 ft., are spectacular granite spires with granite walls rising 4,000 to 6,000 ft. above their valleys. The expedition entered and left the area by chartered plane.

Thomas A. Mutch and Joseph E. Murphy, Jr., on June 8 climbed Istoru Nal (24,271 ft.), a peak in the Hindu Kush, the range of mountains at the western end of the Himalayas. The expedition was called the Princeton Mountaineering Club Expedition to the Hindu Kush and also included Maj. Ken Bankala of the Pakistan army. Base camp was set up at 15,000 ft. on the Tirich glacier during the last week of May. Four camps were established above base, the highest being a little over 22,000 ft. With the exception of Minya Konka (24,900 ft.) climbed by Terris Moore's party in west China in 1932, this was the highest summit to be reached by Americans.

Bradford Washburn, director of the Boston Museum of Science, led a trip to Alaska from the middle of March to the middle of April 1955 to finish the ground survey details for his map of the McKinley area, to be published under the joint auspices of the Boston Museum of Science and the Swiss Institute for Alpine Research. The party of five camped on the upper Ruth glacier which was reached by plane from Talkeetna.

Mt. Makalu, Nepal, 27,790 ft., was climbed by a French expedition under the leadership of Jean Franco.

Charles Hitchcock, director of the American Geographical Society and secretary of the Explorers club, and William Phelps, Jr., conducted an exploratory expedition to the interior of Venezuela. This expedition continued the survey and ornithological work done in previous expeditions to this little-known area.

A report, not officially confirmed, stated that a party of six headed by Orlando Reney Braro had reached the summit of Los Yajas de Salado in the Andes on the Argentine-Chilean frontier and determined the altitude of that peak to be 327 ft. higher than Aconcagua.

A new archaeological expedition from Princeton (N.J.) university was about to start operations in Serra Orlando in Sicily, Italy, led by Erik Sjöqvist, former head of the Swedish Academy in Rome. It would be joined by four graduate students on a rotating basis, to train young scholars. The site promised to be an important new one and to contribute valuable new data about Greek history in this area.

An expedition from the American Museum of Natural History, New York city, uncovered important new material of an archaeological nature at Poverty Point, on Bayou Macon, 5 mi. N.E. of Epps, Louisiana. James A. Ford and Junius B. Bird of the museum and S. Neitzel of the Louisiana State Parks commission reported that this was the oldest known village of the

advanced Stone Age Indian people, between 800 and 400 B.C. Several mounds were found and excavated, and artifacts were found. The people used bird effigies, and made jewelry of quartz and jasper, as well as bolas of hematite.

An expedition of the Academy of Natural Sciences of Philadelphia, Pa., left for Peru, to study the aquatic life of the Amazon. The expedition would work at Iquitos and Tingo Maria. It was headed by Ruth Patrick, curator of limnology, and was accompanied by zoologists and entomologists.

The floating island of ice in the Arctic ocean, T-3, was reoccupied by a party of three U.S. air force scientists, who planned to continue scientific studies already started in the area between northern Canada and Greenland. The island was abandoned on May 14, 1954, when it floated to a point near the northern tip of Ellesmere Island, N.W.Terr. It was then considered too close to a fixed weather station to be of value as a weather-reporting station. The new party was interested primarily in scientific research. The scientists planned to make ice thickness and ocean depth measurements as well as meteorological, oceanographic, auroral and other observations.

Sharat K. Roy, chief curator of geology at Chicago Natural History museum, went to El Salvador to conduct an expedition to study Central American volcanoes and to collect specimens of volcanic products. He had been engaged in these studies for several years, and planned to conclude his work in El Salvador in 1955 and extend his activities to volcanoes in Nicaragua.

Waldo L. Schmitt, head curator of zoology, U.S. National museum, directed an expedition sponsored by the Smithsonian institution that was investigating the invertebrate fauna of the Belgian Congo, with special emphasis on the mites and ticks, as well as their plant and animal hosts. The crustacean fisheries operated by the natives in the extensive Congo river system and tributaries were also to be studied. The party included Edward Baker of the Entomology Research branch of the U.S. department of agriculture, who was particularly interested in the mites of importance or potential importance to agriculture in the United States, and Roy Lyman Sexton of Washington, D.C., a medical consultant who had previously conducted surveys for the government on the health of native populations. His son, Roy L. Sexton, Jr., chief of the photolaboratory at Walter Reed Medical centre, accompanied the expedition as microphotographic specialist.

New techniques for exploring the ocean bottom were put into use during the summer of 1955, in the Mediterranean. The French navy's research vessel, the "Elie Monnier," spent some time testing new methods for obtaining core samples of the bottom, and exploring the canyons around Corsica. J. Boucart of the Laboratory of Submarine Geology at the Sorbonne, Paris, was the scientific director.

The French vessel "Calypso," under the direction of Capt. J. Cousteau, also conducted a research voyage, studying principally the biological life along the coast and adjacent to Greece. H. Edgerton of the Massachusetts Institute of Technology, Cambridge, accompanied the vessel, principally to test new undersea photographic equipment.

The British submarine "Acheron" made a set of gravity determinations along the ocean floor on the route from England to Ceylon, going via the Mediterranean and returning around the Cape of Good Hope.

An arctic expedition left the U.S.S.R. to make oceanographic, magnetic and meteorological observations at and near the north pole. The expedition was led by N. A. Volkov of the Arctic Research institute.

An expedition led by R. J. Braidwood of the Oriental institute of The University of Chicago gathered much archaeological material in Iraq, especially around Jarmo. Samples of wood for radiocarbon dating were obtained, and bones, artifacts and pottery were uncovered. The expedition showed that goats had been domestic animals 7,000 years ago. Further evidence was found that overgrazing was already practised by early people and deforestation was noted. (See also ANTARCTICA; ANTHROPOLOGY; ARCHAEOLOGY; CARTOGRAPHY; COAST AND GEODETIC SURVEY, U.S.; INTERNATIONAL GEOPHYSICAL YEAR, 1957-58; NATIONAL GEOGRAPHIC SOCIETY; OCEANOGRAPHY.) (S. A. K.)

Explosions: see DISASTERS.

Export-Import Bank of Washington.

Established in 1934 as a District of Columbia banking corporation, the Export-Import bank was reincorporated as an independent agency of the United States government by the Export-Import Bank act of 1945 and operates under that act as amended. The basic purpose of the bank, as stated by the act of congress, is to aid in financing and to facilitate the exports and imports of the United States. During 21 years in pursuit of this objective the bank had authorized loans or guarantees in 65 countries in a total amount of \$7,200,000,000. A total of \$5,000,000,000 had been disbursed of which \$2,700,000,000 was outstanding at the close of the 1955 fiscal year.

The first half of the calendar year 1955 witnessed a continuing uptrend in Export-Import bank financing. During the first six months of 1955, 115 credits totaling \$336,700,000 were authorized, bringing the total of new credits authorized during the fiscal year to \$628,300,000. The bank continued its practice of assisting exporters on a case-by-case basis. In addition, the bank undertook, in appropriate cases, to establish credit lines for exporters under the terms of which they were apprised in advance, in fairly specific terms, how far the bank would be willing to go in financing their exports to specific countries. As of June 30, 1955, the bank had authorized 90 exporter credit lines in the total amount of \$144,670,000.

In financing exports upon application of the United States exporter, whether on a case-by-case basis or under a line of credit, the bank generally required the exporter to participate to the extent of 20% of the sales price and required the buyer to make an advance payment of varying percentages but usually amounting to at least 20%. The bank then agreed either to guarantee or to purchase the remaining 60% without recourse to the exporter; that is, the exporter had no obligation or liability to the bank for the portion financed or guaranteed by the bank.

The bank continued to receive and, in appropriate cases, to approve requests of foreign entities and governments for credits to finance the acquisition of United States materials, equipment

and services for developmental projects to be undertaken abroad. Such loans were considered one of the most important contributions the bank could make to an expanding world economy. Not only did they support the United States economy, policy generally but they contributed to economic and political stability abroad and thereby created expanding markets for United States exports. (S. Sd.)

Exports: see AGRICULTURE; INTERNATIONAL TRADE. See also under various countries.

Eye, Diseases of the. With the tremendous progress in the conversion of atomic energy to useful controlled power production, hundreds of thousands and eventually millions of workers potentially will be exposed to nuclear radiations. It is important to recognize the early signs of radiation injury for the protection of employees. A recent study of the survivors of atomic bomb explosions in Japan in 1945 revealed small opacities in the lenses of the eyes that developed two to ten years following the exposure to nuclear radiations in persons who showed no other signs of radiation damage. The changes did not lead to blindness in a significant number of cases and were increasing very slowly, if not at all. From these studies, it is readily apparent that the human lens is extremely sensitive to nuclear radiations, and the earliest signs of damage from that source to human life may be detected by examination of the eyes.

In 1955 the results of treatment of trachoma (granuloma of the lids) in North American Indians by a new antibiotic proved effective; treatment by antibiotics that had been found more effective in some cases had failed to produce a cure. Erythromycin cleared the symptoms of the disease in the inflammatory stages where sulfonamides used in the usual manner had failed to halt the disease. This was probably another instance of the acclimatization of viruses to antibiotics and evidence of change in the strains of disease producing organisms.

PHOTOGRAPHIC REPRESENTATION of the visual sensation of a person suffering from tubular, or "gun barrel," vision, a form of hysterical blindness in which sight is impaired in the periphery of the visual field. The photograph appeared in 1955 as part of a series showing from "within" the problems of persons with common forms of impaired sight.

Retinitis pigmentosa, a disease of the eye which had been formerly considered hopeless, was found to respond to treatment by Dicumarol, a drug that had been used mostly in treatment of vascular disease. This indicated that retinitis pigmentosa may be the result of vascular disease rather than of cell regeneration on an hereditary basis.

Ocular tuberculosis was being treated by use of Isoniazid, an expensive drug, combined with antibiotics and cortisone, with encouraging results according to a recent survey of several clinics. The combination of drugs must be varied according to their respective effects, as a fixed dosage could not as yet be established.

Colour sense in children does not vary according to sex up to the age of eight years. Above this age differentiation according to sex is found, and the percentage of anomalies is in accordance with statistical findings in adults. In advanced age a deterioration of the colour sense could be ascertained above 60 years of age both in males and females. This defect is more marked in people with low grade of intelligence (25%) than in subjects with high academic education (18%). In advancing age anomalies of perception of red and green occur which cannot be explained by changes occurring in the lens. (W. L. BE.)

Facsimile: see TELEGRAPHY.

Faeroe Islands (FAERÖERNE). A self-governing part of the kingdom of Denmark, the Faeroe Islands are situated in the North Atlantic between Iceland and the Orkney Islands, about 200 mi. northwest of the latter. Area: 1,400 sq.mi.; there are 21 islands of which 18 are inhabited. Pop.: (1950 census) 31,781; (1954 est.) 33,000. Language: Faeroese, akin to Icelandic rather than to Danish. Religion: Lutheran. Capital, Thorshavn, on the island of Stromo, pop. 10,950, 5,607. Governor general in 1955, C. A. Vagn-Hansen.

History.—At the election to the Lagting (parliament) on Nov. 8, 1954, the Sambands (Conservative) party gained 7 seats (last election 7), the Folkeflokkurin (Conservative Independence party) 6 seats (8), the Tjodveldisflokkurin (Republican Left-wing Independence party) 6 (2), the Social Democrats (6), the Selvstyre (moderate Home Rule) party 2 (4) and independents 1 (0). The new Landsstyre (government), formed by the Sambands party, the Folkeflokkurin and the Selvstyre party, had to put an end to a curious quarrel at Klaksvig.

Since 1951 Oluf Halvorsen had been serving as a temporary physician at the Klaksvig hospital. Because of a dispute with the Danish Medical association Halvorsen was dismissed, but when on April 21, 1955, the Danish governor tried to enforce the decision he was driven back to his ship in the harbour of Klaksvig by some of the inhabitants who wished to retain Halvorsen's services; they were encouraged by the Republican party to use force. The governor then asked for police assistance from Denmark, and 100 policemen were sent from Copenhagen to Thorshavn, the Faeroese capital. At the same time Viggo Kampmann, the Danish minister of finance, flew to the islands. He succeeded in reaching an agreement, under which Halvorsen could leave Klaksvig and another temporary physician would be appointed for six months. When, however, representatives of the governor arrived at Klaksvig on Sept. 28 to install a permanent physician, they were again attacked by followers of Halvorsen, and the Republicans demanded "the Danes out of the islands." In the end the permanent physician was appointed and Danish policemen, again requested from Copenhagen, landed at Klaksvig and arrested the rioters.

In May the Danish Folketing voted Kr. 6,100,000 for loans to Faeroese industries and guaranteed a Kr. 10,000,000 loan to Faeroese municipalities. (H. LN.)

Fairs and Exhibitions. United States and Canada.—

Records for attendance were shattered at many of the state fairs of the United States and the provincial exhibitions of Canada in 1955 and most of the regional and district fairs also had some of the best seasons in their histories. The excellent results were attributed to the generally prosperous condition of the countries, coupled with a steady improvement in attractions—both exhibits and entertainment—offered by the fairs. In all of the larger fairs the practice of booking "name" attractions from the movies, television and stage had been greatly extended, and it paid off handsomely.

Exhibits in every department kept pace with the general expansion, but entertainment undoubtedly was the chief factor in bringing people to the fairs.

Again leading all fairs on the continent was the Canadian National exhibition at Toronto. Its attendance of 2,809,500 in 14 days was only a little less than the 1954 all-time high. In the United States the Texas state fair at Dallas, with attendance of more than 2,000,000, and the Los Angeles county fair, Pomona, Calif., with more than 1,000,000, were the highest in attendance. In 1955, the Minnesota state fair, St. Paul, registered 1,008,101 attendance in its 10 days. This placed Minnesota in second place in attendance for a 10-day period, Pomona's fair running for 17 days.

As agricultural fairs, those at Pomona and St. Paul topped all others. From an entertainment standpoint, Dallas was the best. It had four college football games, an auto show, a Broadway stage show (for which \$4.50 top was charged), the National Tipica orchestra from Mexico City, and numerous other attractions. Illinois state fair, Springfield, reported attendance of 950,000, but of this number more than 200,000 paid no admission. Fairs which drew 500,000 or more included Michigan state fair, Detroit, 786,758; California state fair, Sacramento, 852,303; Pacific National exhibition, Vancouver, B.C., 750,792; Indiana state fair, Indianapolis, 590,000; Ohio state fair, Columbus, slightly more than 500,000; Missouri state fair, Sedalia, 542,175; Iowa state fair, Des Moines, 505,000. The Wisconsin state fair, Milwaukee, usually among the leaders, was hard hit by polio and attendance was down nearly 50%. Kansas Free fair, Topeka, drew 492,000; Central Canadian National exhibition, Ottawa, 431,797; Exposition Provinciale, Quebec, Can., 360,000; Eastern States exposition, Springfield, Mass., 413,552; New York state fair, Syracuse, 462,000; Mid-South fair, Memphis, Tenn., 362,000. (NA. G.)

Great Britain and Other Countries.—During 1955 the following shows and exhibitions attracted much attention:

U.S. EXHIBIT BUILDING at the 1955 industrial fair held in Paris, Fr.

Agriculture and Horticulture

- May 25— Royal Horticultural society's spring show, Chelsea, Eng.
- May 25—²⁸ Royal Ulster show at its permanent show ground, at Balmoral, near Belfast, Ire.
- June 1-4 Bath and West and Southern counties show, Launceston, Eng., the show's first visit to Cornwall for 42 years.
- June 21-24 Royal Highland show, Edinburgh, Scot.
- June 22-25 Royal Counties show, Horsham, Eng., the first visit to Horsham since 1889.
- July 5-8 Royal Agricultural Society of England's show, Wollaton Park, Nottingham, under presidency of the Duke of Portland. Show occupied 166 ac. and cost £165,000. Total attendance 185,527.
- Aug. 6 Bicentenary show of Brecon Agricultural society, Newton Park, Eng.

Industry

- March 1-²⁶ *Daily Mail* Ideal Home exhibition, Olympia, London. Record attendance of 1,315,431.
- May 2-13 British Industries fair, Olympia, London, and Castle Bromwich, Birmingham.
- July 5-16 10th International Printing Machinery and Allied Trades exhibition (IPEX), Olympia, London. The first printing exhibition in Britain since 1936. The 338 exhibitors included 40 from 9 countries.
- Aug. 26-^{Sept. 3} National Radio and Television exhibition, Earl's Court, London, opened two days late because of Electrical Trades union strike.
- Sept. 5-11 The 16th flying display and static exhibition of the Society of British Aircraft Constructors, Farnborough, Eng. Public days attracted 239,000 visitors (300,000 in 1954).
- Oct. 19-29 International Motor show, Earl's Court, London. Final attendance figure was 516,811, including 13,750 (a record) from overseas.

Miscellaneous

- June 1-11 Atoms for Peace exhibition at South Bank, London, jointly presented by the U.S. information service and the U.K. Atomic Energy authority. The exhibition later visited Belfast, Glasgow, Newcastle, Edinburgh, Leeds, Liverpool, Manchester, Sheffield, Nottingham, Birmingham, Cardiff, Bristol and Southampton. Nearly 36,000 attended in London.
- June 1-10 Aluminum centenary exhibition, Royal Festival hall, London.
- June 8-23 Antique Dealers' fair, Grosvenor house, London.
- July 10-16 Soho fair, London. A festival of arts, craft, food and drink.
- Sept. 2-^{Oct. 14} 5th International exhibition of book design, National Book league, London.
- Oct. 3-8 Five Centuries of British Timekeeping exhibition, Goldsmith's hall, London.
- Oct. 13 Steuben Glass exhibition, in London; first to be held in Europe.

Other Countries

- May 14-³⁰ Foire de Paris attracted 3,782,825 visitors including about 100,000 from abroad.
- June 1 U.S.S.R. Agricultural exhibition attracted more than the 8,000,000 visitors in 1954.
- June 14-19 21st Paris Salon de l'Aéronautique, Le Bourget, Fr.
- June 10-^{Aug. 28} "H55", at Helsingborg, Swed. Mainly concerned with Swedish industrial arts but included architecture, building, education, shipping and electricity.
- June 25-^{July 10} 2nd International Textile exhibition, Brussels, Belg., opened by King Baudouin.
- July 3 24th Poznan fair, Pol., visited by more than 1,300,000 persons.
- Aug. 8-20 1st International Exhibition of the Peaceful Use of Atomic Energy, Geneva, Switz., held in conjunction with conference on same subject. There were 140 exhibitors from manufacturers of eight countries.
- Oct. 8-13 Frankfurt Book fair, 1,150 publishers exhibited 48,500 books. On one day 100,000 attended.
- Oct. 6-17 42nd Salon de l'Automobile, Paris, attracted 1,100,000 people—a new record. A new Citroen model aroused enormous interest.
- Oct. 29-^{Dec.} Indian Industries fair, New Delhi, Ind., was the largest industrial exhibition held in Asia. It cost more than Rs. 50,000,000. (See also SHOWS.) (A. J. Kd.)

Falk Foundation, Maurice and Laura: see SOCIETIES AND ASSOCIATIONS, U.S.

Falkland Islands.

British colony (East and West Falkland and adjacent islands) and dependencies in the South Atlantic. Dependencies: (1) South Georgia (1,450 sq.mi., four whaling stations; permanent pop. about 700) with South Orkney (240 sq.mi.) and South Sandwich (130 sq.mi.) and (2) South Shetland (1,800 sq.mi.) and Graham Land (on Antarctic mainland). Area of colony: 4,618 sq.mi. Pop.: (1946 census) 2,439; (1953 census) 3,630, mainly of British descent and Protestant. Only town, Stanley (cap.), pop. 1,135. Governor in 1955, O. R. Arthur.

History.—Work began during 1955 at Stanley on plans to

improve the water supply, drainage and roads, and attention was also given to road communications with isolated farms.

Two new bases were established in the Falkland Island dependencies, at Anvers Island in the Palmer archipelago and Horseshoe Island off the west coast of Graham Land. The number of bases thus became eight and the Norwegian vessel "Norsel" was chartered to help the royal research ship "J. Biscoe" in their maintenance. An aerial survey of Graham Land by Hunting Airways on behalf of the British government was begun in 1956. The expedition ship "Oluf Sven" sailed for Antarctica in October with the main party and a helicopter board.

Great Britain made a direct approach to the International court at The Hague about Chile's and Argentina's challenge to British sovereignty in the dependencies. Both rejected recourse to the court, established further bases, and legislated to "incorporate" all or most of the area of the colony and dependencies into their respective countries. (J. J. Ty.)

Education.—(1954) Four schools, pupils 340; also 9 itinerant teachers.

Finance and Trade.—Currency: sterling with local notes. Budgets: *only* (1953-54 actual): revenue £241,741, expenditure £221,931; (1954-55 est.) revenue £285,142, expenditure £284,648. *Dependencies* (1953-54 est.): revenue £265,064, expenditure £263,882. Foreign trade (including dependencies, 1954): imports £3,460,000; exports £5,120,000. Principal exports: wool, hides and skins, guano, whale oil, whale meat meal.

Famines: see AGRICULTURE.

Farm Co-operatives: see CO-OPERATIVES; FARM CREDIT SYSTEM.

Farm Credit System.

Farmers and their co-operatives the year ended June 30, 1955, obtained \$2,400,000,000 in loans from the organizations of the operative Farm Credit system supervised by the Farm Credit administration. This compares with \$2,200,000,000 the preceding year.

The system operates through 12 farm credit districts and includes 1,100 national farm loan associations, 498 production credit associations, 12 federal land banks, 12 production credit corporations, 12 federal intermediate credit banks and 13 banks for co-operatives including a Central Bank for Cooperatives located in Washington, D.C.

Farmers' investment in the system reached a new high. Farmers and their co-operatives owned \$198,000,000 in capital stock in the system on June 30, 1955, compared with \$187,000,000 year before. All the national farm loan associations and the federal land banks were entirely farmer owned, as well as 8 of the production credit associations. Farmers' marketing, purchasing and service co-operatives owned 11% of the capital stock of the 13 banks for co-operatives. The Farm Credit Act of 1955, approved Aug. 11, 1955, provided a plan for the banks for co-operatives to gradually become completely owned by farmers' co-operatives using their services.

The 12 federal intermediate credit banks and the 12 production credit corporations are completely government owned. During the year, the amount of government capital in the system declined slightly from \$244,500,000 to \$243,900,000.

Farmers' and farmer co-operatives' investment in capital stock has grown because of the large increase in loans. Each farmer-borrower buys capital stock in his local national farm loan association equal to 5% of his loan. Each farmer who borrows from a production credit association must own capital stock equal to 5% of his loan. Farmers' co-operatives borrow from the banks for co-operatives are also required to own stock in the banks.

Farm Mortgage Loans.—Farmers obtained 57,000 farm bank loans for \$403,000,000 through the 1,100 national farm loan associations during the 1955 fiscal year. This was the

amount in any year except 1934—the peak of the emergency financing. It represented 15% more loans and 34% more credit extended than in the previous year. At June 30, 1955, farmers had 350,900 loans outstanding for \$1,400,000,000.

To obtain funds to finance loans, the land banks in the year ended June 30, 1955, had outstanding bonds totalling \$1,100,000,000. These bonds are not guaranteed in any way by the U.S. government. The balance of their loan volume was financed with the banks' own funds and borrowings from commercial banks totalling \$83,000,000.

Farmers repaid more than \$178,000,000 on their land-bank loans in the year. Of this, \$103,000,000 represented scheduled principal and interest payments. The balance was made up of partial or full repayments ahead of time.

Farmer-borrowers received \$3,700,000 in dividends on their stock in their national farm loan associations. This represented an additional substantial saving made by obtaining their credit co-operatively.

Production Credit.—Farmers obtained 272,000 loans for \$1,300,000,000 from their 498 production credit associations in the year ended June 30, 1955. The number of loans was up about 2% from the previous year and the amount was 8% larger. On July 31, 1955, farmers had loans outstanding for \$18,700,000, the highest at any time since the system was organized in 1933. Funds to make loans are obtained primarily by discounting farmers' notes with the federal intermediate credit banks.

The 479,000 members of production credit associations on June 30, 1955, owned capital stock in their associations amounting to \$96,000,000, up \$2,400,000 from a year before.

During the year, 65 more associations became completely farmer owned, bringing the number so owned to 419 or 84% of the total. The capital stock of the production credit associations owned by the government, through the 12 production credit corporations which supervise the associations, was reduced to \$2,100,000. This may be compared with a peak of \$90,000,000 that the government had invested in these associations in the mid-1930s.

Farmer-owned stock, plus accumulated earnings of nearly \$8,000,000, represented almost 99% of the total net worth of the associations.

Farmer-members of 121 associations received \$792,000 in dividends on their stock in the associations. The preceding year members of 86 associations received dividends of \$592,000. Members of 30 dividend-paying associations also received patronage refunds amounting to \$418,000.

The 419 completely farmer-owned production credit associations paid \$2,136,201 state and federal income taxes during the year.

Credit for Co-operatives.—Farmers' marketing, purchasing and business service co-operatives borrowed \$500,000,000 from the 13 banks for co-operatives in the year ended June 30, 1955, about 2% more than in the preceding year. Of this amount, 50% was for operating capital, 26% to store commodities and 24% for buildings and equipment.

Part of the funds to finance the banks' loans was obtained from the investment market through the sale of consolidated debentures totalling \$70,000,000. Debentures are not guaranteed in any way by the U.S. government.

On June 30, 1955, 2,129 farmers' co-operatives had loans outstanding for \$317,000,000. This was the largest number of borrowing co-operatives at any time since the banks were established in 1933.

For the year ended June 30, 1955, the 13 banks paid \$1,553,000 in federal franchise taxes.

Federal Intermediate Credit Banks.—During the year, the 12 federal intermediate credit banks extended credit amounting to \$1,900,000,000 to production credit associations, other financing institutions, the banks for co-operatives and farmers' marketing and purchasing co-operatives.

These banks obtained loan funds from investors by selling consolidated debentures. The banks had \$793,000,000 of debentures outstanding on June 30, 1955, and sales of debentures in the year totalled \$1,000,000,000. These debentures are not guaranteed in any way by the U.S. government.

The intermediate credit banks paid \$461,116 in franchise taxes to the government for the fiscal year 1955. (R. B. T.)

Farmers Home Administration. Farmers continued to make good use of the loans and other assistance offered through the Farmers Home administration, an agency in the U.S. department of agriculture. Loans accompanied by appropriate technical assistance were made for operating, purchasing, enlarging, developing and improving farms, and for meeting emergency credit needs of farmers who, because of drought, floods or similar disasters, needed a supplemental source of credit to continue normal operations.

About 135,200 farm families received this financial assistance through the 12-month period ending June 30, 1955.

Only farmers unable to get suitable credit from private or co-operative sources were eligible for the aid. The agency's approvals of loan applications were based on the policy of supplementing rather than competing with private credit.

A large proportion of the loans were made to young farmers, including veterans, who were establishing better farm setups and whose greatest needs were for adequate credit and some help in developing sound systems of farming and adopting efficient farm management practices. Veterans receive preference for most types of loans.

A total of 70,700 farmers borrowed production and subsistence loans amounting to \$133,591,000. The purpose of these loans was to make efficient use of their land and labour resources. This amount included loans to farmers already indebted to the agency. They used the loans to purchase livestock, feed, seed, fertilizer, equipment and other farm and home operating needs and to permit necessary adjustments for efficient family farm enterprises.

Progress made by 13,431 farm families who paid their production and subsistence loans in full in 1954 and continued to farm was analyzed during the 1955 fiscal year. The analysis reflected the value of the operating loan program. The average farmer in this group used Farmers Home administration credit four years. During that time, his net worth increased from \$4,907 to \$8,375, and his working capital from \$2,860 to \$5,187. Those listed as owners or part owners increased from 51% to 64%.

A marked increase in participation in the insured loan program in the year ending June 30, 1955, by private lenders resulted in 2,909 farmers receiving farm-ownership loans totalling \$31,933,000, all from insured loans advanced by private lenders and used to buy and improve or enlarge farms. Another 1,466 farmers obtained farm-ownership loans made from appropriated funds and totalling \$18,999,000.

The volume of insured loans made during the year was 80% greater than in any previous year.

Private lenders also began advancing insured loan funds for the new soil and water conservation loan program during the year. First loans for this program were made in Oct. 1954. This program, succeeding the former water facilities loan program, helped 2,930 individuals and associations carry out measures for soil conservation, water development and use, permanent pasture

development, and drainage. The insured loans totalled \$15,468,000. In addition, direct loans for the same purposes from appropriated funds to 744 individuals and associations totalled \$4,021,000.

In designated areas where emergencies caused need for supplemental agricultural credit, loans were made to 53,941 farmers for a total of \$69,595,000. The loans helped farmers who suffered losses from drought, storms and other disasters continue their normal operations.

Special livestock loans, in the amount of \$19,404,000, were made to 2,514 established producers and feeders (except commercial feed lot operators) to buy feed and replacements and to pay other expenses of maintaining normal livestock operations. Authorization for the special livestock loan program was established in July 1953 for a period of two years. At the expiration of that period in July 1955, the authorization was extended for an additional two years.

Total principal and interest payments by borrowers on all types of loans during the fiscal year ending June 30, 1955, amounted to \$275,927,000.

Faure, Edgar (1908—), French politician, was born at Béziers, Hérault, Aug. 18, 1908. He became premier of France for the second time on Feb. 23, 1955. He studied Russian at the Paris École des Langues Orientales, later graduating from the Paris faculty of law and practising in the capital. Entering politics, he joined the Radical party. During World War II he remained in Paris and took part in the resistance movement, joining General Charles de Gaulle's French Committee of National Liberation at Algiers (1943-44). In Dec. 1945 he was appointed assistant delegate of the French government at the Nuremberg trial of war criminals. On Nov. 10, 1946, he was elected deputy to the national assembly from the Jura *département* and was re-elected on June 17, 1951. From Feb. 1949 he served as secretary of state of finance in two successive cabinets. He became minister of the budget in July 1950 in the first Plevin cabinet and kept this portfolio in the following third Queuille cabinet. From Aug. 1951 to Jan. 1952 he was minister of justice in the second Plevin cabinet. He was briefly premier from Jan. 18 to Feb. 29, 1952. Not invited to join the Pinay and Mayer ministerial *équipes*, he returned to power in June 1953 as minister of finance in the Laniel cabinet, keeping this portfolio in the Mendès-France cabinet (June 18, 1954-Feb. 5, 1955). On Feb. 23 he formed a government based on a centre-rightist coalition (the 21st of the fourth republic) and was confirmed as premier by 369 votes against 210. He took part in the Geneva conference of the Big Four Powers (July 18-23). His government was defeated on Nov. 29, but he dissolved the national assembly and announced new elections. For this his former friend Mendès-France staged on Dec. 1 his exclusion from the Radical party.

FBI: see FEDERAL BUREAU OF INVESTIGATION.

Federal Bureau of Investigation. The Federal Bureau of Investigation, the investigative arm of the United States department of justice established in 1908 by Attorney General Charles J. Bonaparte, is charged with the investigation of certain specific federal

laws and the collection of evidence in such cases. It has jurisdiction over more than 140 federal investigative matters. A fact-gathering agency, the FBI neither evaluates the results of investigations nor makes prosecutive recommendations.

FBI headquarters is located in Washington, D.C. The 52 field offices of the FBI are located in major cities throughout the United States and in Hawaii, Puerto Rico and Alaska.

The investigative activities of the FBI include the fields of domestic intelligence and general crime. The FBI's domestic intelligence responsibilities include the correlating and disseminating of information bearing upon the nation's security interests of agencies of the executive branch of the federal government. In meeting these responsibilities, the FBI has the basic objectives: (1) to identify subversive elements within the United States and secure intelligence data concerning their activities and future objectives; (2) to obtain and disseminate security information vital to other federal agencies; and (3) to secure legal evidence of violations of federal laws.

Although the full effect of FBI investigations in the security field cannot be adequately measured by arrests and convictions, it is noted that 21 additional Communist party leaders were arrested during the 1955 fiscal year, and trials of Communist party leaders charged with violating the Smith act resulted in 18 verdicts of guilty. Sixteen of these persons were found guilty of conspiring to teach and advocate the overthrow and destruction of the United States government by force and violence. The remaining two were convicted under the membership provisions of the Smith act. From 1948, when 12 members of the national board of the Communist party were indicted, through June 1955, 131 Communist party leaders were arrested on Smith act charges, and 90 were convicted in federal court; however, two of these were granted new trials.

During the 1955 fiscal year, the FBI conducted investigations concerning a number of organizations which had been cited as subversive by the attorney general under executive order 10450. Additionally, facts concerning other groups were reported to the department of justice so that determination might be made as to their character. The facts gathered by the FBI concerning subversive organizations are promptly reported to the department of justice and to other interested agencies of the federal government. The FBI does not cite organizations as subversive nor does it recommend that such citations be made.

The magnitude of the FBI's domestic intelligence operations is evidenced by the fact that 84,725 security matters were received for investigation in the 12-month period ending June 30, 1955, an increase of more than 10,800 over the preceding year. Additionally, considerably more than 1,000,000 requests from other government agencies for security-type information were handled during the 1955 fiscal year.

In addition to the intensive efforts of the FBI in the field of domestic intelligence, the volume of investigations and accomplishments in the general investigative field continued to be high.

Convictions in cases investigated by the FBI during the 1955 fiscal year totalled 10,615, as compared with 10,511 during the previous fiscal year. These convictions represented 96% of the persons who were brought to trial in FBI cases. Sentences imposed totalled 29,296 years, 3 months and 26 days.

Fines, savings and recoveries in cases investigated by the FBI during the 1955 fiscal year totalled \$59,664,535. In addition, Renegotiation act claims adjusted in favour of the government totalled \$5,588,587. Included in the property recovered in cases investigated by the FBI were 14,254 automobiles.

Upon request, the services of the FBI laboratory and the identification division are available without cost to law enforcement agencies and to other federal government agencies. Du-

the 1955 fiscal year, the FBI laboratory received 27,664 requests for assistance involving 133,724 scientific examinations of 118,398 specimens of evidence, as compared with the 126,518 examinations conducted in fiscal 1954.

In the course of the 12-month period ending June 30, 1955, 175,694 fingerprint cards were received for retention in the files of the identification division. These fingerprint cards were received from 12,704 contributors and represented an average receipt of more than 20,000 fingerprints per working day. Fugitives identified through fingerprint comparisons totalled 13,491. As of June 30, 1955, the identification division had 135,990,686 fingerprint cards in its files, representing approximately 71,000,000 persons.

The FBI, upon request, co-operates with local law enforcement agencies in special training programs held at the FBI National Academy in Washington, D.C., and in police training schools conducted on a local level throughout the nation. With the completion of its 55th session in June 1955, the FBI National Academy had graduated 2,984 men representing police agencies in every state in the United States, Alaska, Hawaii, Puerto Rico, the Canal Zone and several foreign nations. In addition, the FBI participated in 2,315 police training schools held on a local basis.

As a further co-operative service to law enforcement, the FBI publishes the *FBI Law Enforcement Bulletin* and the *Uniform Crime Reports*. The *FBI Law Enforcement Bulletin*, a monthly publication, serves as a medium for the exchange of ideas between law enforcement agencies. The *Uniform Crime Reports* bulletin, published annually and semiannually, is a statistical analysis of local crime. (See also CRIME; JUVENILE DELINQUENCY; POLICE; SECRET SERVICE, U.S.) (J. E. H.)

Federal Communications Commission.

Figures released by the Federal Communications commission in 1955 indicated that more than 90% of the U.S. population was within reception range of at least one television station, and that about 75% lived in areas served by two or more stations. At the end of the fiscal year 1954-55, 582 commercial TV stations were authorized by the FCC, as compared with 573 at the close of the preceding fiscal year.

Radio and television authorizations of the FCC as of Sept. 30, 1955, are shown in Table I, and authorization by the commission in the nonbroadcast services are shown in Table II. The total number of individual radio transmitters—fixed, portable and mobile—employed in the broadcast and nonbroadcast services on that date was estimated to be in excess of 800,000.

National Defense Activities.—The FCC continued its extension of CONELRAD (control of electromagnetic radiation), a program designed to confuse potential enemy aircraft which might in wartime try to use commercial radio signals to get their navigational bearings. The participating stations in the program—numbering about 1,300 at the end of the fiscal year 1954-55—switch rapidly to different frequencies so that beams cannot be followed.

Table I.—Radio and TV Stations in the U.S., Sept. 30, 1955

Service	Authorized	Licensed	On Air
Commercial TV	581	144	473
National TV	34	1	15
Commercial radio (standard)	2,884	2,757	2,771
Commercial radio (FM)*	555	521	538
National radio (FM)*	131	121	124
Total	4,185	3,544	3,921

*Frequency modulation.

Table II.—Nonbroadcast Radio Authorizations in U.S., Sept. 30, 1955

Airline	52,908	Amateur	139,628
Aviation	44,183	Common carrier	2,001
Industrial	26,357	Experimental	661
Public safety	19,153	Other	2,704
Land transportation	21,608		

Other national defense projects of the FCC were cloaked in secrecy by security rules. The commission established a priority system for telephone-telegraph communications to be put into effect immediately in case of national emergency.

International Frequency Allocations.—The FCC completed its domestic implementation of provisions of the Geneva, Switz., agreement of 1951 in so far as they applied to mobile, amateur, fixed, aeronautical and maritime mobile transmitters. Under the Geneva agreement, 65 nations, including the U.S., agreed to consult with each other before allocating new frequency bands for radio services. During 1954-55, U.S. representatives attended 10 international conferences and meetings on radio.

Monitoring and Research.—Aided by mobile units, the FCC discovered a total of 105 illegal radio transmitters throughout the U.S. in the fiscal year 1954-55. District offices of the commission investigated about 18,000 complaints of interference with reception. At the commission's instigation, local committees had been set up in 412 communities to investigate TV interference.

The commission also continued its research into technical means of reducing man-made interference with radio transmission and reception.

Telephone and Telegraph.—During the fiscal year 1954-55 the FCC granted 126 wire-line and 381 microwave licences for long-distance telephone circuits. No important telephone rate changes (supervised by the FCC) were authorized during the year. Effective July 15 and Aug. 1, 1954, however, Western Union (the only domestic U.S. telegraph carrier) increased its rates to yield an estimated increase of \$10,000,000 in the company's annual revenue. Later in 1954 rate increases for domestic press messages and for telegraph messages to Canada were authorized. (See also RADIO AND TELEVISION; TELEGRAPHY; TELEPHONE.)

Federal Deposit Insurance Corporation.

In the fiscal year July 1, 1954, to June 30, 1955, there were five cases in which disbursements by the Federal Deposit Insurance corporation were necessary to protect depositors of insured banks. Disbursements in these five cases totalled \$3,100,000 and there remained unpaid claims of \$79,619.

From the beginning of deposit insurance until June 30, 1955, the corporation had disbursed \$333,000,000 to protect depositors of 427 distressed insured banks. This consisted of \$331,400,000 for protection of depositors and \$1,600,000 to facilitate termination of liquidations. The banks involved held approximately 1,400,000 accounts with deposits of about \$563,000,000, of which about 0.5% was lost to depositors. Liquidation of assets by the corporation had resulted in recovery of about nine-tenths of its total disbursements.

On June 30, 1955, the assets of the corporation totalled \$1,717,189,827, of which \$1,711,528,619 consisted of obligations of the United States government. Liabilities totalled \$126,649,160. The excess of assets over liabilities, known as the deposit insurance fund, amounted to \$1,590,540,667. This fund represented accumulated assessments and investment income in excess of losses and expenses in the past.

As of Dec. 31, 1954, the 13,541 insured banks held deposits totalling \$203,194,531,000. Based on studies made in the past, it was estimated that 55.3% of this total, or \$112,431,000,000, was insured. On that date the deposit insurance fund of \$1,542,697,382 was equal to 1.4% of estimated insured deposits.

The board of directors of the Federal Deposit Insurance corporation was composed in 1955 of H. E. Cook, chairman; Ray M. Gidney, comptroller of the currency, vice-chairman; and Maple T. Harl. (E. H. CR.)

Federal Income Tax: see TAXATION.

Federal Land Banks: see FARM CREDIT SYSTEM.

Federal Power Commission.

Natural Gas.—The Federal Power commission during the 12-month period ended June 30, 1955, issued certificates authorizing construction of 4,927 mi. of natural gas pipelines and compressor units aggregating 259,000 h.p., costing \$465,324,175. They were designed to add nearly 1,750,000,000 cu.ft. to the daily delivery capacity of the transmission systems in the United States, and would benefit 114 cities of 50,000 population or more in 22 states and the District of Columbia, as well as numerous smaller communities. Since Feb. 7, 1942—the date the certificate provisions of the Natural Gas act became effective—the FPC had authorized more than 64,000 mi. of pipelines and nearly 4,400,000 h.p. in compressor units. These facilities were estimated to cost approximately \$4,852,000,000 and were designed to add more than 23,500,000,000 cu.ft. of daily delivery capacity to the nation's individual gas pipeline systems.

As a result of the U.S. supreme court decision of June 7, 1954, in the Phillips Petroleum company case, the commission assumed jurisdiction over sales of natural gas in interstate commerce for resale made by independent producers. During the fiscal year, 6,047 applications for certificates were filed by independent producers, of which 1,093 were disposed of by the commission.

During the 12 months ended June 30, 1955, wholesale natural gas rate increase applications totalling approximately \$92,099,600 annually, filed by 22 pipeline companies, were acted upon by the commission. Of this amount, \$89,736,800 was suspended and \$2,362,800 accepted.

At the beginning of the year there was a backlog of \$131,250,800, making a total of \$220,987,600, in suspended rates requiring commission action during the year. Of this amount, \$19,113,900 was disallowed as not justified, \$31,832,800 was permitted to become effective and \$35,340,300 was permitted to be withdrawn by the companies. Including the carry-overs and the sus-

pensions in 1955, there was a backlog on June 30, 1955, \$134,700,600, \$133,629,600 of which was in effect under but awaiting the commission's determination of the amounts to be allowed, and \$1,071,000 was still under suspension.

During the fiscal year, 10,978 rate filings were received from independent producers, including 2,633 rate increases totalling \$30,888,356, of which 124 amounting to \$12,145,189 were suspended and 2,509 amounting to \$18,743,167 were allowed.

Electricity.—During the year ended June 30, 1955, the commission placed under license 1,135,000 kw. of hydroelectric generating capacity, representing an investment of approximately \$289,936,000. A total of 103 applications were filed and 11 cases were completed. In the last 14 years the commission has placed under license 6,495,300 kw. of hydroelectric generating capacity, representing an estimated cost of \$1,646,554,000. As of June 30, 1955, there were 650 FPC licenses in effect involving a total installed capacity of 7,346,000 kw. and a claim for estimated cost of \$2,440,000,000.

Electric utility generating plants in the United States produced a total of 503,228,956,000 kw.hr. during the year ended June 30, 1955. This amount was the largest on record to that date and 11% above the utility output for the year ended June 30, 1954. Combined utility and industrial production in the year ended June 30, 1955, reached 578,630,152,000 kw.hr., 10.1% from a year earlier.

Total installed capacity of utility generating plants on June 30, 1955, was 107,617,233 kw., including the net addition of 12,308,260 kw. or 12.9% in the 12-month period ended on that date. Industrial generating capacity was 16,085,165 kw. As of June 30, 1955, while the nation's total utility and industrial generating capacity reached 123,702,398 kw. as of June 30, 1954.

For the year ended June 30, 1955, electric utility thermal plants burned 128,493,301 tons of coal, 1,165,122,059,000 cu.ft. of gas and 71,418,586 bbl. of fuel oil. These quantities were higher than those of the previous year by 10.1% for coal and 6.7% for gas, while the use of oil was 3.6% less.

Water-Power Potentials.—Federal Power commission studies of water-power potentials indicated that, including projects under construction or authorized, the total undeveloped water power of the United States was approximately 83,000,000 kw.

which, if developed, would be capable of generating about 362,000,000,000 kw.hr. annually. Of this undeveloped power 54%, or about 44,000,000 kw. was west of the continental divide, with 37%, or about 31,000,000 kw., in the north Pacific area, of which about 27,100,000 kw. was in the Columbia river drainage system. Of the remainder, California had about 9,000,000 kw., or about 9.5% and the Colorado river basin 5,200,000 kw., or about 6.3%. The Missouri river basin had about 8,700,000 kw. of undeveloped water power, or about 10.5% of the United States total. The largest concentration of undeveloped power east of the Mississippi river was in the north Atlantic drainage area extending from the St. John river in Maine to the Rappahannock river in Virginia, v

INSTALLATION OF SCROLL CASE for generating unit in the powerhouse of the Palisades, Ida., power project, July 1955

about 7,100,000 kw., or about 8.6% of the national total.

(J. K. K.)

Federal Reserve System.

During the year the federal reserve system of the United States pursued a policy of credit restraint, moving by degrees from an objective of active ease in Nov. 1954 to one of firm restraint at the end of 1955. The progressive tightening of monetary policy matched the transition from sharp recovery from slight recession early in 1955 to rapid and broadening expansion and in turn to capacity production and threatened inflation late in the year.

Free Reserves.—A measure of the extent of credit restraint provided by the course of free reserves of member banks. That is, excess reserves minus borrowings from federal reserve banks. These were about \$650,000,000 in Nov. 1954, when the policy objective of the federal reserve system was still that of active ease. By July 1955 free reserves were about \$90,000,000; in Nov. 1955 they had declined further to a minus \$550,000,000. The change from Nov. 1954 to Nov. 1955 resulted from an increase in member bank borrowing of more than \$900,000,000 and a decrease of about \$300,000,000 in excess reserves. The impact of this tightening of reserve positions was heightened by the decline during the year in holdings of short-term government securities by money market banks.

Open Market Operations.—Open market operations of the federal reserve system in a framework of increasing reserve needs of member banks played an extremely important role in 1955. All changes in the total system portfolio resulted from transactions in treasury bills, either bought outright or under purchase agreements. Open market operations were of assistance to banks in adjustment of their reserve positions as a result of temporary shifts in deposits and seasonal fluctuations in loans and money in circulation. In Jan. and Feb. 1955 the federal reserve sold or redeemed \$1,300,000,000 of government securities, primarily for the purpose of absorbing reserve funds made available by the seasonal return of currency from circulation and the reduction in required reserves associated with the seasonal deposit decline. In the last three months of the year the federal reserve made substantial purchases of treasury bills to provide some of the reserve funds made necessary by the seasonal outflow of currency into circulation and the higher required reserves resulting from the seasonal deposit increase. Throughout the year the open market operations resulted in a steady tightening of bank reserve positions. For instance, in October and the first half of November the federal reserve banks bought almost \$500,000,000 of treasury bills, yet demands for reserve funds were so strong that free reserves dropped \$200,000,000 as a result of a substantial increase in member bank borrowing.

Thus open market policy and discount rate policy complemented each other in increasing the cost and restraining the supply and availability of reserve funds.

Discount Rate.—Four times during the year the federal reserve banks raised the discount rate, that is, the rate on advances to member banks secured by obligations of the United States or discounts of eligible paper or advances thereon to member banks. Effective on various dates from April 14 to May 14 the 12 regional banks raised the discount rate to $1\frac{3}{4}\%$ from $1\frac{1}{2}\%$ rate which had prevailed since April and May 1954. Between Aug. 4 and 12 the discount rate at 11 reserve banks was raised to 2%, while the increase at the Federal Reserve Bank of Cleveland was to $2\frac{1}{4}\%$. In turn, between Aug. 26 and Sept. 13, the other reserve banks raised their discount rate to 2%. Starting on Nov. 18, there was a fourth round of increases

to $2\frac{1}{2}\%$.

This brought the discount rate to the highest level it had reached since 1933.

Effective Feb. 15, the board of governors revised its regulation A to restate and clarify the guiding principles which are observed by the federal reserve banks in making advances and discounts. It was noted that access by member banks to federal reserve discount facilities is granted as a privilege of membership in the federal reserve system in the light of these principles.

During the year no changes were made by the board of governors in member bank reserve requirements, emphasis being placed rather on open market operations and discount rate policy. Member bank reserve requirements remained at the level set in the summer of 1954, that is, on net demand deposits, 20%, 18% and 12% at central reserve city banks, reserve city banks and country banks, respectively, and on time deposits, 5% at all member banks.

Acceptance financing by United States banks had recently had some revival, and the federal reserve had an interest in the continued development of a broad market for such credit instruments as a means of facilitating trade. Starting in April 1955 the Federal Reserve Bank of New York, under direction of the federal open market committee, made modest purchases of acceptances from dealers, the first purchases since 1951. Some were outright and some were made under repurchase arrangements with dealers for limited periods.

The largest amount held by the federal reserve, however, did not exceed \$22,000,000.

Margin Requirements.—Twice during 1955 the board of governors of the federal reserve system raised margin requirements for credit extended by brokers and banks to finance new purchases and short sales of stock exchange securities. After having been at 50% since Feb. 1953, margin requirements on stock market credit were increased to 60%, effective Jan. 5, and from 60% to 70%, effective April 23. In testimony before the senate committee on banking and currency, the chairman of the board of governors stressed that the objectives of the federal reserve system in regulations concerning stock market credit were to permit adequate access to credit facilities for security markets to perform their basic economic functions and to prevent the use of stock market credit from becoming excessive.

It was stated that the responsibility of the board of governors did not relate to the price of stocks and that margin requirements are not and cannot be cure-alls for stock market excesses or abuses. (See also BANKING; CONSUMER CREDIT.)

(J. K. L.)

Federal Trade Commission.

The preservation of free and fair business competition in the United States is the function of the Federal Trade Commission. This is a bipartisan five-man commission appointed by the president and confirmed by the congress. It has quasi-judicial powers and is assisted by a staff of about 600, comprising principally lawyers, economists and statisticians. It administers the Federal Trade Commission act, the Clayton Antitrust act (which includes the Robinson-Patman and Anti-merger amendments), the Export Trade act, the Wool Products Labeling act, the Fur Products Labeling act and the Flammable Fabrics act. The FTC also has duties under the Lanham Trade Mark act.

The commission's work is devoted principally to correcting monopolistic and deceptive practices. It also plays a major role in guiding industry toward fair competition through trade practice conferences. These conferences adopt commission-approved

rules for proper competitive conduct.

Having completed a major reorganization of the commission begun in 1953, Chairman Edward F. Howrey resigned, and Pres. Dwight D. Eisenhower appointed John W. Gwynne to replace him as administrative head of the agency. The reorganization had succeeded in its major objectives of speeding the commission's case work and eliminating a backlog of old cases. It also had achieved increased compliance activity following a check of outstanding orders. By the year's end, more than a third of the 4,000 orders had been checked for current compliance.

The reorganized commission staff, with all investigative work centered in one bureau and all trial work in another, was able during fiscal 1955 to bring 36 antimonopoly complaints, an increase of nearly 30% over the ten-year average covering 1944 to 1953. Thirty cease and desist orders against monopolies were issued, an increase of 40% over the 1944-53 average. In the antideceptive field, the 125 complaints issued represented nearly a 50% increase and the 82 cease and desist orders a 9% increase over the average for 1944-53.

The commission's orders against illegal competitive activity ranged from those against individual merchants who misrepresented to the public the quality of their merchandise to prohibitions breaking up price-fixing conspiracies involving entire industries. These actions most frequently are initiated as a result of complaints from the public and from injured competitors of the predatory firm. They also can be requested by congress or undertaken on the commission's own initiative.

Outstanding actions during the fiscal year included two investigations—misrepresentation of health and accident insurance and the rising rate of corporate mergers. As a result of the insurance study, the FTC brought complaints against 31 companies charging that their advertising promised greater benefits to the insured than the policies actually offered.

Antimerger work increased in tempo with the naming of a task force to pursue the problem free of routine procedures. Screening of current mergers was well underway at the year's end, and two complaints had been issued by June, with others under study.

Among the other major cases undertaken were those alleging: price fixing by certain importers of twine and rope; restraint of trade by certain paint and wallpaper distributors charged with inducing manufacturers to confine sales to "recognized dealers"; price fixing by certain members of the Alaskan salmon canning industry; unlawful conspiracy by certain tobacco firms to limit warehousing in a tobacco trading centre; and exclusive dealing by eight major ice cream manufacturers doing a \$400,000,000-a-year business.

Orders to cease and desist were issued in a wide variety of cases such as those involving false claims for the merits of drugs and vitamins, household appliances, correspondence schools and flowering shrubs. A large group of cases brought against furriers and garment sellers failing to describe accurately the products they sold.

Significant during the year was the initiation of a service to advise and consult with small businessmen.

In addition to Chairman Gwynne, commission members were Lowell B. Mason and Sigurd Anderson, all Republicans; Robert T. Secrest and William C. Kern, Democrats. Kern was the first former staff member to become a commissioner in the FTC's 41-year history. (J. W. GE.)

Federated Malay States: see MALAYA, FEDERATION OF SINGAPORE.

Fencing. The 1955 fencing season in the United States climaxed with the national championships held in New York city, June 9-17. Albert Axelrod of the Salle Santelli, New York, won his first national foil crown. Former champion Daniel Bukantz of the Fencers club, New York city, and Silvio Giolito of the New York Athletic club were second and third. A new champion was also crowned in the *épée* when Abram Cohen of the Fencers club of New York defeated his clubmate Frank Bavuso in a fence-off for the title. The defending titleholder Sewell Schurtz, U.S. navy, was third. The sabre crown was won by a comparative newcomer, R. Richard Dyer of Salle Csizar, Philadelphia, Pa., who defeated Sol Gorlin of the Salle Santelli in a fence-off for the title. Jose R. de Capriles of the Fencers club was third. Maxine Mitchell of the Hollywood Athletic club was the only successful defending champion to make a clean sweep of the final round. A newcomer to the women's finals, Louise Knabb of the Salle Santelli, was second and her teammate Eve Siegel was third.

The foil team championship was won by the Fencers club of Salle Santelli second, and the New York Athletic club third. The Salle Santelli won the *épée* team championship, with a team of U.S. navy officers second and the Fencers club third. The sabre team championship was successfully defended by the Salle Santelli. The Fencers club was second and the Philadelphia division third. The Fencers club won the three-weapon team title with Salle Csizar second and the Salle Santelli third. The women's team was won by the Salle Santelli, Southern California division was second and Northern California division was third.

QUALIFYING MATCH of the 1955 Intercollegiate Fencing association championships, March 12, at New York city. Opponents were S. Schneider (left) Harvard university and F. Zechlin of the U.S. Naval academy

The midwest championships were held in Cleveland, O., May -8. The foil championship was won by Herman Velasco, Central Illinois division. Albert Wolff of Kentucky won the *épée* crown, the sabre title was won by James Campoli, Michigan, while Judy Goodrich of Michigan took the women's foil title.

The southwest championships were held at Fort Bliss, Tex., also in May. James Parker of the Gulf Coast division won the oil title; Arnold Mercado, Gulf Coast division, the *épée*; Bruce urch of Arizona won the sabre, and Waneen Wyrick of the Gulf Coast division took the women's championship.

The Pacific Coast championships were held in San Francisco, Calif. Gerard Biagini of the Olympic club won the foil individual title, the *épée* title was won by George Siebert of the cavaliers, Southern California division, and the sabre championship was won by Daniel De La O of the Olympic club. Maxine Mitchell successfully defended her women's title. The Olympic club took the foil team championship and the Los Angeles Athletic club the *épée* and sabre team. The women's team championship was won by the Southern California division.

ji. Fiji is a British colony of 322 islands (106 inhabited) in the Pacific ocean. Total area: 7,040 sq.mi., including main islands Viti Levu (4,011 sq.mi.) and Vanua Levu (2,137 sq.mi.), and Rotuma dependency (18 sq.mi.), 400 mi. to north. pop.: (1946 census) 259,638; (June 1954 est.) 333,000 including Fijians 44%, Indians 48% and Europeans 2.6%. Religion: Fijians are Christian (80% Methodist); Indians, 88% Hindu and 12% Moslem. Capital: Suva, on Viti Levu, pop. (1946 census) 25,513. Governor in 1955, Sir Ronald Garvey.

The governor of Fiji is also governor of Pitcairn ex officio, and is responsible for the general exercise of British protection in Tonga (*q.v.*).

Pitcairn.—This is a British colony by settlement. Area: 2 sq.mi. Pop. (Dec. 1953 est.) 143, Anglo-Polynesians descended from "Bounty" mutineers. Dependencies: Oeno, Henderson and Phoenix islands (total area 17 sq.mi.). Religion: Seventh-Day Adventist. Chief magistrate in 1955, John Christian.

History.—Three important reports were published in Fiji during 1955: one by a commission of inquiry into methods of crime investigation; another on a soil survey of Viti Levu; and a third by the director of education making proposals for educational developments. The governor, under an amendment to the letters patent, was empowered to appoint a speaker for the legislative council.

The new buildings of the Fiji museum were opened in Suva botanical gardens. A yaws control project was carried out with assistance from the World Health organization. In January a new central nursing school was opened. (J. J. Ty.)

ne Arts: see ARCHITECTURE; DANCE; MUSIC; THEATRE.

Finland. An independent republic of northern Europe, Finland has an area of 130,119 sq.mi., including the Åland Islands. Pop. (1950 census) 4,029,803; (1955 est.) 4,232,000. Capital: Helsinki; pop. (1950 census) 369,380; (1954 est.) 396,343. Other cities (1954 estimates): Turku

(Åbo) 107,519; Tampere (Tammerfors) 107,577; Lahti 46,822. Language and nationality: 90% Finnish, 10% Swedish. Religion: Lutheran Christian. President in 1955: Juho K. Paasikivi. Prime Minister: Urho Kekkonen.

The Åland Islands, a Swedish-populated archipelago belonging to Finland, lie to the southwest at the mouth of the Gulf of Bothnia. Area: 581 sq.mi. Pop. (1950 census) 21,690. Chief town: Mariehamn; pop. 3,273.

History.—Urho Kekkonen returned to the premiership Oct. 20, 1954, but the tense and insecure balance of forces in Finnish politics continued to threaten the stability of the government. A crisis in December almost upset the new regime, and it was again endangered in March because of a strike of government employees for higher wages. But Kekkonen rode out these storms and others, and the approach of the presidential election, to be held in Jan. 1956, came to supersede other issues. Paasikivi was a possible choice to succeed himself, despite the fact that he would be 85 at the beginning of a new six-year term; he was probably the only man on whom a large majority of the people could unite. Kekkonen became the candidate of the Agrarian party, but strong opposition expressed itself against him as a person. Other candidates named were Karl A. Fagerholm by the Social Democrats; Ralf Toengren by the Swedish party; Eero Rydman by the Progressives; Sakari Tuomioja by the Conservatives and Freethinkers; and Eino Kilpi by the Socialist Union and the Communists.

When the U.S.S.R. defeated Finland in 1944 it took the Porkkala peninsula, much of it less than 20 mi. from Helsinki, as a naval base; the 50-yr. lease was confirmed by the treaty signed in Paris in 1947. The strip was about 20 mi. long and 4 to 10 mi. wide. Not only was it uncomfortable to have a foreign base on Finnish soil, but a main railway ran across the area, and windows had to be shuttered tightly on every train that passed through. In June 1955 the U.S.S.R. agreed to ease some of the restrictions, because nothing but birch forest could be seen anyway. In mid-September a delegation of Finns went to Moscow, the party including Paasikivi, Kekkonen, and Defense Minister Emil Skog. The Russians pleased the Finns and startled the world by announcing that they would yield their lease and return Porkkala to the Finns, withdrawing their forces within three months. The Finns agreed to extend for 20 years the treaty of friendship they had signed with the Russians in 1948. In Finland some bitterness arose because of the secrecy preceding the negotiations, and because of the failure to get frontier rectifications in the east.

This had been the only Soviet base on clearly foreign, non-satellite soil. Immediately after the signing of the agreement the Soviet representatives in the United Nations called upon the United States and the other western powers to match this gesture by abandonment of their bases on foreign territory. The western states showed no intention to equate Porkkala with the NATO (North Atlantic Treaty organization) bases in Europe, but the Russians made good propaganda out of their move.

Many of the smaller German plants which the Russians had taken over after the war proved unprofitable, and since 1953 were being sold. The Russians kept the larger plants and concentrated their interests in service industries. They granted the Finns a long term loan and agreed that if the Finns would build a refinery the U.S.S.R. would supply them with 98% of their petroleum needs. This practically froze out the western oil companies, whose business had already fallen off in four years from 70% to 4% of Finland's consumption. Among important orders from the U.S.S.R. was that for a 22,000-ton icebreaker to be built in Finland. For development of woodworking and electric power plants Finland borrowed \$12,000,000 from the International Bank for Reconstruction and Development. Ex-

ports showed an upward trend, and the economy of the country appeared more stable than in most of the period since the end of World War II. (F. D. S.)

BIBLIOGRAPHY.—William L. Shirer, *The Challenge of Scandinavia* (1955).

Education.—Schools (1953-54): primary 6,402, pupils 541,770, teachers 22,817; secondary 345, pupils 114,901; vocational 473, pupils 31,054, teachers 3,284; folk high schools, etc. (1952-53) 179, pupils 52,374, teachers 1,068. Teachers' training colleges (1953-54 primary) 14, students 2,456, teachers 201. Universities and graduate schools 15, students 15,355, professors, lecturers and other teachers 1,210.

Finance and Banking.—Monetary unit: markka, with an official selling rate of 231 markkaa to the U.S. dollar. Budget (1955 est.): revenue 224,000,000,000 mk.; expenditure 231,000,000,000 mk. Internal debt (Mar. 1955) 50,700,000,000 mk., external debt 61,600,000,000 mk. Currency circulation (Feb. 1955) 50,100,000,000 mk., (Oct. 1954) 48,400,000,000 mk. Bank deposits (Feb. 1955) 36,400,000,000 mk., (Oct. 1954) 36,300,000,000 mk. Gold and foreign exchange (Jan. 1955) U.S. \$243,900,000.

Foreign Trade (1954).—Imports 150,982,000,000 mk.; exports 156,542,000,000 mk. Main sources of imports: U.K. 18.8%; U.S.S.R. 17.8%; German Federal Republic 6.7%; Netherlands 6.5%; France 6.1%; United States 4.6%; Sweden 4.5%. Main destinations of exports: U.K. 22.5%; U.S.S.R. 21.5%; German Federal Republic 7.4%; United States 5.8%; France 4.7%; Netherlands 4.5%. Chief exports (1954): wood 40%; wood pulp 19%; paper 21%.

Transport and Communications.—Roads (1953): 63,460 km. Motor vehicles in use (1954): cars 62,000; commercial vehicles 50,800. Railways (1954): 5,046 km., of which state 4,859 km.; passenger-km. (1953) 2,029,000,000; freight, ton-km. (1954) 3,848,000,000. Navigable inland waterways (1953): 49,900 km. Merchant shipping vessels (Apr. 1955): 588; total tonnage 728,805. Air transport (1954): passenger-km. 94,507,000; freight, ton-km. 873,600. Telephones (Jan. 1954) 408,531. Licensed radio receivers (1953) 908,000.

Agriculture.—Main crops (metric tons, 1954): wheat 249,000; rye 137,000; barley 265,000; oats 830,000; beet sugar (raw) 38,000; potatoes (1953) 1,379,000. Livestock (Sept. 1954): cattle 1,885,000; sheep 908,000; pigs (June 1953) 434,365; horses (June 1953) 338,669; reindeer (1953) 151,523. Fisheries: (1953) 62,100 metric tons.

Industry.—Electricity production (1954) 5,642,000,000 kw.hr. Raw materials (metric tons, 1954): pig iron 74,610; crude steel 176,330; copper, smelter 27,820; pyrites (1953) 800,000. Forest products (cu.m., 1953): sawn softwood 4,055,000; sawn hardwood 60,000; plywood (1954) 345,000; (metric tons, 1954): cellulose 1,590,000; mechanical pulp 878,000; board and fibre 275,000; (1953) newsprint 448,000; paper other than newsprint 267,000.

Fires and Fire Losses. For the first time in five years, fire losses in the United States showed a decrease. The total fire loss estimate for 1954 was \$1,016,915,000. This was an approximate decrease of \$5,000,000 from the 1953 total. This favourable record continued into 1955. For the first eight months of 1955, losses totalled \$602,474,000, which represented a decrease of 0.2% from the first eight months of 1954.

Fire continued to take its toll of human life. The estimate was an annual loss of 11,000 lives. Of this group, 20% were under the age of 5.

The total number of fires during 1954 approximated 1,993,000. Of these 774,660 were building fires. This was an increase of 47,600 over 1953. Although the number of building losses increased, the dollar loss decreased 1.5%. The three leading causes of fires in buildings during 1954 were smoking and matches, electrical wiring and defective or overheated cooking and heating equipment. Incendiary fires resulting from arson attempts continued at the usual rate.

The giant fire of 1955 was the spectacular oil refinery fire at Whiting, Ind. The loss exceeded \$10,000,000. It is interesting to note that in 1954 there were 313 large-loss fires. This was an all-time high in the history of recorded fires. (See also DISASTERS; FORESTS.)

(L. J. A.)

Fisheries. The world's oceans, rivers, lakes and ponds yield an annual catch of nearly 60,000,000,000 lb. of fish, crustaceans, molluscs, etc., according to information released in 1955 by the Food and Agriculture Organization of the United Nations. Detailed data assembled by FAO for the year 1953 showed that about half the world catch was made by Asian countries and somewhat more than one-fourth by European nations. North American countries accounted for 13% of the

total and African countries 6%.

The world fish production was estimated to be more than 20% larger than in the period immediately prior to World War II, according to the FAO report. Herrings, sardines and chovies provided the largest single catch with a yield of 14,300,000,000 lb., 24% of the estimated total world catch of all species. In Europe the annual prewar catch of all species was about 12,100,000,000 lb. By 1953 it had grown to an estimated 18,000,000,000 lb., up 3,700,000,000 lb., or 31%. The North American catch of about 7,600,000,000 lb. was about 10% greater than in 1938. African countries were estimated to have produced about 1,000,000,000 lb. of fish in 1938; the catch in 1953 amounted to an estimated 3,400,000,000 lb., an increase of more than 225%. South American countries also showed a sharp gain from 600,000,000 lb. in 1938 to about 1,300,000,000 lb., an increase of 117%. Australia and New Zealand stepped up their fish production from a pre-World War II annual total of 150,000,000 lb. to 220,000,000 lb. Available figures for Asia do not show such remarkable increases, despite the great need for increased food in that area. However, Japan, the world's greatest fishing nation, caught more fish than ever before, 10,000,000,000 lb. in 1953, compared with 7,900,000,000 lb. in 1938.

The marketing of the catch varied widely in various parts of the world, because of differences in technological progress and distributive facilities. Of the estimated total world catch of about 60,000,000,000 lb., 41% was marketed fresh, 26% was cured and 15% was used for reduction into fish meal and oil. In Africa, however, only 11% of the catch was marketed fresh while 19% was canned and 58% was used for reduction. North America, distribution was much more even, 27% being marketed fresh, 23% used for reduction, 22% canned, 15% frozen, 11% cured and 2% used for other purposes. In Europe three processes accounted for most of the catch: 40% was marketed fresh, 25% was cured and 24% was used for reduction.

A new chapter in the history of fisheries was written during April and May 1955 when the first World Conference on Fisheries Conservation was held in Rome, Italy. Delegates from 60 nations and observers from 6 nations attended. General agreement was reached by the conference on the objectives of conservation; that conservation measures should be based on scientific and technical facts; on the types of research that should be included; and on the general principles upon which international conservation conventions should be based. It was generally agreed that most of the international conservation problems of fishery resources not covered by existing conventions could be handled by international agreement through use of established types of conventions, provided that nations fishing the same resources accept the responsibility of co-operating with each other in research and, where necessary, in the regulation of these resources.

Following the World Conference on Fisheries Conservation the International Law commission at Geneva, Switz., spent several weeks considering the problem of the breadth of territorial waters and related topics. The subject was discussed under the headings, "Regime of the High Seas" and "Regime of the Territorial Sea." These are matters of extreme importance, since there is wide divergence of opinion among nations with respect to the extent of territorial jurisdiction over the fishery resources. Some nations claim that the limit of territorial waters is 3 miles while others claim jurisdiction up to 200 miles. Articles agreed upon by the commission were submitted to member nations for comment and observations preparatory to submission to the general assembly of the United Nations.

A major problem of the fishing industry is the violent fluctuation that occurs in the supply of certain fish. Recent instances of these fluctuations include the almost complete disappearance

herring from the north coast of Iceland and the decline in herring production on the west coast of North America from an average of more than 1,000,000,000 lb. annually in the years 1934 to 1944 to less than 10,000,000 lb. in 1953. In an effort to understand and foresee these fluctuations, the United States Fish and Wildlife Service, at the request of the Pacific Science Association, inaugurated in 1955 a study of established systems of meteorological observations in the eastern, northern and tropical Pacific ocean. The work was to be of a pioneering nature in three fields of science—fishery biology, oceanography and meteorology. The ultimate purpose of the project would be to discover the natural laws governing fluctuations in abundance of commercial fisheries. Recent advances in oceanography and meteorology suggest that the abundance of fish may be greatly affected by large-scale changes in the weather pattern. If the study of ocean-wide events, as they may be related to worldwide weather fluctuations, should disclose the causes of major fishery fluctuations, then it might be possible to predict future fluctuations.

Fishery research in the United States was expanded materially in 1955 as a result of passage of the Saltonstall-Kennedy Act in 1954. This act provided that 30% of the customs duties collected on imports of fishery products into the United States during the period from July 1, 1954, to June 30, 1957, be made available to the fish and wildlife service for use in promoting trade in domestically produced fishery products. Expenditures in any one year may not exceed \$3,000,000. New and expanded programs undertaken with these funds during 1955 included exploratory fishing and gear development; technological research; biological research; educational, market development and economic projects; and the collection and publication of fishery statistics.

Norway's cod fishery in the Lofoten waters was disappointing again in 1955, yielding slightly less than 50,000 short tons, about the same as the 1954 record low. For many years the annual catch of cod in those waters amounted to about 80,000 tons. The 1955 Norwegian winter herring fishery, one of the world's oldest fisheries, yielded a catch of more than 2,000,000,000 lb., only 300,000,000 lb. less than the record 1954 production. The Norwegian brisling sardine catch, during the first half of 1955, totalled approximately 69,200,000 lb., about one-half the catch for the same period in 1954. The 1955 catch for the first six months was the poorest in years. Canned brisling sardines are an important dollar-earning item for Norway. The small catch made it difficult to meet the demand for these fish in the United States, where an extensive advertising campaign had been under way since 1952.

Reduced packs of sardines were also reported from the east coast of North America. The Canadian pack, to mid-Aug. 1955, totalled only 674,000 cases (100 $\frac{1}{4}$ -drawn cans of 3 $\frac{1}{4}$ oz.) compared with 2,223,000 cases for the same period in 1954. Production in the United States amounted to 717,000 cases up to Aug. 20, 1955, compared with 2,285,000 cases for the same period in 1954.

The Japanese high-seas salmon catch increased spectacularly in 1955. The salmon fleets engaging in this fishery (14 mother ships, each with about 25 catcher boats) caught 57,758,000 lb. of salmon up to Aug. 5, shortly before the season ended. In 1954 the high-seas salmon catch amounted to 20,494,000 salmon. (See also MARINE BIOLOGY.)

FLOODWATERS at Putnam, Conn., Aug. 20, 1955. Burning building in centre was a magnesium plant which caught fire after flood waters hit the boiler area

Floods and Flood Control. The most destructive flood that ever occurred in the United States in terms of physical damage caused was experienced in 1955. It occurred in August in six northeastern states: Connecticut, Massachusetts, Rhode Island, New York, New Jersey and Pennsylvania. It caused a reported 191 deaths. Preliminary estimates of direct property damage totalled \$1,600,000,000. These estimates, made by the army's corps of engineers on the basis of state and local information, gave the following breakdown by states: Connecticut, \$900,000,000; Massachusetts, \$400,000,000; Rhode Island, \$170,000,000; Pennsylvania, \$150,000,000; New Jersey, \$41,000,000; and New York, \$11,000,000. These estimates were subject to revision upon receipt of more complete information. It was pointed out that the estimates were for direct property damage only and did not include other damages such as loss of industrial production, loss of employment and transportation delays.

This great amount of damage, concentrated in a relatively small and highly developed area, was caused by continuous, heavy rains associated with Hurricane "Diane" as it moved up the Atlantic coast. Less than a week earlier the same general area had suffered heavy precipitation as Hurricane "Connie" moved northward. The heavy rains accompanying Hurricane "Connie" soaked the ground and brought many streams to medium-high stages. When Hurricane "Diane" struck, concentrating its record rainfall into two days, the combination of adverse conditions caused an unprecedented rate of runoff and high velocity flows. The result was a flood with terrific erosive effect, which left total destruction in its wake rather than normal high-water damage.

National attention was again directed to the same six-state area in October, when heavy rains fell over most of the area stricken by Hurricane "Diane." Connecticut was again the worst sufferer.

Hurricane "Diane" floods were followed by prompt and wide-

spread disaster recovery activity on the part of federal, state and local authorities, under the general leadership of the Federal Civil Defense administration. Many agencies were enlisted in the effort to put the stricken communities back in operation as soon as possible. The corps of engineers, in addition to its usual responsibilities for flood relief under its flood control functions, was given the mission of discharging Federal Civil Defense administration responsibilities with respect to removal of debris, health and safety hazards, and temporary restoration of public facilities.

Within a matter of hours, the army engineers mobilized key military and civilian personnel from the corps of engineers' nation-wide organization and deployed them to key points in the stricken northeastern area, to organize and expedite action in the disaster recovery program, supplementing corps of engineers personnel regularly stationed in the area. Bailey bridges, centrifugal pumps, generators and other equipment were rushed to the area.

A further phase of the approach by the corps of engineers to the flood problem called for a vigorous prosecution of flood control improvements authorized by congress which were needed to improve permanent flood protection. The entire program of authorized federal flood control works in New England, which bore the brunt of the "Diane" damage, had a total estimated cost of about \$331,000,000. Appropriations up to fiscal year 1956 totalled \$72,000,000. The location of the "Diane" flooding in southern New England was such that many projects that were completed had no effect upon it. However, the dams and other structures which had been completed within the area affected by the flood were 100% effective. The entire authorized program would not have prevented the floods but would have greatly reduced the damages. Consequently, it was felt that the presently authorized flood control plans for New England rivers should be completed as soon as possible.

Still another phase of the corps of engineers approach to the problem contemplated a review of flood control plans to ascertain what projects and measures could be devised to supplement presently authorized projects. The unprecedented nature of the 1955 storm demanded a most thorough review to ensure that all possibilities of protection and damage reduction were considered.

Before Hurricane "Diane" struck, the corps of engineers had been given the task of collaborating in a study of the behaviour of hurricanes and to determine possible means of preventing or minimizing loss of life and damage to property resulting from them. The study, authorized by congress following the disastrous Hurricane "Hazel" of 1954, was being made in co-operation with the weather bureau and other agencies concerned. The corps of engineers planned to prosecute this study vigorously to the maximum extent permitted by appropriated funds. (See also AGRICULTURE.) (S. D. S.)

Florida. The extreme southeastern state of the United States, Florida was admitted to the union in 1845 as the 27th state. It is called the "Sunshine state" and sometimes the "Peninsula state." Area: 58,560 sq.mi., of which 4,208 sq.mi. is water surface. Population: (1950 U.S. census): 2,771,305 of whom 1,813,890 were urban dwellers and 957,415 were rural; 2,166,047 were white and 605,258 were nonwhite. The 15 cities of more than 25,000 people in 1950 were: Miami 249,276; Jacksonville 204,517; Tampa 124,681; St. Petersburg 96,738; Orlando 52,367; Miami Beach 46,282; Pensacola 43,479; West Palm Beach 43,162; Fort Lauderdale 36,328; Lakeland 30,851; Daytona Beach 30,187; Tallahassee (the capital) 27,237; Gainesville 26,861; Key West 26,433; Panama City 25,814. On July 1, 1955, the state population was estimated at 3,364,000.

History.—The state elective administrative officers in 19 whose terms were to expire in Jan. 1957 were Leroy Collins governor; R. A. Gray, secretary of state; Richard W. Erwin attorney general; C. M. Gay, comptroller (resigned April 1955, and Ray E. Green was appointed to complete the term office); J. Edwin Larson, state treasurer; Thomas D. Bailey superintendent of public instruction; Nathan Mayo, commissioner of agriculture.

The state legislature in 1955 proposed eleven amendments to the state constitution to be voted on at the general election Nov. 6, 1956. In brief, these were as follows: (1) revising Article V relating to the judicial department, the most important change being the establishment of district courts of appeal; (2) providing for home rule in Dade county; (3) abolishing the court of record in Escombia county and vesting all its jurisdiction in the circuit court of that county; (4) provisions relating to regular and extra sessions of the legislature whereby members of the legislature may extend the regular session beyond the 60 days' period, and providing also for extra sessions called by members of the legislature; (5) relating to apportionment of the senate and house of representatives (the 1955 legislature was called into extra session by the governor to consider reapportionment of the legislature, but a deadlock prevented any action); (6) providing for two judges of the criminal court of record in Duval county; (7) abolishing the office of county special tax school district trustees, and transferring their duties to the county board of public instruction; (8) providing for the appointment of the county superintendent of schools in Duval, Sarasota, Dade and Pinellas counties by the county board of public instruction; (9) abolishing the office of county solicitor in Dade county, and transferring the duties to the state attorney of the judicial district in which Dade county is situated; (10) relating to fees and compensations of county officers of Escombia county; (11) authorizing the legislature to establish civil service systems and boards for municipal, county and state employees, and for municipal, county and state officers not elected by the people or appointed by the governor.

Other important acts of the 1955 legislature included the creation of a Florida Constitution Advisory commission to report to the 1957 legislature; the appropriation of \$8,600,000 for the construction of a teaching hospital in conjunction with the medical and nursing schools at the University of Florida. Apropos of the U.S. supreme court decisions relating to public school racial segregation, the legislature enacted a statute whereby county boards of public instruction are authorized and directed to provide for the enrolment in the public schools of children qualified for admission and who apply for enrolment; the creation of a citizens tax council to study the state's tax structure and submit its report for the 1957 legislature; creation of a community college council to study and make recommendations for the establishment of community colleges in anticipation of a huge increase of college students; an act for the establishment of the Northeast Florida mental hospital; an act for the establishment of the South Florida Industrial School for Boys; an act to appropriate \$4,196,652 for capital outlay at the four junior colleges of the state; an act providing for dental, medical and nursing scholarships; the creation of a council on mental health in Florida; an act to create a merit system of personnel administration and to establish a state personnel board, and a merit system council under the personnel board; an act for the revision of the state's retirement systems, and creating a new plan of retirement for teachers; an act to provide for automobile drivers' education in the public secondary schools; an act to establish the Northeast Tuberculosis sanatorium in Union county.

Education.—Enrolment in the public schools for the year 1954-5

ades 1 through 12 was as follows: white, 544,562; Negro, 153,214; total, 697,776. Kindergartens: white, 3,446; Negro, 262; total, 3,708. Junior colleges (grades 13 and 14): white, 2,325; Negro, 191; total, 2,516. The total enrolment in the public schools of Florida in 1954-55 was 704,000. There were 1,218 elementary and 465 secondary public schools, 61 kindergartens and 5 junior colleges in the state, of which there were 807 white and 411 Negro elementary schools, 320 white and 15 Negro secondary schools, 57 white and 4 Negro kindergartens and 4 white and 1 Negro junior colleges. These schools had instructional staffs exclusive of 203 supervisors) of 24,195 teachers and 1,034 principals, of whom 18,773 teachers and 790 principals were employed in schools for whites, and 5,422 teachers and 244 principals were employed in schools for Negroes.

Social Insurance and Assistance, Public Welfare and Related Programs.—Florida disbursed for state welfare through the state welfare board \$56,277,360.9 in 1954-55. From grants by the federal government the state received in 1954-55 for old-age assistance \$25,554,238.56; dependent children \$11,291,372.55; aid to the blind \$1,149,883.00; total \$37,995,441.11. Disbursements for old-age assistance were \$38,154,495.56; dependent children \$13,461,328.00; and for the blind \$1,686,150.50; total \$53,301,974.06. Administrative and other welfare services amounted to \$3,025,762.03 which included \$1,417,280 federal funds. The total addition to the unemployment compensation fund was \$10,839,126.14 while the gross unemployment benefit payments were \$11,406,947.32 with net benefit payments of \$11,333,331.

The parole commission had an appropriation for 1955-56 of \$301,500. The state supports tuberculosis hospitals at Orlando, Tampa, Tallahassee and Lantana, and the appropriation for the Tuberculosis board for 1955-56 amounted to \$4,800,000. The Tuberculosis board was authorized by the 1955 legislature to establish the Northeast Tuberculosis natorium in union county. The state also supports hospitals for the sane at Chattahoochee and Arcadia, the Florida farm colony for the feeble-minded at Gainesville, and the Florida School for the Deaf and Blind at St. Augustine. The appropriations for these institutions for 1955-56 were \$8,075,711, \$2,135,131 and \$950,502 respectively for operation; \$1,518,200, \$2,250,000 and \$860,000 respectively for capital outlay.

The population of the state prisons and other institutions as of Aug. 1, 1955, was as follows: state prison at Raiford 2,250; Glades state prison farm at Belle Glade, 318; Industrial school for boys at Marianna, 19; Industrial school for white girls at Ocala, 123; Industrial school for Negro girls at Forest Hill, 126; the Apalachee Correctional institution at Chattahoochee, 224; the state hospital at Chattahoochee and Arcadia, 104; the farm colony at Gainesville, 1,012.

Communications.—The total highway and street mileage in the state at the end of the year 1954 was 55,050 mi., of which 25,132 mi. were paved and 4,008 mi. were constructed of gravel or stone. Disbursements for the calendar year 1954 were \$73,167,496.86 for construction and \$14,399,756.64 for maintenance. The state road department's budget for the year 1955 amounted to \$169,202,940 for construction and \$10,323,391 for maintenance. Florida had in 1955 approximately 5,000 mi. of railroad exclusive of yard tracks.

Banking and Finance.—The total revenue receipts for the state of Florida for the fiscal year ending June 30, 1955, amounted to \$418,330,113.82.

Table I.—Principal Crops of Florida

Crop	Indicated 1955	1954	Average 1944-53
Oranges, bu.	10,952,000	9,200,000	7,966,000
Apples, bu.	960,000	1,080,000	665,000
Pears, tons	93,000	84,000	63,000
Peaches, lb.	34,528,000	32,941,000	24,748,000
Almonds, lb.	23,000	25,000	—
Walnuts, Irish, bu.	10,178,000	9,786,000	5,698,000
Almonds, sweet, bu.	650,000	638,000	767,000
Almonds, lb.	63,800,000	44,550,000	60,206,000
Sugar cane, short tons	1,191,000	1,281,000	1,163,000
Oranges, boxes	91,000,000	88,400,000	63,090,000
Apples, boxes	4,600,000	5,100,000	4,550,000
Peaches, boxes	38,000,000	34,800,000	31,440,000

Table III.—Mineral Production of Florida

Rate in Mineral Production of Mines (In short tons, except as noted)				
	1952		1953	
	Quantity	Value	Quantity	Value
Coal	198,000	\$ 2,072,000	258,000	\$ 2,952,000
Petroleum (bbl.)	591,000	—	543,000	1,030,000
Phosphate rock	1,031,000	54,086,000	1,045,000	56,525,000
Sand and gravel	4,155,000	3,848,000	3,731,000	3,199,000
Clay	7,837,000	9,578,000	9,429,000	11,309,000
Other minerals	—	13,294,000	—	17,321,000
Total	—	\$82,878,000	—	\$92,336,000

*Value included with other minerals.

Included in these sums were \$80,331,123.63 from gasoline tax, \$74,026,996.80 from sales and use tax, \$32,451,756.36 from beverage tax, \$20,252,629.36 from cigarette tax, \$32,709,203.55 from motor vehicle licences. The state expended \$39,803,282.13 for education in the fiscal year ending June 30, 1955. The outstanding revenue bonds as of June 30, 1955, were: for the Florida State Improvement commission \$72,909,500 and for the board of control which supervises institutions of higher education \$13,010,000. On June 30, 1955, there was a total balance in the state treasury of \$127,547,726.45 with outstanding warrants of \$20,243,463.87. On June 30, 1955, there were within the state 79 active national banks with total deposits amounting to \$2,031,089,000, and 154 state banks and trust companies with deposits of \$1,064,000,000. There were also 8 industrial banks with deposits of \$10,844,006. These represented total deposits of \$3,105,933,006, a gain of \$387,817,414.71 in the fiscal year.

Agriculture.—On Jan. 1, 1955, the livestock resources of the state were as follows: 1,376,000 beef cattle and calves; 167,000 milk cows; 519,000 swine; 3,000 sheep; 22,000 horses; 20,000 mules.

The total income from the sale of agricultural commodities for the year 1954 was \$546,963,000. Income from the sale of cattle and hogs amounted to \$53,510,000; poultry and eggs \$29,696,000; dairy products \$41,624,000; truck crops approximately \$129,466,000; citrus \$188,580,000; greenhouse and nursery products \$23,802,000; and from field crops: tobacco \$24,900,000; potatoes \$14,619,000; corn \$1,144,000; sugar cane for syrup \$987,000; sugar cane for sugar \$11,138,000; cotton \$4,841,000; and peanuts \$4,301,000.

Manufacturing and Business.—Income paid to the people of Florida in 1953 amounted to \$4,586,000,000. The number of people employed in manufacturing plants in Florida as of Jan. 1955 was 138,800 according to a report of the Florida Industrial commission. On April 1, 1955, there were 300,000 telephones in service in Florida as compared with 250,000 in 1953 and 100,000 in 1946.

(A. N. P.)

Mineral Production.—Table III shows the tonnage and value of Florida minerals in 1952 and 1953 (preliminary) whose value was \$100,000 or more. In 1953, Florida was first among the states in the production of phosphate rock and zircon, and second in ilmenite. It is the only state that produces rutile. It ranked 27th in the value of mineral output in 1953, with 0.64% of the U.S. total.

Flour: see BAKING INDUSTRY; WHEAT.

Folsom, Marion Bayard (1893—), U.S. government official and business executive, was born on Nov. 23 at McRae, Ga. He studied at the University of Georgia, Athens, and at Harvard university and worked for the Eastman Kodak company at Rochester, N.Y., of which he became treasurer and member of the board of directors. During World War I he was an army quartermaster officer with the American Expeditionary forces. Pres. Franklin D. Roosevelt appointed Folsom a member of his advisory council on economic security (1934-35) and of the federal advisory council on social security (1937-38). During World War II he held several federal and regional advisory appointments dealing with problems of manpower and employment.

Under Pres. Dwight D. Eisenhower Folsom became undersecretary of the treasury in 1953. Following the resignation of Oveta Culp Hobby as secretary of health, education and welfare in 1955, Eisenhower appointed him to that cabinet post.

Food Supply of the World: see AGRICULTURE.

Football. The rules committee of the National Collegiate Athletic association, meeting in New York, N.Y., in Jan. 1955, made several minor changes in regulations for the intercollegiate sport. A more liberal substitution rule, permitting a man removed from the line-up after starting any quarter to re-enter the game once during that quarter, was adopted. In 1954, players leaving a contest were not allowed to return in the same period except during the last four minutes of the second and fourth quarters. The chief benefit of the change is that it allows the removal of an injured player for examination without his being lost for an entire period. Another change permits a man kneeling to hold the ball on placement attempts to kick, pass or advance the ball. Under the former regulation he was limited to holding the ball for the kicker. A third innovation makes any lineman an eligible forward pass receiver only

MAX BOYDSTON, college All-Star end, snaring a long pass as he is tackled by Tom Jones of the Cleveland Browns in the first quarter of the game, Aug. 12, 1955. The All-Stars upset the favoured professional champions, 30-27

when he is on one end of the scrimmage line when the play starts and he is not outflanked by a teammate. The so-called "hideout" play, in which a man would attempt to hide near a sideline and take a pass, was virtually eliminated by a ruling that all players must be within 15 yd. of the ball when it is spotted and ready for play.

Roundup of 1954 Collegiate Season.—Ohio State, with nine victories in all, gained the western conference (Big Ten) laurels for the 1954 season and earned the right to play in the Rose Bowl. U.C.L.A. won nine games and clinched the Pacific Coast conference crown when it routed Southern California, 34-0, before a crowd of 102,548 persons. However, having played in the previous Rose Bowl game, U.C.L.A. was ineligible to represent its group in the 1955 battle and the defeated Trojans were selected.

Oklahoma, perennial Big Seven champion, won 10 decisions and extended its streak to 19. Having played in the Orange Bowl Jan. 1, 1954, Oklahoma could not represent the Big Seven a second straight year and Nebraska got the nod. Yale and Cornell shared the Ivy league laurels. Other leading conference champions were Mississippi, Southeastern; Arkansas, Southwest; Wichita, Missouri Valley; Denver, Skyline; Montana State, Rocky Mountain; Duke, Atlantic Coast; West Virginia, Southern; Texas Tech, Border; San Francisco State, Far Western; Prairie View, Southwestern.

Notre Dame, in its first season under Coach Terry Brennan, lost only to Purdue, 27-14, early in the campaign. Navy took seven out of nine games and won the Lambert trophy, symbol of the unofficial Eastern crown. The Middies climaxed their drive with a 27-20 triumph over Army before more than 100,000 at Philadelphia's Municipal stadium on Nov. 27, 1954. Harvard won the Big Three title for the first time since 1941 when it upset favoured Yale, 13-9. The South's All-Stars beat the North, 20-17, in the Shriners' benefit contest at Miami, Fla., on Dec. 25, 1954, and the Blues turned back the Grays, 14-7, at Montgomery, Ala.

Navy, playing in its first bowl game, provided one of the features of the Jan. 1 (1955) battles when it routed Mississippi, 21-0, before 82,000 in the New Orleans Sugar Bowl. Ohio State rolled over Southern California, 20-7, before 89,191 in Pasadena's rain-soaked Rose Bowl. Other New Year's day contests resulted as follows: Georgia Tech 14, Arkansas 6 (Cotton);

Duke 34, Nebraska 7 (Orange); Texas Western 47, Florida State 20 (Sun); Skyline All-Stars 20, Border All-Stars (Salad); U.S. Air Force 21, Marines 14 (Rice); Fort Jackson 26, Shaw Air Force Base 21 (Palmetto); Fort Ord 36, Fort Hood 0 (Shrimp). The East's All-Stars triumphed over the West, 13-12, in the thirteenth annual Shrine benefit contest at San Francisco. The game produced record net profits of \$240,300. The South beat the North, 12-6, in the sixth senior bowl battle at Mobile, Ala., on Jan. 8, and a team of U.S. all-stars halted Hawaiian all-stars, 33-13, in the Hula Bowl at Honolulu on Jan. 10.

1955 College Campaign.—Unbeaten Oklahoma was named No. 1 team of the nation in the final poll of writers and broadcasters by the Associated Press and thus won the Father J. Huether O'Donnell trophy, symbol of the championship. The Sooners scored 10 straight victories in 1955 to extend their winning streak through 29 games. Michigan State, with an 8-1 record, ranked second and Maryland, with 10-0, was third. Others in the first ten were U.C.L.A. (9-1); Ohio State (7-2); Texas Christian (9-1); Georgia Tech (8-1-1); Auburn (8-1-1); Notre Dame (8-2); and Mississippi (9-1). Ohio State retained the Big Ten championship, but Michigan State was selected for the Rose Bowl trip. Michigan State furnished one of the season's upsets by routing Notre Dame, 21-7. Michigan State's only loss in nine starts was to Michigan, 14-7. Maryland, with 10 triumphs in a row, extended its winning streak through 15 contests. U.C.L.A., the Pacific Coast conference champion, lost only to Maryland, 7-0. Navy, headed for Eastern honours and a bowl bid, was upset by its service rival Army, 14-6, at Philadelphia on Nov. 26. A new service academy made its gridiron debut Oct. 8 when the United States Air Force Academy freshmen turned back the Denver university freshmen, 34-18, at Denver. Among the group champions of the year were the following: Oklahoma, Big Seven; Princeton, Ivy; West Virginia, Southeastern; Rhode Island, Yankee; Mississippi, Southeastern; Coe, Midwest; Texas Christian, Southwest; Texas Tech, Border; Idaho State, Rocky Mountain; Missouri Valley, Missouri Valley Intercollegiate Athletic association; Colorado A.&M., Skyline; Miami (Oxford, O.), Mid-American; Detroit and Wichita (tie), Midwestern; Missouri Valley Conference.

The college All-Stars furnished a pre-season upset when they conquered the Cleveland Browns, 1954 champions of the National league, by 30-27 before a crowd of 75,000 at Soldier Field in Chicago, in August. The victors' 30 points was a record for college players in the series.

Hall of Fame.—Sixteen players and five coaches were elected

the sport's Hall of Fame in 1955. Coaches chosen were Wallace Wade, Matty Bell, Bernie Bierman, E. N. Robinson and George E. Little. Players voted in were Cliff Battles, West Virginia Wesleyan, halfback; Paul Des Jardien, Chicago, centre; William (Beattie) Feathers, Tennessee, halfback; A. R. Flowers, Georgia Tech, halfback; Clinton Frank, Yale, quarterback; Bob Rayson, Stanford, fullback; John Kilpatrick, Yale, end; Leroy Mercer, Pennsylvania, fullback; David O'Brien, Texas Christian, quarterback; Elmer Oliphant, Army, halfback; Clarence (Ace) Parker, Duke, back; David Shreiner, Wisconsin, end; Fred Wootton, Alabama, tackle; Harry Smith, Southern California, guard; Clarence Spears, Dartmouth, guard; Alex Wojciechowicz, North Carolina, centre.

Lehigh turned back Rutgers, 21-14, in the sixth annual Hall of Fame game played at Rutgers stadium in New Brunswick, N.J., Oct. 22, 1955. It marked the fifty-second meeting of these Fiddle Three rivals.

Professional Football.—Cleveland's Browns furnished the major surprise of the 1954 campaign in the National league by defeating the favoured Detroit Lions, defending champions, 56-10, in the title play-off at Cleveland on Dec. 26, 1954. Otto Graham passed for three touchdowns, pitched out for another and tallied three himself as a crowd of 43,837 looked on. Early in 1955, U.S. teams moved to obtain agreements with Canadian clubs to end the "raids" on playing material. On Feb. 24, the Washington Redskins and Calgary Stampeders signed a pact, and on April 3 the Western Interprovincial Football Union of Canada amended its bylaws to prevent any of its clubs from signing any player under contract or option in the National Football league. On April 30, a federal court decree awarded a \$100,000 judgment to the Chicago Bears against the Hamilton (Ont.) Tiger-Cats in a player-raid case. The suit was settled out of court. As the National league teams neared the end of their 1955 schedules Cleveland was leading the Eastern conference, with Washington still in the running, while Los Angeles, the Chicago Bears, Baltimore and Green Bay remained in a tight race for Western conference honours.

Canadian Football.—Edmonton's Eskimos retained the Grey Cup, symbolic of professional supremacy in Canada, by defeating the Montreal Alouettes, 34-19, on Nov. 26, 1955. A record play-off crowd of 39,417 gathered in the Empire stadium at Vancouver, B.C., saw Edmonton become the first Western team to win the cup final in two successive seasons. Edmonton had captured the cup in 1954 by subduing the favoured Alouettes, 25-21, at Toronto on Nov. 27. The University of Toronto was the intercollegiate senior title winner of 1954. Proctor academy at Andover, N.H., defeated Westmount High of Montreal, 7-5, in their seventh annual meeting at Montreal in 1955. The victors gained a 7-0 lead in the first half, played under U.S. rules. The second half was governed by Canadian regulations. (T. V. H.)

Great Britain, Commonwealth and Europe.—*Association football.*—The world cup competitions of 1950 and 1954 and several international matches in this period showed how far behind the vastly improved standard now set by the best European and South American sides the British national teams had fallen and in the 1954-55 season great efforts were to be made to remedy matters. All went well up to a point: Ireland, Wales, the German side badly weakened by illness, and Scotland were beaten, Scotland indeed losing at Wembley for the first time since 1934. But England's summer tour against France, Spain and Portugal was disastrous, bringing defeats in Paris and Porto and a draw in Madrid.

It was generally agreed that most modern British professional footballers did not work as hard or as enthusiastically as many foreigners, and this was borne out by the poor standard of many football league games. The advent of Eurovision, moreover,

enabled many to see the best continental football. Total attendances at Football league games fell by 2,000,000 as patrons could sit at home and watch sports on television and the lowest charge for admission was increased from threepence to two shillings. But in continental countries crowds increased and many huge stadiums were under construction; Spain now had three grounds holding more than 100,000 spectators.

In the English home program Manchester City's combined attacking method proved successful, for although they lost 1-3 to Newcastle United, 1951 and 1952 cup final winners, in the league they finished seventh, having in recent years been in danger of relegation. Chelsea celebrated its 50th season by winning the Football league title for the first time and also the competitions in which their Reserves, A team, and Juniors competed.

Rugby Union.—The season was overshadowed by two coming tours, that of the British Isles in South Africa in the summer of 1955 and that of South Africa in New Zealand in 1956. Both British and New Zealanders were much divided in their opinions as to how they could beat South Africa. The British after the home internationals decided to pick a dangerous and attacking back division and take the best available forwards, mostly Welsh and Irish, from some rather moderate packs.

The British back division, largely based on the English one, played beautifully in every international game at first, but failed to ram its advantage home. Wales had to win at Paris after a defeat in Edinburgh to tie with France for the unofficial championship. France day in and day out had the best side of the five countries. Scotland had a most welcome revival, beating Ireland for the first time in 20 years, and almost held England at Twickenham. Ireland had a disappointingly erratic side.

Rugby League.—When Great Britain, France, Australia and New Zealand competed in France in November for the first world cup, the matches were conducted in an excellent spirit. A young and largely new British team made up for the loss of the rubber in Australia by beating Australia and New Zealand, drawing with France, and then beating France in the play-off. The English professional clubs mostly had a poor season financially and much poor football again was seen in Northern league games. Warrington, the holders, were as good as in the previous year after a poor start and beat Oldham in the final. B. Bevan, their great Australian wing, brought his total of tries to more than 500, a record. Oldham had no such outstanding individual but they achieved much by good teamwork and were a trifle unlucky not to win a single trophy. (For U.S. association football see SOCCER.) (L.A. M.)

Ford Foundation: see SOCIETIES AND ASSOCIATIONS, U.S.

Foreign Aid Programs, U.S. The year 1955 marked the completion of ten years of postwar foreign aid by the United States government. Having had bipartisan support during most of its history, the policy of granting substantial foreign aid was continued by the Republican administration that came to power in 1952, and by late 1955 seemed to have established itself as a continuing part of U.S. defense and foreign policy.

Tables I and II summarize U.S. foreign aid over the decade, showing the shift since the Korean war. The figures cover all forms of foreign aid, including not only the major sums provided through the Economic Cooperation administration and its successor agencies, but also such items as the large recovery loans provided in the immediate postwar years, lend-lease settlement credits, relief shipments, loans by the Export-Import bank, and contributions to aid through international agencies, including capital subscribed to the International Monetary fund and the International Bank for Reconstruction and Develop-

ment. For a number of technical reasons, some of which are mentioned in the notes to the tables, specific figures must be used with caution, but the tables accurately reflect the main characteristics and trends of foreign aid. The division between military and other aid is sometimes rather arbitrary. Because the figures show actual utilization of aid which takes place some time after money is appropriated by congress, the tables understate the shift in emphasis in recent years toward aid for Asia.

Aid in Fiscal 1955.—During the twelve months ending June 30, 1955, the United States made new grants to foreign countries totalling \$4,486,000,000 and provided new credits to the sum of \$443,000,000. Repayment of the principal of earlier loans plus returns on certain grants and reverse grants to the U.S. reduced the total net aid for the year to \$4,469,000,000. This was almost \$800,000,000 less than the aid utilized in the previous fiscal year and the smallest figure since fiscal 1951.

Direct military aid, in the form of weapons, munitions, aircraft, etc., came to \$2,543,000,000, nearly 57% of total aid. This was about \$1,000,000,000 less than in fiscal 1954 when military aid accounted for more than two-thirds of the total. However, this drop did not accurately reflect the extent to which U.S. aid was used for military purposes. The official fig-

ure for "other grants and credits" includes substantial sums paid to other governments for the support of their military effort and also supplies such as clothing, food and fuel that went directly to troops. More than \$600,000,000 was given for the direct support of troops during the year, the largest part, \$434,000,000, going to France to help defray the cost of the war in Indochina. Subsequently similar, though smaller payments were made to Laos, Cambodia and South Vietnam for the same purpose and to build up their defensive strength. Payments of this sort help to account for the rise in "nonmilitary" aid from \$1,711,000,000 in fiscal 1954 to \$1,927,000,000 in fiscal 1955. The largest other constituent of this total was "defense support," a type of payment comparable to the "economic aid" of earlier years, but justified on the ground that it enabled recipient countries to maintain greater military strength than their economies could have borne without aid.

Western European nations and their dependencies received about three-fifths of the purely military grants. This was about the same share as in previous years, although the value of aid was nearly \$800,000,000 less than in fiscal 1954. The \$1,500,000,000 of aid used in this way included the U.S. share of the North Atlantic Treaty organization (NATO) infrastructure program—mostly airfields, pipeline and storage facilities and telecommunications network—as well as transactions intended to strengthen the military power of specific NATO countries and also Spain and Yugoslavia. Eastern and southern Asia, the area receiving the next largest amount of aid, the bulk of it going to Korea, Formosa, the Philippines, Thailand and Pakistan. The near east, including Greece and Turkey, was the third area of importance for military aid, but like the others showed a decline from fiscal 1954. Since European countries provide defense for some areas outside western Europe, whether in their colonies or otherwise, the official figures on the allocation of military aid do not exactly reflect the actual geographical distribution of the use of this aid.

Principally because of the large payments to France, western Europe's share of so-called nonmilitary aid was larger than in the previous year. Outside France, only Spain and Yugoslavia received larger sums in fiscal 1955 than in the previous year. Britain was the second largest recipient, after France, but here again the largest part of the aid was a direct contribution to military strength, in this case to assist in aircraft production. Nonmilitary aid to the near east increased in fiscal 1955, with Iran becoming the largest recipient. Deliveries to Turkey were the next largest, and Egypt, Jordan and Libya also got more than in the previous year. While Greece and Israel were in third and fourth places among the recipients of U.S. aid in the region, the amounts they received fell compared with the previous year.

In the far east, Korea was the largest recipient, getting a contribution to reconstruction of \$207,000,000 compared with \$152,000,000 the year before. The Chinese government on Formosa received aid totalling \$76,000,000, the same as the year before. Japan, which had made substantial use of U.S. credits in fiscal 1954, repaid \$29,000,000 during fiscal 1955 and received \$7,000,000 in grant aid. In southeast Asia the largest payments went to Laos, Cambodia and South Vietnam, mostly for direct support of their armies. India was the next largest recipient with \$64,000,000, compared with \$30,000,000. Pakistan's military aid fell from \$83,000,000 in fiscal 1954 to \$30,000,000 in fiscal 1955, but that country also received military aid from the United States. Aid to Latin America fell from \$246,000,000 in fiscal 1954 to \$102,000,000 in fiscal 1955, largely because of a sharp decrease in credits that had been advanced in the previous years to ease Brazil's foreign exchange difficulties.

The Mutual Security act of 1954 required that \$350,000,

of the aid appropriations be used to finance the sale of agricultural surpluses. The Agricultural Trade Development and Assistance act of 1954 provided that an additional \$700,000,000 be used in the same way over three years. The farm surpluses are sold for foreign currency which may then be used to provide aid to foreign governments, for instance by being loaned back to them or by being spent, in agreement with the foreign government, for the purchase of aid goods for that country or another. Only when the currencies are actually used do these transactions appear in the foreign aid accounts. During fiscal 1955, the Foreign Operations administration negotiated sales for \$467,000,000 worth of agricultural surpluses, comprising \$250,000,000 worth of cotton, \$147,000,000 of grains and \$24,000,000 in fats and oils. Added to the sales made under a similar provision in the previous fiscal year, the total came to about \$700,000,000. Sales under the Agricultural Trade Development and Assistance act during fiscal 1955 totalled \$361,000,000, comprising \$124,000,000 worth of cotton, \$135,000,000 worth of grain and \$40,000,000 of tobacco. The largest part of the sales was to western European countries. Actual deliveries of surplus farm products during fiscal 1955 produced \$362,700,000 in foreign currencies. Of this sum, \$102,100,000 was used for grants, credits and offshore procurement under the aid program, and \$14,600,000 was used to finance U.S. government operations abroad. The remaining sum, combined with similar funds accumulated during the previous year, left the U.S. government at the end of the fiscal year with almost \$400,000,000 in foreign currencies, of which \$235,800,000 was in western Europe, \$98,000,000 in the far east and south Asia, and \$56,500,000 in the near east.

Appropriations for Fiscal 1956.—In a message of April 20, Pres. Dwight D. Eisenhower asked congress to appropriate \$3,530,000,000 for foreign aid in fiscal 1956, substantially more than had been appropriated the year before. (The sum was later reduced to \$3,408,000,000 by a cut in the military request; see Table III.) Less than half the money requested was to be for military assistance, including direct support of foreign troops. This was nearly \$500,000,000 less than had been appropriated for this purpose the year before when military items accounted for more than 70% of the appropriation. The president asked for an increase of defense support and other economic aid, putting special emphasis on Asia. No economic aid was planned for the original Marshall plan countries; in Europe, only Yugoslavia, Spain and Berlin would receive general economic help. Technical assistance was also budgeted for a larger sum. Additional money for technical assistance and economic development would come from the \$200,000,000 the president

Table III.—United States Foreign Aid Appropriations
Fiscal Years 1955 and 1956

	(Millions of dollars)		
	Appropriations for fiscal 1955	Executive requests for fiscal 1955	Appropriations for fiscal 1956

requested for an Asian development fund, to be used over three years. The president also asked for larger sums for refugees, including a contribution to the UN program for Arab refugees from Palestine, and a substantial increase in the money earmarked for ocean freight to facilitate the sale of surplus agricultural goods. Not included in the aid budget was \$35,168,000 appropriated in June as the U.S. share of the capital subscription to the International Finance corporation, a new affiliate of the International Bank for Reconstruction and Development that would provide capital for economic development.

The Mutual Security act of 1955 had a relatively smooth passage in congress. The senate passed the bill on June 2 (59-18), authorizing larger expenditures than the president had requested. The house acted favourably on June 30 (273-128). On July 7 the senate and house approved the conference report reconciling the two bills, and the next day the president signed the act. The appropriations bill encountered more difficulties. The house committee on appropriations became exercised about "the chaotic fiscal situation surrounding the administration of this program," as it had the year before. In particular, it was critical of last-minute action by the department of defense to obligate large sums before the end of the fiscal year. Arguing that the existing pipeline of undelivered military equipment plus some new money would suffice to maintain the level of the program, the committee cut \$420,000,000 from the appropriation for military assistance. It also halved the authorization for the Asian Development fund from \$200,000,000 to \$100,000,000 and cut smaller sums from all other major items. The administration made no attempt to restore these cuts during the floor debate and the bill passed the house (251-123) on July 11 carrying about \$650,000,000 less than the sum authorized by the earlier act. The senate appropriations committee restored the

LOADING DREDGE turned over to the Philippine department of public works by the U.S. International Cooperation administration in 1955. The dredge was to be used for flood and river control construction

BRITISH JET FIGHTERS of the type purchased by the U.S. from British manufacturers for delivery to the royal air force. Four hundred sixty-five planes, at a cost of \$140,000,000, were ordered in an effort to build up British production

full cut made by the house in the military aid item, and most of the other sums as well. The senate passed this bill (62-22) on July 22, with slight changes and the two versions went to conference to see what could be done about the discrepancy of about \$567,000,000. Before the conference met, the defense department reported that it had discovered that \$302,000,000 thought to have been spent was still available. The conferees agreed to permit the use of these funds for military assistance and the senate acquiesced in the house's original cut, so the appropriation bill as passed reduced military assistance by about \$118,000,000. The other discrepancies were compromised and the conference bill, appropriating \$2,703,000,000 and authorizing the use of a further \$61,000,000 in unobligated balances from previous aid appropriations, passed both houses on July 28 by voice vote. The department of commerce estimated that the carry-over of undelivered aid from previous appropriations came to \$11,300,000,000 at the end of fiscal 1955.

Administration.—The Mutual Security act of 1954 provided that the Foreign Operations administration should go out of existence on June 30, 1955. In April the president announced that as of that date he would transfer the FOA's affairs to "a new semi-autonomous organizational unit" within the state department, the International Cooperation administration (ICA). It was to administer economic aid and technical assistance under a director responsible to the secretary of state. The latter was to co-ordinate all mutual security programs and make arrangements with the secretary of defense "for effectively co-ordinating mutual security programs" carried on by the defense department, namely military aid. To head the new agency, the president appointed John B. Hollister of Cincinnati, Ohio.

The view that foreign aid would play a continuing part in U.S. foreign policy received more official support during 1955 than it had before. In his letter announcing creation of the ICA, the president noted that many had regarded the FOA "as merely a temporary unit of government" whereas it was widely recognized "that the functions and the need for co-operative development of economic and military strength among the free nations are continuing and integral parts of the fabric of our international relations." Foreign Investments. Foreign investments expanded vigorously in 1955, as in the previous year, encouraged by generally prosperous world conditions. Early in the year monetary authorities in several European countries began to take steps to counter growing inflationary pressures, which were already causing difficulties in their international trade. Although this was a matter of concern for some United States investors, the establishment of a more peaceful atmosphere appeared to be generating the most widespread interest in foreign investment since the 1920s. European investors continued to invest in U.S. corporate stocks in 1955, and were also making substantial investments in Canada, Latin America and other countries.

U.S. Investments Abroad.—The value of U.S. private investments in foreign countries expanded by a record \$2,800,000,000 in 1954 to reach a total of \$26,600,000,000 on Jan. 1, 1955. In the first six months of 1955 there was a gain of about \$1,000,000,000, indicating a considerable reduction from the 1954 rate of increase.

Most of the change was connected with lower capital outflows for short- and medium-term credits, and reduced borrowing from the United States market by Canada and the International Bank for Reconstruction and Development.

Outflows of direct investment capital were about \$325,000,000 in the first half of 1955, which was somewhat lower than the 1954 amount for the same period. However, the many new ventures being planned or already initiated would call for continuous investment at a high level for some time to come.

Direct Investments.—American business was expanding abroad in 1955 in a great variety of enterprises and in nearly every part of the non-communist world. From the end of 1949 to the beginning of 1955 approximately \$10,500,000,000 was invested in foreign branches and subsidiary companies, companies with a total of \$4,000,000,000 invested from 1919 through 1949. Much of the postwar investment was made in spite of widespread economic and political disorder, and helped to establish entirely new levels of production in many countries.

The United States government took a number of actions in 1955 designed to encourage foreign investments. Probably

most important was a renewed effort to gain congressional approval of reduced taxes on income from foreign sources. Introduced as H.R. 7725 on July 29, the bill provided, in general, that specified business income from foreign sources should be taxed at a rate 14 points lower than the rate applied to domestic corporate income, and that income from foreign branches would not be taxed in the United States until remitted. In August the president signed the bill providing for United States participation in the International Finance corporation, an affiliate of the International Bank for Reconstruction and Development. The United States was to subscribe \$35,168,000 into the \$100,000,000 capital of the organization, which would invest in private enterprises along with private investors and would serve to bring together investment opportunities and prospective investors.

Hearings began in September before the senate antitrust and monopoly subcommittee on a proposal by government agencies that congress should create a new government agency to grant limited exemptions from anti-trust laws for private foreign investment arrangements. The agency would provide advance rulings on proposed undertakings, thus eliminating certain uncertainties as to the application of the laws which may have deterred some investors.

Canada continued to absorb about half of all United States direct foreign investments, raising the total to considerably more than \$6,000,000,000 by the middle of 1955. Canada's natural resources were being developed very rapidly, but as few explorations were carried out it became evident that unappreciated reserves far exceeded those being brought into production. United States companies were especially attracted to Canada by the liberal tax concessions to many types of mining enterprises, as well as by other assistance given by the Canadian government. Among the developments in 1955 was the announcement by the American Metal Co. that reserves of various types on its Heath Steele mines properties in New Brunswick were much larger than earlier estimates and several million dollars were to be spent on milling and other facilities. Early in the year the Marmora, Ont., mine of the Bethlehem Steel Co. began production and shipment of high-grade iron concentrates, after a three-year period of development costing more than \$50,000,000. A new copper source in northwest British Columbia was under development on a 50-50 basis by a Canadian company and Newmont Mining Corp., a U.S. company. About 30,000,000 tons of ore were indicated, and development would require the construction of a railroad. Investments in copper and other minerals were greatly encouraged by the steep price rises taking place in 1955.

Other developments in mining in Canada included a major copper-nickel discovery in the Ungava bay area in northern Quebec by a company owned 50% by Hanna Iron Ore Co., a joint development of a columbium-tantalum ore body at Oka near Montreal at a cost of \$3,000,000 to \$4,000,000 by Molybdenum Corp. of America and Kennecott Copper Corp., an investment of \$7,500,000 by Philip Carey Manufacturing Co. to develop large deposits of asbestos in Quebec, and continued expansion of productive facilities at the great iron ore mines which were still far below their potential output. Early in the year Aluminum, Ltd., largely financed in the United States, announced plans for a \$190,000,000 expansion of its huge facilities at Kitimat, B.C., which would double the smelting capacity already installed or un-

der construction. Output was sold largely in the U.S. and Canada and the raw material was obtained from properties developed in Jamaica, B.W.I.

U.S. investments in Canadian petroleum resources continued at an annual rate of about \$200,000,000, both to expand existing facilities and to carry out further exploration and development of newer areas. A great many United States companies were taking part in the intensive development, and it appeared that great additional amounts of capital would be required to bring the properties into production. The construction of pipelines to distribute the already available output of oil and natural gas was further delayed by failure to reach agreements on financing and other factors.

U.S.-owned manufacturing plants in Canada continued to expand with the country and constituted the leading field for investment, with a value of more than \$2,550,000,000 in 1955. Literally dozens of new enterprises were inaugurated in the year, including plans by International Paper Co. to enter the shipping container field with a new plant near Montreal, a new electronics plant by RCA Victor Co. at Renfrew, Ont., further expansion by Motorola Canada Limited, a new \$5,000,000 to \$6,000,000 insulating board plant to be built at North Bay, Ont., by Johns-Manville Corp., a new enterprise, formed by Canadian Pittsburgh Piping Co. to fabricate special piping equipment, the completion by Linde Air Products Co. of a new plant to manufacture welding and other apparatus, and the final stages of a two-year expansion by Chrysler Corp. at a cost of \$50,000,000, to double its Canadian output.

Investments in Canada in chemicals and related products were especially noteworthy in 1955, and included plans by Hooker Electrochemical Co. to construct an \$11,000,000 chlorine-caustic soda plant, a \$6,000,000 plant near Montreal to be built by an affiliate of W. R. Grace & Co. to manufacture catalysts for oil refiners, a new \$10,000,000 plant to be built by the Ethyl Corp. at Sarnia, Ont., as the first producer of tetraethyl lead in Canada, an explosives plant costing several million dollars to be built by du Pont of Canada near North Bay, Ont., a \$3,000,000 plant program by Dow Chemical Co. of Canada to increase output of ethylene, Canadian Chemical company's new Edmonton, Alta., plant to produce industrial chemicals, a building program costing several million dollars by Charles Pfizer & Co. to manufacture antibiotics in Ontario, a new \$2,000,000 laboratory being built by Parke, Davis & Co., a \$15,000,000 plant in Quebec to be built by National Lead company's Canadian subsidiary to produce titanium pigment, and a \$5,000,000 plant at Sarnia built by Imperial Oil, Ltd., to produce a new petroleum wax.

United States direct investments in Latin America continued to increase in 1955, but the rate of growth was lower than in most postwar years and was probably not higher than the \$220,000,000 increase recorded for 1954. Uncertainties about the immediate economic and political future of Argentina, Brazil and Chile and some other countries tended to discourage investment, but on the other hand there was much evidence of con-

fidence in the long-run future of these countries and a number of very large ventures were in the planning stage.

An indication of the high interest in investing in Latin America was the attendance of more than 800 persons, many representing large United States corporations, at the Inter-American Investment conference held at New Orleans, La., early in 1955 and privately sponsored by the city of New Orleans and Time-Life International.

In Argentina various measures were taken in 1955 to encourage additional foreign investment, but the situation in that country was still very unsettled. A decree (No. 637) of Jan. 17 had the appearance of liberalizing remittances of profits for foreign enterprises established before Aug. 26, 1953—the date of Argentine foreign investment law No. 14222—but the new regulations did not appear to make any substantial change for most of the old established companies. In April the Standard Oil Co. of California signed a contract with the Argentine government under which the company would spend a minimum of \$13,500,000 over a period of years prospecting for oil in southern Argentina. The contract provided for 50-50 sharing of profits between the company and the government, but the approval of the Argentine congress was required before the contract became effective. Similar arrangements were said to be under discussion with other companies.

Industrial investments in Argentina included a plant for the production of polystyrene to be constructed by an affiliate of Monsanto Chemical Co., a factory in Buenos Aires to produce optical products financed by a German company and American Optical Co., and an \$8,000,000 investment in Cordoba by Kaiser-Willys in a factory to produce trucks, jeeps and passenger cars.

In Bolivia there was great hope that petroleum production could be increased; several United States companies were interested and an additional \$4,160,000 was raised by Glenn McCarthy to develop existing properties.

Brazil was suffering a severe balance of payments crisis in 1954 and 1955 as coffee exports and prices fell, and the political situation was somewhat strained prior to the presidential elections scheduled for late 1955. One of Brazil's great economic and political problems is the development of oil resources, but there seemed to be no immediate prospect of foreign capital entering the field following the decisive defeat by the Brazilian senate in April of a bill that would have made this possible. In spite of difficulties, Brazil remained one of the most active fields for United States direct foreign investments, which totalled \$1,050,000,000 in that country by 1955, more than half in manufacturing. According to newspaper reports French and German groups were both studying huge investments in Brazil, although the United States' stake was now by far the largest. Among the proposed United States investments in Brazilian industry were expanded productive capacity for abrasives and aluminum oxide by the Carborundum Co., plans to manufacture tobacco-processing machinery by American Machine and Foundry Co., a textile factory using \$3,000,000 of imported equipment by Saco Lowell shops, a new plant to manufacture steel drums and other products by the American Flange Corp., RCA Victor's plant to produce electronic equipment, a plastics plant to be established by the Koppers Co., a joint venture by W. R. Grace & Co. and a German firm to produce various chemicals, a new \$10,000,000 manufacturing plant of Singer Sewing Machine Co., the plans of Remington Rand Inc. to mass produce typewriters and calculating machines in Brazil, Caterpillar Tractor Co.'s project to manufacture equipment and parts in Brazil, and Burroughs Corp. facilities for manufacturing office equipment.

Although Chile was suffering from a critical price inflation in 1955, the prospects for additional United States investments,

especially in mining, were greatly improved by new tax legislation, the discovery of new resources, and sharply rising copper prices. The new tax legislation effective in May continued the income tax rate at about 75% but reduced the burdens of other regulations, including fixed prices for sales of copper to the Chilean Central bank and an arbitrarily high rate of exchange for pesos needed to cover local expenses. The latter factor continued to be a serious problem in 1955 as prices soared in Chile. In August, the Anaconda Co. announced the discovery of new property, the Indio Muerto mine, said to rank among the great copper mines in the world. The development of this and other copper properties in Chile was encouraged by a provision of the New Investments statute, adopted earlier in the year under which a decree can give tax rate guarantees, including five-year quick amortization.

Exploration for oil continued in Cuba, with Standard Oil Co. of Indiana reported as planning to spend \$10,000,000 over a period of years. Deep Rock Oil Corp. and other companies were also active in the country. Expansion of investments in sugar production was discouraged by the weakness of the market, but plans were being made for a \$7,000,000 plant to produce furfural, a sugar by-product.

Elsewhere in the Caribbean area there appeared to be an improvement in the prospects for foreign investment, although the agricultural basis of the region was still subject to market instability and occasional severe losses from weather damage and strikes. The president of Costa Rica cited the United Fruit Co. as a stabilizing influence, and there was a report that United States private capital was interested in constructing a \$3,000,000 oil refinery in the country. In the Dominican Republic a \$6,000,000 furfural plant was opened by the South Porto Rico Sugar Co. Guatemala was one of several Latin-American countries to agree to co-operate in the U.S. government's guarantee program. Reynolds Metals company began a \$7,000,000 bauxite mining project in Haiti, and several smaller ventures in that country were under discussion. U.S. bankers and a construction concern were considering a program to bolster the economy of Nicaragua by the construction of housing projects, dock facilities, etc. Despite serious damage to banana producing properties in Honduras, the outlook was brightened by a \$30,000,000 rehabilitation program announced by the Tela Railroad Co. Other activities in the area included off-shore oil exploration in British Guiana and a plant to produce soluble coffee in El Salvador.

Mexico recovered rapidly from a devaluation in 1954 and appeared to increase in attractiveness for United States investment, especially because of the continued policy of unrestricted foreign exchange transactions and tax incentives provided in the newly enacted Industrial Encouragement law. Republic Steel Corp. was reported as planning a \$15,000,000 titanium operation, Sears, Roebuck & Co. was opening additional stores and also entering the manufacturing field, various United States chemical and pharmaceutical concerns were planning expansion in the country, Mexican Gulf Sulphur Co. was expanding operations, Monsanto Chemical Co. expanded sulphuric acid production and Sherwin-Williams Co. opened a \$500,000 paint factory.

Investment interest in Peru was unusually active in 1955, centring around a \$200,000,000 project to develop three new copper properties containing at least 1,000,000,000 tons of ore. The American Smelting and Refining Co. was heading a group of U.S. companies interested in the project, and about half the capital was expected to be provided by the Export-Import Bank of Washington. This new project would more than double existing U.S. mining investments in Peru. Other plans for Peru included a \$3,000,000 tire and rubber company formed by B. F. Goodrich Co. and Peruvian capital, continued oil develop-

by Douglas Oil Co. in the Lobitos area, a refractories plant in Lima by Harbison-Walker Refractories Co., and a Sears, Roebuck store in Lima costing \$3,000,000 to \$4,000,000.

Direct U.S. investments in Venezuela reached \$1,400,000,000 in 1955 and were continuing to expand as the demand for petroleum intensified and prices rose. Creole Petroleum Corp. scheduled capital and exploration expenditures of \$120,000,000 for the year, much of which would be charged against income, including new projects such as a \$34,000,000 gas conservation plant, further development of \$35,000,000 harbour facilities, and \$11,000,000 on expanded refinery installations. Sun Oil Co. was also seeking to enter Venezuela. Other developments in Venezuela included work on sulphur and mercury deposits by Venezuelan Sulphur Corp. and a plan partly backed by U.S. capital to establish a company to extend automotive dealer credit.

U.S. companies carried out many additions to their European investments in 1955, spurred by greatly strengthened economies in most countries and the apparent easing of the political atmosphere. At the same time, there was a threat of economic dislocation if inflationary pressure was not kept in check. A Belgian drive to attract United States investment was having some success and the Ford Motor Co. (Belgium) announced plans to spend 175,000,000 fr. for new buildings and retooling. In France there was great interest in the expansion of oil production by the French affiliate of Standard Oil Co. (New Jersey), and the Caltex group was continuing exploration work as well as spending an additional \$8,500,000 to expand and improve refineries. Other companies were established in the machinery and chemical industries.

Germany's current economic strength and relatively free foreign exchange system attracted much attention from U.S. investors, who were leading all other foreign countries in direct investments in Germany. In 1955 the German affiliate of Standard Oil Co. (New Jersey) planned a new refinery to handle 1,000,000 tons a year, the affiliates of both General Motors and Ford Motor Co. were enlarging their capacity, the Pfadler Co. was expanding its German plant, Marchant Calculators, Inc., was to construct a factory in Hamburg, Berkshire Knitting Mills planned to produce stockings in Germany, and the German affiliate of International Telephone & Telegraph Corp. was to receive new United States capital for expansion. There was one liquidation in 1955 as New Jersey Industries received the equivalent of \$15,000,000 for the sale of the Emil Koester chain of stores to foreign interests.

Italy was endeavouring to attract foreign capital to aid in large plans for economic development, and legislation to liberalize the terms of previous laws was introduced early in 1955. Interest centered around oil development, with Socony-Vacuum Oil Co., Inc., obtaining a U.S. guaranty for an \$11,000,000 refinery expansion, Gulf Oil Corp. seeking permission from the Italian government to start production from a 25,000-ac. concession and the formation of a new company by Standard Oil Co. (New Jersey) to explore for oil in Sicily.

Investment continued to go forward in the Netherlands, with Caltex expanding its refineries near Rotterdam, and new investments in the chemical field by Dow Chemical Co. and Merck & Co., Inc. In Portugal, the Socony-Vacuum Oil Co. explored for oil and in Turkey the Federal Motor Truck Co. was to join Turkish interests in a \$7,000,000 truck assembly plant.

U.S. direct investments in the United Kingdom were larger than in any country except Canada or Venezuela, totaling \$1,250,000,000 at the beginning of 1955 and growing steadily. Among the many 1955 projects were a \$12,000,000 plastics plant for Scotland by Union Carbide & Carbon Corp., a new plant costing several million dollars by Borg-Warner Corp., a program to cost the equivalent of \$168,000,000, largely out of earnings,

to expand Ford's production facilities, participation by Solar Aircraft Co. in a British company to produce gas turbine engines, a joint venture by Oronite Chemical Co. to produce detergent ingredients in the United Kingdom and a \$25,000,000 expansion plan by Monsanto Chemical company's British subsidiary.

In the far east there was unusually active interest by U.S. investors in Australia, where the U.S. share in foreign investment had greatly expanded since the war. Petroleum investment was important, with further large outlays planned for exploration and the completion of a \$45,000,000 refinery by Standard-Vacuum Oil Co. Industrial investments included a large manufacturing plant by Caterpillar Tractor Co. costing nearly \$7,000,000, the beginnings of a large expansion program by Chrysler Corp., and a \$48,000,000 expansion by the Australian subsidiary of General Motors Corp. The Atlas Corp. was reportedly to invest \$1,265,625 with Australian interests in a uranium property, and Sears, Roebuck & Co. purchased a substantial interest in an Australian department store chain.

A more favourable attitude toward foreign investments seemed to be developing in Indonesia, although the situation was complicated by political changes. Standard-Vacuum Oil Co. was going ahead with the various parts of a comprehensive \$80,000,000 development program, but the installations of General Motors Corp. were liquidated in the year. The situation in India was also somewhat mixed. The government agreed to allow Standard-Vacuum Oil Co. to prospect for oil in Bengal and was considering an enlargement of the Caltex refinery investment. Both Burma and Pakistan issued official statements inviting foreign investors, and the latter country signed an investment guaranty agreement with the United States as well as an agreement with U.S. investors providing for an investment of more than \$30,000,000 in petroleum development.

Middle east oil production was at record levels in 1955, with the largest new investment taking place in the rehabilitation of the industry in Iran. In the year there was a series of negotiations aimed at raising the proportion of petroleum earnings going to the various governments in the area. Oil exploration was going forward in Egypt, production started at a new refinery in Lebanon and further expansion was planned by the U.S. owners, and Standard Oil Co. (New Jersey) was building a new petroleum terminal in Libya. Israel further liberalized regulations affecting foreign investors in 1955. The Israel-American Oil Corp. announced the discovery of a natural gas deposit and Ampol planned a \$10,000,000 investment in various enterprises in the first half of the year.

In the Union of South Africa, Remington Rand, Inc., established a new subsidiary to develop manufacturing facilities for export, and it was announced that Twentieth Century-Fox Film Corp. was to purchase a chain of movie houses for about \$30,000,000.

Other Private Investments.—Net capital outflows from the United States in 1954 were at a record level largely because of short- and medium-term credits to finance United States exports, especially to Latin America and Japan, increased holdings of sterling, and increased purchases of equity securities in Europe and Canada. In the first half of 1955 net capital outflows of these types were greatly reduced, but many arrangements were being worked out which would stimulate further financing of United States exports, as well as additional investments in the securities of foreign corporations. However, such capital flows are quickly influenced by changes in relative interest rates and exchange rates, and by short-term fluctuations in the situation of individual foreign countries, so that the conditions for a steady outflow are difficult to achieve.

A special program to assist U.S. exporters to obtain credit

Table II.—Value of Foreign Investments in the United States, Jan. 1, 1954, and Jan. 1, 1955
(In billions of dollars)

*Includes state and municipal obligations.

†Includes estimated foreign holdings of U.S. currency of \$839,000,000 on Jan. 1, 1954, and \$838,000,000 on Jan. 1, 1955, which cannot be distributed by area.

‡Less than \$50,000,000.

Source: U.S. Department of Commerce, *Survey of Current Business*, Aug. 1955. Details may not add to totals because of rounding.

covering exports of capital equipment was inaugurated by the Export-Import bank late in 1954 and by July 1955 total credit lines agreed to by the bank totalled \$150,159,000, although only a negligible amount had been utilized.

U.S. banks were increasingly active in participating in the loans being made by the International Bank for Reconstruction and Development, usually buying the earlier maturities of loans repayable over a number of years. In the fiscal year 1955 the International bank sold or agreed to sell, mainly to U.S. banks, \$98,400,000 of loans without guarantee and \$800,000 with a guarantee. U.S. banks participated in loans in 1955 to a great number of countries, including Australia, Austria, Colombia, Finland, Nicaragua, Peru, Pakistan, Thailand, Uruguay, Guatemala and Panama. Other medium-term private bank loans made directly to foreign borrowers included \$4,000,000 to Italy, \$30,000,000 to Israel and \$40,000,000 to Spain.

Renewed interest in foreign securities was reflected in the successful flotation of a new Australian bond issue of \$25,000,000 and a \$30,000,000 issue of Belgian bonds at the end of 1954, followed by a \$15,000,000 new issue of Norway early in 1955. However, the greatest interest in 1954 and 1955 was in foreign corporate stocks, with net purchases, mainly of European and Canadian issues, reaching \$87,000,000 in the first half of 1955. To facilitate these investments the Irving Trust Co. issued American Depositary Receipts covering 34 foreign issues. The Securities and Exchange commission was drafting registration and prospectus forms to provide for the first time a means of registering these depositary receipts under the 1933 Federal Securities act.

United States Government.—Repayments on outstanding U.S. government long-term credits nearly equalled disbursements on new loans, leading to a net increase of only \$40,000,000 in the first half of 1955; there was a net repayment of \$200,000,000 in 1954. U.S. government holdings of foreign currencies and claims arising out of aid program counterpart funds and payments for agricultural exports from the United States continued to soar, increasing by about \$160,000,000 in the first half of 1955.

Foreign Investments in the United States.—Foreign long-term investments and liquid assets in the United States increased in value by a record \$3,100,000,000 in 1954 to reach a total value of \$26,768,000,000 at the beginning of 1955. A further increase of about \$1,400,000,000 took place in the first half of 1955. About \$1,300,000,000 of the 1954 increase was in liquid dollar assets, as was about \$500,000,000 of the increase in the first half of 1955.

Not included in these figures are sales of gold by the United States treasury to foreign countries, which totalled \$327,000,000 in 1954 and about \$65,000,000 in the first half of 1955. Gold sales had declined sharply as many foreign governments, seeing their international reserves increase beyond the bare

minimum, preferred to invest interest-bearing reserves such as time deposits or United States government obligations.

Most of the gains in reserves were by European countries but the rate of increase was falling off in 1955, and the United Kingdom sustained some losses in July and August.

Long-term Investments. The leading feature of foreign investments in the United States in 1954 and the first half of 1955 was large purchases

United States corporate stocks, amounting to \$135,000,000 in 1954 and \$80,000,000 in the first six months of 1955. Sharp rising market prices added nearly \$1,500,000,000 to the value of foreign holdings in 1954 and a further \$600,000,000 to July 30, 1955, raising the total value at that date to about \$6,000,000,000. At the beginning of 1955 the largest holdings of United States corporate stocks were recorded for Switzerland and the United Kingdom, with \$1,353,000,000 and \$1,153,000,000 respectively. Continued purchases were reported for these countries in 1955, but investors in the Netherlands and Canada were net sellers, probably because of the attractiveness of investments in their own security markets.

An increasing number of foreign firms were establishing producing or marketing units in the United States in 1955, although the amount of foreign capital involved was not yet substantial. The Bowater Paper Corp., with a British parent company, planned to add a \$25,000,000 unit to its Tennessee mill, mainly with loans from United States sources. Canadian companies continued their investments in mines and oil properties south of the border, with Nipissing Mines Co. acquiring full control of Vermont Copper Corp. Other investments included a further expansion of U.S. facilities by Canadian Breweries, Ltd., an \$18,000,000 vat dye plant constructed by a United States company owned by Swiss interests, a proposed 50% interest by Imperial Chemical Industries, Ltd., in a \$10,000,000 titanium plant in West Virginia, a proposed truck plant by Daimler-Benz, A. G. of Germany, and the purchase and equipping by the German Volkswagen Automobile works of a Studebaker-Packard plant in New Jersey. Sales and service organizations in the United States were being rapidly re-established by Japanese interests. Forests. United States.—More than 300,000 ac. in California were ravaged by forest fires in the late summer of 1955. Below-normal precipitation during the preceding winter and hot dry summer weather contributed to explosive forest fire conditions. During an 18-day period, 436 fires occurred. Federal and state forces held most of these to small acreages; the major losses were caused by 16 fires that reached large size.

For the full year 1954, the federal forest service and state

forestry agencies reported a total of 176,891 forest fires in the United States, a substantial increase over the 154,160 reported in 1953. The area burned totalled 8,832,963 ac., which was less than the 9,975,750 ac. burned in 1953. State forestry agencies increased the area under organized protection by approximately 1,000,000 ac. during the year, bringing the total area under some degree of protection by state and federal agencies to 600,377,000 ac. About 49,000,000 ac. of state and private forest and watershed land, most of it in the southern states, still lacked organized protection. The value of systematic protection was indicated by the fact that 12% of the unprotected area burned over in 1954 compared with 0.7% of the protected area.

The Society of American Foresters, at its 54th annual meeting late in 1954, awarded to William L. Hall of Hot Springs, Ark., the Gifford Pinchot medal, named for the society's first resident and first chief of the U.S. forest service. Hall, 81 years of age, was a cofounder of the society with Pinchot. He was cited as the oldest professional forester in the United States in active practice. To Tom Gill of Washington, D.C., was presented the Sir William Schlich memorial medal, named for one of the most eminent foresters of the English-speaking world. Sir William (1840-1925) was inspector general of forests in India, professor of forestry at Oxford university and author of the *Manual of Forestry*, an early monumental work on forest management. Gill, executive director of the Charles Lathrop Mack Forestry foundation, was awarded the medal for distinguished service to international forestry. He had been a forestry consultant to several governments in Central America and the Orient and a forestry adviser to the Food and Agriculture organization of the United Nations.

The William L. Hutcheson Memorial forest, a 65-ac. tract of virgin forest formerly known as Mettler's woods, located near New Brunswick, N.J., was dedicated Oct. 15, 1955, and turned over to the trusteeship of Rutgers university, New Brunswick. The forest was dedicated as a permanent memorial to the former president of the United Brotherhood of Carpenters and Joiners of America, A.F. of L. This organization was the largest donor of funds to a citizens' committee formed to raise money for the purchase of the tract to prevent its commercial exploitation. The memorial forest, together with adjoining land also purchased with donated funds, was to be maintained as the Rutgers University Forest Ecological project, an outdoor laboratory for the study of changes in natural plant and animal associations.

The U.S. congress appropriated a total of \$82,246,690 to the forest service, U.S. department of agriculture, for research, protection and administration of the national forests and co-operative work with the states in the fiscal year 1955. On June 30, 1955, the area of the 149 national forests and related lands under administration of the forest service was 181,002,248 ac. This was a net decrease of 55,370 ac. compared with June 30, 1954. During the fiscal year 1955 the national forests supplied a total of 6,328,229,000 bd.ft. of timber, a new record and an increase of nearly 1,000,000,000 bd.ft. over the 1954 cut. Recreational use of the national forests continued to increase, with 2,000,000 visits reported in the calendar year 1954 and a larger number expected in 1955. The forest service in 1955 issued permits for the grazing of 1,108,794 cattle and horses and 2,911,373 sheep on national forest ranges. Receipts from the sale of timber, grazing fees and other uses of lands under forest service administration in fiscal 1955 amounted to \$81,137,294, compared with \$68,992,686 in 1954.

A new forest research centre was established by the forest service at Rapid City, S.D., to study problems of forest utilization and multiple-use forest management in the ponderosa pine type forest of the Black hills. At Gulfport, Miss., a Southern

Institute of Forest Genetics was dedicated, to be maintained by the forest service for tree improvement studies, particularly with the southern pines.

(C. E. R.)

Canada.—The Canadian Forestry association, in co-operation with four other national organizations, called a national convention on resources in 1955, the first of its kind held in Canada since 1906. Cosponsoring the conferences were the Engineering Institute of Canada, the Canadian Chamber of Commerce, the Agricultural Institute of Canada and the Canadian Institute of Forestry. Delegates from every province in Canada drew attention to the need for definite policies on forests and other related natural resources.

In New Brunswick one of the most important steps in years was the appointment of a Forest Development commission. This commission was investigating the relation of the forests and the forest industry in New Brunswick to the entire welfare of the province. It was charged with proposing programs which would bring the forests into full production, under the co-operation of government, industry and the general public.

In British Columbia the Royal Commission on Forestry was convened to make an assessment of its progress since 1945. Its report was expected to have special emphasis on the place of forest management licences in the province's forest industry.

In March 1955 a nation-wide conference was held on research necessary to pulp and paper development, both in the mills and in the woods. Representatives from all branches of government, industry and forest education were present in Montreal, Que.

In August a new motorcar tour was added to the others operated by the Canadian Forestry association, this one to serve the 4-H Forestry clubs in Quebec. Three motorcar tours in the prairie provinces and two in Ontario had been operating for several years, through the courtesy of three large motorcar manufacturers. Two railway lecture cars were also operated by the association. The Canadian Pacific railway's "Tree Planting Car on the Prairies" was completing its 37th year, and the Canadian National railway's "Conservation Car" was in its second year of national service. Public education in forestry was being extended into remote forest communities from coast to coast by these means.

MacDonald agricultural college of McGill university, Montreal, appointed a forester to conduct classes in woodland management for its agricultural students, using the 350-ac. college tree farm and the 55-ac. arboretum. The appointment was financed in part by special contributions from five co-operating pulp and paper firms.

The Canadian tree farm program completed its second year of operation, and listed more than 200 tree farmers who were operating approximately 350,000 ac. of privately owned forestland under approved management practices. (J. L. V. C.)

Great Britain.—The chief forestry operations carried out in 1955 again related to the planting of new land and the clearing of poor scrub forest areas for planting. Extensive areas of conifer plantations, 25 to 30 years old, became due for thinnings to improve the crop, and the felling and disposal of the large quantities of small-sized timber employed all available local labour. The use of the poles in the round for building purposes was tried on an experimental scale. A chip-board factory was also set up in Scotland to make use of thinnings from plantations within a radius of about 30 mi. This factory was expected to use about 500 tons of small timber a week.

The construction of new roads for timber extraction made steady progress, particularly in Scotland and Wales where many hillside plantations were still inaccessible to wheeled vehicles. Various types of tractors and logging arches were used but in most hillside plantations the timber was still dragged to the main roads by horses.

The damage done to trees by squirrels was considerably reduced by paying a bounty for gray squirrel tails. To encourage interest in trees the Forestry commission inaugurated a "forest adoption scheme" which offered to schools within easy reach of state forests a plot of two to three acres for adoption. The children were expected to visit the plot regularly and to clear, plant and tend young trees. A number of such plots were adopted and some city councils started similar schemes for roadside tree planting.

Other Commonwealth Countries.—Political changes in west Africa considerably altered the duties of forest officers from administration to advisory work, and in Nigeria the post of director general of forests was abolished. Chief conservators were now directly responsible to the minister of natural resources and the policy was stated to be "the maximum utilization of the forests on the basis of a sustained yield."

In Kenya more than 66,000 ac. had been planted of the original afforestation scheme of 210,000 ac. to be planted in 35 years.

In South Africa and Southern Rhodesia wattle plantations were badly attacked by the wattle bagworm (*Acanthopsyche junodi*) and the wattle lappet moth. From 1952 about 20,000 ac. had been completely defoliated. Intensive treatment by spraying and other measures reduced these pests but serious damage was also caused in Southern Rhodesia by the Rhodesian cockchafer. South African plantations were very seriously damaged by the worst forest fires in many years. In Southern Rhodesia the forestry department was converted into a forestry commission with wider powers of control and management. Some of the oldest of the very large, recently formed plantations, chiefly privately owned, were beginning to yield marketable produce.

A new form of forest insect control was tried in New Zealand for the beetle *Anobium punctatum* by applying dichloroethyl ether mixed with paraffin, which killed the larvae living in pockets in the bark and wood.

In southern Australia a new method of scientific investigation formulated by T. N. Stoa enabled more accurate estimates to be made for the future yield from the plantations of the softwood *Pinus radiata* by calculating separately the volumes and heights for each kind of locality.

In Ceylon research in utilization was encouraged by financial assistance from the UN Food and Agriculture organization which enabled the installation of an experimental sawmill and an expert for the training of staff.

In the Gold Coast nearly 1,000 sq.mi. of forest were under professional forest management plans.

Europe.—In Hungary a new directorate of forestry was formed, and to increase public interest 6,000,000 Norwegian spruce trees were distributed for planting along streets and in city squares.

In Scandinavia a new investigation into the life history of the beetle *Hylobius abietis* was made, and a number of pine and spruce logs, partly buried in the ground, were being studied over a period of five years on 33 different sites.

In Germany an effective new method of bark-beetle control was started by applying a girdle around infested trees in the form of a band 50 cm. wide containing a compound with an alkali arsenate base.

The planting of American red oak (*Quercus borealis*) in European forests, particularly western Germany and the Netherlands, was the subject of a report which had aroused much interest.

This species had been found suitable for European conditions especially on poorer sites where it produced large timber more rapidly than the native European oaks. (See also LUMBER.)

(A. H. LD.)

Formosa. (TAIWAN). Separated at a distance of about 100 mi. from the China mainland, Formosa, a semi-tropical island, is situated north of the Philippines and south of Japan and Okinawa. Including the Pescadores, it has an area of 13,885 sq.mi. with a population of 8,260,961 according to 1953 census. The populations of the five municipalities were: Taipei, the capital, 670,242 (1955); Kaohsiung, 300,000 (1955); Keelung, 225,000 (1955); Taichung, 231,016 (1953); Tainan, 240,016 (1953).

History.—Fighting along the offshore islands and a possible threat to Formosa itself foreshadowed other significant developments during 1954–55. The loss of Yikiang Island and evacuation from the entire Tachen group and diplomatic pressure to persuade the Nationalists to give up all the offshore islands in order to bring about a cease-fire in the Formosa straits caused uncertainty, disappointment and disillusionment in Formosa. Faced with problems of morale that often took precedence over a consideration of tactics or strategy, the National government repeatedly declared that Quemoy and Matsu islands would be defended with or without U.S. military support. The civil organizations, schools and the provincial assembly, the highest representative body of Formosa, all pledged their support of the government decision. The signing of the Sino-American mutual defense treaty Dec. 2, 1954, in Washington, D.C., and the change of the instrument of ratification in Taipei March 1, 1955, with U.S. Secretary of State John Foster Dulles' presence and encouraging words, boosted morale. In addition to the provision for Formosa's defense the treaty laid down the principle of free enterprise in economic development and indicated further economic aid from the United States.

The tension in the Formosa straits brought other high U.S. officials, including the assistant secretary of state for far eastern affairs, Walter S. Robertson, and Adm. Arthur W. Radford, chairman of the joint chiefs of staff, to the island for consultation. In mid-April a Sino-American military co-ordination conference was held in Taipei between the Chinese defense minister and chief of the general staff, and the commander of the U.S. 7th fleet, chief of the U.S. military assistance group in Formosa and the chief of staff to the U.S. Pacific fleet commander.

To maintain operational liaison with Nationalist forces in Formosa liaison centre of the U.S. armed forces was set up. Early in 1955 about 75,000 Formosa-born Chinese were called to the colours to replace over-aged and disabled soldiers, and a U.S. \$48,000,000 aid program to help the retired veterans resettled and find vocations was launched in August.

A wartime atmosphere was created with the arrival of more than 15,000 civilian evacuees from the Tachen group in February and by the precaution taken against possible air raids in Taipei in April. The evacuees were housed in schools in Keelung, the northern chief port with a good harbour about 20 mi. north of Taipei, and subsequently moved to towns and villages along the east coast and in the south.

The Chinese communist infiltration and enticement caused some uneasiness in Formosa. So far the Nationalists on Formosa had managed to protect themselves against the kind of communist infiltration that plagued them on the mainland. In August the Nationalist precaution against communist penetration resulted in the resignation of President Chiang's top military aide Gen. Sun Li-jen, when one of his subordinates was arrested as an alleged communist agent. The shake-up caused some conce-

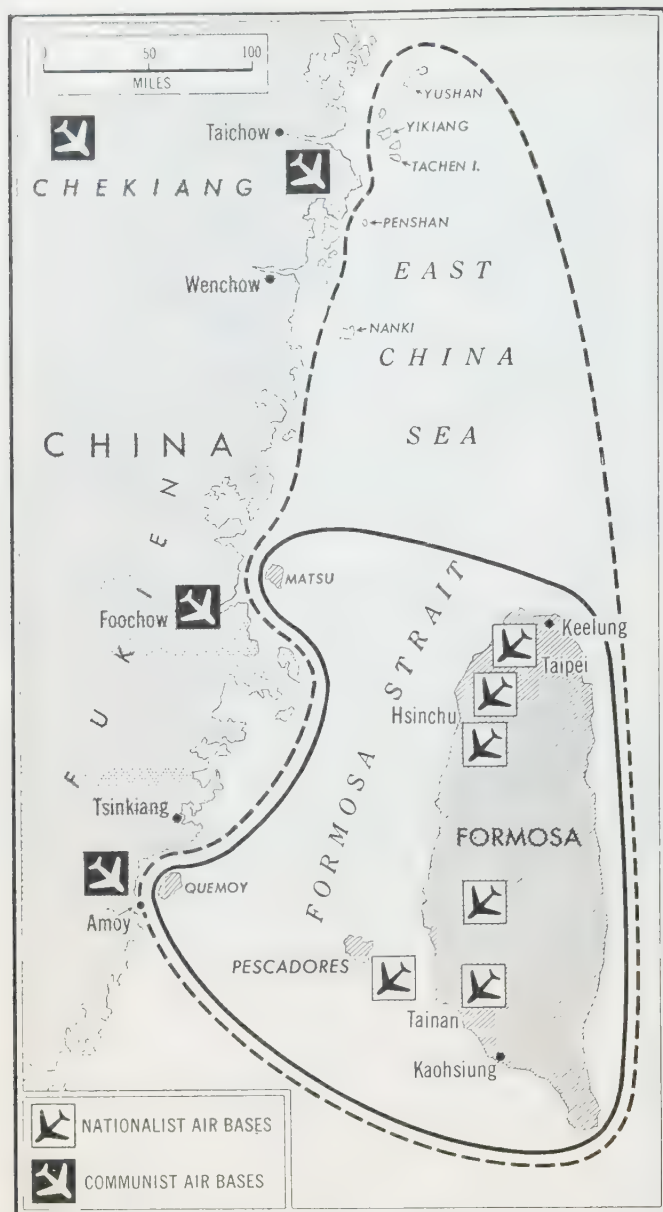

Above, left: SOLDIERS of the 92nd division on manoeuvres near Chiayi, For.

Right: LANDING CRAFT carrying civilians from the Tachen Islands to ships for removal to Formosa. Between Feb. 6 and 11, 1955, more than 5,000 civilians and 10,000 troops were evacuated under the protection of the U.S. 7th fleet

FORMOSA AND THE CHINA COAST. Area of dotted line shows Nationalist controlled area as of Jan. 1, 1955; solid line is area of Dec. 1, 1955

especially among foreign observers.

The self-government program initiated in 1949 with popular elections of local legislative councils and municipal and county administrative officials, including mayors and magistrates, was carried out with enthusiasm and satisfactory results. The third general local elections for councilmen in cities and counties took place in Dec. 1954 and Jan. 1955. About 1,800,000 voters went to the polls to elect 433 city and county councilmen from a total of 822 candidates. In the 1954 election for administrative officials only one out of five mayors and one out of sixteen magistrates elected were not Formosa-born. Greater participation and high posts in the provincial government were also accorded to the native born Formosans.

The four-year economic plan initiated in 1953 to increase production and improve the general welfare completed its second year with an increase in industrial and agricultural production. However, sugar and rice exports declined sharply in 1954. The plan called for continued U.S. economic-aid loans, the amount of which reached nearly U.S.\$90,000,000 for 1954 and was provisionally programmed for 1955 at nearly U.S.\$110,000,000. In Oct. 1954 contracts were signed for building a U.S.\$20,000,000

fertilizer plant capable of producing annually the equivalent about U.S.\$12,000,000 worth of ammonium sulphate imports an important step toward decreasing Formosa's trade deficit.

Education.—In the autumn of 1954 more than 90% of school-age children attended schools in Formosa. The 1954 total enrolment in the 1,338 elementary schools (1,199 in 1949) numbered 1,113,438 (900,648 in 1949). The number of secondary schools increased from 206 with 114,600 students in 1949 to 228 with 180,900 students. There were 90 technical and vocational schools of intermediary level with a total enrolment of 52,000 in 1954. The number of college students in 14 institutions of higher learning (2 national universities and 12 provincial and independent colleges) reached 14,288 as compared with 5,905 students in 6 colleges in 1949. A new Christian university, being built at Taichung, began operation in the fall term of 1955. The total enrolment of overseas Chinese college students in Formosa in the fall of 1955 numbered approximately 1,500 as against 1,125 in 1954.

Finance.—The certificate rate of the Taiwan Yuen or dollar was maintained at about T\$15 to U.S.\$1 but the black market rate rose to about T\$40 to U.S.\$1 in 1955 (T\$27 in 1954). In April 1955 the total note issue was about T\$1,207,000,000 and the total bank deposits were T\$2,155,000,000. The increase in note issue was attributed largely to borrowing by the National government from the Bank of Taiwan for defense expenditure. The National government's budget deficit fell from 24.2% in 1950 to 1.3% in 1953. For the fiscal year 1954 covering January–June 1954 the estimated deficit was about 7% of the total budget of the National government of T\$1,326,000,000. For July 1954 to June 1955 the estimated deficit was further reduced to about 4% of an estimated budget of T\$2,875,000,000. During the period of 1952–54 the Taiwan provincial government's revenue exceeded its expenditure. The receipts of national, provincial and local taxes in 1954 were estimated at T\$2,168,000,000 or about 20% higher than the total collections of 1953.

Trade.—Formosa maintained trade relations with about 50 nations. In order of importance the principal trading countries in 1954 were the U.S., Hong Kong and Japan. A new trade pact with Japan for April 1955 to March 1956 provided a two-way trade value of U.S.\$188,000,000. Since 1950 U.S. aid in the form of imports valued around U.S.\$60,000,000 each year contributed largely to alleviating Formosa's trade deficit. In 1953 Formosa's foreign trade ended with a favourable balance of more than U.S.\$29,000,000. In 1954 the total value of exports declined to U.S.\$97,756,000 while imports, excluding U.S. aid arrivals, amounted to U.S.\$110,217,000. Formosa's principle exports were largely agricultural products including sugar, rice, bananas, canned pineapple, tea and cashew while machine tools, chemical fertilizers, metals and ores and metal products constituted the chief imports.

Transportation and Communications.—Formosa's railway system totalled in 1955 nearly 2,800 mi.; a large percentage of the lines were owned and operated by the Taiwan Sugar corporation as feeder lines. The passenger and freight carried by the government railway of more than 600 mi. in 1954 were 66,847,359 (63,220,000 in 1953) persons and 8,563,400 (8,800,000 in 1953) metric tons. In Oct. 1954 the arterial highway with bituminous pavement of 250 mi. linking Keelung in the north and Kaohsiung in the south was opened to traffic. Nearly two-thirds of the total construction cost was financed by U.S. aid funds. In 1954 the Taiwan highway administration operated more than 1,500 mi. of bus routes in addition to privately-owned bus lines, and there was considerable increase in the number of vehicles and passenger-mileage. In mid-1954 the total registered tonnage of coastal and ocean-going ships was 354,215 as compared with 350,000 gross tons in 1953.

Agriculture.—Despite the industrial achievements in recent years, Formosa's economy remained predominantly agricultural. Production figures are shown in Table I.

Mining and Industry.—As shown in Table II significant progress has been made in manufacturing and mining.

Table I.—Agricultural Production in Formosa

(In thousands of metric tons)						
Year	Rice	Tea	Sugar cane	Sweet potatoes	Bananas	Pineapples
1945	639	1.4	4,159	1,165	32	17
1952	1,570	11.6	4,801	2,090	107	62
1953	1,700	12.0	7,890	2,200	99	71
1954	1,695	13.0	6,499	2,515	98	66
1955 goal . . .	1,800	14.0	5,519	2,530	94	72

Table II.—Industrial Output in Formosa

Power and mineral production:			
Power (1,000 kw.hr.)	1946	1953	1954
Coal (1,000 metric tons)	472,002	1,564,341	1,805,300
Crude oil (kl.)	1,049	2,393	2,100
Natural gas (1,000 cu.m.)	2,539	2,830	5,400
	39,025	30,925	29,000
Manufactured products:			
Sugar (metric tons)	80,656	920,899	642,000
Chemical fertilizers (metric tons)	500(1945)	164,000	168,000
Cement (metric tons)	97,269	519,676	536,000
Machines (metric tons)	800	8,318	6,500
Gasoline (kl.)	2,810	109,925	137,000
Cotton yarn (metric tons)	410	19,545	23,000
Paper (metric tons)	2,585	24,428	29,000

Foundations: see COMMUNITY TRUSTS; SOCIETIES AND ASSOCIATIONS, U.S.

Four-H Clubs. The 4-H club program continued to serve an increasing number of boys and girls, chiefly rural, throughout the United States and territories. An increase of approximately 44,000 members in 1954 brought enrollment by 1955 to 2,104,787. These young persons were organized into nearly 89,000 community and county 4-H clubs and did their work under the guidance of about 336,000 public-spirited volunteer leaders.

They carried on varied projects in farming, homemaking, community service and other activities. They raised livestock and poultry, grew gardens and field crops, conserved the soil, sewed, cooked, preserved food and improved their homes. The 1955 club theme was "Improving Family and Community Living."

Any boy or girl between the ages of 10 and 21 years may join a 4-H club. The only membership "fee" is a willingness to "learn by doing," which is the club slogan, and "to make the best better," which is the club motto. The term "4-H" refers to head, heart, hands and health, which are emphasized in the program. The national 4-H club camp in Washington, D.C., marked the 5th year of the camp. Besides about 200 delegates and 100 state club leaders who attended, more than 300 former delegates from 10 states and Puerto Rico returned to the nation's capital for the silver anniversary occasion.

Since 4-H club work is based on the interests and needs of young persons, it adapts to suit changing conditions. A few new trends were apparent. One was the development of an appropriate program to better serve boys and girls in low-income families; another was a strong effort to meet the needs and interests of older 4-H club members more fully; and a third was to grow in suburban areas, with more than 650,000 youth from nonfarm homes already enrolled.

The 4-H program is a part of the national educational system of co-operative extension work in agriculture and homemaking, in which the U.S. department of agriculture, the state land-grant colleges and the counties share. Two important 4-H supporting groups are the National Committee on Boys and Girls Club Work, with headquarters in Chicago, Ill., and the National 4-H Club foundation in Silver Spring, Md. Pres. Dwight D. Eisenhower is honorary chairman of the national committee.

(C. M. F.)

France. A republic of western Europe, France is bounded north by the English channel, northeast by Belgium and Luxembourg, east by Germany and Switzerland, southeast by Italy, south by the Mediterranean sea, southwest by Spain and west by the Atlantic ocean. Area: 212,736 sq.mi., including the Mediterranean island of Corsica (3,367 sq.mi.), but excluding the overseas *départements* (see also ALGERIA; FRENCH GUIANA; GUADELOUPE; MARTINIQUE; RÉUNION). Pop.: (1946 census) 40,502,513; (1954 census) 42,774,445. Language: French is almost universally spoken but there are also other regional languages or dialects: German in Alsace and part of Lorraine; Breton in Brittany; Flemish in the northern corner of the Nord *département*; Provençal in the Alpes Maritimes, Basses-Alpes, Var and Bouches-du-Rhône *départements*; Catalan in Roussillon (Pyrénées-Orientales); Basque south of Bayonne; and Italian in Corsica. Religion: mainly Roman Catholic with about 700,000 Protestants and more than 230,000 Jews. Chief towns (pop., 1954 census): Paris (cap.) 2,850,139; Marseilles 661,492; Lyons 711,270; Toulouse 268,863; Bordeaux 257,946; Nice 244,360; Nantes 222,790; Strasbourg 200,921; 16 towns with a population of from 100,000 to 200,000. President of the republic, René Coty. Prime ministers in 1955: Pierre Mendès-France and

(from Feb. 23) Edgar Faure.

History.—Although the succession during 1955 passed from one Radical to another and Faure took over many of Mendès-France's objectives, especially in North Africa, the government crisis of February marked a shift back from Mendès-France's attempt to renew the whole method of governing France with the help of public opinion, above all that of the young, to a more patient acceptance of the machinery of government as it stood, though not without frequent reminders from the prime minister that it needed improvement. At the same time the government majority, which had been essentially centre-left under Mendès-France, became centre-right under Edgar Faure. The Socialists did indeed give Faure support against his own right wing over Morocco in October, but they made it clear that this did not mean approval of the government. The fact, however, that both Mendès-France and Faure were Radicals and old comrades and that they shared many aims prevented Mendès-France from conducting an immediate campaign against the "old forces" that had defeated him. His efforts were first concentrated on capturing the Radical party machine and his campaign in view of the elections in 1956 was only beginning to unfold when it was seriously upset by Faure's desire in October for immediate elections. While the question of how France was to be governed was in the background throughout the year and the national assembly gave even greater proof of the difficulty of bringing it to a decision, the foreground was generally and sometimes almost exclusively occupied by North African affairs.

Fall of Mendès-France.—At the new year the Mendès-France government was visibly approaching its end. Mendès-France had only won the debate on the Paris agreements because their importance to France internationally outweighed the growing opposition to himself in the national assembly. (The agreements were ratified on Dec. 30, 1954, by 287 votes against 260, with 74 abstentions.) His proposal on Jan. 4 to return from a much qualified system of proportional representation to the prewar system of single-member constituencies showed that he still considered that attack was the best defense.

A further sign that Mendès-France would not admit defeat in advance was the reconstruction of the cabinet on Jan. 20 prefatory to a second period of his premiership in which his principal preoccupations would no longer be foreign policy but finance and economics, the main subjects of his campaigns before he had taken office. This incidentally stressed a divergence between himself and Faure, for if both were profoundly concerned with modernizing the French economy, Faure undoubtedly held that there was no reason to abandon the gradual methods by which he had already achieved a great degree of consolidation, while Mendès-France evidently feared less the possibility of shock after a more surgical attack on the deep-seated causes of trouble. The refusal of the assembly on Jan. 31 to vote provisional credits for February since the budget was not yet passed—normally not a political issue at all—was a warning how far the wind had turned against him.

Mendès-France was opposed in this debate both by the conservative opponents of his policy and by the Mouvement Républicain Populaire (M.R.P.) who were in essential agreement over North Africa but believed that the present was the last occasion on which Mendès-France could be forced to resign for many months because of the international calendar. Mendès-France had come into office after a stinging attack against the M.R.P. foreign minister Georges Bidault and M.R.P. management of Indochinese affairs. He seemed also to them a revival of the kind of French left which would offer no room for a Catholic party, however liberal. Early in the debate René Mayer, former premier, a right-wing Radical, showed that the truce into which he seemed to have entered with Mendès-France

was over. This was significant for the later course of the debate. Mendès-France was finally defeated on Feb. 5, by 319 against 273. He had against him the right which resented all policy of concession in North Africa, the M.R.P. on personal grounds and the Communists because he had negotiated the Paris agreements.

Faure Cabinet.—Faure was well placed to form a new government in that he had been a member of the Mendès-France and Joseph Laniel governments. He represented a thread of continuity. He had not, during the last year and a half, taken an active part in the disputes over the European Defense community, Indochina or North Africa. He restored the centre-right coalition of René Mayer and Laniel but with a breath of new air from the Mendès-France regime. From the start, however, his position on the left flank of his own government involved him in juggling to maintain the balance. It soon became evident that to save what seemed to him essential he was prepared to sacrifice on other issues. By this combination of yielding and firmness with his coalition always shaking beneath his feet he got the budget voted on March 20 by 392 to 211 votes.

On March 27 the council of the republic (upper house) approved the ratification of the Paris agreements by 234 to 75. This decision had at one time appeared doubtful. There was a strong inclination to introduce some conditional reserve into the bill. The senators asked for assurance about points of variance between France and Germany on the Franco-Saar agreement, as well as on the prospects of the creation of a western European arms agency. Faure insisted that France would be in a much better position to press for allied support after publicly demonstrating its solidarity by ratifying the treaties.

With these matters settled Faure resumed the Franco-Tunisian negotiation on April 7. Among the chief difficulties remaining was the boundary of the area of the Libyan frontier to be under French control as part of French responsibility for security and the proportions of French members in municipalities. The atmosphere of the negotiations was naturally affected by the violent speeches by leaders of the French die-hard organization *Présence Française* and by the extremist nationalist Salah ben Youssef. Nonetheless negotiations did not break down. On April 21, Faure received Habib Bourguiba, much the most important figure in the Tunisian Neo-Destour party, but not a member of the delegation. He was in fact still technically an exile though by now an honoured one. Negotiations were finally concluded successfully on May 29, and the assembly ratified the agreement by 538 to 44 on July 9. (See also TUNISIA.)

Algeria and Morocco meanwhile were giving grave concern. In Algeria Jacques Soustelle, the new governor general, was fighting on two fronts, against the armed rebellion and terrorism that was spreading and against the conservatism of the official hierarchy and dominant political forces in Algeria, and more particularly the demand of settlers that arms should be distributed among them and reprisals carried out. In order to strengthen the executive without weakening civil control, a civilian form of state of siege was invented called "state of urgency." The national assembly passed the necessary law on April 1. Statements on policy in Algeria by Faure and Soustelle stressed that reform, political, social and economic, must be pushed forward without waiting till rebellion and terrorism had ceased. (See also ALGERIA.)

Faure seemed to have planned to leave the problem of Morocco until Tunisia was settled, but the terrorism continued and was soon paralleled by counterterrorism, namely outrages against nationalist Moroccans or Frenchmen advocating a policy of understanding with them. While Moroccan terrorists or alleged terrorists were often arrested, no counterterrorist ever had been. This had aroused sharp criticism in France. On June 12 Jacques Lemaigre-Dubreuil, a well-known industrialist and a

strong advocate of a policy of reconciliation, was murdered in Casablanca. The counterterrorists could no longer be ignored. Roger Wybot, director of the territorial security section of the *Sûreté Nationale*, was sent to Morocco to look into the conduct of the police. Within a few days a dozen arrests were made, mostly among the police, but by the end of the year there was still no indication of the charges being brought against them. On June 20 the government appointed as resident general Gilbert Grandval, who had gained a reputation for energy and imagination as France's representative in the Saar. On June 21 Faure told the assembly that counterterrorism must be expressed no less than terrorism. He outlined French policy in Morocco as: (1) the maintenance of the French presence; (2) the restoration of the functions of internal government to the Moroccans; (3) the creation of a modern democratic Moroccan state. He thus made it clear that the French government had abandoned the plans for a merger of French and Moroccan sovereignty which were the underlying reason for the quarrel that led to Ben Youssef's deposition in 1953.

Faure was evidently walking warily in his references to Morocco, fearing opposition within his own cabinet and from the French in Morocco.

He had hoped to deal with Morocco during the parliamentary holiday, facing the assembly when it met again in October with a successful *fait accompli*, but the murder of Lemaigre-Dubreuil forced him to act earlier. Grandval arrived in Rabat on July 1. Nationalist extremists on both sides, however, were evidently determined to prevent reconciliation. A bomb thrown into a European cafe in Casablanca precipitated anti-Moslem riots by the Europeans and violent demonstrations against Grandval. Disciplinary measures had to be taken against the police. Faure approved Grandval's plan to invite Mulay Mohammed ben Arafa, the phantom sultan, who had been on the throne since 1953, to retire to Tangier and set up a council of regency which could form a representative government that would negotiate with France. Mohammed ben Youssef, the deposed sultan, should be allowed to live in France instead of Madagascar. This plan, however, ran into sharp opposition not only within the coalition but inside the cabinet. Antoine Pinay was slow to assent, but Gen. Pierre Koenig, minister of national defense, did not seem to assent at all. It was objected on the right that France would lose face by deposing the sultan of its own creation. Faure gave assurances that it was not intended to tolerate the return of the deposed sultan and Grandval warned that every day's delay made this return more probable. On Aug. 19 the French government announced an invitation to representatives of all sections of Moroccan opinion to meet a French cabinet committee at Aix-les-Bains. The hope of having achieved something before Aug. 20 (the anniversary of Ben Youssef's deposition) had failed. Grandval was pressing his resignation. Violent outbursts by Moslem extremists in both Morocco and Algeria nearly drowned the cause of conciliation in blood. By Aug. 26 important progress toward agreement on the lines of Grandval's proposals had been made. Faure sacrificed Grandval in the hope of conciliating his right wing and appointed Gen. P. G. Boyer de Latour du Moulin, hitherto resident general in Tunisia. But this did not disarm opposition, some of which seemed to come from the new resident general. It was not till Oct. 1 that the shadowy sultan could be persuaded to go and not until Oct. 6 that the Moroccan council of regency had at last been established.

The effect of this on the government's prestige at home was disastrous. Those who agreed with Faure's aims had no patience with his delays. There were two riots by reservists called up and ordered to embark for North Africa. As if in sympathy with the general decay of authority the Pierre Poujade anti-tax movement raised its head again. Faure's first step to reassert himself

"YOUR HEALTH, MONSIEUR!" a 1955 cartoon by Shanks of the *Buffalo Evening News* (N.Y.)

as to ask the Gaullist ministers to show solidarity or resign. He stayed, four resigned, including Koenig. On Oct. 9 the assembly approved Faure's Moroccan policy by 477 to 140 after a debate in which his execution of it was severely criticized. He had greater difficulty in securing a majority on Algerian policy because, on the principle of taking one difficulty at a time, he had not initiated a frank discussion as he had on Morocco. On Oct. 18 his policy was approved by 308 to 254. His original speech had gone little beyond a promise of the full execution of the 1947 statute of Algeria combined with important administrative, social and economic reforms, but in his second he laid stress on consultations to be held before the new year with members of all Algerian parties on the future status of the country. In the course of the debate he admitted that the troops in North Africa now numbered 320,000, an increase of more than 100,000 in the year. Faure was no doubt assisted in rallying a demoralized assembly by the vote of the UN general assembly at the end of September to include a discussion of Algeria in its agenda. This was a severe shock to French opinion, as was, nearly a month later, the big adverse vote on the Saar (q.v.).

On Oct. 21 Faure announced the government's decision to ask the assembly to curtail its own existence and hold elections in December. Faure declared that he left it to the assembly to decide whether the electoral law should be reformed. In fact, with so short an interval the only practicable reforms would be those that did not require remapping the constituencies. The return to single-member constituencies as Mendès-France had demanded would have meant delaying the elections. Mendès-France immediately attacked Faure for holding sudden elections by a method which would save as many as possible of the old deputies, instead of seeking a real renewal. Faure replied that vital decisions must be taken in January and that only a government based on a new assembly would be able to shoulder them. Mendès-France had gained control of the Radical party machine at a stormy party congress in May and was about to strengthen

it and launch his election campaign at a second party congress opening on Nov. 4. This congress fully endorsed Mendès-France's views and received with catcalls the premier who had difficulty in getting a hearing.

Meanwhile in Morocco the principal opponent of the deposed sultan, Haj Thami el-Mezuari el-Glaoui, the pasha of Marrakesh, had transformed the situation on Oct. 25 by declaring himself in favour of the deposed sovereign's restoration. The French government could no longer oppose the Moroccan people's unanimous wish so that when the sultan landed in France from Madagascar it was at once quite evident that his exile was at an end. The shadow sultan confirmed the situation on Oct. 3 by formally abdicating in Tangier. On Nov. 6 Pinay formally informed Mohammed V Ben Youssef that France recognized him as sovereign and a joint declaration was issued by which the sultan was committed to becoming a constitutional sovereign, France to leading Morocco rapidly on the road to self-government and the sultan and France to seek by bilateral negotiations a framework of "interdependence" within which Morocco would be independent and French interests in Morocco guaranteed. Here was indeed a strong argument to reinforce Faure's plea that France must have a government able to take decisions in January. (See also MOROCCO, FRENCH.)

Indochina.—Declining French interest in Indochina was stimulated in April and May by the difference of opinion with the U.S. as to whether the southern Vietnamese premier Ngo Dinh Diem should be encouraged to put down by force the armed sects, the more so since Ngo was disinclined to accept the commitment in the Geneva agreement to hold elections simultaneously with northern Vietnam in 1956. On May 3 Faure told the assembly that it would be more dangerous not to hold these elections than to lose them. French views were overruled with regard to Ngo and the sects and henceforth the principal French interest in Indochina was in gradually withdrawing what was left of the expeditionary force. It stood at 35,000 in October, when it was decided to reduce it to 20,000. (See also VIETNAM.)

(See also FRENCH LITERATURE; NORTH ATLANTIC TREATY ORGANIZATION; PARIS.) (D. R. GL.)

On Nov. 29 the government was defeated by a 318-to-218 vote of the assembly, or more than a majority of the entire membership of the chamber. Faure thereupon seized on a clause of the 1946 constitution, never before used, which provided that if two governments are defeated on formal votes of confidence by a majority of all the house within an 18-month period, the cabinet may order dissolution of the assembly, and elections must then be held within 30 days. The cabinet backed Faure's decision to dissolve parliament, with some dissent, and he set Jan. 2, 1956, for the national elections.

Education.—(1953-54). Primary schools: state infant 4,076, pupils 620,780; private infant 211, pupils 21,787; state primary 70,166, pupils (including infant) 4,085,338; private primary 10,691, pupils (including infant) 888,021; state higher primary, pupils 239,735; private higher primary, pupils 69,334; total primary 80,857, pupils 4,395,707; teachers, all groups (state) 167,261, (private) 33,800. Secondary schools (including some primary classes): state 898, pupils 529,879, teachers 21,423; private 1,624, pupils 372,974, teachers 18,148. State vocational schools 1,064, pupils 282,897, teachers 19,035. State teachers' training colleges 162, students 16,868. Institutions of higher education: state 53, students 15,806; private (including vocational) 40, students 8,136. Universities 16, students 145,865, teachers 3,600.

Finance.—Monetary unit: franc, with an official exchange rate in 1955 of 349.95 to the U.S. dollar. Budget: (1954 actual) revenue 3,249,000,000,000 fr., expenditure 3,535,000,000,000 fr.; (1955 est.) revenue 2,997,000,000,000 fr., expenditure 3,313,000,000,000 fr. National income (1953): 10,470,000,000,000 fr. Internal debt (1954) 4,440,000,000,000 fr.; external debt 1,129,000,000,000 fr. Currency circulation: (Feb. 1955) 2,548,000,000,000 fr.; (Oct. 1954) 2,471,000,000,000 fr. Deposit money: (Oct. 1954) 2,520,000,000,000 fr.; (Feb. 1955) 2,694,000,000,000 fr. Gold and foreign exchange holdings (March 1955, official) U.S. \$1,535,000,000. Cost of living index (April 1955, 1948=100): 168. Wages index (April 1955, 1948=100): 234.

Foreign Trade (1954).—Imports 1,475,394,000,000 fr.; exports 1,466,124,000,000 fr. Main sources of imports: French dependencies 28%; continental European Payments union countries 23%; U.S. and Canada 10%; U.K. 5%; other sterling area 18%; Latin America 6%. Main

PASSENGERS AWAITING BUSES at Neuilly, a suburb of Paris, Fr., are kept warm by infrared heaters installed in 1955

destinations of exports: French dependencies 36%; continental E.P.U. 34%; U.K. 6%; other sterling area 4%; Latin America 6%; U.S. and Canada 4%.

Transport and Communications.—State railways (1954): 41,200 km., including 4,421 km. electrified; passenger-kilometres (1953) 25,880,000,000; freight ton-kilometres (1954) 41,270,000,000. Roads (1953): 830,000 km. Motor vehicles in use (1953): cars 2,020,000, commercial vehicles 1,254,000. Navigable inland waterways (1953): 8,500 km. Shipping (July 1954): merchant vessels of 100 gross tons and more 1,267; gross tonnage 3,844,519. Civil aviation (1954): 2,711,115,000 passenger-kilometres; freight 91,368,000 ton kilometres. Telephones (Jan. 1954): 2,768,951. Licensed radio receivers (1954): 8,585,000.

Agriculture.—Main crops (metric tons, 1954, revised data): wheat 10,519,000, rye 537,000, barley 2,522,000, oats 3,565,000, maize 871,000, flax fibre 34,200, potatoes 17,012,000, grapes (1953) 9,020,000; dessert grapes (1954) 234,000. Livestock (Sept. 1954): cattle 16,889,000, pigs 7,328,000, sheep 7,826,000, horses 2,277,000, chickens 75,000,000. Meat production (metric tons, 1954): beef 751,200, veal 272,400, pork 511,200, mutton and lamb 80,400. Dairy production (metric tons, 1954): milk 18,600, butter 305,000, cheese (1953) 270,000. Wine production (1954) 58,490,000 hl. Sugar (1954, raw value) 1,617,000 metric tons.

Industry.—Index of employment (1948=100): Oct. 1954, 105, April 1955, 106. Index of industrial production (Jan. 1955, 1948=100): mining 150, manufacturing 147, construction 102, gas and electricity (March 1955) 171, general (March 1955) 154. Industrial production (metric tons, 1954, excluding the Saar): coal 54,405,000, iron ore (35% metal content) 43,824,000, pig iron 8,937,000, crude steel 10,626,000, aluminum, primary, 12,306,000, cement 9,553,000, (1953) zinc ore 11,500, bauxite 1,163,000, gold (kilograms) 1,515,000, (1954) woven cotton fabrics 209,000, cotton yarn 295,300, wool yarn 128,400, rayon filament yarn 53,300, rayon staple fibre 50,900. Gas production (1954): 2,589,000,000 cu.m., electricity (95% of total) 42,763,000,000 kw.hr. Motor vehicle production (1954): cars 437,100, commercial vehicles 163,240. Merchant shipping launched (1954): 268,300 gross tons.

French Equatorial Africa. This federation in central Africa of four overseas territories of the French Union is bounded west by the Atlantic ocean, Nigeria and French West Africa, north by Libya, east by the Anglo-Egyptian Sudan and southeast by the Belgian Congo. Cameroun, under French trusteeship, is administered separately. Areas and populations are shown in the table.

Native population is mainly Bantu, but there are semi-

Hamitic, semi-Negroid pastoralists in the northern savannah tracts. Religion: animist; 46% Moslem in Chad; about 280,000 Christians in Gabon and Middle Congo. Chief towns: Brazzaville (cap. of A.E.F. [Afrique Equatoriale Française]) 1,200,000 (1950 census) 84,090, including about 5,000 Europeans; Bamenda (1953 est.) 60,000; Fort Lamy 18,300; Libreville 12,600; Yaoundé (1950 est.) 30,000. High commissioner in A.E.F. in 1954 Governor-General Paul Chauvet. Governors: Gabon, Yves Diouf; Middle Congo, Ernest Rouys; Ubangi-Shari, Louis Sanmarco; Chad, Ignace Colombani. High commissioner in Cameroun Roland Pré.

History.—Nothing of political importance happened in 1954. The elections to the senate did not change anything. Deposits of iron ore at Boca-Boca (Gabon) and of manganese at Franceville attracted attention, and a railway linking Franceville with the Congo-Ocean line was planned. Late in August a number of Sudanese officials from the north presented themselves in Ubangi, as refugees from the revolt of the south.

In Cameroun the Cameroun Peoples' union (U.P.C.), an organization with communist leanings, stirred up a certain

Territory	Area (sq.mi.)	Population (1952 est.)	Capital
Gabon	103,089	408,778	Libreville
Middle Congo	132,046	684,450	Pointe Noire
Ubangi-Shari	238,224	1,071,791	Bangui
Chad	495,752	2,241,501	Fort Lamy
Total	969,111	4,406,520*	
Cameroun	166,793	3,077,080†	Yaoundé

*Including 20,120 Europeans (about 7,500 French). †1951 census. Including 12,000 Europeans (10,249 French).

amount of trouble. On May 24 a police post at Douala was attacked. Violent demonstrations took place at N'Kongsam and at Yaoundé. After 26 people had been killed, order was restored and the U.P.C. dissolved.

The number of rural communes, each equivalent to an administrative subdivision, was raised from 17 to 52 by the creation of 35 new ones; on their councils most of the members were chosen by election, though some were nominees of the traditional chiefs. A vast area in the south of Cameroun was not administered in this way.

P. H. Teitgen, minister for Overseas France, visited Cameroun in May and declared that the territory would shortly be granted political institutions like those newly conceded to Togo. He opened the 1,830-m. bridge across the Wouri estuary, connecting western Cameroun with Douala at once by rail and by road.

(Hu. De.)

Education.—Schools (1953): A.E.F., primary 938, pupils 123,000, secondary 35, pupils 2,449; vocational 95, pupils 4,207. Cameroun, primary 1,336, pupils 152,006; secondary (including teacher training) pupils 3,000; vocational 27, pupils 1,137.

Foreign Trade.—(1954) Monetary unit: franc C.F.A. (Colonies Françaises d'Afrique)=2 metropolitan francs. Metropolitan franc: 350 U.S.\$1. A.E.F.: imports: 16,681,800,000 fr.C.F.A. including 10,000,000,000 fr.C.F.A. from France; exports 12,794,000,000 fr.C.F.A. including 8,600,000,000 fr.C.F.A. to France. Cameroun: imports 16,000,000,000 fr.C.F.A., including 10,000,000,000 fr.C.F.A. from France; exports 15,000,000,000 fr.C.F.A., including 7,800,000,000 fr.C.F.A. to France. 2,600,000,000 fr.C.F.A. to the Netherlands. Cocoa exports (Cameroun metric tons, 1954): 50,000.

French Guiana. An overseas *département* on the northern coast of South America. Area, including the adjacent maritime territory of Inini: 35,135 sq.mi. Pop.: (1946 census) 28,500 (1954 census) 27,863 (including 2,380 *primitifs*). The coastal and lowland population is Negro or mixed; Europeans about 5,000. Inini, aboriginal Indians. Religion: mainly Roman Catholic. Capital and chief port, Cayenne, pop. (1953 est.) 15,000. In effect in 1955, Robert Vignon.

History.—The Radicals retained their majority in the general council during 1955; one Socialist was elected to it. An aircraft was purchased for inland use. The road along the coast was completed from St. Laurent to Mana; development work went on at Cayenne.

(Hu. De.)

Foreign Trade.—(1954) Monetary unit: metropolitan franc, valued in 1955 at 350 francs to U.S. \$1. Imports 3,500,000,000 fr., including 1,593,000,000 fr. from France. Exports 175,000,000 fr., including 120,000,000 fr. to France.

French Guinea: see FRENCH WEST AFRICA.

French India: see INDIA.

French Literature. Literary production in 1955 seemed less prolific than in 1954. The number of novels was fewer than in the preceding year—approximately 50 as against about 200. Nevertheless, literary juries were not averse to it to select the winners of the traditional prizes, the foremost of which was the Goncourt prize for 1955.

The best-known writers did not produce outstanding works. This applied to Jules Romains, to Georges Duhamel, who appeared to have produced only a travel book, *La Turquie nouvelle*, and *Refuges de la lecture*; to Henri de Montherlant who, apart from his *Port-Royal*, published his "Théâtre Complet"; and to Paul Morand, who offered only a selection of articles, *L'Eau sous les ponts*. Paul Vialar, with exceptional fecundity, added two volumes to an already extensive work: *Cinq hommes de ce monde* (imaginary life stories of heroes of World War II—Englishman, an American, a German and a Russian) and *Voiles de Mars*, in which was evident the author's hatred of war. Roger Vercelet, a former winner of the Prix Goncourt, produced a novel on Martinique, *L'Île des revenants*. There was no doubt, however, that the most valuable novel, which attracted the attention of both literary and political circles, was that which won the 1954 Goncourt prize: *Les Mandarins*, by Simone de Beauvoir. It brought back memories of "existentialist" theories of postwar Paris and portrayed dispirited youth engaged in a fruitless quest for a philosophy and a faith. Critics were warm in their praise of *Le Passage* by Jean Reverzy, which dramatically depicted an invalid under sentence of death by his doctors, and *Le Goût du péché* by Maurice Boissais, a story of a Protestant Puritan family, which earned the Prix Interallié. *La machine humaine* by Gabriel Veraldi seemed less inspired than his earlier *A la mémoire d'un ange*, although it won the 1954 Prix Fémina.

The many novels that were published in 1955 included *Le Terre*, by Pierre Brisson, the editor of *Figaro*; *Philippe*, by Claude Aveline; *Amélie*, by Henri Troyat; *La femme infidèle*, by Jules Roy; *Les Asiates*, by Jean Hougron; *La Greffe de printemps*, and *Les eaux mêlées*, by Roger Ikor; *L'Heure exquise*, by Raymond Las Vergnas; *Les bijoutiers du clair de lune*, by Robert Vidalie; *Les rois maudits*, by Maurice Druon; *L'Humeur vagabonde*, by Antoine Blondin; *Le Pays où l'on n'arrive jamais*, by André Dhôtel; *Le Machin* and *Les Cheveux sur la soupe*, by Jacques Perret; *Doucine*, by Jean Dutourd; and *Le Bouquet de mariée*, by Jacques Chenevière. Two books by Pierre Gascar were particularly worthy of attention. These were *Femmes* and *Graine* (a moving recollection of an unhappy childhood).

Once again French women writers contributed to the wealth of the year's literary production. They included Louise de Vilморin, with *Les belles amours*; Françoise Mallet-Joris, with *La chambre rouge*; René Jérôme-Tharaud, with *Le Bois perdu*; Françoise Lorrain, with *La Colonne de cendres*; and Monique Saint-Hélière's *L'Arrosoir rouge*.

Among books of poetry published, the following should be noted: *Clair obscur*, by Jean Cocteau; *La Pluie et le beau temps*, by Jacques Prévert; *Poèmes retrouvés*, by Jacques Duron; and *Facé*, by Marie Jeanne Dury. Memoirs and letters published in 1955 included volume six of the *Journal* of Julien Green (1950-54); *Souvenirs sans fin*, by André Salmon; the second volume of *Journal littéraire*, by Paul Léautaud; and General Charles de Gaulle's *Les Mémoires de guerre* (whose literary

value reinforced intrinsic historical interest). Several biographies attracted the notice of the cultivated public. These were *Saint Just et la force des choses*, by Albert Ollivier; *Les Frères Goncourt*, by André Billy; *Alexandre Dumas*, by Henry Clouard; *Don Quichotte*, by Etienne Burnet; Robert Escarpit's *Rudyard Kipling*; and Marcelle Auclair's *Jaurès*. The most notable works of literary criticism were *Balzac et son monde*, by Félicien Marceau (who also produced an interesting novel—*Les élans du coeur*); *L'Esprit du mal et l'esthétique baudelairienne*, by Marcel A. Ruff; *Jules Romains et les hommes de bonne volonté*, by André Cuisenier; and *Mallarmé lycéen* and *Rimbaud ou le génie impatient*, by Henri Mondor. Reprints during 1955 included Marcel Proust's *A la recherche du temps perdu* (three volumes, with a preface by André Maurois); volume 1 of Charles Baudelaire's *Oeuvres complètes*, arranged in chronological sequence under the direction of Sylvestre de Sacy; and *L'Esthétique de la langue française*, by Rémy de Gourmont. Of equal significance were *La correspondance André Gide—Paul Valéry (1890-1942)*, with a preface and notes by Robert Mallet; and *La correspondance générale* of Prosper Mérimée (the second volume of the second series, started by Maurice Parturier).

During 1955 the literary world commemorated the second centenaries of the death of Montesquieu and the death of Saint-Simon, the centenary of the birth of Emile Verhaeren, and the 50th anniversary of the death of Jules Verne. Jean Cocteau, Daniel Rops and Albert Buisson were elected members of the Académie française on March 3, and Jean Giono was elected member of the Académie Goncourt, as successor to Colette. (See also CANADIAN LITERATURE; LITERARY PRIZES.) (A. PR.)

French Overseas Territories: see FRENCH UNION.

French Pacific Islands: see PACIFIC ISLANDS, FRENCH.

French Union. With the establishment, by the constitution of 1946, of the French union, in which are comprised both the mother country and the former empire, the old colonial terminology was abolished and for the colonies were substituted four categories of overseas regions. The older assimilated colonies claimed recognition as French *départements* administered as in the mother country; the others became overseas territories (*territoires d'outre-mer*) which henceforward would elect representatives to parliament and would have their own local assemblies possessed of wide powers; the trust territories, to be known in future as *territoires associés*, were similar in structure to the overseas territories and had the same electoral privileges; lastly, there were the former protectorates, now styled *états associés*, which could belong to the union only by an act of voluntary accession. Total area of the French union, excluding France proper (1955 est.): 4,483,527 sq.mi.; total population about 63,838,000. Certain essential information on the component parts of the French union is given in the table on page 282. (See also separate articles.)

History.—In 1954 Pierre Mendès-France had begun to solve the French union's political difficulties by making peace in Indochina and by promising autonomy to Tunisia. His successor Edgar Faure concentrated his attention on the outstanding north African problems, with a view to putting an end to bloodshed and disturbances. On Feb. 4, 1955, the Mendès-France government was overthrown on the north African question by a combined vote of the right wing and the communists. Edgar Faure's government, formed on March 2, included P. H. Teitgen as minister for overseas France.

The Franco-Tunisian negotiations were continued to some effect: in April a protocol of agreement was signed whereby Tunisia received internal autonomy. The Tunisian leader Habib Bourguiba returned to his country in triumph. Yet when tran-

*1954 estimate if not otherwise stated. †1955 est. ‡1952 est. §1953 est. ||1954 census. ¶1954 est.

quillity had been restored in Tunisia, assassinations and attacks by armed bands increased in Algeria and in Morocco. In Morocco the new resident general, Gilbert Grandval, tried to find a solution despite bloodshed, rioting and the opposition of certain French elements of the population. His proposals, put forward in August, involved the departure of the reigning sultan Mulay Mohammed Ben Arafa and the establishment of a Moroccan government. Faure came to terms with the Nationalists and with the deposed sultan, Mohammed V Ben Yussef; but opposition from the right wing of his own supporters obliged him to temporize and to accept Grandval's resignation. It was only when the Gaullist ministers in turn resigned that Faure, on Oct. 8, was able to secure the assembly's approval of his policy.

In Algeria the focus of terrorist activity was transferred

FRENCH TROOPERS in Algeria guarding suspected terrorists in a rout Aug. 22, 1955, after a week of violence in which more than 2,000 persons were killed

from the Aurès range to the zone between Constantine and Philippeville. The size of the French population and the fact that the country's being politically linked with France caused the government to propose that the union be maintained and consolidated, while undertaking to hold *bona fide* elections and consult the inhabitants' elected representatives with a view to formulating a new policy. On Oct. 18 it secured a majority of 50 votes for these proposals.

For the former protectorates of north Africa, then, the policy of autonomy was finally adopted. The Indochinese states meanwhile became practically independent; toward the end of October the special French ministries for them were suppressed, responsibility passing to the ministry of foreign affairs. At the same time support was increasingly forthcoming for the concept of a federal structure for the French republic insofar as Algeria and the overseas territories were concerned; the Socialists, traditional champions of the policy of assimilation, now adopted a more federalist standpoint; and the U.D.S.R. (Union Démocratique et Socialiste de la Résistance), a group not removed from the Socialists, did likewise. Sedar Senghor, Senegalese African, leader of the federalist group known as the Overseas Independents, joined the Faure government as secretary of state in the premier's office.

The institutions granted to Togo by the national assembly constituted a step in the direction of autonomy; and Cameroon was to receive the same. The 40 principal towns of the overseas territories were given the status of *communes*, with elected municipal councils.

On the international plane the north African crisis was exploited in an anti-French sense at the Bandung conference and at the United Nations assembly. The latter, on Sept. 30, by a vote of a slight majority, put the Algerian question on its agenda. The French delegation, taking the view that Algeria was French territory and that the majority's decision was unconstitutional, left the assembly. (See also ALGERIA; ASIATIC AFRICAN CONFERENCE; CAMBODIA; FRANCE; LAOS; MOROCCO; FRENCH; TUNISIA; UNITED NATIONS; VIETNAM.) (HU. DE.)

French West Africa.

This group of eight West African overseas territories of the French union is bounded west and south by the Atlantic ocean, north by the Rio de Oro, southern Algeria and Libya, and east by Chad and Nigeria. The eastern part of the former German

ny of Togo, under French trusteeship, is administered separately. Areas and populations are shown in the table above.

Population: mainly Negro; some Arab and Berber admixture in the savanna; European (1951) 62,236 (including 49,458 French) in A.O.F. (Afrique Occidentale Française), 1,427 (1952) in Togoland. Religion: animist 53.4%; Moslem 44.2%; Christian 2.4%. Chief towns (pop., 1951 census, unless otherwise stated): Dakar (cap. of A.O.F.) 229,200; Abidjan (1953 est.) 160,000; Bamako (1952 est.) 100,000; Saint-Louis 60,000; Conakry 35,600; Porto Novo 28,400; Lomé (1948 est.) 30,100. High commissioner in A.O.F. in 1955, Gov. Gen. Bernard Cornut-Gentile. Governors: Mauritania, Albert Mouragues; Senegal, Max Jourdain; Sudan, Lucien Geay; Upper Volta, Salvador Etcheber; Niger, Jean Ramadier; Ivory Coast, Pierre Lesmer; French Guinea, Jean Paul Parisot; Dahomey, Charles Bonfils. The post of commissioner in Togoland was vacant.

History.—The only political incident of 1955 occurred on Jan. 22, when the Socialist leader Lamine Gueye was attacked by supporters of the Bloc Senegalais. The elections to the senate in June led to only a slight alteration in the numerical representation of the parties. The congress of the African Democratic Rally met at Conakry in July and reaffirmed its belief in the unity of the French union which, however, it desired to interpret in a federal sense.

On April 16 a law was passed to grant new political institutions to Togo: the powers of the territorial assembly were enhanced and a council of government was set up, consisting of members elected by the assembly. In the elections to the new assembly, held on June 12, the electorate was asked by the constitutionalists to abstain from voting, but 80% of it went to the polls: 15 candidates of the Togo Progressive party and 15 of the Northern Peoples' union won seats. The assembly voted unanimously in favour of a motion demanding that the link with France be maintained and the regime of trusteeship brought to an end. A United Nations mission of inspection traversed the territory in September.

Two companies were formed to exploit the Mauritanian copper and iron deposits. Less peanuts and less coffee, but more cocoa and more bananas, were exported than in 1954. Measures were taken to make it possible to export the peanut crop of the Niger territory by way of Dahomey: as the wharf at Cotonou had a maximum capacity of 300,000 tons, it seemed that it could have to be lengthened. An institute for the issue of currency for French West Africa and Togo was established, superseding the Banque de l'Afrique Occidentale, which remained, however, in existence as a private bank. (HU. DE.)

Education.—Schools, 1954: A.O.F., primary 1,562, pupils 239,847; secondary 70, pupils 10,718; vocational 98, pupils 4,363; 1 higher institution, students 373; teachers (all schools) 7,033. Togo (1953), primary 13, pupils 48,515; secondary (including teacher training) 8, pupils 981; vocational 5, pupils 319.

Foreign Trade.—(1954) Monetary unit: franc C.F.A. (Colonies Françaises d'Afrique)=2 metropolitan francs; 350 metropolitan francs=\$S.1. A.O.F.: imports 66,445,000,000 fr.C.F.A., including 45,000,000,000 fr.C.F.A. from France; exports 58,264,000,000 fr.C.F.A., including 1,000,000,000 fr.C.F.A. to France. Togo: imports 2,700,000,000 fr.C.F.A., including 1,200,000,000 fr.C.F.A. from France; exports 4,200,000,000 fr.C.F.A., including 2,600,000,000 fr.C.F.A. to France. Products exported (metric tons, 1954): coffee 94,800; cocoa 52,800; peanuts 112,000 (oil 89,600).

Friends, Religious Society of. Friends (also called Quakers) number fewer than 200,000 throughout the world. They are organized into more than 50 yearly meetings (more than 30 of which are in North America) and although most of these meetings keep in close touch with each other through a world committee and personal intervisitation, there is no over-all organization.

In March 1955 the Hicksite and Orthodox Yearly Meetings of Philadelphia merged. This union climaxed more than 20 years of growing co-operation between them. Their century-old journals, *Friends Intelligencer* and *The Friend*, were combined into the *Friends Journal*. During the summer the corresponding meetings in New York also united, as did the three yearly meetings in Canada. The 128-year-old Hicksite separation thus came to an end.

In June, six American Friends took advantage of increased travel opportunities in the U.S.S.R. to pay what they termed a "simple and informal visit of good will." In addition to sight-seeing and visits to many places the group presented to Andrei Gromyko, acting Soviet foreign secretary, a plan for international disarmament inspection that would utilize the International Labour organization inspection system.

Plymouth Friends Meeting, Plymouth Meeting, Pa., received a \$5,000 award from the Fund for the Republic for its action in refusing to discharge its librarian, who was under attack for refusing to sign the state loyalty oath.

Two outstanding books by English Friends indicate current Quaker concerns. Hallam Tennyson published *Saint on the March*, an account of Vinoba Bhave, successor to Gandhi, who was trying to solve India's land problem through his "land gift mission." Reginald Reynolds wrote *Beware of Africans* (issued in the United States as *Cairo to Capetown*), a report on Africa's racial problems. (See also CHURCH MEMBERSHIP.)

(LY. W. R.)

Frozen Foods. Retail sales of frozen foods were indicated as possibly in excess of \$2,000,000,000 in the U.S. in 1955, as compared with less than \$1,800,000,000 in 1954, a gain of perhaps 15% for the year. In particular, prepared or precooked frozen foods including soups came to the front; more than 200 items, prepared by more than 330 packers, totalling more than 425,000,000 lb. and representing sales estimated at \$250,000,000, were involved. Prepared fish sticks were up to 65,000,000 lb., as compared with only 7,500,000 lb. in 1953. Frozen orange juice sales also continued to increase beyond the 61,341,000 gal. of 1953-54; more than one-fourth of the lemon consumption was in frozen form, as was considerably more than half the strawberry crop.

The industry was described as afflicted with growing pains, sales having far outstripped frigid retail space, with the lease-back system of financing plant facilities increasingly used in the industry. Adequate inventories were difficult to maintain. The Federal Trade commission was requested by the industry to indicate acceptable legal procedure to be used by distributors

TEAM of fieldworkers harvesting Boston marrow squash in 1955 for freezing at a major U.S. vegetable processing factory

and packers in placing frozen food dispensers in retail outlets. Abuse with respect to food freezer plans was reported much decreased.

Frozen foods were increasingly utilized in the U.K., except that a sharp swing away from frozen imported beef was registered by the housewife, even at half the price of home killed and one-fifth lower than when prices were under control.

(J. K. R.)

Fruit. U.S. fruit crops in 1955 totalled at least 3% larger in volume than in 1954 and perhaps 8% larger than the 1947-49 average. The year was not without some disasters. A late March freeze penetrated deep into the southland, greatly damaging early fruit prospects, especially peaches, which were a near failure in much of the important southeast area. Trees as well as bloom were reported damaged, thus raising some question about recuperation in 1956. Uncommonly hot weather early in September damaged several crops. Drought followed by repeated floods and windstorms in parts of the eastern U.S. damaged some crops. Grapes were a fifth more abundant than in 1954. Cranberries and citrus were somewhat increased, apples and pears little changed. The frozen strawberry pack exceeded the record 194,349,967 lb. of 1954.

The favourable supply situation resulted in an August price level for fruits about 9% lower than at the same date in 1954. Packs, canned, dried and frozen, of several major fruit types were as much as 15% larger than in 1954. Stocks of canned citrus juices were only half as large as in 1954, and stocks of frozen orange juice were 6% smaller on Sept. 1. Imports of fruits and preparations, excepting bananas, totalled about \$52,000,000 in value in 1954-55, almost unchanged from 1953-54. Exports were nearly three times as large—\$151,588,000.

The deciduous fruit crops of western Europe apparently were somewhat less abundant than in 1954, but grapes were indicated as abundant and uncommonly high in sugar content. The 1955 apple crop of northern-hemisphere countries was about one-fourth smaller than the 1954 crop, the pear crop about 5% smaller than in 1954. Except for pears, the 1954-55 Australian deciduous fruit crop was estimated as between one-tenth and one-fifth smaller than in 1953-54, but higher yields were preliminarily indicated for 1955-56.

Of world production of citrus in 1954-55, the U.S. produced about 40% of the oranges and tangerines, 90% of the grapefruit, 50% of the lemons and 8% of the limes. Florida produced more than 90% of the citrus juices. Israel expected a

citrus crop as much as one-fifth larger than the 9,000,000 bc of 1954-55. There was some question as to the degree of recovery from previous frost damage in Spain.

Apples.—The commercial U.S. apple crop of 104,813,000 was 4% smaller than that of 1954 but near the decade average. It was generally of good fruit size and colour. National average prices to producers in September were \$2.62 per bushel compared with \$3.02 a year earlier.

The world apple crop of 1954 was 600,723,000 bu., large compared with 561,678,000 bu. in 1953 and an average production yield of 462,320,000 bu. Europe accounted for most of the increase, with 418,399,000 bu. as compared with 393,218,000 in the previous year. Percentage increases in Japan and Argentina were even larger than in western Europe.

Large apple crops in 1955 in British Columbia and Nova Scotia spurred efforts to increase exports to the U.K., which in 1954-55 imported 1,275,284 boxes of North American apples, 783,692 boxes from Canada, 491,592 boxes from the U.S.

Apricots.—The 1955 commercial apricot crop of 257,000 tons was generally late, but two-thirds larger than that of 1954 and 10% above the 234,400-ton average for 1944-53. California, as usual, was the major producer (230,000 tons). In Washington (23,000 tons) a large part of the Wenatchee crop was not harvested because of weak demand.

Avocados.—The Florida 1955-56 crop of 14,000 tons was about one-fifth larger than 1954-55 and about 300% larger than the 1944-53 average. California orchards suffered damage from excessive heat.

Bananas.—About 47,265,000 bunches of bananas from Central and South America valued at \$64,400,000 were imported in 1954-55 as compared with 50,063,000 bunches valued at \$67,668,000 in 1953-54. World trade in bananas increased in 1955. Argentina took 84% of the exports from Brazil.

Cherries.—The sweet cherry crop, produced predominantly in California (39,000 tons), Oregon, Washington and New York, was indicated at 118,980 tons, 21% larger than in 1954 and 26% above average. The sour cherry varieties, mostly used for pies, produced a crop of 150,590 tons, 40% more than in 1954 and 29% above average. Michigan with 73,000 tons was the leading producer, followed by New York (31,900 tons) and Wisconsin (22,300 tons). The important Door county of Wisconsin had a record crop. Because of quality and price, sweet cherries were not harvested. French production of bigarreau cherries, largely processed into glacé cherries, was 14,330 tons as compared with 13,800 tons in 1954.

Cranberries.—A 1955 crop indicated at 1,049,300 bbl. was 3% larger than the 1,018,000 bbl. of 1954 and 25% above average. Massachusetts with 560,000 bbl. (590,000 bbl. in 1954) was above average. The Wisconsin crop was a record high of 300,000 bbl.

Dates.—The U.S. department of agriculture in October announced a program to assist the domestic date industry in selling new use outlets for as many as 4,000,000 lb. of 1955 crop. Dates withheld from sale in normal outlets under federal marketing order. The date crop of Iraq was forecast at 270,000 tons.

Table I.—U.S. Commercial Apple Production, by Leading States

(In thousands of bushels)					
State	Indicated 1955	1954	Average, 1944-53	State	Indicated 1955
Washington . . .	31,300	23,160	28,367	Connecticut . . .	1,780
New York . . .	17,600	16,900	19,046	Idaho	1,670
California . . .	9,036	9,200	8,174	Illinois	1,500

New Jersey . . .	2,620	2,900	2,421		

ns, 30% less than in 1954 when marketing problems resulted about 50,000 tons remaining unsold.

Figs.—The 1955 California fig crop was indicated as smaller than average or than the 25,900 tons dried and 11,000 tons not dried in 1954.

The world fig crop of 1954 was 188,700 tons, slightly above average. Italy (57,300 tons), Turkey (33,000 tons) and Algeria (33,000 tons) were the leading producers. Turkey announced an export subsidy on figs equivalent to 2.4 cents per pound.

Grapes.—The U.S. 1955 crop of grapes of all types was indicated at 3,133,800 tons, 22% more than in 1954 and 7% above average for 1944-53. European types grown in California (2,016,000 tons as compared with 2,329,000 tons in 1954) and Arizona totalled 2,920,000 tons. American-type grapes amounted to 213,300 tons; the crop of the Great Lakes states was 138,700 tons, 25% less than in 1954 but 15% above average. New York with 75,400 tons was the leading producer, but the Washington crop of 56,000 tons was double the average for 1944-53.

The South African raisin crop was reduced to 9,400 tons from 10,700 tons the previous year. Turkey increased the export subsidy on raisins from 2.6 cents to 4.8 cents per pound. Unfavourable weather at harvest affected quality and reduced the amount of the Australian raisin pack to 75,900 tons as against 151,100 tons in 1954. Currants declined to 11,800 tons from 15,000 tons in 1954.

Grapefruit.—The U.S. 1955-56 grapefruit crop was indicated as approximately midway between the 42,170,000 boxes of 1954-55 and the 49,262,000-box average of 1944-53. A Florida crop of 38,000,000 boxes was indicated, as compared with only 34,800,000 boxes in the previous year and a decade average of 31,400,000 boxes. The Texas crop, though less abundant than in 1954, was of good size and quality.

A world grapefruit crop of 48,181,000 boxes in 1954-55 was 10% below that of the previous year. The U.S. accounted for about 90% of the world crop.

Lemons.—The California 1955-56 lemon crop was indicated at 13,200,000 boxes, as compared with 14,000,000 boxes the previous year and an average crop of about 13,000,000 boxes.

The 1954-55 world lemon crop of 29,750,000 boxes was 10% smaller than for the previous year but more than the 23,292,000-box average of 1935-39. The Mediterranean area produced 1,880,000 boxes.

Limes.—The 1955 Florida crop was indicated at 360,000 boxes, moderately smaller than the 380,000 boxes of 1954 but well above the average of 270,000 boxes for 1944-53. A world crop of 4,600,000 boxes in 1954-55 was larger than the 3,000,000 boxes of 1953-54 and about twice as large as the prewar average. Mexico was the leading producer with 2,342,000 boxes.

Olives.—The prospective California olive crop was below the 10,000 tons of 1954 and the 44,400-ton average of 1944-53.

The important Spanish green olive crop of 1955-56 was indicated at 2,900 tons of Queens and 14,500 tons of Manzanillos, a total of 17,400 tons as compared with 31,900 tons in the previous year.

Oranges.—The 1955-56 U.S. orange crop was indicated as slightly smaller than the total 125,870,000 boxes of 1954-55 but larger than the average crop for 1944-53 of 111,796,000 boxes. The California crop was damaged by high September temperatures, but other areas had larger crops than in 1954, Florida producing an indicated total of 91,000,000 boxes as compared with 88,400,000 boxes in 1954 and only 63,090,000 boxes in 1944-53. Prices to producers in the very early part of the 1955-56 harvest season (October) averaged only \$1.42 per box as compared with \$1.98 a year earlier.

A decrease of 11% in the important Mediterranean crop,

mostly because Spain had not yet recovered from severe frosts, approximately cancelled the increase in North America. The world total was 354,450,000 boxes as compared with 354,071,000 boxes in the previous year and a prewar average of 212,972,000 boxes.

Peaches.—A total U.S. crop of 50,539,000 bu. was 18% below the small 1954 crop of 61,316,000 bu. and 27% less than the 1944-53 average. The crop in all southern states was a near failure because of freeze damage, and the earlier part of the crop to come to market from other areas sold at uncommonly high prices. The western crop, much of which ripened later than usual, was 39,861,000 bu., 9% above 1954 and 4% above average. The California freestone crop was smaller than 1954, or average, but the clingstone type, largely used for canning, was 22,502,000 bu., 17% larger than in 1954 and 5% above average.

Pears.—The 30,143,000-bu. pear crop indicated for 1955 approximated the crop of 1954 and was about average for 1944-53. Larger crops in Washington and Oregon compensated for reductions in California and the central area. Bartletts were particularly numerous. The price to producers in September for all pears was \$2.11 per bushel as compared with \$2.18 per bushel in 1954.

A world pear crop of 157,097,000 bu. in 1954 was slightly smaller than the 166,887,000 bu. of the previous year, but large as compared with the 117,059,000-bu. average crop of 1935-39. Europe, especially France, western Germany and Italy, was the major producer.

Plums and Prunes.—The 1955 U.S. plum crop was a large one of 91,400 tons, 16% larger than 1954 and 6% above average; California with 87,000 tons, 21% larger than in 1954, was responsible for the increase, whereas Michigan had a small crop.

The prune crop of the Pacific northwest, for use fresh or in canned or frozen form, of 97,300 tons (fresh basis), was 9% below average but 44% more than the small crop of 1954 and

harvested rather late. Some of the crop was left unharvested; a larger than usual fraction was dried.

The California prune crop was indicated at 137,000 tons (dried basis), 23% less than 1954 and 21% below average for 1944-53.

Pineapples.—Distributors' stocks of canned pineapple on July 1, 1955, were 1,121,000 cases as compared with 1,097,000 cases a year earlier.

Strawberries.—The total U.S. strawberry crop was 13,191,000 crates as compared with an average for 1949-54 of 11,217,000 crates. Yields averaged 119 crates per acre as against a normal 92. Indicated for harvest in 1956 were 130,020 ac., one-sixth more than the 111,260 ac. of 1955.

The early season strawberry crop was much reduced by March frost in the south, but the mid- and late-spring crop, predominantly in the Pacific coast states, was large.

Tangerines.—The Florida 1955 tangerine crop was indicated at 4,600,000 boxes as compared with 5,100,000 boxes in 1954 and an average crop of 4,550,000 boxes. (See also FROZEN FOODS; HORTICULTURE.) (J. K. R.)

Furniture Industry.

Recovery from the so-called recession of 1954 exceeded all expectations in 1955, at both the wholesale and retail furniture industry levels in the U.S. Wood furniture shipments came very close to matching the 1953 peak dollar volume of \$1,750,000,000. This was about a 12% increase over 1954. Physical volume showed a smaller increase, since price rises, resulting from increased labour and materials costs, accounted substantially for the expansion in dollar volume.

Of 141 leading furniture manufacturers surveyed by the National Association of Furniture Manufacturers in the last quarter of the year, 90% reported business as good, 10% fair. This contrasts with a similar survey in the last quarter of 1954, which showed only 44% reporting business as good, 54% fair and 2% poor.

At the retail level, an equal upsurge in business was recorded. Because of this optimistic outlook, dealers tended to increase inventories. In 1954, only 41% out of 150 manufacturers questioned considered their dealers' inventories to be "normal." In Aug. 1955, a repeat survey showed that 83% considered dealers' inventories normal. In short the hand-to-mouth method of buying was decreasing. In 1954, 29% of the retailers followed the buy-only-as-needed pattern; during 1955 only 14% were ordering on this basis.

There were no sensational new design developments in furniture during 1955, but there was a further strengthening of the trend away from the strictly modern to a softened contemporary, which borrowed design details from other periods and other countries. In addition to contemporary, which led the field, other styles, in the order of their popularity, included French and Italian Provincial, Early American, Empire, Spanish and Regency. Woods were predominantly walnut, mahogany, cherry, maple, birch and ash, popular in that order, and many of the new finishes showed the graining of the wood. More mar-proof surfaces than ever were shown on cabinet and table tops—plastic laminates, field stone, tiles and marble. Case goods showed many tambour and sliding louvred doors concealing all sorts of ingenious interior arrangements for orderly storage.

Adjustable base units to hold a variety of combined units from bookshelves and storage cabinets to desks and high-fidelity recording systems were much in evidence in the better lines. There was an increasing tendency to finish case pieces on all sides, and upholstered furniture showed exposed wood frames in both traditional and the more modern designs.

Another noteworthy trend was the scaling-down of some of

FORMOSAN STUDENTS learning to make rattan furniture. The four-month course was conducted in 1955 for members of the Taiyal tribe of eastern Formosa

the higher-priced groups. In these cases, the luxury lines of their original versions were kept intact, the scaled-down models being added simply for the purpose of obtaining wider outlets for the makers' lines. (See also INTERIOR DECORATION.)

(H. W. As.)

Furs. The United States fur industry appeared likely to produce the \$275,000,000 mark in retail sales for 1955—a gain of at least 10% over the previous year. This was the second successive year of improvement for the industry, following a low point of 1953 when volume dipped below \$230,000,000. Still, business was a far cry from the peak year of 1946 when volume was about \$490,000,000.

Mink continued to be by far the major dollar volume item. Mouton processed lamb was the top seller in terms of unit volume. Sheared beaver, dyed in a variety of new colours, staged a strong comeback in retail selling. In fact, the entire trade toward the use of hitherto untried colours, in a variety of furs, gained momentum throughout 1955. In addition to beaver, such items as mouton processed lamb, muskrat, sheared raccoon, squirrel and Persian lamb appeared in new colours and stimulated consumer interest.

Short fur pieces, such as stoles, capes and jackets, continued to account for more than 50% of sales, although there were signs of recovery in coat business in 1955.

Through 1955 at least, the fur industry appeared to have survived, with little loss in volume, the new competitive threat of Orlon-Dynel pile fabrics—synthetic products made to look like such furs as mouton processed lamb, beaver and Alaska seal. In terms of price as well as appearance these synthetic furs were held to be directly competitive to mouton processed lamb. But mouton sales suffered little in the late summer and early fall and still ranked highest in unit sales.

Wholesale prices of fur garments were generally higher in 1955 than in 1954, largely because of substantial rises in skin prices in the international market. The continuing recovery of western Europe contributed to the increase in raw

ices of such items as squirrel, Persian lamb, beaver, muskrat, coon and mink.

United States imports of raw furs during 1955 showed little change from 1954, when imports totalled \$67,100,000, compared with \$69,500,000 in 1953. U.S. exports amounted to \$6,728,000 in 1954.

The Davy Crockett coonskin cap craze which spread throughout the country in 1955 resulted in the rapid consumption of raccoon tails and a tremendous rise in the use of rabbit skins. Probably more rabbits went into the making of so-called coon-hat hats than raccoon skins.

The credit structure in the industry held generally stable during 1955 as compared with 1954. In that year, fur industry solvency losses amounted to \$4,340,000, a reduction of more than 50% from the 1953 figure of \$8,861,000.

A new labour agreement between Associated Fur Manufacturers, representing about 600 manufacturing firms in New York, and the fur union was negotiated in the spring of 1955. The major innovation of this new three-year contract was a plan for an industry label program to be jointly administered by the union and the manufacturers.

The label program involved issuance of labels to all unionized manufacturers, with the funds from the sale of these labels to be used for national advertising and promotion of all furs. The labels would be distributed only to manufacturing shops complying with the new contract. The label plan, therefore, was designed as a means of taking action against contracting illegal under the contract) and substandard shops. (S. Gd.)

Gas, Natural and Manufactured. Because so few of the countries producing a large part of natural gas production report their output it is not possible to compile world statistics on it. However, Table I shows the known output of those countries producing important quantities of natural gas, and Table II shows similar data for manufactured gas, both according to reports in the *Monthly Bulletin of Statistics*, U.N. Manufactured gas is produced and consumed in large volume in areas where natural gas is not available or the cost of obtaining it is prohibitive in competition with the manufactured product.

*Preliminary. †Mostly for repressuring oil fields; small amounts of surplus gas are returned to the ground for storage. ‡Includes manufactured gas, and not included in the consumption total.

United States.—As shown in Table III, compiled from U.S. bureau of mines data, output and consumption of natural gas increased steadily for many years. By 1955 natural gas was used in 43 of the 48 states. Exports in 1954 were 22,308,000,000 cu.ft. to Mexico, and 6,131,000,000 cu.ft. to Canada. Available data for 1955 showed increased domestic consumption, chiefly because of much colder weather earlier in 1955 than in 1954. There was also an increase in industrial use, because of increased industrial activity.

Coke-Oven Gas.—Slightly more than 14,000 cu.ft. of gas per ton of coke made was produced in by-product coke ovens in 1954. Of the 869,874,515,000 cu.ft. made in 1954, waste and leakage accounted for 13,040,807,000 cu.ft. and 298,490,561,000 cu.ft. was used to heat ovens. The remaining 558,343,147,000 cu.ft. was used as follows: 8% under boilers, 73% in steel plants, 14% servicing city gas mains and 5% was sold for other industrial uses, as reported by the U.S. bureau of mines. (See also FEDERAL POWER COMMISSION; PETROLEUM.)

Gem Stones. The United States produces a great variety of semiprecious and ornamental gem stones but produces no precious stones (diamond, emerald, ruby or sapphire). In Jan. 1955, the U.S. bureau of mines published a list of known semiprecious stones of mineral origin that were reported found in 40 states and Alaska in 1953. Gem collectors and lapidaries compose the principal market for the domestic stones. In 1954, U.S. production of gem stones was estimated to be worth between \$600,000 and \$700,000.

Imports of gem stones had for many years steadily increased in volume and value. Tables I and II, covering U.S. imports during 1953 and 1954 and values during 1945–54, include gems

Table I.—U.S. Imports of Gem Stones

	1953	1954
	Carats	Value
Rough diamonds	730,350*	\$57,001,329*

SYNTHETIC DIAMOND created at the laboratories of the General Electric company, Schenectady, N.Y. About $\frac{1}{16}$ in. long, the diamond was photographed with a standard diamond phonograph needle to indicate its size. In its initial tests the diamond proved hard enough to scratch natural diamonds and capable of withstanding pressures of 1,500,000 lb. per square inch.

of not only natural origin (pearls, etc.) but also synthetic stones. (See also DIAMONDS; MINERALOGY.) (F. E. H.)

Genetics. Human Genetics.—A. C. Allison presented an extensive report of his studies of the buffering action of the sickle-cell anaemia gene on malaria. This gene in double dose, the homozygous condition, has long been known to produce a high infant mortality. Yet in some African tribes the sickling gene, the presence of which can be noted in heterozygotes by appropriate test, was found to have a frequency of 30% or even higher. Allison seemed to solve the puzzle of the high incidence of this gene, which should have been selected against and have remained in low frequency. In some African villages almost half the persons not carrying the sickling gene were infected with malaria. Of those persons heterozygous for this gene only 28% were infected with malaria. Furthermore, malaria in the sicklers was milder in its symptoms; they had a higher resistance. Further study of this phenomenon was under way by Allison, J. V. Neel and others.

In some villages this balance between the two diseases was not found and there may, therefore, be other variables as yet undiscovered.

Ultrastructure of Chromosomes.—The problem of the fine structure of the chromosome, the ultimate nature of the hereditary material, was being attacked vigorously on many fronts and with new techniques. J. G. Gall, using the electron microscope, was able to demonstrate clearly the true structure of the so-called lampbrush chromosomes of many organisms. Under the high power of the conventional microscope such a chromosome appeared to have a central axis covered with a fine fuzz. The electron microscope picture showed this fuzz actually to be made up of two long strands of material folded in and out from the central matrix. It was estimated that such a chromo-

some strand was a continuum of considerable length. Numerous particles in varying concentrations near the loops of the strands were interpreted as ribonucleic acid molecules, RNA, the complex product of the chromosome, which, on passing into the cytoplasm, carries the specific organizing potential for the formation of the numerous cell enzymes necessary for processes.

The problem of the size and number of genes arranged in linear order in the chromosome was attacked by the use of certain microorganisms, which allowed for observations on large numbers of individuals, always a limiting factor in the study of the genetics of higher organisms. Seymour Benzer studied mutations occurring in a specific chromosome region of a strain of bacteriophage. He was able to demonstrate recombination of genes very near together on the chromosome and to show that certain of these genes were no larger than a dozen nucleotide pairs. Biochemical studies had earlier led J. D. Watson and F. H. C. Crick to postulate the essential structure of the chromosome as consisting of a helix of deoxyribonucleic acid (DNA), the ultimate units of which were these pairs of nucleotides. On theoretical grounds these and other workers had considered the probable gene structure as made up of several nucleotide pairs in the long DNA chain.

M. Demerec, I. Blomstrand and Z. E. Demerec demonstrated that small blocks of genes could be transferred by bacteriophage particles from one cell of the bacterium *Salmonella* to another. As the second cell underwent division this block of genes could be substituted for the homologous region of the bacterial chromosome. By this mechanism, known as transduction, pieces of chromosome carrying various mutant genes could be transferred from one bacterium to another. The linear order of certain gene loci could thus be determined even though the usual type of linkage studies made in sexually reproducing forms is not possible in *Salmonella*. By this ingenious method the linear order of a series of biochemical mutants was demonstrated. Mutant genes, blocking in turn a series of steps in biochemical synthesis, were found to lie in a corresponding linear order in the bacterial chromosome.

In higher organisms cases of extremely closely linked genes all acting on the same character complex, continued to accumulate. M. M. Green reported a series of these pseudo-alleles at the forked bristle locus in the fruit fly *Drosophila melanogaster*. A mutant gene at another locus suppressed the action of some of these forked alleles but not of others. Genetic recombination by crossing over occurred between forked alleles from two groups but not between those belonging to the same group. J. R. Laughnan demonstrated a complex series of these extremely closely linked genes, pseudo-alleles, in strains of corn collected from Ecuador and Peru. Thus the approach to the ultimate structure of the genetic material in the cell nucleus was being made along several different but mutually corroborative lines.

New Books.—*Human Heredity* by J. V. Neel and W. J. Schull, two modern methods used in this rapidly advancing field. Without apologetics the authors presented the newest mathematical techniques. However, the book was so arranged that the physician or intelligent layman, lacking mathematical training, could gain an understanding of what is known in human genetics and an insight into the important role which studies in heredity play in medicine and sociology in these times.

Genetics and Metabolism by R. P. Wagner and H. K. Mitchell for the first time presented a survey of the biochemical basis of inheritance in a modern and sophisticated treatment of the borderline field where physiology, biochemistry, embryology and genetics meet on common ground.

Geneva Big Four Conferences of 1955.

The Precedents.—The last World War II conference of h

of governments of the big powers was held in Potsdam, Ger., during the second half of July 1945. It was left to the foreign ministers of the big powers to discuss problems of common concern deriving from the defeat of Germany and Japan. As time went on it became more and more evident that the problems inherited from the war were being transformed into problems of relationships between the big powers, the Soviet Union on one side and the United States, Great Britain and France on the other. Conferences of foreign ministers were held in London at the end of 1945, in Paris and New York in 1946. There had then been some agreement (e.g., on the formation of a commission entrusted with the study of problems arising from the discovery of nuclear energy, on the recognition oforean independence, on the peace treaties with Italy, Finland, Hungary, etc.). But the gap between the position of the western Big Three Powers and that of the Soviet Union was widening and foreign ministers' conferences of 1947 in Moscow and in London ended in total disagreement. The Korean war made the holding of other conferences impossible.

After the death of Joseph Stalin there seemed to be some modification in Soviet internal and external policies, and in May 1953 British prime minister Winston Churchill proposed a conference of heads of governments with the aim of finding a solution to the problems dividing the democratic bloc and the communist bloc. The suggestion of the prime minister was received with elation by Europeans, who were frightened at the thought of a Soviet invasion, but with coldness by most Americans, who were mindful that the United States had borne the brunt of the war in Korea.

Churchill fell ill and nothing came of his suggestion except an exploratory meeting at Bermuda of the Big Three heads of government. The Korean armistice revived hopes of peaceful settlement of at least some of the major problems dividing the democracies and the Soviet Union (unification of Germany, European security, disarmament, communist aggressions in the far east, etc.) but a conference of foreign ministers in Berlin at the beginning of 1954 was as unfruitful as the meetings of 1947 and 1949.

The Thaw.—French exhaustion after seven years of war in Indochina led to the Geneva conference of April–July 1954 and a truce on the basis of the surrender of the northern half of Vietnam to the communists. Many people did not realize that the Geneva agreement had been made possible by the fact that the communists received more than they gave, and hopes for a general settlement revived. The French, harassed by internal and colonial problems, were particularly insistent in asking for a conference at the highest level which would repeat on a larger scale the so-called miracle of Geneva. To this end, the French premier, Pierre Mendès-France, tried to enlist the support of other governments. The British, mindful of Churchill's opposition the year before, were sympathetic. The Italians, Austrians and west Germans expressed enthusiastic approval for a Big Four conference.

The turning point came in Feb. 1955 when the team of Premier Bulganin, N. S. Khrushchev and G. Zhukov took over in Moscow and engaged in a diplomatic policy which aimed at winning friends, encouraging neutralism and isolating the United States. Since 1945 the Austrian peace treaty had been left hanging in mid-air, the Soviet government holding that it could not be signed until a solution had been found to the problem of a peace treaty with Germany. In a sudden reversal, the Soviet government announced that the Austrian treaty would be dealt with independently from the German one. This was a new language, and a new policy. The pressure for a meeting at the top increased, outside and inside the United States. At the end of April the U.S. state department announced that the foreign min-

isters of the Big Three western powers, who were going to Paris for a regular meeting of the North Atlantic Treaty organization, would discuss plans for a Big Four conference. It had been made clear in Washington, London and Paris that no general conference would take place before the implementation of the Paris agreements of 1954 concerning the status of Germany, the strengthening of the 1948 Western European union, and Germany's admission both to the union and to NATO. Moscow had made equally clear that the implementation of the Paris agreements would lead to the invalidation of the amity pacts between the Soviet Union and Great Britain (1942) and between the Soviet Union and France (1944); also that an eastern counterpart of NATO would be organized among the Soviet Union and its European satellites. All this seemed to clear the ground for a summit conference in the summer.

On May 15 the Big Four foreign ministers met in Vienna to sign the Austrian peace treaty. Plans for a conference of heads of governments were discussed and on May 26 the Soviet Union formally accepted the invitation which through three identical notes had been sent by the governments of the United States, Great Britain and France a fortnight before.

The Summit Conference.—The immediate reaction was one of great enthusiasm, in the United States, in Europe and elsewhere. Even responsible leaders spoke of a new era, of a radical transformation in international affairs. Certain developments seemed to indicate that optimism was justified: The Communist Chinese government promised to release arrested United States fliers; the Soviet authorities apologized after a Bering sea incident in which a United States plane had been shot down; Konrad Adenauer, chancellor of western Germany, was invited to Moscow; Cardinal Mindszenty was reported released from imprisonment in Hungary; all kinds of cultural, economic and political missions were exchanged between communist and non-communist countries.

No agenda was set for the conference but through indirect means it was proposed and accepted that the conference should deal mainly with European problems. On July 12 Pres. Dwight D. Eisenhower discussed the policy to be followed in Geneva with congressional leaders. On July 15 the foreign ministers of the three western powers met in Paris to discuss a common front vis-à-vis the Soviet delegates. Before leaving for Geneva, President Eisenhower in a radio and television talk stated that a change in spirit would be "the greatest step towards peace, toward future prosperity and tranquillity that has been taken in all the history of mankind," adding "we shall be conciliatory . . . we shall be tolerant." Premier Bulganin, stating that the Big Four heads of government "can and must" resolve major disputes, also said that "a bad peace is better than a good quarrel." Similar sentiments were expressed by Sir Anthony Eden and by the French premier Edgar Faure.

The conference opened in Geneva on July 18. The United States delegation was led by President Eisenhower, the British delegation by Prime Minister Eden and the French delegation by Premier Faure. The Soviet delegation included Premier Bulganin, Khrushchev, secretary of the Communist party, Foreign Minister V. M. Molotov, Marshal Zhukov and A. A. Gromyko.

The conference lasted six days. President Eisenhower presided at the first meeting and in his opening speech suggested that six issues should be discussed: the unification of Germany through free elections, safeguards for the security of the Soviet Union, restoration of sovereignty and self-government to countries deprived of them, the improvement of communication among nations, international trade and steps toward disarmament through a system of inspection and alarms. The three prime ministers followed, Edgar Faure and Sir Anthony Eden expanding on some of the points made by the president, and

COMMENT on the Geneva conference of the heads of the Big Four Powers
De Gazet van Antwerpen, Belgium

Bulganin rejecting any discussion concerning the satellites and bringing up the usual question of Communist China. Through discussion among the foreign ministers it was decided that the status of the satellites and that of China should be left out and that the issues to be dealt with would be the unification of Germany, European security, disarmament and cultural and economic relations between east and west. In the course of the following days the foreign ministers met at 11 A.M., the heads of government at 4 P.M.

The Issues.—Prime Minister Eden presented the western plan for Germany: creation through free elections of a unified regime for a sovereign Germany with which a peace treaty would be negotiated and which would decide what attitude to take in international relations. Prime Minister Bulganin made it clear that agreement was unlikely; he stated that because of the "remilitarization of western Germany and her integration in military groupings of the western powers . . . we may fail to reach immediate agreement on the reunification of Germany." On European security, the western spokesman was again Prime Minister Eden who affirmed that "there are many ways of insuring that unification of Germany shall not involve any threat to anybody" and offered three different plans to the Soviet delegation: (1) a five-power pact against any aggressor, linking the Big Four and Germany (largely modeled on the Locarno pact of 1925); (2) agreements on the armed strength of Germany; (3) the creation of a demilitarized zone along the border between Germany and Poland. At the Berlin conference of 1954 Soviet foreign minister Molotov had proposed a defense treaty linking all European countries (including the U.S.S.R.) with the United States and Red China as observers; Prime Minister Bulganin brought back the same plan, offering a defense treaty open to all European countries, to which the western and eastern German republics would be equal and separate parties, asking for the withdrawal of all foreign troops from Europe (this meant U.S. troops; the Soviet troops, being European, would remain) and the abolition of both the North Atlantic treaty and the Warsaw treaty.

The problem of disarmament had already been discussed at length by a committee of the United Nations. The issue came up for discussion on July 21, the first anniversary of the signing of the cease-fire in Indochina. Prime Minister Eden proposed the inspection of the demilitarized zone between east and west and its extension. Premier Faure indicated that the western democracies favoured the reduction of military budgets, the money to be spent instead for the economic development of all needy nations. President Eisenhower made a dramatic appeal to the Soviet delegation, stating "I propose . . . to give to each other a complete blueprint of our military establishment . . . to provide within our countries facilities for aerial photography." Prime Minister Bulganin offered a plan modeled on the one presented on May 10 by the Soviet government: step by step reduction of all nuclear weapons and their final destruction, and limitation of troops (1,500,000 men each for the United States and the Soviet Union, 650,000 men for Great Britain and France, 150,000–200,000 for the other countries). On the issue of east-west relations, there was verbal but not substantial

agreement. The three western heads of government urged a free flow of communication, through all available mediums. President Eisenhower expressed the hope that it would be possible to break down "both mild and severe barriers to mutual understanding." Prime Minister Bulganin echoed by saying, "We strive for a broad development of international contacts and cooperation in the field of culture and science, for the removal of obstacles impeding intercourse among nations."

The Outcome.—The friendly atmosphere of the July conference was a pleasant change from the bitter acrimony of previous meetings. It seemed a good thing that each side could state its case with clarity and without insults where it stood. The gaps were wide but many hoped that time and good will would fill them. The job of bridging the gaps was entrusted to a conference of four foreign ministers to be held in Geneva in October. The summit conference nearly foundered on the subject of the agenda to be discussed in October. With considerable difficulty a compromise formula was found which avoided, in a rather ambiguous way, the problem of priority to be given to the issues of German unification and European security: "The heads of government instruct their foreign ministers to continue the consideration [of questions discussed] . . . taking account of the close link between the problems of European security and the reunification of Germany."

The conference disbanded in an atmosphere of optimism. It seemed that President Eisenhower had been able to convince the Soviet Union of the peaceful intentions of the west. It was hoped that the Soviet leaders would modify their policies accordingly, dropping the aggressiveness which could have been the result of fear. There were good omens: at the beginning of August conversations were started in Geneva between U.S. and Communist Chinese diplomats; the Soviet Union announced a reduction of 640,000 men in its armed forces (not many knew that in the course of the previous months U.S. armed forces had been reduced by about that number and therefore the Soviet Union was not changing the ratio of its forces to that of the United States). The Finnish government was suddenly notified that the Soviet Union was giving back the base of Porkkala. For seven or eight weeks the expression "spirit of Geneva" was used in written and oral statements by many people in many countries.

End of the Spirit.—The foreign ministers' conference in Geneva proved that little or nothing had changed in the traditional Soviet attitude. The meeting opened on Oct. 27 and lasted until Nov. 16. The four protagonists were John Foster Dulles, U.S. secretary of state, Harold Macmillan, British foreign minister, Antoine Pinay, French foreign minister, and Molotov. There were three items on the agenda. The first included German reunification and European security. In July the Soviet delegation had accepted the close link between the two. In October and November Molotov reiterated the Soviet position: the problem of security came first and that of German reunification could not be solved on the basis of proposals made by the western powers. In the course of the debate, the discussion narrowed on the basic question of free democratic election

many versus Soviet style elections. After a brief trip to Moscow, Molotov announced on Nov. 8 that under no conditions could the Soviet Union accept a plan which would jeopardize the communization of east Germany. That was the end far as the first item on the agenda was concerned. The second item was disarmament. On Nov. 10 Molotov attacked the plan offered by the western powers, based on the proposal made by President Eisenhower of exchanging military blueprints, establishing control posts, publicizing military expenditures and using aerial inspection. On the following day Dulles tried to meet the Soviet criticism by offering to put U.S. bases abroad under air attack. Molotov replied that the proposals of the western powers were not of a constructive nature. On Nov. 14, the third item (east-west relations) came up for discussion. The western powers had presented a series of concrete proposals which Molotov rejected as representing interference with the internal affairs of the Soviet Union. Disagreement was total on all points it had been in 1947 and in 1949. Nothing could be clearer on that subject than the final communiqué: "In compliance with the directive issued by the four heads of government . . . the foreign ministers . . . met in Geneva from October 27 to November 16, 1955. . . . [They] agreed to report the result of their discussions to their respective heads of government and to recommend that the future course of the discussions of the foreign ministers should be settled through diplomatic channels. . . ." The two Geneva conferences had been a good try; the Soviet Union had made their success impossible. (M. SA.)

Geneva Conference on Peaceful Uses of Atomic Energy: see ATOMIC ENERGY.

Geography. The most obvious trend in geography in the United States during 1955 was toward the application of geographic training to a great variety of specific activities. For example, very few professionally trained geographers in government work were so classified. Considerably more than 50% of them were engaged in some form of map making, interpretation or librarianship. Others were classified as geographic names specialists, intelligence analysts, foreign service officers, area experts, climatologists, planners, etc. Many of the more experienced geographers filled responsible administrative positions, or served as co-ordinators of research projects. Likewise, few positions taken in business and industry by recipients of graduate degrees in geography during the year were designated as geographic. They were positions in cartography, planning, marketing, transportation, etc. Even in the field of education an increasing number of geographers were teaching integrated studies, area studies and social studies programs. The formal training of geographers was continuing at an accelerated rate, but employment, aside from college and university teaching, tended to lose the identity of geographers as such.

A second trend in geography was toward concentration on research and exploration in foreign lands, with most emphasis on planning for participation in the International Geophysical Year and exploration of the antarctic. Geographers in more than 40 countries were participating, with scholars from other fields in geophysics, in planning simultaneous, world-wide observations and measurements from more than 700 stations during the anticipated period of maximum sunspot activity in 1957-1958. The information thus gained about the geographical distribution of phenomena was expected to be of great value in forecasting, weather forecasting, telecommunications, navigation and high-altitude flight. (See also INTERNATIONAL GEOPHYSICAL YEAR, 1957-58.)

Two polar expeditions were especially noteworthy because of their magnitude and connection with plans for the International

Geophysical year. One was the Trans-Antarctic expedition, directed by V. E. Fuchs and supported by the British and commonwealth governments. The primary objective was to make a cross-section of the antarctic continent's features and structures. In contrast, the U.S. Antarctic expedition, known as Operation "Deepfreeze," was establishing observation stations at widely separated points, including one at the South Pole. This was one of a series of operations encompassed by the U.S. antarctic program under the direction of Rear Admiral Richard E. Byrd. Other antarctic expeditions in which geographers were participating had been activated in connection with the International Geophysical year by Argentina, Australia, Chile, France, Great Britain, Japan, New Zealand, Norway, the Union of South Africa and the U.S.S.R. The existing and proposed sites for all these countries were plotted on U.S. hydrographic chart no. 16,429, which was published Oct. 27, 1955, in a very limited quantity for use by operational units.

Foreign research in other areas was also being encouraged by geographical societies and government agencies, and by the reduction of restrictions on foreign travel. For example, the Royal Geographical society and Alpine club jointly created, early in 1955, the Mt. Everest foundation. The foundation was to administer all profits resulting from the ascent of Everest and to make grants for geographical research and exploration in mountain regions of the world. In the United States the National Academy of Sciences-National Research council initiated a program for young geographers to carry out field investigations abroad. Financial support was provided by the U.S. office of naval research. In Germany the president of the Deutscher Geographentag, Werner Krause, said in his presidential address during the year that any research project could now be undertaken in any field and that young geographers now had

GIANT STEEL GLOBE, 30 ft. in diameter and weighing 40 tons, erected in 1955 at the Babson Institution of Business Administration, Wellesley, Mass., for use by geography students. The 500 vitreous enamel plates could be removed and changed to keep pace with world events

the opportunity to travel on grants in all parts of the world, even to places where Germans had been barred for the past ten years.

Several other polar, marine and mountain exploring expeditions were continued or undertaken. Spurred by the conquest of Mt. Everest in 1953, climbers from 11 countries attempted other peaks in the Himalayas and two reached their goals. An Italian group scaled 28,250-ft. Mt. Godwin Austen (K-2), and an Austrian expedition ascended Cho Oyu (26,867 ft.). A British group reconnoitered the world's third tallest peak and loftiest unscaled mountain, Kanchenjunga (28,146 ft.) but did not reach its summit.

Two U.S. icebreakers pierced, for the first time, the M'Clure strait which connects the Arctic ocean with Viscount Melville sound and constitutes a western entrance to the famous north-west passage. Russian scientists reported finding a vast underwater divide between the New Siberian Islands and Greenland. An expedition led by a Jesuit priest of Boston college, Chestnut Hill, Mass. (Daniel Linehan), localized the north magnetic pole near the northwest end of Prince of Wales Island, about 150 miles west and a little south of the position established in 1946.

The National Geographic society (q.v.) continued to support expeditions begun in 1953 and 1954, and undertook several new ones, bringing the total now in progress to eleven. Among those which had yielded notable results was the Palomar Observatory Sky survey which was culminating in a sky atlas with 1,758 photo-maps and sky charts. The atlas, which was scheduled for completion in 1956, was meant to serve primarily as a guide to show astronomers where research efforts should be concentrated for new discoveries. Geographic study of astronomical bodies had also been advanced through the National Geographic society's joint support with the Lowell observatory of a photographic study of Mars from Bloemfontein, U. of S.Af. About 20,000 photos, taken when Mars was nearest the earth and directly above the observatory, revealed blue-green markings believed to be vegetation, gleaming polar caps, frost areas, clouds and possibly dust storms.

One of the most useful tools for geographical research in recent years was the new edition of the *London Times Atlas*. Volume iii (western Europe) of the five-volume work was published in 1954 and the remaining volumes were scheduled to be completed at the rate of one a year, making this the largest and most comprehensive English language atlas in existence.

Geographers who worked effectively on problems or projects of significance to the profession were honoured by awards granted at national or international meetings. At the 51st annual meeting of the Association of American Geographers in Memphis, Tenn., April 11-14, 1955, the Outstanding Achievement award was presented to Gilbert F. White of The University of Chicago for his penetrating studies of water resources and their control, and citations were given to Henry M. Kendall of Miami university, Oxford, O., for editorial work on the *Annals* of the association, to John C. Weaver of Kansas State college for crop studies in the middle west, and to Erwin Raisz of Boston for work on landform maps. At the 40th annual meeting of the National Council of Geography Teachers in San Francisco, Calif., Aug. 19-21, 1954, the Distinguished Service award was granted to Erna G. Gilland of California Teacher's College, Pa., for contributions through teaching. The Richard Elwood Dodge prize in physical geography went to C. Langdon White of Stanford university, Stanford, Calif., and the Ray Hughes Whitbeck prize in economic geography went to Lucille Carlson of Western Reserve university, Cleveland, O. At the annual meeting of the Special Libraries association in Detroit, Mich., June 13-16, 1955, the Geography and Map division presented the award for Outstanding achievement in Geography and Map librarianship

to Marie C. Goodman of the library of congress. At the annual meeting of the Royal Geographical society in London, June 1955, the Society's Patron medal was presented to John Wright of the American Geographical society. At the 6th general assembly of the Pan American Institute of Geography and History in Mexico City, July 25-Aug. 7, 1955, the Atwater medal was given to Federico A. Daus of Argentina, and the Pan American Medal in Geography to Jorge Zarur of Brazil. (See also CARTOGRAPHY; EXPLORATION AND DISCOVERY; GEOLOGICAL SURVEY, U.S.; NATIONAL GEOGRAPHIC SOCIETY; SOCIETIES AND ASSOCIATIONS, U.S.) (A. C. GH)

Geological Survey, U.S. This bureau in the United States department of the interior has as its principal objectives the determination and appraisal of the nation's mineral and water resources, delineation of the physical features of the United States, its territories, possessions, and supervision of mineral leasing on federal and Indian lands.

During 1955 emphasis continued to be placed on activities to attain these objectives—the preparation of topographic, geologic and hydrologic maps; systematic collection; exploration, appraisal and interpretation of quantitative and qualitative data on mineral and water resources; classification of public lands for mineral and water power potential; supervision of mineral and oil and gas development on federal and Indian lands; fundamental research in the sciences and techniques involved; publication and dissemination of maps and reports setting forth the results of its investigations and mapping. In addition to these basic goals, the survey is frequently called upon to provide consultative and technical services to other federal agencies.

Geologic Investigations.—During 1955 the geologic division carried on co-operative investigations with 13 states and the territory of Alaska. The result—publication of 44 reports (2 by states and 42 by the geological survey) and the preparation for publication of 37 additional reports and maps. The milestones in the progress of geologic mapping were publication of geologic maps of New Hampshire, Oklahoma and Wyoming.

Novel developments in geophysical, geochemical and geotectanical prospecting aided exploration for new deposits of minerals and mineral fuels. In co-operation with engineers of the bureau of mines, survey geologists continued to evaluate applications for loans to mining companies and individuals, and supply technical advice necessary for effective execution of contracts under the Defense Minerals Exploration administration and the Emergency Procurement service.

Studies were made for the department of defense on tectonic and volcano hazards in the Aleutian Islands. In anticipation of construction of the Air Force academy, a special geologic investigation was completed at Colorado Springs, Colo. Field studies and a core-drilling program were completed on navy oil-sand deposits in Utah. Special geologic work was done for the cooperation of engineers and other department of defense agencies. Much work under auspices of the Foreign Operations administration, investigations of mineral resources were made in 17 countries: Latin America, Asia and Africa. On behalf of the Atomic Energy commission a broad program of geologic research and exploration for fissionable raw materials was continued, paying particular attention to the Colorado plateau and the Black Hills.

Shallow seismic reflection equipment developed by survey scientists during 1954 was further tested and refined. This was successfully used in locating buried river channels in Colorado. Studies of radiowave frequency propagation, electromagnetic methods and induced polarization were also made. For regional studies in the Mojave desert and in Salt Lake and Utah valleys.

avity and aeromagnetic methods yielded valuable data. Thousands of fossils from 35 states, Alaska and 12 areas outside the United States were examined by palaeontologists and stratigraphers. The resulting information was incorporated in 13 administrative reports for use in guiding the field work of other geologists and for eventual publication.

Water Resources Investigations.—While the United States is a water-rich nation except for some areas like the southwest, water supply has become a major national problem because requirements are increasing so rapidly. The national per capita use of water quadrupled from 1900 to 1950 and it was estimated that it would nearly double again before 1975. The basic facts contributing to the problem were population growth coupled with a rising standard of living.

In achieving its principal objective—an accurate appraisal of U.S. water resources—survey scientists and engineers systematically collected, analyzed and interpreted hydrologic and geologic data; evaluated water resources of specific areas; determined water requirements for industrial, domestic and agricultural uses; performed research and development to broaden the knowledge of basic principles in water occurrence and movement, and to improve its investigations techniques; and prepared technical and scientific reports for publication.

Because its work meshes closely with many state and local interests in water supply, state and local governments have encouraged increasing participation in co-operative ventures. Since 1929 the congress has provided funds to match area financial offerings and federal-state partnerships have developed with all 48 states. Federal funds for co-operative water investigations in fiscal 1955 amounted to \$3,800,000.

About 6,800 gauging stations to obtain stream-flow data were operated in 1955 in the 48 states and in Alaska, Hawaii and Guam. A special project summarizing stream-flow records in the United States for the period 1888–1950 was about 60% complete. Special reports on floods were in progress or near completion for 17 states. Hydraulic data on 96 sites where bridges were to be built were furnished to highway departments.

Survey-gathered data on water available in basalt beneath the Snake river plain played a significant part in the first major federal reclamation development in the United States based on underground water. A large perennial supply was found permitting irrigation of about 64,000 ac. in the Minidoka project, Idaho.

Dissolved minerals are a factor in the use of water. For this reason the chemical quality of more than 64,000 samples of water from streams, lakes, springs and wells was determined. The major portion of these samples came from about 450 daily periodic sampling sites, mostly on streams. A major reference report entitled *Industrial Utility of Public Water Supplies in the United States, 1952* was issued during 1955. It was a two-volume compilation of chemical analyses of water from 1,315 of the nation's larger cities.

Topographic Mapping.—This activity is designed to furnish accurate and detailed information on natural and man-made topographic features of the United States, its territories and dependencies. This is for use by the public as well as by civil and military agencies of the government.

Since it was established in 1879 the survey had published about 17,000 different topographic maps that now covered about 98% of continental U.S. However, many of the older maps had long needed revision. At the end of 1955 only about 37% of the country was covered by maps that met modern needs. Barring unforeseen delays, the next three decades were expected to see the country substantially covered with topographic maps made to modern standards. However, a continuing problem of keeping these maps up to date would remain. During the year mapping or map revision was carried on in all 48 states, Alaska,

Puerto Rico, the Virgin Islands and the Hawaiian Islands. In 29 states mapping was accelerated through federal-state co-operative programs whereby mapping costs were shared equally between the federal government and a state, county or municipality. Altogether, 2,266 map manuscripts were transmitted to the publications office for printing and distribution. Of these, 1,280 represented new mapping.

Conservation.—Conservation activities in 1955 were aimed, as in previous years, at assuring proper development and use of water and mineral resources on federally controlled lands. This work required field surveys; preparation of maps and reports dealing with water power, fuels, minerals and chemicals; and on-site supervision of mining and drilling operations to assure safe and economical production of coal, oil, gas and other minerals.

In mineral classification alone, 24,137 cases were handled involving either the outright disposal of federal lands with no reservation of any mineral; disposal of such lands with qualifications; or exercise of the government's right to lease such property for minerals exploration and production by private enterprise.

More than 1,800 mining properties were under supervision during fiscal 1955, involving leases, permits and licenses in 32 states and Alaska. Minerals production was estimated at nearly 17,000,000 tons valued at more than \$120,000,000 with royalties amounting to more than \$5,000,000. The production of coal from federal land in the United States and Alaska aggregated 5,588,830 tons with a royalty value exceeding \$692,000.

Drilling on public lands during the year included the spudding of 1,413 wells and completion of 1,352 wells, of which 937 were productive of oil or gas. In all, 21,758 wells, including 12,433 capable of producing oil or gas, were under supervision at the end of the fiscal year; production was appreciably greater than in 1954 and royalty returns to the United States amounted to nearly \$40,000,000.

Publications.—The information gathered by the geological survey in field and laboratory is made available through a variety of books, pamphlets, maps and charts. A list of those published by the survey is available free upon request. In addition, many reports were published by other federal agencies, co-operating states, and scientific and technical periodicals. Reports published during the year included 46 professional papers, 47 bulletins, 60 water-supply papers, 35 circulars and 30 chapters for the new edition of the *Topographic Manual*.

(H. B. N.)

Geology. The review of geological articles and books shows the progress of geological science. Scrutiny of geologic literature published in 1955 revealed two major fields of endeavour: detailed provincial studies and refinements in research methods. Writings of universal interest on the broader aspects of geology made up but a minor part of the year's production, and petrology, normally a subject of considerable study, received comparatively little attention.

General and Historical Geology.—The cultural division of the French embassy, New York city, issued the *French Bibliographical Digest: Science, Geology* (2) (1954), an annotated list of geologic books and articles published in the French language during the period 1948–54. A summary of trends in French geology was included. *Prodrome d'une description géologique de la Belgique*, by P. Fourmarier et al. (1954), the most recent complete geologic description of Belgium, was published. A. L. DuToit, in *The Geology of South Africa*, presented a revision of this standard reference which incorporated data discovered after 1939.

Engineering Geology.—The application of geology to engineering attracted greater attention and more detailed examina-

tion during 1955. John R. Schultz and Arthur B. Cleaves, in *Geology in Engineering* (1955), contributed a text in elementary geology designed for engineering students. The Aug. 1955 issue of the *Bulletin* of the Geological Society of America included "Engineering Geology Reference List," assembled by Stafford C. Happ, which included references in European and North American literature. *A Glossary of Selected Geologic Terms With Special Reference to Their Use in Engineering*, by W. Lee Stokes and David J. Varnes, was published by the Colorado Scientific society in 1955. *Géologie des barrages et des aménagements hydrauliques* (1955), by M. Gignoux and R. Barbier, primarily a reference on the subject of geology of damsites but touching upon the associated subjects of construction, tunnelling, drilling, grouting, equipment and underground water, was published. Numerous examples involving widely varying geological situations were presented.

Structural Geology.—Reinout W. van Bemmelen, in *Mountain Building* (1954), considered the principles of mountain building and described current mountain making in Indonesia, one of the areas of most active crustal deformation at this time. A study of the earth's crust utilizing earthquake surface waves appeared in "Crustal Structure and Surface-Wave Dispersion," by Jack E. Oliver, Maurice Ewing and Frank Press, in the July 1955 issue of the *Bulletin* of the Geological Society of America. Analysis of surface-wave dispersion resulted in the deduction that the Pacific ocean and parts of the North Atlantic ocean were underlain by typical oceanic crust except for a possible thin layer of continental rock under the Easter Island rise. A symposium entitled *Crust of the Earth*, edited by Arie Poldervaart, was published as a Geological Society of America Special Paper. The nature of the earth's crust, recent deformation and sedimentation, structural synthesis and petrogenesis and the historical development of the earth's crust were the major topics of exposition.

Sedimentation and Marine Geology.—*The Ocean Floor* (1954), by Hans Pettersson, presented information on the nature, stratigraphy and geochemistry of the sediments of the ocean floor, based on data obtained during the cruise of the "Albatross" in 1947. Other topics were the ages of the deep oceanic basins, turbidity currents, bottom waters and the life of the great deeps. Francis P. Shepard and David G. Moore contributed a classic discussion of sedimentation in the Gulf of Mexico in "Central Texas Coast Sedimentation: Characteristics of Sedimentary Environment, Recent History, and Diagenesis," in the Aug. 1955 issue of the *Bulletin* of the American Association of Petroleum Geologists. Deposition, biology and chemistry of the sediments were closely integrated and the studies enabled identification of depositional environments in cores of as much as 85 ft. of sediments in bays, barrier islands and deltas. "Deep-sea Channels, Topography, and Sedimentation" by Henry W. Menard, Jr., in the Feb. 1955 issue of the *Bulletin* of the American Association of Petroleum Geologists, had for its principal topic an explanation of the surface relief of parts of the ocean bottom. Smooth submarine topography was found to be closely related to deposition by turbidity currents, while irregular topography was described as occurring in areas where deposition was solely by settling out of suspended material. Bottom topography of some relief was observed to be sheltered from turbidity currents by submarine mountains or ridges. Submarine fans were also discussed. Morphology of some submarine canyons led the author to the conclusion that turbidity currents had eroded the channels, as canyon orientation could be related to Coriolis effects.

Papers presenting lithofacies analyses (quantitative presentation of physical characteristics of sediments in map form with relation to source and depositional areas) appeared in larger

numbers in 1955. Outstanding examples of this type of presentation were published in various issues of the *Bulletin* of the American Association of Petroleum Geologists and are as follows: January, "Lithofacies Map of Lower Silurian Deposits Central and Eastern United States and Canada," by Thomas Amsden; April, "General Lithofacies Relationship of St. Peter Sandstone and Simpson Group," by E. C. Dapples; and May, "Quantitative Lithofacies and Biofacies Study of Florena Shale (Permian) of Kansas," by John Imbrie, and "Devonian System of Williston Basin," by Andrew D. Baillie.

Mineral Deposits.—The first all-inclusive publication on mineral deposits of Bolivia was published. Frederico Ahlfeld. *Los Yacimientos Minerales de Bolivia* (1954), included maps, cross sections, descriptions of mining districts and individual deposits and production and export data. Continued expansion of the search for uranium resulted in the devotion of the entire March-April 1955 issue of *Economic Geology* to all phases of the geology of uranium, and U.S. geological survey and Atomic Energy commission geologists described numerous individual deposits.

Petroleum Geology.—A. I. Levorsen, a petroleum geologist of outstanding reputation, wrote *Geology of Petroleum* (1955) in which the subject was completely discussed. In "Time Migration of Oil and Gas," in the May 1955 issue of the *Bulletin* of the American Association of Petroleum Geologists, W. C. Gussow proposed a method of determining the length of time of migration. Time involved in compaction, regional time of trap formation, hydrostatic and saturation pressure and diagenesis were each examined and related to oil migration. The principles were tested by application to Alberta, Can., oil fields. The origin of petroleum in place was discussed by C. Corbett in "In Situ Origin of McMurray Oil of Northeast Alberta and Its Relevance to General Problem of Origin of Oil," in the August issue of the *Bulletin* of the American Association of Petroleum Geologists. It was suggested that humic acids derived from plant material were the source of the hydrocarbons. Environmental factors in deposition of the sediments were discussed and a sequence of chemical changes from original plant material to oil was proposed.

The international oil situation was the subject of several examinations. *World Oil*, in its "International Issue" of Aug. 1955, presented developments of the petroleum industry in producing countries of the world during the previous year, with a special section devoted to Russia and other communist-dominated countries. Leonard M. Fanning, in *Foreign Oil and the Free World* (1954), showed the international petroleum development by the leadership of the United States of America in the petroleum industry. Practical problems, economics and political aspects were discussed and statistics of the industry were given for some areas. The July 1955 issue of the *Bulletin* of the American Association of Petroleum Geologists reviewed developments in Mexico, South and Central America, Europe, Africa, the middle east and the far east for 1954, while the June issue of the same publication presented statistical data on exploration in Alaska, Canada and the United States for 1954. In *Romanian Oil Industry* (1955), Constantin N. Jordan reviewed events of that segment of the oil industry for the period 1945-52 with the major presentation that of statistical information. An interesting series of reviews by George V. Chilingar of comparatively recent Russian publications appeared in various issues of the *Bulletin* of the American Association of Petroleum Geologists in 1955. The origin of petroleum was emphasized in these reviews.

Geochemistry.—Two phases of this subject received more than usual attention within the year. *Isotope Geology* (1955) by Kalervo Rankama, and *Nuclear Geology* (1954), edited

ROCK FALL at Niagara falls in 1955. Geologists located areas of dangerous
isms and dynamited thousands of tons of rock to reshape the face of the
ls. The photograph shows the American falls with New Prospect point at
upper left

Henry Faul, presented numerous applications of radioactivity and related phenomena to geologic problems. Techniques and equipment for study of radioactive effects, age determinations and earth origin and history were discussed. Biogeochemistry as applied to exploration for metalliferous minerals was demonstrated in two case histories: "Biogeochemical Reconnaissance of the Annie Laurie Uranium Prospect, Santa Cruz County, Arizona," by Roger Y. Anderson and Edwin B. Kurtz, Jr., in *Economic Geology*, March-April 1955 issue, and "Biogeochemical Prospecting at the Shawangunk Mine—a Case Study," by Joseph E. Worthington, in *Economic Geology*, June-July 1955 issue. The problem of sampling for biogeochemical exploration is analyzed and techniques for effective sampling were suggested by Harry V. Warren, Robert E. Delavault and John A. C. Artescue in "Sampling in Biogeochemistry," which appeared in the Feb. 1955 issue of the *Bulletin of the Geological Society of America*. (See also MINERALOGY; OCEANOGRAPHY; PALAEOLOGY; SEISMOLOGY.) (L. ON.)

Georgia. Georgia, popularly known as the "empire state of the south," is located in the south Atlantic region of the United States. It has an area of 58,876 sq.mi. and had an estimated population of 3,539,000 on July 1, 1955, according to the U.S. bureau of the census. Of the 1950 population (3,444,783), 54.7% was rural and 45.3% urban; 68.6% was native white and 30.9% Negro. Atlanta, the capital, had a 1950 population of 331,314. Its 1954 estimated population was 457,300. Other chief cities and their 1950 populations, with their estimated 1954 populations in parentheses, are: Savannah, 119,638 (29,700); Columbus, 79,611 (90,800); Augusta, 71,508 (93,700); and Macon, 70,252 (76,000).

History.—In Jan. 1955, the state legislature convened for the first time under a constitutional amendment providing for annual sessions not to exceed 40 days. Prior to the adoption of this amendment in 1954, the state legislature met in 70-day annual sessions. The Jan. 1955 session of the legislature passed an act providing for the automatic withdrawal of all state and local funds for public education in any public school district system where white and coloured Negro children were not

segregated in schools and classes. The act was another in a series of measures adopted by the state legislature designed to maintain segregation in the public schools of the state.

In another measure which reflected the continued urban trend and increased industrialization in the state, the legislature authorized cities and towns to formulate workable programs for utilizing appropriate private and public resources to eliminate and prevent the development and spread of slums, to encourage needed urban rehabilitation, and to provide for the redevelopment of slum areas.

Other important actions of the January session of the legislature authorized the creation of a farmers' market authority to construct and improve farmers' markets throughout the state; established a rural roads authority to construct, maintain, repair, operate and finance rural road projects; prohibited the sale or use of fireworks in the state except in public displays authorized by the state fire marshal and local government officials; repealed the act of 1953 creating the Georgia turnpike authority; provided for the issuance of five-year drivers' licences instead of the permanent licences formerly issued; required the filing of ad valorem tax affidavits with applications for automobile licence tags; and established a state programs study committee to study the operations of the state government and to make recommendations to the governor and state legislature for meeting the fiscal needs of the state on a long-range basis.

Among the more significant political developments of the year was a meeting of the state legislature in extraordinary session for two weeks in June for the purpose of enacting new revenue, licence and tax laws needed to cope with a developing financial crisis in the state government. After rejecting a controversial sales tax extension bill, the legislature raised taxes on gasoline, cigarettes, beer and wine, incomes, insurance premiums and a number of other items. It was estimated that the new tax-producing bills would bring in more than \$40,000,000 to the state treasury.

Principal state officials during 1955 were: governor, S. Marvin Griffin; lieutenant governor, Ernest Vandiver; secretary of state, Ben W. Fortson, Jr.; comptroller general, Zach D. Cravey; attorney general, Eugene Cook; treasurer, George B. Hamilton; commissioner of agriculture, Phil Campbell; commissioner of labour, Ben T. Huiet; and superintendent of schools, M. D. Collins.

Education.—During the school year 1955-1956, there were 2,864 public schools in Georgia with an enrolment of 892,467 pupils and a teaching staff of 29,255, according to the state department of education.

There were 1,615 elementary schools, 741 for white children and 874 for Negro children. An additional 1,249 elementary schools had one or more high school grades (including 524 for Negro children). There were 665 five-year high schools (419 for white children and 246 for Negro children). There was an enrolment in the elementary grades of 666,808 (442,514 white children and 224,294 Negro children) and a teaching staff of 19,057 (12,839 white and 6,218 Negro). There was an enrolment in high school grades of 225,659 (166,651 white children and 59,008 Negro children) and a teaching staff of 9,033 (6,763 white and 2,270 Negro). There were 645 nonteaching principals (490 white and 155 Negro).

Total expenditures of the state government for education during the fiscal year ending June 30, 1955, amounted to \$122,295,266, compared with \$113,417,455 the preceding year and \$137,711,000 for the operating budget for the fiscal year beginning July 1, 1955.

Social Insurance and Assistance, Public Welfare and Related Programs.—Public assistance programs during the fiscal year ending June 30, 1955, amounted to \$62,247,686, an increase of approximately 6.5% over the previous year, according to the state department of public welfare. Old-age assistance amounted to \$43,860,295; aid to the blind, \$1,694,545; aid to dependent children, \$12,562,369; and aid to disabled persons, \$4,130,477. In June 1955, a total of 97,985 persons received old-age assistance with an average allowance of \$37.81; 3,370 blind persons received benefits averaging \$42.96; 39,961 dependent children received benefits averaging \$27.14; 9,052 disabled persons received benefits averaging \$42.05.

During the fiscal year ending June 30, 1955, a total of 6,914 persons were convicted of crimes (1,921 of felonies and 4,993 of misdemeanors) and committed to state and county penal institutions under the control of the state board of corrections. There were 7,789 prisoners in these institutions on June 30, 1955, compared with 7,675 on June 30, 1954.

Communications.—As of June 30, 1955, the state highway department reported that there were 87,455 mi. of public roads in Georgia and an estimated additional 7,483 mi. of city streets and alleys. The state highway system extended 15,111 mi., and county roads extended 72,343 mi. For the fiscal year ending June 30, 1955, the state highway department expended \$65,755,641.01. The state received \$15,517,352.62 from the federal government for highway purposes during the fiscal year.

On Dec. 31, 1954, there were 6,049 mi. of railroads in Georgia, according to the Interstate Commerce commission. The Georgia Public Service commission reported there were 607,526 telephone stations in the state as of July 15, 1955. There were 3,238 mi. of federal airways and 79 active civil airports in Georgia as of June 30, 1955.

Banking and Finance.—On June 30, 1955, there were 301 state banks in Georgia with total deposits of \$953,656,932 and total assets of \$1,064,342,920, according to the Georgia department of banking. The same source showed 51 national banks in the state with total deposits of \$1,171,883,000 and assets of \$1,274,494,000 as of April, 1955. There were also 14 state chartered building and loan associations in Georgia in 1954 with total assets of \$21,093,040, according to a report by the Georgia secretary of state.

The Georgia Savings and Loan league reported that there were 79 savings and loan associations on June 30, 1955, of which 71 were chartered by the federal government and 8 by the state. These 79 associations had resources of approximately \$600,000,000.

Total receipts of the state government for the fiscal year ending June 30, 1955, were \$236,473,995; budget allotments for the period were \$241,304,615. On June 30, 1955 the state had a net surplus of \$16,364,658.

Agriculture.—The U.S. department of agriculture estimated that the total cash income (including government payments) of Georgia farmers for 1954 was \$601,765,000. This represented a decline of 7.6% from the \$650,956,000 reported for the previous year. Of the 1954 cash income 52.5% was derived from crops while 46.4% came from livestock. Government payments during 1954 amounted to \$6,640,000.

Table I.—Principal Crops of Georgia

Crop	Estimated 1955	1954	Average, 1944-53
Cotton, bales.	685,000	612,000	695,000
Corn, bu.	65,208,000	29,642,000	46,217,000
Peanuts, lb.	613,800,000	276,750,000	657,004,000
Tobacco, lb.	146,740,000	124,220,000	114,536,000
Oats, bu.	18,356,000	21,235,000	14,416,000
Peas, lb.	4,000,000	20,000,000	36,981,000
Potatoes (sweet), bu.	1,350,000	966,000	4,080,000
Potatoes, Irish, bu.	344,000	395,000	872,000
Hay, tons	596,000	444,000	676,000
Wheat, bu.	1,472,000	2,072,000	2,216,000
Peaches, bu.	*	2,800,000	3,612,000

Manufacturing.—In June 1955 there were 324,300 persons employed in manufacturing industries in Georgia, compared with 304,600 in June 1954, according to the U.S. bureau of labor statistics. The same source reported that gross average weekly earnings of production workers in manufacturing was \$52.93 for June 1955, compared with \$48.51 in June 1954. The U.S. bureau of the census estimated that persons employed in manufacturing in Georgia received a total of \$848,075,000 salaries and wages in 1953. The same agency reported that a value of \$1,545,467,000 was added by manufacture during 1953, compared with \$1,355,318,000 in 1952 and \$1,332,659,000 in 1951. (G. S. Ps.)

Mineral Production.—Table III shows the tonnage and value of the mineral commodities produced in Georgia in 1952 and 1953 (preliminary, whose value exceeded \$100,000. Georgia produces a variety of nonmetallic minerals. In 1953, the state was second in output of mica, third in slate, and fifth in asbestos. Georgia was 32nd among the states in value of mineral output, with 0.36% of the U.S. total in 1953.

Table III.—Mineral Production of Georgia

Mineral	(Short tons)		1953	
	Quantity	Value	Quantity	Value
Clays	2,562,000	\$23,138,000	2,651,000	\$23,455,000
Iron ore	358,000	1,439,000	291,000	1,101,000
Sand and gravel.	2,134,000	2,030,000	2,051,000	1,901,000

Talc	56,000	653,000	58,000	203,000
Other minerals.	7,023,000	...	6,978,000
Total.		\$52,398,000		\$52,397,000

German Literature. The year 1955 gave many indications that the book trade was in just a healthy condition as the rest of West German economy. Sales were high, many new titles were published and the German technical literature again displayed the quality and quantity always associated with German scholarship before 1932. However, the creative literature failed to achieve anything like the recovery which the nation had produced in the technical and economic sphere. In literature it was not so much a question of recovery but rather of rebirth, the rebirth of a new generation of authors. The great difference between the work presented during the year by the present generation and that of the old generation with an unbroken continuity of development reaching back into the pre-Hitlerian days was apparent with the publication of the concluding volume, *Der Tag des jüngsten Arztes*, in the autobiography of his youth which Hans Carossa began to write during World War I. Here in the mature reflections about his life and times as a young doctor in Bavaria the author expresses his awareness of the organic meaningfulness of his entire long life in a very simple, peaceful prose which is saturated with the tradition of the language.

Max Frisch, a talented young Swiss writer, in his excellent psychological novel, *Stiller*, generally acknowledged as the finest novel of the year, articulately gave voice to the themes and style which attract the younger writers. This long book tells of the unsuccessful attempts of a man, Stiller, to lose his identity by fleeing from his total environment. The Swiss architect and writer was distinguished not only by this novel which was awarded the Wilhelm Raabe prize, but his radio play, *Der Lärm und die Architektur*, was selected as the best submitted to the jury of the Hessian radio, and his play, *Don Juan oder Liebe zur Geometrie*, was successfully produced on the German stage.

Typical of those established German authors who enjoyed a profitable exile during the years of German suffering but who thus forfeited their acceptance by the German public was Hermann Hesse, author of *A Thousand Must Fall*, whose latest effort, *Off Limits, Roman der Besatzung Deutschlands*, was highly publicized but not well liked. Disappointed critics regarded the novel as an attempt to sell a huge number of copies since it emphasized the sensational elements such as fraternization, prostitution, etc. and, it was claimed, often gave distorted views of the truth.

Among the older German authors was Lion Feuchtwanger, one of modern German literature's foremost historical novelists whose lengthy *Spanische Ballade*, was set in 12th-century Spain.

the historical background was presented with such detail that sometimes it threatened to turn the novel into a lecture. Max Rod, the Czech writer, uses the historical novel primarily as a vehicle for his poetical speculations and psychological explanations. This was especially true in his latest book, *Armer Cicero*, which uses a love affair of the aging orator for a young girl as the situation through which Cicero, who is caught in the gulf between his ideals and the realities of life, becomes aware of human frailty and reaches the stage of readiness for self-sacrifice, the last step in the logical development of his life. Honoured on her 70th birthday, Ina Seidel also produced one of the finest German novella of recent times, *Die Fahrt in den Abend*, which is about a retired physician who suddenly is brought back to the memory of a critical decision in his earlier life, starting from which he reviews and evaluates then the remainder of his life in retrospect.

World War II, especially the Russian war, army life and postwar problems was the predominant theme in the work of the more promising young writers. Hans Hellmut Kirst, film critic for a Munich paper and the author of 1954's best seller, *Null-acht-fünfzehn*, expanded in the course of one year the military adventures of Private Asch into a trilogy. Volume two, *Die seltsamen Kriegsabenteuer des Gefreiten Asch*, focuses more attention on various members of an artillery regiment on the eastern front, unpleasant types found in the army, whose crudity and brutality the author satirizes unmercifully. The third volume, *Der gefährliche Endsieg des Gefreiten Asch*, emphasizes similar characters and situations in the military theme during the final days of the war. Episodes and personalities are exaggerated for the author's purpose, which is to satirize the tragedy caused by the evils of army life and war.

Of quite a different stamp was the last volume, *Berlin*, of the war trilogy (*Moscow, Stalingrad*) written by Theodor Plievier, who died during the year. In twelve years of devoted effort this author, a disillusioned emigrant to and then from the Soviet Union, tried, probably better than anyone yet, to picture realistically on a broad canvas the eastern-front war as it affected the three cities. In the novel, *Berlin*, no details are spared and everything is presented, but by choosing to give such a picture there arises a documentary rather than a novel. The most important works of nonfiction dealing with the war came from the pens of two generals, Albert Kesselring's *Gedanken zum Zweiten Weltkrieg*, and Erich von Manstein's *Verlorene Siege*. The former attempts a critical evaluation of personal experiences which culminate in an investigation of the errors committed by the Axis powers. The latter aims at supplementing the existing source documents by appending that which von Manstein calls the essential element; that is, how the leading personalities thought and acted.

Though not drawing her material from the war, Johanna Moosdorf concentrated on an attempt to make understandable the reactions of men under duress by placing them against the realistic background, the factory environment of the east zone. *Der Himmel brennt* the author, herself a refugee from east Germany, was the first to use the workers' revolt of July 1954 as the setting for a skilful revelation of the German worker under the Soviet system, who takes pride—even love—in his work but at the same time has the greatest hatred for the regime over him. Stefan Andres was the only young author of ability to escape the lure of present-day environmental influences that are so attractive to his contemporaries, and in *Die Reise nach Cortina*, a trip through southern Italy, the main characters meet, travel together, and encounter personal emotional crises under the spell of the chapel where the Franciscan order was begun.

In the field of the German drama, still dominated by trans-

lations, there was but one noteworthy play printed and produced by a German writer, Carl Zuckmayer's *Das kalte Licht*, which shows the conflict between loyalty and ideology in a German atomic scientist who went to England and Canada and became a communist spy. Zuckmayer's ability to write an eminently producible drama led him here to write an almost technically perfect play, but the psychological development of the central figure cannot quite match the dramaturgy. To be noted in the field of poetry were the volumes: *Yamins Stationen* by Peter Härtling, and *Après-lude* by Gottfried Benn, both of which contained some of the finest lyrics that modern German poets had written. Heinz Piontek, who had begun to make a name for himself in the field of the lyric, published a volume of small pieces in lyrical prose, *Vor Augen*, which received much favourable comment.

The third and last volume of Franz Werfel's unpublished work *Erzählungen aus zwei Welten*, edited by Adolf Klarmann (the manuscripts being prepared for the printers by the widow, Alma Mahler Werfel), surprisingly reveals that Werfel went through a period of intense Jewish-nationalistic feeling from the time the Nazi danger threatened Austria through his flight to France, including even the first days of his residence in America. During this period he emphasized the peculiarities of the Jewish character, contrasting them with other peoples. This volume contains two major prose works. One, *Eine blassblaue Frauenschrift*, presents as the heroine the noblest, most undistorted of all his many Jewish characters, the daughter of a Viennese physician, Vera Wormser. The second, *Cella oder die Ueberwinder*, is a completed first volume of a projected two-volume novel which with great penetration depicts the expulsion of the Jews out of Vienna and the early days of the Nazi terror in that city. Another valuable posthumous work was found in the one volume, *Das Gesamtwerk*, of Friedo Lampe, which contains several hitherto unpublished novelle and short stories of this little known man who wrote in the true style of the German Romantic tradition.

C. W. Ceram, the author of the best seller, *Gods, Graves, and Scholars*, published a similar work, *Enge Schlucht und schwarzer Berg*, dealing exclusively with the Hittite empire and the archaeological adventures concerned with the discovery and study of this strange civilization that was so long lost to the world. In his *Wörterbuch der deutschen Umgangssprache* Heinz Küpper made an outstanding beginning in one branch of German lexicography which had been sadly neglected. Heinrich Weinstock's book, *Realer Humanismus*, was highly praised as it presented a thorough treatment of the history of humanism, its place in education, why and how it failed, and also the author's plea for a "real" humanism, distinguished from the traditional form in that it should take realities into account. One of the most valuable studies of the 19th-century Kulturkampf was written by Georg Franz in his *Kulturkampf: Staat und katholische Kirche in Mitteleuropa von der Säkularisation bis zum Abschluss des preussischen Kulturkampfes*.

The creative literature in the east zone was practically nonexistent. The lot of the author was not a pleasant one in the Peoples' Republic where royalties, or the equivalent, were extremely low except for the select few, and the opportunities for part-time employment which the government recommended were equally poor. In May 1955 the government instituted the first literary fair where they presented their prize authors behind counters to sell and autograph their books and talk to the people. It was also found necessary to establish an *Institut für Schriftsteller* under Alfred Kurella, an officially approved writer, because of the great dissatisfaction with the sales volume of the east zone literature, and it was felt that the writers were not sufficiently familiar with dialectical materialism, the ideo-

logical panacea in the Sovietized regime of Germany.

(J. C. OR.)

Germany. A country of central Europe, Germany is bounded north by the North sea, Denmark and the Baltic sea, east by Poland, south by Czechoslovakia, Austria and Switzerland, and west by France, Luxembourg, Belgium and the Netherlands. From 1949 Germany was partitioned into two republics with a special provisional regime for Berlin (*q.v.*). Areas and populations of the two states and Berlin are as follows:

	Area (sq.mi.)	Population (1950 census)	(1955 est.)
German Federal Republic	94,719*	47,695,672*	49,900,000*
German Democratic Republic . . .	41,380	17,313,734†	16,500,000
Berlin	341	3,336,475	3,369,000
	136,440	68,345,881	69,769,000

*Excluding the Saar (*q.v.*): area, 991 sq.mi.; pop. (1954) 980,858. †1946 census.

Language: German, with small admixture of Lusatian (260,000 in the Kottbus-Bautzen area), Polish (150,000, mainly in Westphalia) and Danish (120,000). Religion: (1938 est.) Protestant 62.7%, Roman Catholic 32.5%, Jewish 0.7%, other 4.1%; (1950 census, Federal Republic only) Protestant 52.2%, Roman Catholic 43.8%.

German Federal Republic.—Chief cities (with population of more than 200,000, 1953 est.): Bonn (cap.) 130,000; Hamburg 1,658,000; Munich 870,000; Cologne 629,200; Essen 624,100; Frankfurt 564,400; Düsseldorf 540,200; Dortmund 534,500; Stuttgart 521,800; Hanover 467,900; Bremen 463,000; Duisburg 426,700; Nuremberg 381,600; Wuppertal 375,100; Gelsenkirchen 329,800; Bochum 301,300; Kiel 259,500; Mannheim 256,300; Lübeck 234,600; Brunswick 230,400; Wiesbaden 228,700; Oberhausen 211,100; Karlsruhe 204,600. President of the republic in 1955, Theodor Heuss; federal chancellor, Konrad Adenauer (*q.v.*).

German Democratic Republic.—Capital, Berlin-Pankow. Chief cities (1953 est.): Leipzig 607,700; Dresden 510,100; Chemnitz (renamed Karl-Marxstadt) 298,500; Halle 278,400; Magdeburg 252,300. President of the republic in 1955, Wilhelm Pieck; premier, Otto Grotewohl. Soviet ambassador, Gheorghy M. Pushkin; Soviet commander in chief, Col. Gen. Andrey A. Grechko.

History.—During 1955 no progress was made over the most important subject for all Germans—that of the reunification of their country. The foreign ministers of the four occupying powers met in Geneva, Switz., in July, and again in October, without making the slightest progress. At each conference the differences in western and Soviet policies were starkly illustrated. The Soviet plan for the creation of a European security system and the later, step-by-step progress towards German reunification was countered by that of the western powers, entailing the holding of free, all-German elections, the signing of a German peace treaty and the later evolution of a security system. The failure of the great powers to make any progress caused increasing impatience among Germans.

The most important "all-German" event in 1955 was, therefore, the visit of Adenauer to Moscow in September. He was invited by the Soviet government on June 7, the invitation being passed through the Soviet and federal German ambassadors in Paris. Adenauer accepted, through the same channels on June 30. He flew to Moscow in a German "Lufthansa" plane on Sept. 8, having pledged himself to secure the return of German prisoners still in the Soviet Union and some progress over reunification. In return he was prepared to open diplomatic relations with the Soviet Union, as requested by N. A. Bulganin, the Soviet premier.

The Moscow talks lasted five days and Adenauer flew back on Sept. 14 to Bonn. He pointed out at once to the press and to the *Bundestag* that he had refused to budge from its commitments to the western powers under the Paris agreements and

had maintained his claim to represent the whole German people as head of the only democratically-elected German government. Bulganin had promised the return of the German prisoners, giving a figure of 9,626, and he had in return agreed to open diplomatic relations with the Soviet Union. There had been an change of views on the subject of German reunification, but practical progress on this subject was achieved. This was a bitter disappointment to the people of both eastern and western Germany.

The Soviet leaders promised to take immediate steps to turn the German prisoners. The first batch, consisting of 24 former generals, arrived in the Federal Republic on Oct. 6. Oct. 10 the first large group, of 598, arrived at the federal transit camp of Friedland and smaller groups reached both the Federal and the Democratic republics later.

In Moscow Adenauer made it clear that he would not take part in all-German talks with the German Communist government. The Soviet government had already proposed such talks subject to the annulment of the Paris treaties, on Jan. 15. Adenauer turned down this proposal in a radio broadcast on Jan. 16 when he said that he would not sacrifice the treaties to a German reunification which would be "dependent on Moscow." The Soviet *démarche* had been accompanied by notes to the Western European Union countries alleging that the treaties infringe the Geneva protocol of 1925 by allowing the stockpiling of biological and chemical weapons. The British and French governments were also accused of infringing their mutual security agreements with the Soviet Union.

German Federal Republic.—On May 5 the Federal Republic became a sovereign state, almost exactly ten years after the end of the war. In the morning Adenauer, the federal chancellor, had a final meeting with the three western high commissioners who became ambassadors on the same day and who presented their credentials to Heuss, the federal president. At an open ceremony at the chancellor's official headquarters of the Palace of Schaumburg in Bonn the German flag was hoisted and Adenauer made a short statement, announcing the end of the occupation and the birth of western German independence. A similar proclamation was read in the *Bundestag*.

The return of German sovereignty gave the Federal Republic the right to rearm; to build commercial aircraft; to enter into diplomatic relations with any country; to control its own internal security; and to enjoy freedom from Allied controls over industry. Immediately after the declaration of sovereignty the Federal Republic took part on May 8 in the first Western European Union meeting in Paris. Adenauer thanked the other powers for their reception of the Federal Republic and on the next day the German generals Hans Speidel and Adolf Heusinger were received at NATO (North Atlantic Treaty organization) headquarters in Paris. They wore civilian clothes.

The prelude to the events of May was the ratification of the Paris treaties by the *Bundestag* on Feb. 27 after a three-day debate. There were four treaties: the protocol on ending the occupation regime, the convention for the stationing of foreign troops on German soil, the agreement for the admission of the Federal Republic into NATO and the Western European Union and the Saar agreement between France and the Federal Republic. The majorities in favour of the first three agreements varied between 157 and 176 in the second and third readings of the ratification bills. In each reading 264 members voted for the Saar agreement and 204 and 201 respectively voted against it. Four cabinet ministers failed to support the government on the Saar agreement and one of them (Vice-Chancellor Franz Blücher) offered his resignation as a result. It was not accepted by Adenauer. The *Bundesrat* (or *Länder* assembly) accepted the treaties on March 18 and President Heuss signed them on March 20.

REPATRIATION OF GERMAN WAR PRISONERS, 1955

24, after deciding that there was no reason to wait for a decision as to their constitutionality by the federal constitutional court in Karlsruhe.

Ratification of the Paris treaties took place against a background of uncertainty. On Jan. 29 opponents of the treaties launched a "national" campaign against them when their leaders met in St. Paul's church in Frankfurt and signed a manifesto against rearmament. On Jan. 23 the leader of the Social Democratic party, Erich Ollenhauer, sent a grave warning against rearmament to Adenauer. Popular aversion to rearmament increased and applications for posts in the new armed forces fell away sharply. German youth in particular showed its doubts about rearmament but communist efforts to take part in the campaign were rebuffed.

The federal chancellor had a busy year. Apart from his Moscow visit, he went to both the United States and Great Britain in 1955. On June 16 he received a degree at Harvard university and on June 13 and 14 had talks with Pres. Dwight D. Eisenhower and J. Foster Dulles. He declared that the bonds of friendship between the two countries were closer than ever before and aired the possibility of bringing about "controlled disarmament" through negotiations with the Soviet Union. On June 19 he visited Sir Anthony Eden at Chequers.

On Jan. 14-15 Adenauer had talks with the French premier, Pierre Mendès-France, in Baden-Baden. They reached agreement over the Saar question but temporarily shelved the French plan for a European arms pool. On April 29 and 30 Adenauer had talks with the French foreign minister, Antoine Pinay, in Bonn. They completed arrangements for the Saar statute (which was rejected by the Saarlanders in a referendum held on Oct. 23), agreed to re-examine the project for a Moselle canal and declared their common desire to secure European integration. The communiqué had a cool reception from the German political parties. On Oct. 5 Adenauer met the French premier, Edgar Faure, in Luxembourg, in order to produce a joint declaration encouraging the Saarlanders to accept the "European" statute.

As a result of making this trip by car in raw weather Adenauer became seriously ill with pneumonia. He was unable to take any further part in affairs until shortly before Christmas.

On May 25 Adenauer interviewed the German ambassadors in London, Paris and Washington. The object of this meeting was to ensure close co-operation between these three "key" men and the new foreign minister, Heinrich von Brentano, who was officially appointed on June 7. At the same time Theodor Blank was appointed minister of defense.

Three *Land* elections were held in 1955. On April 24 the Lower Saxony election resulted in a coalition of the Christian Democratic, Free Democratic, German and Refugee parties coming into power with a narrow majority. On May 15 the Christian Democrats (C.D.U.) obtained 51 out of 100 seats in the parliament of Rhineland-Palatinate. On Oct. 9 the Social Democrats won the Bremen election by increasing their vote from 39% to 48% and taking 52 out of 100 seats. The general effect of these elections was to show that the C.D.U. vote had declined since the 1953 federal election but that this party was still the strongest in the Federal Republic. The C.D.U.'s position in the federal parliament was slightly weakened by the defection of the Refugee party from the coalition on July 23. The party went into opposition on Oct. 15.

Other political events included: the Yugoslav demand for 350,000,000 marks of reparations on July 27; the confiscation of German assets in Austria which provoked a German protest on May 16; the formation of a defense cabinet on Oct. 6; and the signing by Heuss of a volunteer law for the new armed forces on July 23.

The economic expansion of western Germany continued. Unemployment dropped to less than 500,000 in September, the number of employed people rose to nearly 18,000,000, the index of industrial production to 210 (1938=100). Coal and steel workers staged a protest strike in January and the first series of unofficial strikes took place in Hamburg and Kassel in August. The "Lufthansa" civil air lines began flights in Germany on April 1 and to European countries on May 15.

German Democratic Republic.—There were no sensational events in eastern Germany during 1955. This was because Soviet policy concentrated on the idea of "peaceful coexistence," based on the continuing partition of Germany and a slow, step-by-step progress towards reunification. The eastern German government, which in all important respects remained unchanged during 1955, collaborated fully with this policy. Thus on Feb. 20 the eastern German premier, Otto Grotewohl, appealed to Adenauer to join him in making an approach to the four great powers on the subject of reunification. Grotewohl asked for joint "all-German" consultations and a national referendum to be held on the subject of the Paris treaties. On March 25 Grotewohl again demanded the cancellation of these treaties and announced "measures to protect the German Democratic Republic." These included the closer scrutiny of people entering or leaving the country and the more thorough organization of the people's police into a paramilitary force. Grotewohl also pointed out that eastern Germany and the Soviet Union were no longer in a state of war since Jan. 25. During the year the state of war with Albania, Bulgaria, China, Czechoslovakia, Poland and Rumania was ended, and on July 6 a joint declaration was made with the Polish government which pronounced the Oder-Neisse line to be the "definite and irrevocable" eastern frontier of Germany.

On May 14 the Warsaw treaty was concluded between the Soviet Union and seven satellite states, including the German Democratic Republic. Grotewohl said that it was designed "to bar aggression in Europe," but eastern Germany was not a fully fledged member of the organization. Although a national army was proclaimed it was not integrated under the supreme

ommand created in Warsaw.

On July 24 eastern German-Soviet co-operation was again stressed by the visit of N. A. Bulganin and N. S. Khrushchev to eastern Berlin on their way back from the Geneva conference. There was complete agreement over the need to evolve a system of European security which could be joined by both German states and which would pave the way for German reunification. On Sept. 26 eastern German sovereignty was bolstered by the assumption, with Soviet permission, of control over frontiers and internal communications. This was regarded in some quarters as a threat to Berlin's communications with the west.

The internal history of the German Democratic Republic followed much the same pattern as in 1954. There were minor food shortages in the spring and autumn, after a bad potato and sugar beet harvest. The failures of the five-year development plan (1951-55) resulted in the intended increasing of the people's police from 110,000 to 135,000 men being temporarily abandoned. The announcement of April 3, that 18- to 22-year-olds could be conscripted for two years' service in that force, could not be implemented. Desertions from the people's police were frequent and the stream of refugees to the west continued. In 1955 those seeking refuge in western Berlin and the Federal Republic totalled about 150,000.

In January the sending of parcels to eastern Germany was restricted and closer control was exercised on traffic in and out of Berlin. Western Germans were not allowed to procure ration cards in eastern Germany, and were forced to pay in "westmarks" for purchases in eastern German shops and restaurants. Transfers from western to eastern German banks were fixed at parity, although one "westmark" was worth 4.80 ostmarks on the free exchanges. On Jan. 17 the government announced that all young people of the age of confirmation would take part in "youth initiation" ceremonies on April 1 and in preparatory classes for them. Only about 5% attended the ceremonies since the Christian churches threatened to withhold confirmation from the young, and the sacraments from parents. In October the bishop of Berlin, Otto Dibelius, once more drew attention to the deteriorating relations between church and state and warned against a much more resolute youth initiation campaign prepared for the winter of 1955-56.

Other events of interest included the agreement with the Soviet Union on Jan. 14 for the exchange of data on the peaceful uses of atomic energy; the return of the paintings of the winged museum in Dresden, including Raphael's "Sistine Madonna"; the formation of eastern German "Lufthansa" air lines on April 27; and the end of publication of the Soviet army German-language paper, the *Tägliche Rundschau*, on June 30. (See SO BERLIN; EASTERN EUROPEAN ECONOMIC PLANNING; GENEVA BIG FOUR CONFERENCES OF 1955; NORTH ATLANTIC TREATY ORGANIZATION; SAAR; UNION OF SOVIET SOCIALIST REPUBLICS.)

(T. P.)

Education.—*German Federal Republic.*—Schools (1954), excluding Hamburg and Bremen: primary 29,344, pupils 4,832,395, teachers 157,566; higher primary 759, pupils 309,512, teachers 12,785; secondary 573, pupils 774,317, teachers 41,152. Comprehensive (all-age) schools Bremen and Hamburg) 463, pupils 292,419, teachers 9,199. Vocational schools (Nov. 1953) 8,329, pupils 2,309,296, teachers 66,874. Teachers' training colleges (Nov. 1953) 81, students 11,837, teachers 1,693. Universities 17, students (1954) 81,949, professors, etc. (1953) 4,908. Other institutions of higher education 30, students (1954) 33,276, teachers (1953) 1,839. Music, art and physical training colleges (1954) 18, students 4,245.

German Democratic Republic.—Schools (1950): primary 10,900, pupils 2,440,000; secondary 560, pupils 233,000. Institutions of higher education (1955) 46, including 6 universities, students about 100,000.

Finance and Banking.—*German Federal Republic.*—Monetary unit: deutsche-mark, with an exchange rate of 4.20 DM. to the U.S. dollar. Budget (1954-55 closed account): revenue 27,962,000,000 DM., expenditure 28,189,000,000 DM.; (1955-56 estimate) balanced at 30,596,300,000 DM. Internal debt (March 1953) 9,293,000,000 DM.; external debt 1,551,000,000 DM. Currency circulation: (Dec. 1954) 12,780,000,000 DM.; (March 1955) 12,910,000,000 DM. Deposit money: (Dec. 1954) 13,630,000,000 DM.; (March 1955) 12,670,000,000 DM. Gold

and foreign exchange: (March 1955) U.S. \$2,762,000,000; (Dec. 1954) U.S. \$2,682,000,000.

German Democratic Republic.—Budget: (1952 est.) balanced at 31,695,000,000 deutschemark (ostmark); (1953 est.) balanced at 34,700,000,000 deutschemark (ost.). On Oct. 30, 1953, the deutschemark (ost.) was "revalued" at an exchange rate of deutschemark 1.00 = 1.80 roubles. Although officially pegged at 45 U.S. cents, its real purchasing value was only a fraction of that amount.

Foreign Trade.—*German Federal Republic.*—(1954) Imports 19,337,100,000 DM.; exports 22,035,200,000 DM. Main sources of imports: continental European Payments Union countries 43%; U.S. and Canada 14%; Latin America 12%; U.K. 4%; other sterling area 11%. Main destinations of exports: continental E.P.U. 57%; Latin America 10%; U.S. and Canada 6%; U.K. 4%; other sterling area 8%. Chief exports: motor vehicles 8.3%; electrical machinery 7.6%. Chief imports: raw cotton and cotton products 5.6%; wheat 5.4%.

German Democratic Republic.—Eastern German trade with 17 western European countries, excluding the German Federal Republic (1953): imports U.S. \$93,000,000; exports U.S. \$83,500,000. In 1953 the eastern German share in the total imports of eastern Europe from western Europe was 12%, while its part in the total exports of eastern Europe into western Europe amounted to 9%.

Transport and Communications.—*German Federal Republic.*—Railways (1954): 35,247 km.; passenger-km. (1953) 31,113,000,000; freight, ton-km. (1954) 52,055,000,000. Roads (Mar. 1954): classified 128,140 km., including 2,151 km. of *Autobahnen*; local (unclassified) approx. 120,000 km. Motor vehicles in use (Jan. 1955): cars 1,253,300; commercial vehicles 912,000. Shipping (July 1954): merchant vessels of 100 gross tons and over 1,798; total tonnage 2,227,195. Cargo in west German ports in external trade (metric tons, 1954): loaded 14,262,000; unloaded 26,771,000. Navigable inland waterways (1953): 4,259 km. Telephones (Mar. 1954): 3,255,971. Radio receivers (Jan. 1955): 12,284,434.

German Democratic Republic.—Railways (1951): 14,400 km. Roads (1950): 54,900 km. Telephones (1951): 332,200. Radio receiving sets (1952): 3,400,000.

Agriculture.—*German Federal Republic.*—Main crops (metric tons, 1954): wheat 2,892,000; rye 4,098,000; barley 1,920,000; oats 2,473,000; potatoes 26,769,000; beet sugar (raw) 1,295,000. Livestock (Sept. 1954): cattle 11,641,000; pigs 12,435,000; sheep 1,352,000; horses 1,271,000. Poultry (Dec. 1954): chickens 55,091,500; ducks 1,125,400; geese 2,201,500; turkeys 336,800. Production (metric tons, 1954): milk 17,054,000; butter 339,000; cheese 144,000; meat 1,730,400.

German Democratic Republic.—No reliable data published since 1950. Main crops (metric tons, 1950, except as indicated): wheat 815,000; rye 2,130,000; barley 515,000; oats 1,140,000; potatoes (1953) 12,618,000; sugar beets 5,400,000. Livestock (1953 est.): cattle 3,876,000; pigs 8,283,000; sheep 1,428,000; horses 750,000; chickens (1951) 18,786,000. Production (metric tons): butter (1949) 64,000; meat (1949) 419,000; sugar (1953) 750,000.

Industry.—*German Federal Republic.*—Index of employment (Sept. 1954; 1950 = 100): 127; unemployment 7.5%. Index of general industrial production (Feb. 1955; 1948 = 100): 297. Production (metric tons, 1954): coal 128,036,000; lignite 87,811,000; electricity 67,872,000 kw.hr.; manufactured gas 18,032,000 cu.m.; (metric tons) crude oil 2,669,000; iron ore (metal content 30%) 9,705,000; pig iron 12,582,000; crude steel 17,435,000; copper, primary (electrolytic) 164,800; lead (smelter) 110,200; zinc, primary 166,700; aluminum, primary 129,300; potash (K₂O content) 1,936,100; cement 16,269,000; (units) motor cars 518,190; commercial vehicles 162,140; (metric tons) cotton yarn 369,300; woven cotton fabrics 252,300; wool yarn 106,300; rayon filament yarn 59,800; rayon staple fibre 209,700; merchant vessels launched (1953) 818,221 tons; new dwelling units completed 508,497.

German Democratic Republic.—Production (metric tons, 1953 est.): coal 3,148,000; lignite 178,266,000; iron ore, 30% metal content 800,000; pig iron 765,000; steel 1,870,000; copper ore 1,230,000; potash salt, pure content 1,400,000; sulphuric acid 305,000; cement 2,560,000; synthetic petroleum (1952) 692,000; electricity 22,400,000,000 kw.hr.

G.I. Bill: see VETERANS ADMINISTRATION (U.S.).

Gibraltar. A British fortress colony, city and port, Gibraltar lies on a peninsula from the southwest coast of Spain at the western entrance to the Mediterranean. Area: 2½ sq.mi. (including reclamation). Pop., excluding armed forces (1951 census): 21,314; (1954 est.) 25,000. Language: Spanish (50% also speak English). Religion: mainly Roman Catholic. Governors in 1955: Lieut.-Gen. Sir Gordon MacMillan and (from May 22) Lieut.-Gen. Sir Harold Redman.

History.—In Jan. 1955 a delegation from the Commonwealth Parliamentary association visited Gibraltar under the leadership of Lord Balfour of Inchyre. Restrictions by Spain on its frontier with Gibraltar had some effect on trade and revenue, and it was estimated at midyear that there would be a deficit of £60,000 instead of a surplus of £32,000 in the budget. Consequently a bill was introduced to impose a 10% ad valorem duty on certain imports. Its defeat in the legislative council by six votes to four on July 27 led the governor to use his reserve powers to secure its passage, and five elected members of the council re-

signed in protest.

Half a million pounds was granted from colonial development and welfare funds for the period 1955-60. (J. J. Ty.)

Education.—Schools (1954): primary 18, pupils 2,949; secondary (including technical) 6, pupils 1,188.

Finance and Trade.—Currency: sterling, with local notes. Budget (1953-54 actual): revenue £1,058,216; expenditure £1,046,709. Foreign trade (excluding bunkers, 1954): imports £4,940,000; exports £936,000.

Glands: see ENDOCRINOLOGY.

Glass. In 1955 the glass industry continued the prosperous growth of recent years. In the United States several companies reported the highest sales in their histories during the first part of the year. Growth was particularly evident in the fibre-glass industry. Statistics for the German glass industry showed a business of 85,000,000 DM. per month for the first five months of 1955, an increase of 12,000,000 DM. over the corresponding months of 1954. Much of this resulted from increased foreign business. In the United States glass-container production was 76,000,000 gross for the first seven months of 1955 or 7.1% more than during the same period in 1954.

Several new glass products were introduced for the building industry. Spandrelite, ceramic colour fused to a plate-glass base, was brought out by the Pittsburgh Plate Glass company. Foam silica and Duraface Foamglas with a dense white surface were introduced by the Pittsburgh Corning corporation. A new method of assembling stained glass windows with strips of polyvinyl chloride plastic instead of lead was introduced by J. Vaessen in the Netherlands, while a new type of stained glass consisting of thick fragments with chipped jewellike surfaces set in cement was developed by P. Fourmaintraux-Winslow of Metz-Sablon, Moselle, Fr.

Construction of a modern plant with a capacity of 6,000 tons of window glass per year was begun at Inchon, Korea. The Ford Motor company started to build a new flat glass plant at Nashville, Tenn., with an area of 1,000,000 sq.ft. Vidno Plano S. A. of Monterrey, Mexico, installed a sheet-glass reannealing lehr to increase production. The Pittsburgh Plate Glass company constructed a \$34,000,000 plant in Cumberland, Md., and planned a new window-glass factory at Decatur, Ill.

The production of television tubes continued to expand, particularly in Europe. The development of colour television equipment was very active in the United States, with mass production just around the corner.

The Corning Glass works, with seven other companies, announced plans to build the first nuclear research reactor in the world to be owned and operated by private industry. Besides helping in the search for new and beneficial applications of glass, it was believed that research might throw more light on the fundamental structure of glass.

The Otto Schott Commemoration medal of the Deutsche Glastechnische Gesellschaft was presented to W. E. S. Turner, honorary president of the International Commission on Glass. This rare distinction, which had been awarded only three times previously, had never been given to a non-German before.

(C. H. G.)

Gliding. The Soaring Society of America held its 22nd national soaring contest at Elmira, N.Y., July 2-14, 1955. Twenty-seven pilots flew a total of 15,468 mi.; 59 flights ranged from 100 to 208 mi. K. Trager, flying a sailplane of his own design, earned the title of national soaring champion.

Again the Australian national soaring championships were held on a state basis in which each State Gliding association ran its own contest from Dec. 28, 1954, to Jan. 8, 1955. The final

score for a pilot was the sum of his two best flights. M. W. horn of New South Wales emerged as the champion. Three Australian records were set: a distance flight on Jan. 2 of 303 mi. M. Waghorn, flying an Olympia; on Jan. 5, S. Owen established a goal and return flight of 207 mi. in an Olympia sailplane; Goodhart flew around the 100 km. triangular course at 3 m.p.h. to set a speed record.

Four British records were established away from Great Britain. P. A. Wills set two records with one flight on Dec. 29, 1954, one for absolute altitude of 30,400 ft. and the other an altitude gain record of 28,200 ft., in the standing atmospheric wave record. New Zealand. A. Goodhart flew a goal and return distance record of 187 mi. on Jan. 8 in Australia, and L. Welch and F. Irving flew a Slingsby T-42 sailplane across the English channel and set a multiplace record of 250 mi.

In Canada F. Brame flew a Schweizer 1-23 for a goal and return record of 120 mi. on July 24.

In France a feminine world two-place goal record of 233 mi. was established on April 16 by F. Abadie and J. Trubert who flew a C25-S sailplane. On April 17 a two-place feminine distance record of 273.4 mi. was set by M. Choynet and A. Abelande.

In the United States B. Woodward reached two feminine world records on April 14 in a Pratt-Read sailplane: an absolute altitude of 39,994.1 ft. and an altitude gain of 27,994.5 ft.

The Federation Aeronautique Internationale announced the international records set in Poland: a feminine goal and return record of 203.92 mi. on June 18 by Maksymiliana Czielowna in the single-place Jaskolka sailplane; a goal and return record of 203.44 mi. on June 18 in the Jaskolka 2 sailplane.

Several new gliders were designed and built during the year. In Argentina a tailless glider by Horten, the Horten-X, an unusually light sailplane with the pilot in a prone position; in Germany the Greif 1, a single-place trainer turned out by Gr. Flugzeugbau; in Switzerland the Elfe III, a high performance single-place sailplane by Pfenninger; in the United States a tailless glider by A. A. Backstrom, the EPB-1, nicknamed the "Flying Plank," and the "Nucleon" single-place by A. B. Schuchman.

(B. Sk.)

Gold. World monetary gold reserves (excluding those of the U.S.S.R.) in Sept. 1955 stood at about \$37,900,000,000 (preliminary), as against \$37,210,000,000 a year earlier. Of the 1955 total, the United States held \$21,745,000,000 (\$118,000,000 below Sept. 1954); other countries, together with the Bank for International Settlements and the European Payments union, about \$14,400,000,000 (\$800,000,000 above Sept. 1954) and the International Monetary fund \$1,750,001,000 (preliminary). In Sept. 1955, the United States thus held 57% of the world monetary gold stock, as against 70% in Sept. 1949 and about 60% in 1945.

Of the rise in monetary gold holdings of countries other than the United States during the year ended Sept. 1955, about \$500,000,000 to \$600,000,000 accrued from new production outside the United States and the U.S.S.R.—worth about \$900,000,000—and about \$142,000,000 was purchased from the United States.

World Production of Gold (Refinery Production)

	(In thousands of fine ounces)

Australia	886	890	868	896	980	1,075
Total (est.)	30,000	31,000	32,700	33,500	34,300	33,700

considerable amounts of dishoarded gold reportedly found their way into official reserves of certain countries, particularly France; and some Russian gold was sold on certain markets in western Europe. Such newly mined gold as cannot be accounted for by accretions to official reserves was used largely in the arts and industry. Hoarding demand for gold seemed the smallest in many years.

Besides gold, countries other than the United States in Sept. 1955 held about \$11,900,000,000 in the form of dollars, on both official and private account (including primarily deposits in United States banks and short-term and certain longer-term United States government securities), or about \$1,000,000,000 more than a year previous. Total gold and dollar holdings of these countries in Sept. 1955 amounted to \$26,300,000,000 or \$1,800,000,000 above Sept. 1954, and \$5,550,000,000 higher than in Dec. 1945 before the serious depletion of the earlier post-World War II years. They were also \$11,550,000,000 or nearly 80% higher than in Sept. 1949, the date of the general currency devaluations, and \$7,350,000,000 or about 40% higher than in March 1952, the low reached after the war in Korea.

These aggregates, however, conceal important changes in gold and dollar holdings of particular countries and areas. The holdings of continental western Europe increased by \$1,760,000,000 during the 12 months ended Sept. 1955, more than one half of the increment accruing to France and western Germany. The aggregate holdings of Latin-American countries rose by \$90,000,000 and those of Canada by \$80,000,000; the holdings of sterling Asian countries increased \$355,000,000. The aggregate gold and official and private dollar holdings of sterling area countries declined by \$500,000,000; central gold and official dollar holdings held by the United Kingdom as the area's banker fell by \$556,000,000. The distribution of reserves outside the United States was considerably influenced by transfers of gold and dollars among various countries.

The growth of gold and dollar reserves by countries other than the United States thus continued in 1955, but on a somewhat more limited scale than in 1954. This reduced rate was primarily the outcome of transactions of other countries with the United States. Payments made by the United States for imported goods and services, and as a result of government grants, military expenditures and government and private capital outflows, exceeded current and capital payments made by foreign countries to the United States, as in 1954, but the difference was smaller; this was primarily because of a much larger increase in United States merchandise exports than imports. The rise in United States exports reflected primarily the growing demand for United States goods in much of the world because of rapidly growing investment and consumption; the reduction of discriminatory restrictions against dollar imports, especially by Europe and European currency areas, also tended to expand exports from the United States.

In countries where renewed inflationary strains reappeared in 1955, the ensuing balance-of-payments difficulties brought about sizable gold and dollar losses; most of this deterioration was, however, accounted for by developments in certain sterling area countries and in a few of the larger countries of Latin America. Despite these difficulties, the pattern of international trade remained freer and more nearly sustainable than in earlier years.

(M. A. K.)

World Production.—The gold output of the world by the principal countries contributing to it are shown in the table, as

GOLDSMITHS' WORK FROM ANCIENT IRAN, three objects from an exhibition of Assyrian and Persian art which opened at the Metropolitan Museum of Art, New York city, in March 1955. *Top*: 8th century B.C. plaque decorated with lions and the tree of life; *centre*: fluted bowl, 522-404 B.C.; *bottom*: rhyton, or drinking vessel, 6th-5th century, B.C.

reported by the U.S. bureau of mines. Because estimates only are available for the U.S.S.R., the grand totals are provisional.

United States.—Gold production by 10 states and Alaska declined 6% in 1954 compared with 1953. South Dakota, Utah, Alaska and California produced 78% of the domestic output of gold in 1954. The larger part of production in the U.S. is from straight gold mining—both lode and placer—the remainder being recovered as a by-product of base metal ores, chiefly copper.

Canada.—Output of gold rose to 2,599,719 oz. (329,311 oz. from base metals; 2,270,408 oz. from auriferous quartz and placers) in the first seven months of 1955 from 2,473,049 oz. in the same period of 1954.

Union of South Africa.—Output in the first half of 1955 totalled 7,119,022 oz. against 6,322,002 oz. in the first half of 1954. (See also EXCHANGE CONTROL AND EXCHANGE RATES; MINERAL AND METAL PRODUCTION AND PRICES.

Gold Coast: see BRITISH WEST AFRICA.

Golf. In the 1955 United States open golf championship, a play-off for the title developed between unheralded Jack Fleck, 32-year-old Davenport, Ia., professional and Ben Hogan, the Fort Worth Texan, who had won the championship on four previous occasions. Another triumph would have placed Hogan on a higher rung in the sport than any other golfer had attained.

To the surprise of those gathered at the Olympic Country club course, outside San Francisco, Calif., Fleck defeated Hogan after a thrilling 18 hole play-off. This was necessitated when they both finished the regulation 72 holes with identical scores of 287. In the extra session, Fleck beat Hogan, 69 to 72. After the tournament, Hogan, 42 years old, announced he was "through with competition."

While the big golf plum went to Fleck, the Professional Golfers association championship, in which Fleck also played, went to Doug Ford, registering from Kiamasha Lake, N.Y. Competing in the tournament for the first time, Ford defeated Cary Middlecoff of Memphis, Tenn., 4 and 3 in the scheduled 36-hole final at the Meadow Brook Country club, Detroit, Mich.

The top money winner among the professionals, however, was Julius Boros of Southern Pines, N.C., who collected more than \$61,000 in winnings for the playing year. The largest part of this total came from a triumph in the George S. May sponsored "world's championship" in Chicago, where Boros captured a \$50,000 first-place prize.

Middlecoff won the Western open in addition to the Masters tournament that is played annually at Augusta, Ga.

The British open crown was retained by Peter Thomson, 25-year-old Melbourne, Austr., representative. At St. Andrews, Scot., Thomson clinched the famed cup with an aggregate of 281 that was two below the score of second-place John Fallon of England. Lieut. Joe Conrad, U.S. air force, however, captured the British amateur championship, defeating Alan Slater of England, his final opponent at St. Anne's, Eng., by 3 and 2. Conrad was also low amateur scorer in the British open as well as a member of the U.S. Walker cup team. The team triumphed easily at St. Andrews by 10-2, after making a 4-0 sweep in the foursomes, which comprised the opening day's program.

The Canada cup matches, sponsored by John Jay Hopkins, president of the International Golf association, were held in Washington, D.C. The United States pair of Chick Harbert and Ed Furgol won with a team score of 560, while the Australians were second. Furgol won the individual title after a play-off with Flory Van Donck of Belgium and Peter Thomson of Australia.

The United States amateur championship was staged at the Country Club of Virginia, in Richmond. Harvie Ward, 29-year-

JACK FLECK sinking a putt on the sixth hole of the last round of the open golf championship at San Francisco, Calif., in June 1955. Fleck beat Ben Hogan over the regulation distance, then beat the four-time champion in a match play-off.

old San Francisco automobile salesman who was born in Waco, N.C., carried off this honour, defeating William Hynd of Philadelphia, Pa., in the 36-hole final by a decisive 9 and 6 margin. Ward previously had been a Canadian and international amateur champion and a 1955 Walker cup team member.

Arnold Palmer, the 1954 amateur winner, scored successfully during his first year as a pro by winning the Canadian open at Toronto with a score of 265.

In women's golf, Pat Lesser, a 22-year-old Seattle, Wash., college student, became the U.S. women's amateur champion. Miss Lesser succeeded the California girl, Barbara Romack, who lost in the second round of the 1955 tourney at the Myers Park Country club, Charlotte, N.C. Miss Lesser won the western amateur title prior to her national victory. In the final of the latter, she turned back an Indianapolis schoolteacher, Jane Ferguson, 7 and 6.

The U.S. women's open championship was won by Betty Crocker of Montevideo, Urug., over a windy Wichita, Kan., course, with a 72-hole score of 299. Mary Lena Faulk and Louise Suggs were tied for second at 303 in this \$7,500 consolation.

Beverly Hanson of Indio, Calif., won the ladies' Professional Golfers association title at Fort Wayne, Ind., beating Louise Suggs, 4 and 3, in the final.

The British Ryder cup team of professionals made a 600 mi. trip to oppose the United States group at Palm Springs, Calif., in the biennial series staged in November. The United States retained the trophy by 8 to 4, after gaining a 3-1 margin in the foursomes at the Thunderbird Country club. Chick Harbert was the U.S. captain.

Although 20-year-old Don Bisplinghoff of Orlando, Fla., reached the final of the men's amateur at Chantilly, Fr., he lost to Henri de Lamaze, French star, 5 and 4.

The United States Golf association sponsored a senior r

championship for the first time. This was won by J. Wood Platt Philadelphia and Bethlehem, Pa. The women's senior championship was won by Mrs. Harrison Flippin of Ardmore, Pa.

(L. A. Wn.)

Government Departments and Bureaus, U. S.

The principal departments and bureaus of the U.S. government, and their chief executive officers as of Oct. 1, 1955, were:

Department or bureau	Name	Post
Department of state	*Dulles, John Foster Hoover, Herbert, Jr.	Secretary Undersec'y.
U.S. mission to the UN	*Lodge, Henry Cabot, Jr.	U.S. Representative
International Cooperation administration	Hollister, John B.	Director ¹
Department of the treasury	*Humphrey, George M. Rose, H. Chapman	Secretary Undersec'y.
Office of the comptroller of the currency	Gidney, Ray M.	Comptroller
Office of the treasurer of the U.S.	Priest, Ivy Baker	Treasurer
Bureau of customs	Kelly, Ralph	Commissioner
Internal revenue service	Andrews, T. Coleman	Commissioner
Bureau of narcotics	Anslinger, Harry J.	Commissioner
Bureau of the mint	Brett, William H.	Director
U.S. savings bonds division	Shreve, Earl O.	Natl. Director
U.S. coast guard	Richmond, Alfred C., Vice-Adm.	Commandant Chief
U.S. secret service	Baughman, U. E.	Chief
Department of defense	*Wilson, Charles E.	Secretary
Joint chiefs of staff	*Radford, Arthur W., Adm. Taylor, Maxwell D., Gen. Burke, Arleigh A., Adm. *Twining, Nathan F., Gen. Shepherd, Lemuel C., Jr., Gen. ²	Chairman Chairman Undersec'y. Chief
Armed Forces Policy council	*Wilson, Charles E.	Chairman
Department of the army	*Brucker, Wilber M. Finucane, Charles C.	Secretary Undersec'y.
Chief of staff	*Taylor, Maxwell D., Gen.	Chief
Women's army corps	Galloway, Irene O., Col.	Director
Department of the navy	*Thomas, Charles S. Gates, Thomas S., Jr.	Secretary Undersec'y.
Chief of naval operations	*Burke, Arleigh A., Adm.	Chief
Asst. chief for women, bureau of naval personnel	Wilde, Louise Kathleen, Capt.	Ass't. Chief for Women
U.S. marine corps	Shepherd, L. C., Jr., Gen.	Commandant
Women marines	Hamblet, Julia E., Col.	Director
Department of the air force	*Quarles, Donald A. Douglas, James H.	Secretary Undersec'y.
Chief of staff	*Twining, Nathan F., Gen.	Chief
Women in the air force	Gray, Phyllis D. S., Col.	Director
Department of justice	*Brownell, Herbert, Jr. Rogers, William P.	Att'y. Gen. Deputy Att'y. Gen.
Deputy attorney general	Hoover, J. Edgar	Director
Federal Bureau of Investigation	Bennett, James V.	Director
Bureau of prisons	Swing, Joseph M.	Commissioner
Immigration and naturalization service	*Summerfield, Arthur E.	Postmaster Gen.
Post office department	*McKay, Douglas Woosley, Edward	Secretary Director
Department of the interior	Emmons, Glenn L.	Commissioner
Bureau of land management	Wrather, William E.	Director
Bureau of Indian affairs	Farley, John L.	Director
Geological survey	Dexheimer, Wilbur A.	Commissioner
Fish and wildlife service	Wirth, Conrad L.	Director
Bureau of reclamation	Forbes, John J.	Director
National park service	Lausi, Anthony T.	Director
Bureau of mines	Mittendorf, C. O.	Administrator
Office of territories	Pearl, William A.	Administrator
Defense Minerals Exploration administration	Wright, Douglas G.	Administrator
Donnellville Power administration	Leavy, Charles W.	Administrator
Southwestern Power administration	Benson, Ezra Taft Peterson, Ervin L.	Secretary Ass't. Secretary
Southwestern Power administration	Ritchie, Fred G.	Acting Administrator
Department of agriculture	Shaw, B. T.	Administrator
Federal-State relations	McArdle, Richard E.	Chief
Agricultural conservation pro- gram service	Williams, Donald A.	Administrator
*Agricultural Research service	Knapp, Joseph G.	Administrator
Forest service	Ferguson, Clarence M.	Administrator
*Soil conservation service	McConnell, James A.	Ass't. Secretary
Farmer co-operative service	Morse, True D.	President
Federal extension service	Hughes, Earl M.	Administrator
Agricultural Stabilization	Laidlaw, Charles S.	Manager
Commodity Credit corporation	Scott, K. L.	Director
Commodity Stabilization service	McLeish, Robert B.	Administrator

¹ The former Foreign Operations administration was abolished and its functions transferred to the departments of state and defense as of July 1, 1955; the new ICA was created within the department of state as a semi-autonomous organization to carry out the functions transferred to that department.		
² Sits as co-equal when marine corps matters are being considered.		

Graham, William Franklin ("Billy") (1918-), Southern Baptist evangelist, born Nov. 7, was reared on a farm near Charlotte, N.C. A graduate of Wheaton college (Ill.), he came into the limelight in 1949 following a campaign in Los Angeles, Calif., where his converts made headlines. Since then his city-wide campaigns have attracted multitudes and elicited world-wide publicity.

On March 21, 1955, he conducted the all-Scotland crusade at Kelvin hall, Glasgow (seating 15,000), for six weeks with 23,000 recorded "decisions for Christ." The aggregate attendance, excluding that at relay centres, was a little less than 1,000,000. The closing rally at Hampden park on April 30 drew 100,000. The unusual feature of this crusade was the relayed services conducted throughout Great Britain (in churches, theatres, concert halls and hospitals), linked by post-office land-lines and closed circuit television channels. It was estimated that Billy Graham preached each night to 1,000,000 persons, or more people than any other evangelist had ever reached. On May 14 he returned to Wembley stadium (seating 84,000) for an eight-day Greater London crusade, and was greeted with a more enthusiastic reception than the preceding one, held in 1954. Climaxing this campaign, Queen Elizabeth invited him to preach to the royal family in the private chapel at the royal lodge near Windsor castle. Following these crusades he toured the continent, and held rallies in Paris, Zürich, Frankfurt, Nuremberg, Dortmund, Rotterdam, Oslo, Göteborg, and Geneva (where a great prayer for peace was offered before 40,000 persons during the meeting of the Big Four in July). The tour attracted 500,000 people. On July 22 he addressed the Baptist World congress in London, where 7,612 official delegates met from 60 countries.

During the year he received an invitation to visit the U.S.S.R., and was also invited to visit Cambridge and Oxford, for a one-week campaign at each university. (Hl. T.)

Great Britain & Northern Ireland,

United Kingdom of. The United Kingdom in north-western Europe comprises the main island of Great Britain (kingdom of England, principality of Wales and kingdom of Scotland) and the six northeastern counties of Ireland, together with many small islands off the coast. It is a constitutional monarchy, with a sovereign and a parliament of two houses: the house of lords, which on Sept. 15, 1955, consisted of 4 peers of the blood royal, 824 hereditary peers, 26 spiritual peers, 16 Scottish representative peers, a number of Irish representative peers and 8 life peers; and the house of commons, 630 members (including the speaker) elected by universal suffrage. Table I shows areas and populations of the component parts and home dependencies of the United Kingdom. Language: English is almost universally spoken, but in Wales, according to the 1931 census, 3% of the population spoke Welsh only and 31% spoke both languages; in Scotland, (1951 census) 2,652 spoke Gaelic only and 91,630 spoke both languages; in the Isle of Man 528 spoke English and Manx. Queen: Elizabeth II (q.v.). Prime ministers in 1955: Sir Winston Churchill (q.v.) and (from April 6) Sir Anthony Eden (q.v.).

The following were members of the cabinet of Great Britain on Dec. 31, 1955:

Post	Name
Prime minister and first lord of the treasury . . .	Sir Anthony Eden
Lord president of the council . . .	Marquess of Salisbury
Chancellor of the exchequer . . .	Harold Macmillan
Secretary of state for foreign affairs . . .	Selwyn Lloyd
Lord chancellor . . .	Viscount Kilmauir
Chancellor of the duchy of Lancaster . . .	Lord Selkirk
Lord privy seal and leader of the house of commons . . .	Richard Austen Butler
Secretary of state for the home department and minister for Welsh affairs . . .	Gwilym Lloyd-George
Secretary of state for Scotland . . .	James Gray Stuart
Secretary of state for commonwealth relations . . .	Earl of Home
Secretary of state for the colonies . . .	A. T. Lennox-Boyd
Minister of labour and national service . . .	Iain Macleod
Minister of defense . . .	Sir Walter Turner Mond
Minister of housing and local government . . .	Duncan Sandys
President of the board of trade . . .	Peter Thorneycroft
Minister of agriculture, fisheries and food . . .	D. Heathcoat-Amory
Minister of education . . .	Sir David Eccles
Minister of works . . .	Patrick Buchan-Hepburn

History.—In June 1955 Queen Elizabeth II and the duke of Edinburgh paid a state visit to Norway; and in October welcomed the president of Portugal and his wife to London. Princess Margaret spent a month in the West Indies in February-March.

Later in the year, as her 25th birthday approached, there was much speculation in newspapers abroad about the possibility of a marriage between Princess Margaret and Group Captain Peter Townsend, a former equerry to King George VI. British press took up the subject widely in October when group captain left the Brussels embassy, where he was then air attaché, for a month's leave in England, and visited Clarence House, the princess' London home.

On Oct. 31 the princess announced that she would not marry Group Captain Townsend, and that "mindful of the Church's teaching that Christian marriage is indissoluble" and of her duty to the Commonwealth, she had resolved to put these considerations before any others.

The general election took place on May 26, preceded on April 5 by the resignation from the office of prime minister of Winston Churchill. Sir Anthony Eden formed his government and ten days later announced an appeal to the country. In September 1955, Sir Anthony Eden was elected to the post of

SIR ANTHONY EDEN campaigning in the rain at the village of Wycombe, Eng., during the general elections of 1955. Eden and his associates were returned to office by a large majority

of its acute internal differences, the Labour party went to the polls protesting confidence and maintaining that even a minor "swing" of the electorate in its favour would give it a majority, and that such a swing was all but inevitable. Although every constituency in the United Kingdom was contested—for the first time since 1832—the Labour party and its associates polled 1,500,000 fewer votes than in 1951. The Conservative poll also fell, but by less than 500,000 votes, so that they increased their share of the total vote from 48% in 1951 to 49.6% and gained 23 seats.

The Labour percentage was 46.4, and the new house of commons was composed of 345 Conservatives and associates (as compared with 319 at the dissolution); 277 Labour members (293); 6 Liberals (6); 2 Sinn Feiners (—).

The Conservative strength was later raised to 347 (including the speaker of the house of commons) because the Sinn Fein candidates, who were elected for two nationalist constituencies in Northern Ireland, were held to be disqualified on the grounds that they were serving a term of imprisonment (they were captured after an Irish Republican army raid on a military barrack); and their Unionist opponents were declared elected. A feature of the general election was the elimination of all independent candidates. (See POLITICAL PARTIES, BRITISH.)

After the election the Conservative party settled down under Sir Anthony Eden, disturbed only by back-bench dissatisfaction with the rate of government expenditure, which was marked by some coolness toward the supplementary budget. Signs of eco-

*Figure for four largest denominations in Northern Ireland represent "professions" (1951 census) rather than full membership or communicant status: they are therefore probably too high in comparison with those for corresponding denominations in the other three countries. †Established Church of England; disestablished Church in Wales, Episcopal Church in Scotland, Church of Ireland; figures are for "persons definitely attached", according to parish records. ‡Figures are for full membership. §Calvinistic Methodist Church. ||Communicants, established Church of Scotland; other small Scottish Presbyterian bodies are excluded. ¶Figures are for full membership, Methodist conference churches only; Independent Methodists (U.K., 1953) 9,000, Wesley Reform Union (G.B., 1952) 6,000. **Figures are for full membership, 1954 est. ††Mainly Welsh Independents.

Note: In England, Presbyterians, Methodists (incl. Indep. Methodists and Reform Union), Baptists, Congregationalists (incl. Countess of Huntingdon's Connexion chapels) and Moravians (1954: 3,000 communicants) are linked by the Free Church Federal council. Other important Christian bodies were (1954 U.K. figures): the Brethren (Plymouth Brethren) 80,000; Churches of Christ (164 churches); Salvation Army (132,000), Friends (Quakers) 21,000.

nomic strain in the last half of 1954 led to an increase in the bank rate in January from 3% to 3½% and, barely a month later, to 4½%, coupled with restrictions imposed by the government upon instalment purchases and measures to check disadvantageous dealing in sterling abroad. Few changes were made by the April budget: 6d. off the standard rate of income tax as "a fresh incentive to the forces of growth and expansion" and some relief in purchase tax, chiefly for the benefit of the textile trades, now feeling the effect of foreign competition. R. A. Butler, chancellor of the exchequer, warned that further fiscal legislation might be necessary later in the year. In July he was forced to announce new credit restrictions on banks, to appeal to local authorities to delay capital expenditure, and to impose a slow-down of capital expenditure by nationalized industries and stiffer terms for instalment purchases. Even these did not suffice and, on Oct. 4 the chancellor, in a speech at Mansion house, London, said the imperative need was to use less at home and send more abroad.

When Butler introduced his supplementary budget on Oct. 26, increasing all rates of purchase tax by one-fifth, profits tax from 22½% to 27½%, and imposing higher postal and telephone charges, he was accused by the Labour party of having misled the electorate by his earlier budget. Local authorities, whose interest rates on loans had been raised in February and again in September, were told that the volume of lending to them would be checked, and that the housing subsidy was to be abolished as soon as possible and in the meantime, cut. The imposition of purchase tax on household articles was unpopular and an immediate effect was a renewal or a raising of wage claims by trade unions. Building operatives who had asked for 4d. an hour more increased their demand to 6d. because of the budget. The prime minister, the chancellor and Sir Walter Monckton, minister of

labour, had a discussion on Nov. 1 with leaders of the Trades Union congress, who after the meeting issued a statement saying that the budget was inequitable and that government policy was to be blamed for the overstretching of the economy.

With the economic strain and the inflationary pressure of home demand, reflected in rising prices, there went a spirit of industrial unrest. In May there began a strike of dock workers affecting Liverpool, Manchester and Hull, and lasting six weeks. The immediate cause was the demand of the National Amalgamated Stevedores' and Dockers' union for recognition on the negotiating committees of the ports along with the much larger Transport and General Workers' union. A railway strike, narrowly averted in the closing days of 1954, was begun on May 28 by locomotive men and firemen, and for 17 days caused a drastic curtailment of services. The dispute was over the "differential" in rates of pay. Concerned at the effect of strikes upon working people not directly involved, the Trades Union congress in September amended its constitution to allow it to intervene in disputes before negotiations had broken down. The vote against this change was, however, substantial, the small unions fearing the effect of T.U.C. pressure upon their bargaining powers. In the coal mining industry production failed to keep pace with the demands of industry, partly through losses caused by "unofficial" stoppages of work, partly by insufficient manpower and other causes. In July coal prices were advanced by 18%, causing protests from industry. A committee was formed by the National Coal board and the National Union of Mineworkers to inquire into manpower and production in the pits. Meanwhile, miners were opposed to the introduction of any more foreign labour and their union, responding to demands at its annual conference, formulated fresh demands, including a longer holiday period and shorter hours of work. Other disputes in the latter half of the year affected sections of the aircraft and car manufacturing industries. In March and April a pay dispute stopped publication of national newspapers for 26 days.

In February the government announced plans to build 12 nuclear power stations in the next 10 years at a cost of £300,000,000, the first two stations to be completed in 1960-61.

In an effort to bring Great Britain's road system into line with modern traffic needs, the government announced a four-year plan costing £147,000,000 and comprising among other things two motor roads connecting London with Lancashire and Yorkshire. Certain tolls were to be charged, and the scheme was a "first instalment." A much more costly scheme to modernize the railways was announced by the British Transport commission in a 15-yr. plan which was to include a widespread change from steam to diesel and electric traction. Parliament accepted the scheme, the cost of which was put at £11,240,000,000.

The government white paper on defense (Feb. 17) set out plans for a better equipped active fleet and a reduced but more highly prepared reserve fleet; a smaller, better disposed, more mobile army (a cut of 100,000 men was later announced); and a more powerful air force using an effective strategic bomber force. A mobile defense force, forming part of the army and R.A.F. and trained in fire fighting and rescue work, would defend the home base and act as a link between the armed forces and the civil defense services. Despite the protests of lovers of the Hebrides, the government pursued its plan to make the island of South Uist a base for testing guided missiles and, arising out of this, the uninhabited islet of Rockall, 250 mi. west of the Hebrides, was formally annexed to the crown by a naval landing party. Another change in defense organization was the appointment of an independent chairman of the chiefs of staff committee, and the marshal of the royal air force, Sir William Dickson was selected for the new post, an indication of the importance of air power.

Interest in the affair of the "missing diplomats," Donald Maclean and Guy Burgess, who disappeared from England in 1951, flared up again when an article in a Sunday newspaper by Vladimir Petrov, formerly of the Soviet embassy in Australia, alleged that they were long-term Soviet agents and had left England to seek asylum because they were under investigation. The government thereupon published a white paper setting out the known facts: it was widely criticized for not having made the information public earlier. The whole subject was debated in parliament and Sir Anthony Eden offered to convene a small informal conference of privy councillors from both sides of the house to examine security procedures in the public services. The foreign secretary, Harold Macmillan, denied that anybody had been shielded or that Maclean or Burgess had been protected by senior officials.

The outstanding event in foreign affairs was the conference of the heads of state of the Big Four powers at Geneva in July when they succeeded in easing international tension without removing the causes. The U.S.S.R.'s "new look" policy was reflected in the visit of several delegations to the United Kingdom and the arrival at Portsmouth of some Soviet warships while the British force was visiting Leningrad. Hopes were dashed when the subsequent conference of foreign ministers at Geneva in November ran into difficulties over the problem of German reunification, and by the announcement a few weeks earlier that Egypt was securing arms from Czechoslovakia. (See GENEVA, BIG FOUR CONFERENCES OF 1955.) In the middle east Great Britain adhered to the Turco-Iraqi treaty and replaced the treaty of alliance with Iraq by a new defense agreement. The absence of conflict with Egypt over the canal zone was welcomed, but the building up of a British garrison and base in Cyprus gave new impetus to a local movement for union with Greece—a movement that Greece supported in spite of British protests. A London conference between Great Britain, Greece and Turkey failed to reach agreement, and Cyprus continued to be the scene of many violent events directed against the British forces. Trouble also continued with Saudi Arabia (*q.v.*) over the Buraimi oasis dispute, which had been referred to an international arbitration tribunal. In the Sudan, which was to complete its transitional period of self-government in Feb. 1957, the last British troops marched out of Khartoum on Oct. 10. An event which gave great satisfaction was the conclusion of an agreement with the United States for military and civilian nuclear-scientific co-operation.

The *Economic Survey for 1955* recorded 1954 as a successful year with production expanding, but pointed to the worsening state of the balance of payments. In the first two months of 1955 gold and dollar reserves fell, and also the exchange rate of sterling. There was a danger that economic expansion would imperil the maintenance of a proper balance between imports and exports. Gold and dollar reserves, which amounted to £1,078,000,000 at mid-1954, were down to £986,000,000 at the end of the year, and the fall continued. At the end of Sept. 1955 the reserves stood at less than £838,000,000, or £240,000,000 below the peak of 1954. Prices continued to rise but according to a government statement in February, earnings rose by about 220% between 1938 and 1954, retail prices by 131%, and interest and dividends by about 60%. Education.—*England and Wales* (1954): grant-aided, direct grant and recognized independent schools: nursery 466, pupils 23,728, teachers 90,511; primary (including 4,336 all-range schools) 24,570, pupils 4,741,886, teachers 156,872; secondary (including 300 technical and 52 with technical departments) 5,469, pupils 1,472,184, teachers 98,078; special for physically or mentally handicapped children and institutions 719, pupils 57,664, teachers 4,186. Further education (including art schools, 1954): full-time 493, students 59,181; part-time (day) 696, students 72,067; evening 9,684 (including 9,032 evening institutes), pupils 1,021,742; all teachers 10,701. *Scotland* (1954): public and grant-aided schools: nursery 75, pupils 4,495, teachers 117; primary 2,213, pupils 90,577, teachers 17,902; secondary (including 649 with primary departments) 817, pupils 224,768, teachers 13,153; special 81, pupils 10,076, teachers 735. Independent schools, pupils 21,088. Approved schools, pupils 1,564. Further education (1954): pupils 230,725 of which 27,022 in central institutions and 203,703 in further education centres. *Northern Ireland* (1953-54): grant-aided schools: primary 1,642, pupils 202,971, teachers 6,001; intermediate (including technical intermediate) 47, pupils 3,876, teachers (excluding technical intermediate, who are also employed in institutions of further education) 262; secondary (grammar) 81, pupils 30,332, teachers 1,554; special 13, pupils 1,017, teachers 66; centres for further education 150 (of which 91 permanent), students 30,518. *Universities* (1954-55): *England* 14, full-time students 60,755; *Scotland* 1, full-time students 13,366; *Wales* 1, full-time students 4,454; *Northern Ireland* 1, full-time students 2,144. University colleges: *England* 3, full-time students 2,052; *Wales* 1, full-time students 133; *Northern Ireland* 1, full-time students 80.

Finance and Banking.—Official exchange rate, £1=U.S. \$2.80. Budget (1954-55 actual): revenue £4,737,900,000, expenditure £4,304,700,000; 1955-56 est.) revenue £4,710,200,000 (revised est., Oct. 1955, £4,725,000,000), expenditure £4,561,900,000. *Northern Ireland*: (1954-55 actual) revenue £59,046,324, expenditure £58,959,276; (1955-56 est.) revenue £66,422,000, expenditure £66,371,000. Total public debt (Aug. 1955) £28,014,000,000; (Aug. 1954) £26,944,000,000. Currency circulation (Sept. 1954): £1,565,000,000; (Sept. 1955) £1,673,000,000. Total deposits, London clearing banks: (Sept. 1954) £6,539,000,000; (Sept. 1955) £6,345,000,000. Gold and dollar reserves of the sterling area (Sept. 1954): U.S. \$2,901,000,000, (Sept. 1955) U.S. \$2,345,000,000.

Foreign Trade.—Imports (1954; 1955, nine months, in parentheses) £3,379,200,000 (£2,895,000,000); exports £2,674,800,000 (£2,123,300,000); re-exports £100,800,000 (£85,100,000). Main sources of imports (1954): sterling area 44%; continental European Payments Union countries 22%; U.S. and Canada 16%; Latin America 7%. Main destinations of exports (1954): sterling area 48%; continental E.P.U. countries 26%; U.S. and Canada 11%; Latin America 4%.

Transport and Communications.—Railways (Dec. 1953): Great Britain, route length 31,022 km.; Northern Ireland (1954) 749 km. Passenger journeys originating (British railways, 1954) 991,200,000. Freight traffic (1954) 36,120,000 ton-km. Roads (1953) Great Britain: 295,800 km. Motor vehicles licensed (May 1955): 5,930,000 including 3,309,000 cars. Air transport (U.K. airlines, all services, 1954; 1955, six months, in parentheses): mi. flown 58,044,000 (29,425,000); passengers carried 4,377,200 (1,164,000); passenger-km. 2,429,916,000 (1,221,734,000); freight (including mail) ton-km. 76,092,000 (43,038,000). Shipping: mer-

chant vessels on British Commonwealth registers, 500 gross tons and over (Sept. 1955): nontankers 15,093,000 gross tons; tankers 5,325,000 gross tons. Shipping movements at U.K. ports (net tons registered, 1954; 1955, nine months, in parentheses): entered with cargo, mail only 948,000 (365,000), other 71,424,000 (59,305,000); entered in ballast with passengers only 5,952,000 (4,767,000), calling for bunker only 372,000 (268,000), other 11,856,000 (8,952,000). Telephones (March 1954): 6,139,229 (75.3% with automatic dial).

Radio licences (Sept. 1955): sound only 9,271,000; sound and television 4,884,000.

Agriculture and Fisheries.—Production (long tons, 1954; 1955 est. in parentheses): wheat 2,783,000 (2,474,000); barley 2,244,000 (2,777,000); oats 2,440,000 (2,507,000); rye, threshed, 39,000 (19,000); mixed corn 555,000 (497,000); potatoes 7,325,000 (6,009,000); sugar beet 4,521,000 (4,351,000). Livestock (June 1955): cattle 10,672,000; sheep 23,074,000; pigs 5,827,000; poultry 86,925,000. Fisheries (total landings, 1954) 76,200 tons.

Industry.—Establishments employing 11 or more persons 58,921. Total working population (Dec. 1954) 23,816,000 of whom 16,049,000 were men, (Aug. 1955) 24,009,000 of whom 16,130,000 were men. Armed forces (Dec. 1954) 830,000 of whom 21,000 were women, (Aug. 1955) 793,000 of whom 19,000 were women. Registered unemployed (excluding temporarily stopped) 266,000 in Dec. 1954, 182,000 in Aug. 1955. Index of production: Total (1948=100) 121 in 1953, 129 in 1954; manufacturing (1953) 123, (1954) 133. Industrial production (1954): coal 223,496,000 long tons; gas (available at gas works) 587,080,000 cu.ft.; electricity generated 72,900,000,000 kw.hr.; iron ore (about 28% metal content) 15,548,000 long tons; pig iron 11,908,000 long tons; crude steel 18,517,200 long tons; phosphatic fertilizers (P₂O₅ content) 331,100 long tons; cement 11,964,000 long tons; motor cars 769,164; tractors (10-belt h.p. and over) 137,304; trucks 268,716; steam locomotives 583; diesel locomotives 687; railway coaches 2,402; freight cars 61,972; aircraft (excluding military types except those for export) 338 of which 351 for export; merchant vessels completed, 100 gross tons and over, 1,493; permanent houses and flats completed 353,929; woven cotton cloth 1,991,600,000 yd.; woven woollen and worsted fabrics 414,360,000 sq.yd. (excluding 26,520,000 sq.yd. of blankets); rayon filament yarn 219,600,000 lb.; rayon staple fibre 228,000,000 lb.

Great Lakes Traffic: see CANALS AND INLAND WATERWAYS.

Greece. The kingdom of Greece occupies the southern part of the Balkan peninsula. Area: 51,182 sq.mi.; the mainland accounts for 41,328 sq.mi.; the islands, of which the largest is Crete (3,235 sq.mi.), for 9,854 sq.mi. Pop.: (1951 census) 7,603,587; (1954 est.) 7,900,000. Language (1940): Greek 93%; Turkish 3%; Macedonian Slav 1.4%; Albanian 0.9%; Macedo-Rumanian 0.8%. Religion (1940): Greek Orthodox 96.5%; Roman Catholic 0.4%; Moslem 1.9%; Jewish 0.7%. Chief towns (1951 census, municipal area only): Athens (cap.) 565,084*; Peiraeus 186,014; Salonika or Thessaloniki 217,049;

*The population of greater Athens, which included the populations of Peiraeus and suburbs, was 1,378,586.

Patras 79,014; Volos 51,144; Larissa 41,016. Ruler, King Paul I; prime ministers in 1955: Field Marshal Alexandros Papagos and (from Oct. 5) Konstantinos Karamanlis.

History.—The negotiations begun the previous year between Greece and Bulgaria for a settlement of outstanding problems broke down over the question of payment of Bulgarian war reparations to Greece and were suspended indefinitely. An Albanian approach, through the United Nations, for the resumption of Greco-Albanian diplomatic relations was not taken up by the Greek government, which replied that technically a state of war still existed between Greece and Albania and any negotiations should, therefore, be conducted by the general staffs of the two countries.

At the same time the Greek government indicated that any re-establishment of diplomatic relations should be linked with an agreement on frontiers, and that Albania should cease aiding and abetting Greek communist agents in their subversive activities and should also repatriate Greek hostages taken to Albania during the guerrilla war.

King Paul and Queen Frederika paid a state visit to Yugoslavia during Sept. 6–14, returning Marshal Tito's visit to Greece the previous year.

Relations with Britain deteriorated even further as a result of the intensification of Greece's demand that the right of self-determination should be accorded to Cyprus. Greece's appeal to the United Nations in Dec. 1954 was eventually shelved by a resolution of the general assembly which decided, by 50 votes to none with 8 abstentions, that it did not consider it appropriate "for the time being" to adopt any resolution on the question of Cyprus. This decision gave rise to anti-British and anti-U.S. manifestations in Greece, and on June 30 the British government invited Greece and Turkey to a conference "on political and defence questions which affect the eastern Mediterranean, including Cyprus." During this conference, which was held in London from Aug. 29 to Sept. 7, the British government proposed the offer to Cyprus of a new constitution providing for an assembly with an elected majority—the governor retaining reserve powers for foreign affairs, defense and public security—and the setting-up of a special British-Greek-Turkish committee to deal with problems arising from the gradual application of self-government. At the same time Harold Macmillan, British foreign secretary, made it clear that Great Britain did not intend to relinquish possession of Cyprus in the foreseeable future and that the British government did not accept the principle of self-determination as one of universal application but considered that exceptions should be made "in view of geographical, traditional, historical, strategical, and other considerations." The British proposals were rejected by Greece, and Turkish opposition to the Greek viewpoint on Cyprus culminated on Sept. 6 in violent anti-Greek riots in Istanbul and Smyrna (Izmir), where hundreds of Greek-owned shops and houses were wrecked and looted and many Greek churches were desecrated and destroyed. Although the Turkish government expressed its regrets at the riots and its willingness to compensate the victims, and moral reparation was made to Greece at a symbolic ceremony on Oct. 24, Greco-Turkish relations suffered a severe setback. (See CYPRUS; TURKEY.)

Greece again raised the question of Cyprus at the United Nations, but on Sept. 23 the general assembly decided, by 28 votes to 22 with 10 abstentions, not to place the question of Cyprus on its agenda.

The death in October of the premier, Field Marshal Papagos, deprived the country of its outstanding political and military personality, and revealed certain disintegrating tendencies within the Greek Rally which had already been initiated by the secession of Spyros Markezinis, who by August had become leader

of the opposition with his newly formed Progressive party mustering about 30 followers in the chamber. On Oct. 6 Karamanlis who, as minister of public works, had earned himself wide popularity by his energetic road construction program was sworn in as premier in succession to Papagos and on Oct. 11 obtained a vote of confidence in the chamber by 200 votes to 77, with 2 abstentions. In his statement of policy he announced that general elections would be held by April 1956.

(See also NORTH ATLANTIC TREATY ORGANIZATION.)

(S. L. H.)

Education.—Schools (1952–53): primary 10,343, pupils 931,177; teachers 19,094; secondary 589, pupils 215,393, teachers 6,078. Teacher training colleges 14, students (average since 1950) 3,000. Institutions of higher education 5, students 11,711, of which 6,658 at 2 universities.

Finance and Banking.—Monetary unit: drachma (introduced on May 1954, and equal to 1,000 old drachmas), with an exchange rate of dr. 34 to U.S. \$1. Budget (1953–54 actual): revenue dr. 10,620,000,000, expenditure dr. 10,320,000,000. Internal debt (June 1954) dr. 6,432,900,000; external debt dr. 2,403,000,000. Currency circulation: (Dec. 1954) dr. 3,470,000,000. (July 1955) dr. 3,970,000,000. Bank deposits: (Dec. 1954) dr. 5,470,000,000. (April 1955) dr. 6,200,000,000. Gold holdings: (Aug. 1955) U.S. \$10,800,000. (Sept. 1954) U.S. \$10,700,000.

Foreign Trade.—(1954) Imports dr. 9,902,000,000; exports dr. 4,550,000,000. Main sources of imports (1954): Germany 16%; Italy 16%; U.S. and Canada 14%; U.K. 11%; other continental European countries 26%. Main destinations of exports: Germany 24%; Italy 13%; other continental E.P.U. 18%; U.K. 13%; U.S. and Canada 10%. Main exports: tobacco 14%; raisins 21%.

Transport and Communications.—Roads (1953): 22,900 km. Motor vehicles in use (1953): cars 10,500; commercial vehicles 24,100. Railways (1954): 2,573 km., including 21 electrified; passenger kilometers (1953) 845,000,000; freight ton-kilometres (ten months, 1954) 319,500,000. Shipping, merchant vessels of 100 gross tons and more (Jan. 1954) 355; total tonnage, 1,176,862. Telephones (Jan. 1954): 104,234. Licensed radio receivers (1953): 426,000.

Agriculture.—Main crops (metric tons, 1954): tobacco 67,500; wheat 1,218,000; barley 236,000; oats 152,000; rye 49,000; maize 255,000; potatoes 455,000; rice 88,000; grapes 1,367,000; oranges, etc., 153,000; lemons, limes, etc., 41,000; cotton lint 39,000; cottonseed 80,000; olives 539,000; raisins 110,000; figs (1953) 128,600; currants (1953) 77,000; sultanas (1953) 38,000. Wine production (1954) 414,000 metric tons. Livestock (Sept. 1954): cattle 904,000; sheep 8,376,000; pigs 603,000; horses 314,000; mules 199,000; asses 490,000.

Industry.—Fuel and power (1954): lignite 802,800 metric tons; electricity (1953) 903,000,000 kw.hr.; ores (metal content, metric tons 1953): bauxite 328,000; magnesite 107,000; iron pyrites 237,000; chrome 14,700. Index of industrial (manufacturing) production (1948=100): (1954) 238, (Jan. 1955) 242.

Greenland. A large island (840,000 sq.mi., more than four fifths covered by an ice cap), Greenland is part of the kingdom of Denmark, in the north Atlantic ocean northwest of Iceland. Pop. (1951 census): 24,159 distributed in settlements along west coast except for 1,697 on the east coast; 1,269 Europeans (mostly Danes), the rest native Greenlanders (Eskimos); (1954 est.) 25,000. Language: Danish and Eskimo. Religion: Lutheran. Capital, Godthaab (second governor's seat, Godhavn) (1945 census) 970. Governor general, 1955, Poul Hugo Lundsteen.

History.—Investments during 1955 aimed at the improvement of medical facilities and communications. A new tuberculosis hospital was inaugurated, Dronning Ingrid's sanatorium named after the queen. It had more than 200 beds. A ship for X-ray examination of tuberculosis patients at distant places was maintained in connection with the hospital. A sum of 4,800,000 Kr. was voted for expansion and improvement of the Greenland broadcasting system.

(See also DENMARK.)

(H. LN.)

Education.—Schools (1951): infants and primary 163, pupils 4,117; teachers 228; post-primary 3, pupils 71, teachers 12; technical 1, pupils 43, teachers 6; evening schools 15, pupils 500, teachers 48. Institutions of higher education 3, students 35, lecturers 6.

Finance.—Monetary unit: Danish krone, valued in 1955 at 14.4 cents U.S. Budget (1951–52; 1952–53 in parenthesis): revenue 22,300,000 Kr. (40,100,000 Kr.); expenditure 54,800,000 Kr. (65,900,000 Kr.); investments 26,500,000 Kr. (18,000,000 Kr.).

Foreign Trade.—(1953) Imports 57,891,000 Kr. including 48,513,000 Kr. from Denmark, 6,280,000 Kr. from the U.K. Exports 40,289,000 Kr. including 26,675,000 Kr. to Denmark, 8,908,000 Kr. to the U.S.

Agriculture and Fisheries.—Livestock (1953): sheep 18,879; poultry 2,577; horses 143; goats 20; cattle 58. Fisheries, exports (metric tons 1953): salted fish 3,044.8; split cod, etc. 2,410.4; other fish 1,068.

other fish products 388.7; whale blubber 1,128.1; whale and fish oil 44.8; hides and skins 130.6.

Mining.—Exports (metric tons, 1953): cryolite 45,132.2, including 28,044.6 to Denmark and 17,087.6 to the U.S.

Grenada: see WINDWARD ISLANDS.

Gronchi, Giovanni (1887–), Italian statesman, was born at Pontedera, near Pisa, It., Sept. 10, the son of a bookkeeper. He was educated at Pisa university and joined the Christian Democratic movement, founded in 1902 by Romolo Murci. A volunteer, he served in the army in World War I and in 1919 he helped Luigi Sturzo to found the Partito Popolare Italiano. From 1919 he sat in the chamber of deputies and was also the secretary-general of the (Christian) Confederazione Italiana dei Lavoratori. In the first Mussolini cabinet, formed in Oct. 1922, Gronchi was undersecretary for industry and commerce. He resigned when in Aug. 1923 the P.P.I. went over to the opposition. In 1927 he retired to private life and devoted his energies to industry. Returning to politics in 1943, he represented with A. de Gasperi the underground Partito Democratico Cristiano in the National Liberation committee. From June 1944 to June 1946 he was minister for industry and commerce in four successive cabinets. Elected in June 1946 to the constituent assembly, he became the leader of the P.D.C. group. In April 1948 he was elected to the new chamber of deputies and on May 8 was elected speaker. Re-elected to the chamber in June 1952, he continued to serve as speaker. On April 29, 1955, on the fourth ballot, he was elected president of the republic, receiving 658 votes out of a possible 843.

Group Insurance: see INSURANCE.

Guadeloupe. This French overseas *département* in the Lesser Antilles consists of two main and five smaller islands. Total area: 687 sq.mi. Pop.: (1946 census) 278,464; (1954 census) 229,120, mainly coloured (Negro or mixed). Language: French and Creole French. Religion: Roman Catholic. Chief towns (pop., 1954 census): Basse-Terre (cap.) 11,837; Pointe-à-Pitre 8,039. Prefect in 1955, Jacques Ravail.

During 1955 two Radical councillors were elected to the general council. (Hu. De.)

Foreign Trade.—(1954) Monetary unit: metropolitan franc, valued at 350 francs to the U.S.\$1. Imports 3,500,000,000 fr., including 2,593,000,000 fr. from France. Exports 11,700,000,000 fr., including 10,200,000,000 fr. to France. Production (metric tons, 1953): bananas 108,000; rum 102,837 hectolitres; sugar (exports) 21,000.

Guam. Guam is the largest and southernmost island of the Marianas, lying in the Pacific ocean at 13° 26' N. lat. and 144° 39' E. long., about 5,100 mi. W. of San Francisco, 3,340 mi. W. of Honolulu, and 1,500 mi. E. of Manila. Area: 206 sq.mi. Population (1950 census) 59,498; (1952 est.) 75,000. Agaña is the capital with a population in 1950 of 1,330. Other important towns are Sinajana and Inarajan. The Guamanians are Chamorros, and their religion is predominantly Roman Catholic.

History and Government.—Guam is an unincorporated territory of the United States and an organized sovereignty, governed under the Organic Act of Guam of 1950. The island has been administered since 1950 by the U.S. department of interior. Guamanians are citizens of the U.S., with all rights and privileges thereof, replacing their former status as citizens of the territory and nationals of the United States.

The governor of Guam, who must be a civilian, is appointed by the president for a term of four years. Ford Q. Elvidge, who was appointed in April 1953, was governor in 1955. The second

ranking member of the executive branch of the government is the secretary of Guam, who is likewise appointed by the president for a four-year term. R. S. Herman was secretary in 1955.

The legislature of Guam in 1954 passed a law extending suffrage to all citizens of Guam over 18 years of age, thus becoming the first territory of the U.S. to reduce the voting age below 21 years.

In 1955 Guam served as the headquarters of the government of the Trust Territory of the Pacific Islands and of the Air Force's Strategic Air command in the Pacific.

Education.—In 1954 there were 22 public elementary and junior high schools with 8,517 pupils and 293 teachers; 1 high school with 2,106 students; and the Territorial college at Agaña. There were also 8 parochial schools, and a missionary junior college. Instruction is given in English. About 84% of the population was literate according to the 1940 census. About 17% of the island's expenditures went for educational purposes during the 1953–54 fiscal year.

Finance.—During the fiscal year ending June 30, 1954, Guam's expenditures amounted to \$10,957,600 and revenues totalled \$11,801,400. The Bank of America operates a branch on Guam and in 1954 the Guam Savings and Loan association, formed by a group of local businessmen, began operations.

Production and Trade.—There were 1,380 farmers as of June 30, 1954, and 312 persons engaged in fishing. Agricultural production in the year ending June 30, 1954, included (in pounds): corn 665,140; citrus fruit 8,350; muskmelon 162,040; bananas 550,661; taro 196,440; sweet potatoes 63,030; cassava 142,275; pineapple 24,680; yams 32,895; watermelon 36,275; papaya 258,340; sugar cane 33,040; avocado 37,270; mango 42,335; green beans 56,426; eggplant 47,911; tomatoes 21,770; cucumber 57,820; squash 13,810; and rice, grown for the first time in many years, 13,735. The fish catch in the same period totalled 405,164 lb. In 1954 Guam had 11,895 hogs, 6,136 cattle, and 171,840 chickens.

In 1954 there were 16 industrial establishments which produced 14,707 cu.yd. of concrete, 641,485 cases of soft drinks, 6,552 tons of ice, 3,900,000 cu.ft. of oxygen gas and 5,428 lb. of soap. In the fiscal year ending June 30, 1954, imports totalled \$20,518,700 and exports \$4,428,633. Guam's imports came in descending order of importance from the United States, Japan, the Philippines and the Trust Territory. Exports went in order of importance to the Trust Territory, Japan and the United States.

Transportation and Communications.—There are about 80 mi. of paved highways in Guam, about 60 mi. of improved secondary roads and about 100 mi. of village streets. There are no railways, but five military airfields, two of which, Andersen field and Northwest airfield, are major air bases. Guam is a port of call for the Pacific Far East lines and the American President lines. It is the home port of the Pacific Micronesian lines, a subsidiary of the Pacific Far East lines. The U.S. navy maintains the Agaña Naval Air station. The Navy operates the island's electricity system and the government of Guam operates the telephone system. Guam's first commercial radio station, WKUAM, began operations in 1954. Radio facilities also exist through the U.S. armed forces radio network and the Andersen Field radio station. Pan-American World airways, Philippine airlines and Transocean airways provide air service for the island. There are three newspapers, of which one is an English daily and the other two an English and a Chamorro weekly. There are 15 motion-picture theatres. (S. Nr.)

Guaranteed Annual Wage: see AUTOMOBILE INDUSTRY; LABOUR UNIONS.

Guatemala. A Central American republic, Guatemala is bounded by Mexico, British Honduras, Honduras and El Salvador. Area: 42,042 sq.mi.; pop.: (1950 census) 2,788,122; (1954 estimate) 3,201,000. Capital: Guatemala city (1950 census) 283,100; (1953 estimate): 319,379. Other urban centres (1950 census, with 1953 est. in parentheses) are Antigua Guatemala 10,691 (12,545), Chiquimula 8,848 (12,146), Cobán 6,854 (11,765), Escuintla 9,822 (12,380), Mazatenango 10,735 (13,045), Puerto Barrios 15,659 (18,193), Quezaltenango 27,782 (31,352), Retalhuleu 7,677 (11,436) and Zacapa 8,282 (11,652). Language: Spanish; religion: predominantly Roman Catholic. President in 1955, Col. Carlos Castillo Armas.

History.—Pres. Carlos Castillo Armas paid an official visit in 1955 to the United States. He was entertained in Washington by Vice-Pres. Richard M. Nixon, who in February had visited Guatemala and had extended to him an invitation from Pres. Dwight D. Eisenhower to visit the United States. Castillo Armas later called on Eisenhower at the hospital in Denver, Colo., where he was convalescing.

The Guatemalan chief executive received assurances from Undersecretary of State Herbert Hoover, Jr., of continued eco-

conomic aid, scheduled to rise from \$10,000,000 in 1954 to \$24,500,000 in 1955 and early 1956. He also conferred with United Fruit company president Kenneth Redmond on the company's plans for large-scale expansion of its banana plantations and electric power plants; the company had almost been driven from Guatemala by the pro-communist government that had been overthrown in 1954.

In speeches before the Organization of American States and the United Nations general assembly, Castillo Armas stressed the fact that Guatemala was the first nation ever to oust a communist-dominated government, and pledged the restoration of Guatemala's traditional co-operation with the inter-American system. He promised free elections in 1956, following the early completion of a new constitution.

Castillo noted the co-operation of United States and Guatemalan capital in erecting hotels, improving transportation and exploring for oil under new laws encouraging foreign investments. The previous regime had persecuted foreign enterprises and allowed roads to deteriorate badly.

The government early in 1955 faced discontent, brought about largely by shortages of maize, beans and rice which resulted from drought and the bad financial and agricultural situation inherited from the previous administration. Small farms were given to more than 12,000 landless peasants, despite opposition from rightist landowners. Labour resented a temporary trend toward severe curbs, which was to be rectified in the new constitution. Unemployment was large until road contracts were let. Coffee, the source of 80% of the government income, fell on world markets from 85 cents to less than 60 cents per pound, which necessitated a reduction in imports. Discontent and ambition to seize power led a few officers to attempt on Jan. 20 a revolt which was crushed.

Guatemala revived its claim to the crown colony of British Honduras (Belize). Castillo Armas called for economic and anti-communist unity at the first conference of the Organization of Central American States (*q.v.*), held in Antigua in August.

Late in the year the constituent assembly which was completing the constitution resisted clerical demands for special Catholic privileges. (See also HONDURAS.) (R. HN.)

Education.—In 1953 there were 3,537 primary schools with 7,809 teachers and 191,330 pupils and 125 postprimary schools with 2,234 teachers and 17,251 pupils. University education was available at the University of Guatemala which had 8 faculties and matriculation of 4,005 in 1954. The 1950 census showed that 72.2% of those seven years of age and over were illiterate.

Finance.—The monetary unit is the quetzal, at par with the U.S. dollar. The 1954-55 budget (July 1-June 30) as revised balanced revenue and expenditure at \$66,413,001. The 1955-56 budget balanced revenue and expenditure at \$66,385,825. The national debt was said to total \$41,000,000 on June 30, 1954. Currency in circulation (June 30, 1955) was \$49,300,000; demand deposits, \$34,700,000. U.S. direct investments in 1954 were estimated roughly at \$139,500,000. The cost-of-living index (Guatemala city) stood at 133 in July 1955 (1948=100).

Trade and Communications.—Exports in 1954 (unadjusted for banana undervaluation) totalled \$95,700,000; imports, \$86,300,000. Leading exports were coffee (78%), bananas (11%), essential oils and lumber. Leading customers were the U.S. (71%), western Germany (8%), the Netherlands (8%) and Belgium (4%); leading suppliers, the U.S. (64%), western Germany (8%), the Netherlands Antilles (6%) and Mexico (4%).

Total length of railways is 817 mi., of which 581 mi. are operated by the International railways. Surfaced highways totalled about 3,470 mi. in 1951. On Jan. 1, 1955, there were 9,658 automobiles, 7,696 trucks and 1,712 buses. Telephones (Jan. 1, 1954) numbered 6,428, 84.7% of which were automatic and 85% of which were located in Guatemala city.

Agriculture.—Coffee production in the 1954-55 season totalled 1,319,507 bags of 132 lb. each. In 1954, 892,000 bags of coffee and 6,102,788 banana stems were exported. Other crops, with 1954-55 production estimates, were cotton 40,000 bales of 480 lb. each; wheat 450,000 quintals (1 Spanish quintal=101.43 lb.); maize 10,000,000 quintals; rice 200,000 quintals; leaf tobacco 41,250 quintals; white sugar 900,000 quintals. The 1950 livestock census showed 902,915 cattle, 415,295 pigs, 711,579 sheep and 182,580 horses.

Manufactures.—The 1953 industrial census (preliminary figures) showed 943 industrial establishments with five or more employees; they had a total of 17,637 employees. Most important were beverages, textiles, foodstuffs and clothing. Cement production totalled 64,200 metric tons in 1954; beer 11,211,400 l.; electric energy 93,720,000 kw.hr.

Gymnastics. The senior championships of the Amateur Athletic union were held on April 29-30, 1955, the Columbus auditorium in Rochester, N.Y. A record number of 218 entries competed for the men's events while 111 women sought titles in their division. The tournament, held under the auspices of the Catholic Youth organization of Rochester, was marked by a tie for the men's all-around title for the first time in the 68-year-old history of the competition. At the completion of 12 events, John Miles of the Florida State (Tallahassee) gymkhana and Karl Schwenzfeier of Penn State university (State College, Pa.) were deadlocked with 327.0 points each. Joseph Kotys of the Cleveland (O.) Swiss Turners was only a point back with a score of 326.8. Florida State gymkhana won team laurels with 413½ points. Ernestine Russell of the Windsor Gym club of Ontario dominated the women's contest and gained all-around honours with 227.0 points. Leaders in the individual events follow:

Men's Events

Tumbling—first, James Sebbo, Jersey City Department of Recreation; second, Steve Mitakis, unattached; third, Jeffry Austin, Pond's Paladium, Champaign, Ill.

Horizontal bar—first, Abe Grossfeld, West Side (N.Y.) Y.M.C.A.; second, Carl Rintz, unattached; third, John Miles.

Long horse—first, Miles; second, Joseph Kotys; third, Milan Trnava, New York A.C.

Free calisthenics—first, John Beckner, U.S. Army; second, Grossfeld; third, Bob Stout, Philadelphia Turners.

Trampoline—first, Robert Elliott, Maverick Boys' club, Texas; second, Don Harper, unattached; third, Richard Albershardt, unattached.

Side horse—first, James Bown, Los Angeles State College Gym club; second, Sam Bailie, Iowa university (Iowa City); third, Kotys.

Parallel bars—first, Edward Scrobe, St. Mary's Recreation centre, New York; second, Kotys; third, Karl Schwenzfeier.

Still rings—first, Miles; second, Leonard Harris, Los Angeles City college; third, Don Holder, Florida State gymkhana.

Rope climb—first, Bob Hammond, U.C.L.A.; second, John Goldman, Pasadena City college; third, Ferdinand Fournies, Syracuse Gym club.

Swinging rings—first, Bailie; second, Rintz; third, Miles.

SWEDISH GYMNASTS in mass calisthenics at Paterson, N.J., in preparation for the opening of their 1955 U.S. tour

Women's Events

Free Calisthenics—first, Ernestine Russell; second, Olive Schneider, Kansas School of Acrobatics, Chicago; third, Arendine Ostendorp, New York Turn Verein.
 Balance beam—first, Ernestine Russell; second, Arendine Ostendorp; third, Jacquelyn Klein, Lincoln Turners, Chicago.
 Side horse—first, Ernestine Russell; second, Judy Hult, Rochester (N.Y.) Central Turners; third, Joyce Recek, Lincoln Turners, Chicago.
 Parallel bars—first, Ernestine Russell; second, Doris Fuchs, Rochester (N.Y.) C.Y.O.; third, Patricia Fitzpatrick, Roxborough (Pa.) Turners.
 Flying rings—first, Doris Fuchs; second, Arendine Ostendorp; third, Virginia Rodenbeck, Rochester (N.Y.) C.Y.O.
 Tumbling—first, Barbara Gallaher, Dallas (Tex.) A.C.; second, Susan Il, Pond's Palaestra; third, Olive Schneider.

The University of Illinois (Urbana) won the National Collegiate Athletic association team title at Los Angeles, Calif., on March 26. The Big Ten squad amassed 82½ points as Penn State, with 69 points, placed second. The Payne Whitney gymnasium of Yale university in New Haven, Conn., was the scene of the national A.A.U. junior tournament on May 7 and Abe Grossfeld of the West Side Y.M.C.A. of New York city won all-around honours with 301.0 points. The American season was brightened by the visit of a Swedish team of 11 women and 10 men for a series of exhibitions (Jan. 7–March 4) in the United States and Canada.

Boris Schaklin of the Soviet Union took all-around laurels in the first European meet held at Frankfurt-on-Main, Ger., April 10–11. (T. V. H.)

Haiti. The western third of the island of Hispaniola comprises the republic of Haiti. (The other two-thirds is occupied by the Dominican Republic.) Mountains and arid plateau dominate its 10,748 sq.mi., but the valleys sustain the densest population of any American republic, about 3,400,000 (est. Oct. 1954), of whom more than 150,000 live in the capital, Port-au-Prince, and about 30,000 in the second city, Cap-Haïtien. The 1950 census gave the populations of the principal cities as follows: Cap-Haïtien 24,957; Gonaïves 13,534; Jérémie 11,138; Les Cayes 11,835; Port-au-Prince 142,840; St. Marc 10,485. Not over 5% of the population is predominantly of European origin. The official language is French, and the majority speak Creole, but patois of the various African stocks is spoken in the villages.

Paul E. Magloire was president in 1955. He visited the United States extensively during the year.

History.—The economic paralysis wrought by the hurricane of Oct. 1954 continued through early 1955, and some areas of the southern peninsula went through periods of near-starvation. The national income was estimated to have declined 30% in one year. Conditions in the north were much better. Extensive relief from the United States was granted in the way of public works and building reconstruction.

The 1955 coffee crop was favourable even though the hurricane of 1954 did \$13,000,000 damage to the coffee plantations. An exportable surplus of 360,000 bags (176 lb. each) was harvested. Sisal production was likewise increased in consequence of foreign demand. The sugar crop as usual was sold chiefly in Europe.

A cement plant, designed to produce 60,000 tons annually, was completed about the end of the year. The long-discussed technical study of the electric power possibilities of the Artibonite valley was finally begun under arrangements with the Export-Import Bank of Washington.

As a result of the disaster of 1954, the public debt increased by nearly 40% in a single fiscal year (ending Sept. 30). But the money supply fell, and the assets of the National bank shrank 19% in the year ending with May 1955.

New factories were established for the manufacture of soap, oils, paint, rubber heels, leather soles and vegetable oils; and others were projected for glass, porcelain, paper and cardboard.

Bauxite mining received additional foreign capital.

The Banco Popular of Colombia established an affiliate, the Banque Populaire Colombo-Haïtienne.

A treaty of mutual military assistance was signed with the United States on Jan. 28, and on March 3, U.S. Vice-president Richard Nixon signed at Port-au-Prince a new treaty of friendship, commerce and navigation. (C. E. Mc.)

Education.—In 1953 urban primary schools were reported to have 2,001 teachers and 79,859 pupils and rural schools 1,514 teachers and 92,833 pupils. In addition, there were 14 national *lycées*, 19 private secondary schools and 15 professional schools with a total of 8,869 pupils. In the 1950 population census only 7.9% claimed to have more than two years of schooling, and estimates of illiteracy ranged from 85% to 95%. In the 1953–54 fiscal year 11.1% of government expenditures was for education.

Finance.—The monetary unit is the gourde, valued in 1955 at 20 cents U.S. currency, official rate. Actual government revenue in the fiscal year ended Sept. 30, 1954, was \$32,218,222; expenditure, \$31,500,765. The budget for the fiscal year 1955 (the same as that for 1954) estimated revenue at \$25,840,000 and expenditure at \$25,839,380; that for the year 1956 estimated revenue at \$25,641,763 and expenditure at \$25,630,027. The public debt totalled \$27,625,823 on April 30, 1955; the deficit in treasury general funds was \$12,979,752. Currency in circulation (Dec. 31, 1954) was \$13,260,000. The U.S. department of commerce estimated U.S. direct investments in 1954 at \$16,000,000.

Trade and Communications.—Exports in the trade year 1954 (Oct. 1, 1953–Sept. 30, 1954) were \$55,532,626; imports were \$47,556,494. The chief exports were coffee (78%), sisal (9%), cacao (4%), sugar (3%) and essential oils (1%); leading imports, cotton textiles (16%), wheat flour (11%), iron and steel and manufactures (8%), machinery and apparatus (7%) and vehicles (5%). Leading customers were the U.S. (45%), Belgium (22%), France (11%), Italy (8%) and the Netherlands (5%); leading suppliers, the U.S. (63%), Canada (8%), the U.K. (4%), Germany (4%) and the Netherlands Antilles (3%).

At the end of 1952 there were upward of 2,000 mi. of roads, more than half of which were unimproved earth and unsurfaced roads. There were 88 mi. of public railway and about 75 mi. of industrial trackage. On Jan. 1, 1955, there were 4,970 automobiles, 2,921 trucks and 233 buses. Telephones (Jan. 1, 1954) numbered 4,182, 91% of which were automatic and 84% of which were located in Port-au-Prince.

Agriculture.—Coffee production totalled about 500,000 bags of 132 lb. each in the 1954–55 season; exports in the calendar year 1954 were 517,000 bags. Other exports in the trade year 1954 were sisal, 23,975 metric tons; cacao, 2,246 tons; sugar, 15,359 tons; raw cotton, 777 tons; and bananas, 393,116 stems. Exports of essential oils included vetiver, 60,276 lb.; lemon grass, 50,550 lb.; and oil of lemon, 37,238 lb. Sugar production in 1954–55 by three sugar mills, one not operating at full capacity, was estimated at 56,057 metric tons. (J. W. Mw.)

Hammarskjöld, Dag (1905–), Swedish economist and statesman and United Nations official, was born at Jönköping, Swed., July 29, the son of a former Swedish prime minister. He graduated from Uppsala university in 1925, receiving a law degree in 1930. During 1930–34 he was secretary to the Swedish government committee on unemployment, and in 1933 became associate professor of political economics at Stockholm university. From 1936 to 1945 he was undersecretary in the Swedish department of finance, and in 1937 became also an economic adviser to the government. From 1941 to 1948 he was chairman of the Bank of Sweden. During 1940–48 he was a member of the Board of Foreign Exchange. Hammarskjöld entered the diplomatic service in 1946 as specialist in finance. He became chief Swedish delegate to the Organization for European Economic Cooperation in 1948 and was vice-chairman of its executive committee, 1948–49. Becoming assistant foreign minister in 1949, he entered the cabinet as deputy foreign minister in 1951. On April 7, 1953, he was elected secretary-general of the United Nations.

As a result of the resolution adopted by the UN general assembly (Dec. 10, 1954), requesting him to take immediate action toward the release by the Chinese People's Republic of all captured personnel of the UN command still detained in that country, Hammarskjöld arrived in Peking on Jan. 5, 1955. He had four meetings with Chou En-lai, the premier, returning to New York on Jan. 13. On June 25, receiving an honorary degree from the University of California, he recommended more "quiet diplomacy" through the United Nations. On Aug. 7, in his annual report to the general assembly, he urged the great powers to make use of the UN charter's provisions for participation of the heads of government at the meetings of the Security council.

Hammer Throw: *see* TRACK AND FIELD SPORTS.

Handball. Although two separate national tournaments were held in four-wall handball in 1955, as had been the custom since the schism of 1951, some of the leading players participated in both tournaments. The independent U.S. Amateur Handball union held its tournament at the Los Angeles (Calif.) Athletic club March 19–26, whereas the National Amateur Athletic union tournament was held April 16–23, on the courts at Yale university in New Haven, Conn. The winners in the two tournaments were as follows:

Amateur Athletic Union

Singles

First	Sam Costa, Brooklyn, N.Y.
Second	William Lauro, Brooklyn, N.Y.
Third	Thomas Ginty, New York, N.Y.

Doubles

First	John Abate and Joseph Ingrassia, New York, N.Y.
Second	Sam Costa, Brooklyn, and Thomas Fasano, Philadelphia, Pa.
Third	Jack Emas, Philadelphia, and Mel Dorfman, Brooklyn.

Amateur Handball Union

Singles

First	Jim Jacobs, Los Angeles, Calif.
Second	Victor Herszkowitz, Brooklyn, N.Y.
Third	Phil Collins, Bryan Air Force Base, Tex.

Doubles

First	Sam Haber and Ken Schneider, Chicago, Ill.
Second	Jack Gordon, Chicago, and Harry Dreyfus, St. Louis, Mo.
Third	Art Decker and Hyman Rose, Hollywood, Calif.

(FR. RO.)

Harbours: *see* RIVERS AND HARBOURS.

Harness Racing: *see* HORSE RACING.

Harriman, Averell (1891–), U.S. political leader, was born on Nov. 15 at New York city and was graduated from Yale university in 1913. Two years later he was a vice-president of the Union Pacific railroad, becoming chairman of the board of directors in 1932. During World War I he organized a shipbuilding and operating company, and in 1920 he helped found a firm of investment bankers. During the Franklin D. Roosevelt administration he was an officer of the National Recovery administration and during 1940–41 served with the National Defense Advisory commission and its successor agency, the Office of Production Management. In 1941 Pres. Roosevelt named him lend-lease expediter to Great Britain and later to the U.S.S.R. He was U.S. ambassador to the U.S.S.R. from Oct. 1943 to Feb. 1946, and ambassador to Great Britain from April to Oct. 1946, when Pres. Harry S. Truman named him secretary of commerce. From 1948 to 1950 he was special U.S. representative in Europe to supervise administration of the European Recovery program; in the latter year he was named special assistant to the president and in 1951 director of the Mutual Security agency.

He was an early leading contender for the Democratic presidential nomination at Chicago, Ill., in July 1952, following President Truman's decision not to run again for the presidency. On the first ballot of the convention he received 123½ votes, and on the second 121; he then withdrew and transferred his support to Adlai E. Stevenson. He was named ambassador to Great Britain again in 1953.

Harriman was elected governor of New York on the Democratic ticket Nov. 2, 1954, defeating the Republican candidate, Sen. Irving M. Ives, by a narrow margin. Soon he was again considered a major candidate for the Democratic presidential nomination of 1956.

Hatoyama, Ichiro (1883–), Japanese statesman, was born at Tokyo on Jan. 1 and graduated from Tokyo imperial university law school in 1907. Entering

politics as a young man, he was elected to the Tokyo city council, later becoming its chairman. In 1915 he was elected to national diet's house of representatives as a member of Seiyukai (Constitutional) party. In the early 1930s he was minister of education. During World War II he was out of favor with Japan's ruling military clique but nevertheless was elected again to the diet, in 1942. After the war he established the Liberal party as successor to the Seiyukai, but he was proscribed by Gen. Douglas MacArthur from holding any political office.

Hatoyama took his seat in the diet, however, after the Japanese peace treaty with the western nations went into effect in Aug. 1952. Soon thereafter he split with Premier Shigeru Yoshida and organized a new dissident Democratic party in Nov. 1954. Yoshida resigned as premier Dec. 7, 1954, and Hatoyama succeeded him on Dec. 9. Dissolving the Japanese diet on Jan. 1955, Hatoyama called for new elections which were held March 27 and in which his Democratic party won 185 seats—more than any other group. The lower house of the diet re-elected Hatoyama premier March 18, 1955, by a vote of 254 to 160.

Hatoyama's foreign policy platform called for recognition of both Communist and National China, and for attention to improvement of relations with other Asiatic nations, including the U.S.S.R., as well as continuation of Japan's security pact with the U.S.

Hawaii. Hawaii is an incorporated, organized territory of the United States. The territory of Hawaii consists of a group of eight large islands and numerous islets in the Pacific ocean between latitudes 18° 55' and 22° 15' N. and between 154° 50' and 160° 30' W. long. The total area of the group is 6,423 sq.mi. From southeast to northwest, the islands are Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai, and Niihau. In addition, stretching northward beyond Niihau is the Line Islands, an archipelago of rocks, reefs and shoals. The Line Islands, 960 mi. S. of Honolulu and included as part of the city and county of Honolulu lies Palmyra, a coral atoll consisting of islets, 5 mi. long and 2½ mi. wide. The largest island in the territory is Hawaii, with an area of 4,021 sq.mi. The capital of the territory is Honolulu, situated on the island of Oahu. Honolulu is a modern city with a population of 259,196 as of July 1, 1955.

The population of the entire territory was approximately 597,600 as of July 1, 1955, exclusive of military and naval personnel. The Japanese and Caucasian groups are the largest. Other groups include native Hawaiians and part Hawaiians, Chinese, Filipinos, Koreans, Puerto Ricans and Samoans.

History.—On Feb. 16, 1955, the legislature convened, for the first time in the history of the territory, with a majority of Democrats in both the senate and the house of representatives.

In an attempt to complete its work, the legislature extended the normal 60-day session for 28 extra days by stopping legislative clocks on the 60th day. Among important measures passed were a "model" civil service bill and one creating an Economic Planning and Coordination authority.

For the 20th time since 1903, the U.S. congress failed to pass a statehood bill for Hawaii. In November, Gov. Samuel W. King, in his capacity as president of the 1950 constitutional convention, called the delegates of that body together to consider the reapportionment provision of the proposed state constitution. The convention passed a resolution reaffirming its demand for statehood and requesting the congress of the United States to permit reapportionment of the legislature as provided by the state constitution.

A volcanic eruption on the island of Hawaii began on Feb. 1955 and was active over a period of three months, causing extensive property damage to sugar and farm lands and necessitating

vacuation of several villages in the Puna area of Hawaii (south-east coast). In April, Puna was declared a federal disaster area. Although Hawaii's mainland dollar earnings declined in 1954, a favourable balance was maintained of income (\$683,000,000) over expenditures (\$636,000,000). Internal income from goods and services locally produced again amounted to more than \$300,000,000. The growing tourist industry brought an estimated 1,060,000 visitors to the islands in 1955. They spent about \$56,000,000 in the territory.

Representatives of the eight-nation Southeast Asia Collective Defense Treaty organization (SEATO) met in Honolulu in November to integrate subordinate committees' plans working toward a regional defense pact. (See SOUTHEAST ASIA TREATY ORGANIZATION.)

Education.—During the school year 1954-55 there were 203 public schools including kindergartens and schools through the twelfth grade. These public schools had an enrolment of 119,046. The number of teachers and principals in the public schools was 4,146. Expenditures for public instruction for the 1954-55 fiscal year amounted to \$25,070,972.

The territory operated one prison system with three units, two of which were minimum security projects. In addition, there were two training schools. In 1954-55, the average number of inmates of the prisons was 97; training schools, 151. Expenditures for the same period were \$980,221 for the former and \$430,509 for the latter.

Public Assistance.—The following table shows the average number of cases assisted monthly and expenditures, exclusive of administrative costs, during the fiscal year 1954-55 by the territorial department of public welfare:

Type of assistance	Average number of cases assisted monthly during fiscal year 1954-55	Expenditures for fiscal year 1954-55
Old age	1,844	\$ 799,198
Indigent	111	61,645
Dependent children and their parents	3,195	3,420,114
Children under foster care	(9,629 children)	
Disabled persons	825	388,114
General assistance	1,276	735,150
	1,836	1,260,133
Total expenditures for assistance.		\$6,664,354

During the same period, the territorial department of health allocated \$1,062,500 to the counties for hospital and medical aid to the indigent and medically indigent.

Gross unemployment benefit payments, including those to veterans, totalled \$3,995,477. Claims allowed numbered 176,222.

Transportation and Communications.—There were 141,326 taxable passenger cars in the territory on Dec. 31, 1954. Public roads, including both urban and rural paved highways, covered 2,287 mi. During the year ending June 30, 1955, 996 overseas vessels arrived and departed from Honolulu harbour. Overseas incoming freight at this port was 2,557,518 tons; outgoing freight, 941,569 tons. Fifteen airports were in operation in the 1954-55 fiscal year. In Dec. 1954, 131,752 telephones were in use in the territory. Of the 13 commercial radio stations in the territory, 8 were in the city and county of Honolulu. There were also three television stations in Honolulu.

Banking and Finance.—In the fiscal year, 1954-55, bank clearings amounted to \$2,615,371,264. Five banks, operating 46 branches, had deposits totalling \$386,748,755 and their assets were \$418,498,095.

Territorial government expenditures for the fiscal year 1954-55 amounted to \$62,627,496; the bonded indebtedness of the territory was \$47,875,000.

The net assessed valuation of real property was \$676,100,000 for the calendar year 1955; the average, unweighted rate of real property tax was \$17.71 per \$1,000. For the fiscal year 1954-55, territorial general revenues were \$57,433,917.

Production.—Sugar is Hawaii's principal industry and the value of 1,177,347 tons of sugar produced in 1954 was approximately \$141,000,000, including the value of by-products. About 220,138 ac. were utilized for sugar cane production. In 1953-54 pineapples were grown on 73,200 ac. of land to produce a pack of 29,411,000 cases of canned fruit and juices valued at more than \$108,000,000. The 1953-54 coffee crop was 8,264,000 lb., valued at \$5,537,000. The value of fruits, vegetables and other commercial crops produced in 1954 was about \$11,974,000, while the value of livestock and poultry products was \$24,763,000. During the calendar year 1954-55, the commercial fish catch totalled 19,245,366 lb., valued at \$3,575,253.86. (S. W. K.)

Mineral Production.—The following table shows the tonnages and value of those mineral commodities produced in Hawaii in 1952 and 1953 (preliminary) whose value exceeded \$100,000.

Mineral Production of Hawaii				
	1952		1953	
	Quantity	Value	Quantity	Value
Gold	8,894	\$ 240,786	7,431	\$ 223,575
Copper	705,994	1,545,301	1,518,649	2,918,423
Other nonmetals		161,913		190,002
Total		\$1,948,000		\$3,332,000

ERUPTING CONE BLOWING LAVA high into the air during the volcanic activity on the slopes of Mt. Kilauea, Hawaii, in March 1955

Hay and Pastures. U.S. hay crops in 1955 reached a record total of 109,908,000 tons as compared with 104,380,000 tons in 1954 and an average of 102,199,000 tons for 1944-53. The 74,667,000 ac. devoted to hay were about average, but 2.6% more than in 1954. The average yield of 1.47 tons per acre was high compared with 1.43 tons in 1954 and 1.38 tons per acre for 1944-53.

The 52,703,000 tons of alfalfa hay was by far the largest on record; Wisconsin was the leading producer (5,142,000 tons), followed by California (4,884,000 tons) and Minnesota (4,235,-

ooo tons). The average yield of 2.10 tons per acre was slightly below 1954 or the average. Quality was generally high. Clover and timothy hay amounted to 26,731,000 tons as compared with 27,579,000 tons in 1954 and an average for 1944-53 of 31,115,000 tons. An average yield of 1.48 tons per acre was well above 1954 or average, but only 18,064,000 ac. were harvested as compared with 19,312,000 ac. in 1954 and 22,097,000 ac. average for 1944-53. The 13,404,000 ac. of wild grass cut for hay yielded about three-quarters of a ton per acre, or 9,939,000 tons, as compared with 10,184,000 tons in 1954 and 12,367,000 tons average 1944-53. Lespedeza, grown primarily in the southeast, recovered from a severe spring freeze to yield 1.13 tons per acre and a total crop of 4,875,000 tons as compared with .82 ton per acre and 3,052,000 tons in 1954.

The carry-over of hay from previous crops was estimated at 14,797,000 tons, slightly less than in 1954. The average price to producers of all baled hay in September was \$20.30 per ton as compared with \$22.00 one year earlier.

Pasture.—The 55% of the total land area of the U.S. which is devoted to pasture and grazing, a large factor in livestock feeding and total feed requirements, made a slow start in 1955. The western area, in particular, was at an extremely low early level; with improved weather and rainfall after May 1, there was great and general recovery to a much more favourable condition in July than existed a year earlier. August weather resulted in sharp deterioration of pasture conditions in the upper Mississippi valley and the Great Plains. Autumn drought-breaking rains improved the situation to a level higher than in the two previous years, but nevertheless it continued sharply below average. Studies indicated that green-chopping, sometimes called zero-grazing or soiling (bringing the pasture to the livestock), resulted in forage yields about double those from grazing.

Hay and Pasture Seeds.—Seed production in 1955 was moderately abundant; carry-over stocks from prior crops of 36 legume and grass seeds totalled 202,254,000 lb. on June 30, 13% less than a year earlier but 63% above the 1946-50 average. Nevertheless, supplies of some types were inadequate, particularly if millions of acres diverted from other crops should require seeding. Alfalfa seed, forecast at 213,656,000 lb., was a new record both in regard to yield per acre (158 lb.) and the 1,354,800 ac. harvested. Seed prices were lower in 1955 than in 1954 for a majority of seeds.

Extensive amendment of the Federal Seed act regulations was proposed. (J. K. R.)

Hearing. During 1955 there were known to be more than 100,000 totally deaf people in the United States, of whom 51.3% were males and 48.7% were females. About 10,000,000 people had hearing losses of sufficient degree to need some remedial measures.

Between 3,000,000 and 5,000,000 school children had significant hearing disabilities. Five per cent of all school children had sufficient hearing loss to be of educational significance, and 2% of these were of great enough degree to be considered a handicap. It was believed that about half would respond to medical treatment. There were 27,483 deaf children receiving special education in schools and classes of the United States.

In 1955 there were 79 public residential schools, 181 public day schools and 50 denominational and private schools for the deaf. There were also a great many classes within the regular public schools for children with hearing losses. Every state in

COMBINATION HEARING AID AND GLASSES marketed by a New York firm in 1955. Equipment was imbedded in clear plastic frames for the photograph; in actual use, all of the hearing device is concealed except the small ear plug

the country had provision for educating deaf children either at a state-operated school or by agreement with an adjoining state.

Great impetus had been achieved in the development of centres throughout the country to assess hearing problems and attack them. In 1954 there were approximately 140 of these centres, either under the direction of a qualified otolaryngologist or in some way associated with one or more competent practitioners. All had audiological equipment for accurate testing the degree of hearing loss, and advisers for the proper fitting and use of hearing aids or comparable available types of amplification.

By 1954, the general problem of hearing loss attributable to noise exposure was at a point where the many elements of society involved could hope to reach some common ground. Much attention was being given to the complex problem raised by the noise hazard by medical societies, standards committees, insurance carriers, industrial hygienists and safety engineer societies, state departments of labour, noise abatement societies, acoustical and engineering societies, industrial accident commissions and legal and legislative groups.

The essential attitude was one of seeking information on which to base a reasonable solution.

Certain handicaps were imposed by lack of appropriate information. Many years before, physicians had called attention to the relationship between certain trades and the incidence of hearing loss in members of those trades. The peculiar difficulties imposed by the measurement of the quantities involved delayed the delivery of accurate and quantitative information until recently. It was virtually impossible to deal with the problem without modern vacuum-tube equipment, such as the sound level meter and analyzer and the audiometer.

The following three aspects of this problem were receiving attention in 1955: (1) the determination of onset and rate of progression in hearing loss resulting from industrial noise; (2) the study of the characteristics of efficient ear protectors; (3) the detection of the individual who is hypersusceptible to noise-induced hearing loss.

The existing methods of determining percentage of hearing loss were not entirely satisfactory and considerable time had been spent in developing new methods. Progress also was made

the diagnostic implications of the functional hearing tests. Recruitment and diplacusis, the inclusion of two sounds in place of one, were found to be present in cochlear disease and absent in neural disease. Exceedingly poor speech intelligibility was found in impairments resulting from tumours of the eighth nerve.

The development of the Bekesy audiometer facilitated the measurement of threshold fatigue and of recruitment.

Much was done to aid patients with otosclerosis, which is the formation of additional bone in the capsule of the labyrinth of the ear, thus reducing the transmission of sound. The fenestration operation had completely rehabilitated great numbers of those having this type of hearing loss. The operation had developed into a delicate procedure to create a new window through which sound passes from the middle to the inner ear. In most cases the patient's hearing improved to a level of practical serviceability after a fenestration operation, making a hearing aid unnecessary.

In a few cases the hearing sensitivity remained unchanged, and in others hearing retrogressed, because of the ravages of age on the ear tissue and the natural, predestinate degeneration of the hearing nerve.

Another operative procedure for otosclerosis was revived by Samuel Rosen in 1952. In performing this operation, the stapes is exposed by turning down a flap of the tympanic membrane. Under magnification with special instruments an attempt is made by proper pressure applied at the correct area on the stapes to free it. The deposit which binds it tight must be broken up, thus permitting the stapes to vibrate again. This operation had been done previously, and generally speaking the results were not satisfactory.

The use of modern instruments and magnification were largely responsible for its recent success.

An operative procedure known as mobilization had earlier been employed only incidentally in the process of eliminating infection. Stapedectomy was later substituted, but this was abandoned. Mobilization is now done by a number of otologists, but as of 1955 it was still too early to predict the value of the procedure. Otologists reported about 30% of the operative results as being successful. The operation is a delicate procedure and requires more than average dexterity, but is a minor one as far as the patient is concerned. It is done under local analgesia and requires little hospitalization and the patient may usually return to work within a period of 48 hours. Fenestration may still be done if the mobilization operation is not a success. Serious complications are rare.

People with impairments resulting from changes in the tissues of the middle ear usually obtain excellent results with hearing aids. The middle ear changes reduce the mechanical efficiency and mobility of the vibratory structures within the middle ear, leaving the function of the remainder of the hearing mechanism impaired. An effective hearing aid merely delivers sufficient sound pressure to set the inefficient ossicular system in vibration. Unfortunately, many persons with cochlear or neural pathology because of recruitment, diplacusis, auditory fatigue, and severe attenuation of high frequencies which contribute significantly to the perception of certain speech sounds, obtain disappointing results from amplification. However, it must be emphasized that a considerable proportion of patients with less severe cochlear or neural involvements do obtain gratifying results with hearing aids. (See also EAR, NOSE AND THROAT, DISEASES OF.)

(D. LE.)

Heart and Circulatory Diseases.

The year 1955 saw increasing interest in the international epidemiological studies of coronary artery

disease, the major type of heart disease in the United States. Growing awareness was apparent of the prevalence of coronary degeneration as a factor influencing employability of men over 45 years of age, especially in view of the trends of interpretation of workmen's compensation laws.

The influence of tobacco smoking in producing heart and blood vessel disease was hotly disputed. Statistics were presented incriminating cigarettes. Suggestive direct evidence in this problem was offered by J. W. Gofman and his coworkers. They showed by ultracentrifuge studies of the blood serum that regular cigarette smoking is associated with an appreciable elevation of the cholesterol and certain lipoproteins which they incriminated in the causation of coronary artery disease. This effect was greatest in young men, and they stated that this elevation had a prediction of a 40% increase in coronary heart disease mortality in regular cigarette smokers as compared with nonsmokers.

The relatively good prognosis of men disabled by heart disease was shown by the Metropolitan Life Insurance company statistics. If able to return to work after the disabling attack, the majority lived many years. Of those who had a coronary occlusion, four-fifths lived at least five years and more than one-half lived at least ten years.

The causes of congenital heart disease remained obscure, although several were known, such as infection of the mother by virus diseases during early pregnancy. However, in rats, it was demonstrated by a California group that deprivation of pregnant females of the vitamin folic acid for only two or three days during a critical period resulted in offspring with a high incidence of congenital defects, preponderantly of the heart and blood vessels.

Some doubt was cast upon the complete effectiveness of present methods of preventing rheumatic fever following scarlet fever by a report by L. Weinstein, N. H. Boyer and M. Goldfield who followed a series of 110 children treated with penicillin in 1946. They concluded that penicillin therapy of streptococcus pharyngitis in children, even when applied early, may not significantly decrease the occurrence of acute rheumatic carditis. Abnormal electrocardiograms appeared following the original infection in 7.9% of the series, and prolonged conduction from atrium to ventricle or within the ventricle was shown to be an early important evidence of carditis following streptococcal infection. Only this group had rheumatic heart disease seven years later.

The superior effect of treatment of acute rheumatic fever by Cortisone and ACTH as contrasted with salicylates had little statistical support in the joint report from the Medical Research Council of Great Britain and the American Heart Association, but there was a growing clinical opinion that patients treated very early were more likely to escape heart damage.

Cardiovascular surgery continued to develop in technique and in scope. Plastic tubes were utilized to replace arteries and even a section of the aorta in a case of ruptured aneurysm when no graft was available. A white nylon braided shoelace treated to prevent crimping was utilized to replace an artery supplying a leg which was in danger of amputation.

The plastic valve of C. A. Hufnagle was successfully used by him in the aorta to replace the function of an aortic valve of a 17-year-old boy, which had been ruptured by a kick from a horse.

C. P. Bailey and W. Likoff reported advances in methods of introducing artificial valves at the aortic valve itself designed to prevent leakage back through the deformed leaflets.

Dramatic surgical attacks upon badly diseased hearts were made. One in Germany consisted of operation upon three patients with aneurysms of the heart, one of the auricle and two of

the ventricle. Skin from the patient's leg was used as a patch to sew over and around the bulging area of the heart wall.

The first successful operation of dissecting out and removing such a bulging area or aneurysm of the left ventricle following a myocardial infarction was performed by Likoff and Bailey in a 56-year-old man. The operation relieved the congestive failure and the pain of coronary insufficiency.

An unrecognized type of heart failure related to extreme obesity was reported by H. O. Sieker and associates. It was found to be related to respiratory trouble interfering with oxygen exchange in the lungs, producing somnolence, irregular breathing and right heart strain. It is reversible by weight reduction.

In the treatment of hypertension, the drug most widely used was *Rauwolfia serpentina*. R. J. Vakil of India noted that it was mentioned in a Hindu manuscript of 1000 B.C. and had been used by him for the treatment of high blood pressure for about 20 years. Its wide use was evidenced by Vakil's statement that it was said to be prescribed by more than 60,000 physicians, and one manufacturer claimed to have sold, prior to 1954, 98,000,000 tablets of the dried root. Hockey, Field. The sport continued during 1955 to gain in popularity in the United States following a two-month tour by a squad representing the Irish Ladies Hockey union. Playing in 10 states, the visitors completed their trip undefeated late in 1954. An American squad, led by Capt. Nancy Sawin, paid a return visit to Great Britain late in 1955. Members of the All-America first team, chosen at the annual national tourney at Ann Arbor, Mich., in November of 1954 follow: Joan Schenerlein, Wheeling, W.Va.; Eleanor Pepper, Ambler, Pa.; Ann Volp (captain), Bergey, Pa.; Joan Edenborn, Philadelphia, Pa.; Betty Shellenberger, Germantown, Pa.; Alice Willetts, Swarthmore, Pa.; Pat Nuckols, North Hills, Pa.; Blanche Pendergast, Effington, Pa.; Nancy Sawin, Hockessin, Del.; Mary Fetter, Media, Pa.; and Elizabeth Burger, Farmville, Va.

There was a marked revival of interest in men's field hockey with the result that the Men's National Field Hockey league saw more action in 1955 than it had in many seasons. The Greenwich (Conn.) Academy field was the site of a two-day tourney April 30-May 1 (1955). Scoring victories over Westchester, N.Y. and the Toronto B team in the four-team pool made up of first-day winners, Toronto's A eleven carried off top honours. (T. V. H.)

Hockey, Ice.

Closing the regular season with a nine-game winning streak, Detroit's Red Wings came off the National Hockey league title for the seventh straight time in 1954-55 and went on to retain the Stanley cup, symbol of the world professional championship. The Wings kept the title in the regular campaign after a close race with Montreal, Toronto, Boston, New York and Chicago followed in order of the final standing. The Detroit skaters continued at top speed sweep their semifinal match against Toronto's Maple Leafs, winning by 7-4, 2-1, 2-1, 3-0. Meanwhile Montreal advanced to the final round by eliminating the Boston Bruins, four games to one.

The Stanley Cup final again required the full seven contests. Playing at home on April 3, the Red Wings won by 4-2, as Stasiuk, Marty Pavelich and Ted Lindsay each tallied once in the last seven minutes. Detroit took the second game, 7-1, April 5 as Lindsay accounted for four tallies. The decision of the Wings' 15th consecutive victory in league play and set a record for the National circuit. When the series shifted to the Forum in Montreal on April 7 the Canadiens came back to win 4-2. Bernie Geoffrion proved the big star of the third contest with three goals. The Canadiens then tied the play-offs by winning the fourth encounter, 5-3, after which the action moved to the Olympia in Detroit. There on April 10 the Wings triumphed by 5-1 as Gordie Howe led the attack with two goals. The sixth encounter took place at Montreal on April 14 and the Dominion skaters drew even once more by winning 2-2 as Geoffrion paced the offense with a pair of tallies. Detroit captured the seventh and deciding game on its home ice April 14 to successfully defend the trophy. With Alex Delvec scoring twice, Detroit won by 3-1. Howe accounted for two of the Wings' other tally, giving him a total of nine, a new record for the Stanley cup play-offs.

Geoffrion, with 75 points on 38 goals and 37 assists, gave the Art Ross trophy as the league's top scorer for the regular season, his teammate Maurice (Rocket) Richard being a close second with 74. Richard's chances of capturing the title were hurt when he was suspended for fighting in a game at Boston March 13. The penalty, which barred the idol of Montreal for the rest of the campaign including the cup play-offs, had serious repercussions in a game between the Canadiens and Detroit at the Forum on March 17. Spectators pelted Clarence Campbell, league president, with fruit, programs, overshoes, before and during the game and when a smoke bomb was exploded at the intermission fire department officials ordered the building emptied. The game then was forfeited to the Detroit Wings. Goalie Terry Sawchuk of Detroit won the Vezina trophy given annually to the goalie with the best record. Sawchuk permitted 134 goals while Harry Lumley, Toronto, winner of the previous season, allowed 135. Ted Kennedy, Toronto, received the Hart trophy as the circuit's most valuable player and Alex Smith, Toronto, won the Lady Byng trophy, given to that player who best combines sportsmanship and ability. The J. H. Norris Memorial prize, for the most valuable all-around defenseman, went to Doug Harvey, Montreal, and the Calder trophy was won by Eddie Litzenberger, Chicago, when he was named rookie of the year.

The Pittsburgh (Pa.) Hornets won the final play-offs for the Calder cup in the American league, defeating Buffalo's Bisons 4 games to 2. Pittsburgh reached the ultimate round by beating Springfield (Mass.) 3 games to 1 while Buffalo was eliminated by the Cleveland (Ohio) Barons, 3-1. The Hornets also took first place in the regular league drive. Washington (D.C.) triumphed in the Eastern league play-offs.

The University of Michigan, Ann Arbor, Western conference (Big Ten) champion, took National Collegiate Athletic association honours when it halted Colorado college, 5-3, in the

ound at Colorado Springs on March 12. Harvard beat St. Lawrence, 6-3, for the consolation prize. Harvard had retained the Eastern (Ivy) league laurels earlier with a mark of seven victories and one tie.

The Penticton V's of Canada furnished one of the season's big upsets by defeating the Soviet Union's skaters, defending champions, 5-0, in the final of the world amateur tournament at Garmisch, Ger., in March. Czechoslovakia placed third and the United States fourth. (T. V. H.)

Hoffman, Paul Gray (1891-), U.S. industrialist, was born on April 26 at Chicago, Ill., and studied at The University of Chicago. In 1911 he became a salesman for a Studebaker automobile dealer in Los Angeles, Calif., and later was sales manager and then district branch manager for the Studebaker corporation in that city. After serving in World War I as an artillery officer, he bought the Studebaker retail branch in Los Angeles and in 1925 became vice-president of the Studebaker corporation at South Bend, Ind. In 1933 he and another vice-president successfully reorganized the corporation as receivers, and he was president from 1935 to 1948. One of the founders of the Committee for Economic Development, Hoffman was chairman of that organization's board of trustees from 1942 to 1948. On April 5, 1948, Pres. Harry S. Truman appointed him administrator of the Economic Cooperation Administration, and he supervised the European Recovery program until his resignation on Sept. 30, 1950. Shortly thereafter he was named president of the Ford foundation. One of the earliest supporters of Dwight D. Eisenhower for the Republican presidential nomination, Hoffman devoted much of his time in 1951 and 1952 to advancing the Eisenhower boom. He declined after Eisenhower's victory in the national election of Nov. 1952, however, to serve in the latter's cabinet. On Feb. 1953, he resigned as president of the Ford foundation to return to the Studebaker corporation as chairman of its board of directors. When Studebaker merged with the Packard Motor Car company in 1954, Hoffman was named board chairman of the new company.

Home Economics. Membership in the American Home Economics association in 1955 included 1,544 professional memberships, 446 college clubs, 109 home-maker groups and four affiliated foreign associations. The association granted two fellowships for graduate study and 11 fellowships and scholarships to assist students from abroad to study home economics at U.S. colleges and universities.

During the year, the association conducted its annual meeting and exposition and a conference on "Space and Equipment for Home Economics in Higher Education," sponsored in co-operation with the home economics education branch of the office of Education, U.S. department of health, education and welfare.

Home Economics Research.—During the year the U.S. department of agriculture organized its home economics research into three branches, the Human Nutrition Research branch, the Household Economics Research branch and the Clothing and Housing Research branch.

Research in the field of human nutritional requirements continued to contribute information basic in planning nutritionally adequate diets. Completed co-ordinated research under contract with three institutions provided the first metabolic data indicating the amino acid requirements of women. Other studies with laboratory animals showed that the kind of carbohydrate (sugar

or dextrin) in the diet affects amino acid requirements, information basic in planning diets adequate in protein. Progress was also made on studies to determine the influence of fatty acids on the growth and development of children and infants.

A nation-wide food consumption survey covering approximately 6,000 families was undertaken. Data collected included quantities of all food items used during a week in the spring of 1955 and amounts spent by urban, rural nonfarm and rural farm households, classified by family income in four geographic regions.

Two new aids for improving school lunches were produced in co-operation with the Agricultural Marketing service's School Lunch branch and the Fish and Wildlife service of the U.S. department of the interior. One was a set of recipe cards providing more than 400 recipes and much additional information. The second was a food buying guide for type A lunches.

Agricultural Experiment Stations.—The broad scope of the research program at the agricultural experiment stations in the 48 states, Alaska, Hawaii and Puerto Rico in 1955 served many interests of the home and family.

Foods of better quality resulted from research to improve production and marketing practices. New and improved food products were developed, as well as guides for preservation and utilization of foods in the home. Nutrition investigations provided basic information on human nutritional requirements, on the role of nutrients in serving the body's needs, and on the value and interrelationship of different foods in supplying essential nutrients. Studies of farm family spending provided a background toward improving family diets and levels of living at various incomes.

Guides for the improvement of rural housing were developed through researches on space standards and functional designs and arrangements for home storage and activities; construction methods and utilization of materials; farm home utilities; farm home safety; influence of geography and environment on housing design; and housing needs in relation to family composition and economic means.

Research on home equipment design and performance and on work simplification in household tasks provided help in problems of home management. Co-operative regional researches dealt with homemakers' problems in the selection, use and care of clothing.

Home Economics Extension Service.—Approximately 3,453 white and 416 Negro home demonstration agents estimated that their work reached more than 5,736,000 families in 1955. Of these, more than 2,276,000 were farm families, about 1,327,000 were rural nonfarm and 2,133,000 were urban. The number of volunteer leaders actively engaged in forwarding the home demonstration program was 700,000. There were 64,454 home demonstration clubs with a membership of 1,520,900, an all-time high.

Nearly 4,200,000 families were helped to improve their family diets and more than 5,570,000 were assisted with consumer information on agricultural products. The program helped 1,526,000 families to adopt better health and sanitation practices. Families assisted with housing totalled 1,600,000; and those assisted with home furnishings and equipment numbered more than 2,300,000.

The increase in the availability of electricity has meant running water and labour-saving equipment for many farm homes. This has often required redesigned work space, and the kitchen research serves as a basis.

Land-Grant Colleges.—The home economics division of the American Association of the Land Grant Colleges and State Universities gave special attention to research needs in home economics during 1955. The need for more research on aspects of home and family life by all groups concerned with the prob-

lem was studied, as well as the unique responsibility of home economics programs in land-grant colleges for such research. The place of research in the farm and home development program of the extension service received special consideration. The division also centred its attention on the study of the responsibilities of home economics in developing the intellectual potential of women of all ages.

Public Schools and Colleges.—A wide variety of homemaking courses was offered in secondary schools during 1954–55, with approximately 2,400,000 pupils enrolled. Part-time or evening classes for adult homemakers continued to be in demand as a part of the public school homemaking program. Open-house days, homemaking clinics and consultant services were provided in many localities where special adult classes could not be conducted regularly.

Future Homemakers of America and New Homemakers of America, national organizations for junior and senior high school homemaking pupils, celebrated their tenth anniversaries, and membership increased to 461,442. National meetings of these groups stressed ways in which youth could further contribute to better family living. Representatives of both organizations participated in the National Citizenship conference. Throughout the year the F.H.A.-N.H.A. chapters sponsored "Families Together" projects, leadership training conferences and activities to promote international understanding.

Colleges and universities with home economics curriculums reported an enrolment of approximately 69,000 undergraduates, graduates and nonmajors. (See also AGRICULTURAL RESEARCH SERVICE.)

Honduras. A republic of Central America, Honduras is bounded by Guatemala, El Salvador and Nicaragua. Area: 43,277 sq.mi. Pop. (1950 census): 1,368,605, including approximately 35,000 tribal Indians; (1954 est.) 1,608,000. Capital: Tegucigalpa, pop. (1950) 72,385. Other principal cities are San Pedro Sula, 21,139; La Ceiba, 16,645; Tela, 12,614; and Puerto Cortés, 12,228. Language: Spanish. Religion: predominantly Roman Catholic. President in 1955: Julio Lozano Díaz.

History.—Hondurans seemed ready to admit that Julio Lo-

zano Díaz had led the country during 1955 with a skill which combined political tightrope walking with executive ability. He had assumed power on Dec. 6, 1954 with the title of chief of state, when the indecisive election impasse threatened to develop into internal strife. Previously vice-president under Juan Manuel Gálvez, then acting president when the latter left Honduras on sick leave, Lozano Díaz took control under the Honduran electoral code which endows the incumbent executive with total interim dictatorial authority when congress fails to resolve a presidential contest in which no candidate receives a majority.

Lozano Díaz had been thrust into his position by the struggle for power between Tiburcio Carías Andino, who was backed by the Nacionalista party, and Ramón Villeda Morales, backed by the Liberal party. Carías Andino had ruled the country from 1932 through 1948 and was attempting a comeback to follow the term of his protégé and successor, Juan Manuel Gálvez. Abraham Williams Calderón, who had once been vice-president under Carías Andino, however, also ran as the candidate of his Reformista party and succeeded in drawing sufficient strength from the Nacionalistas to prevent Carías Andino's election. Ballot reform was to have been decided by majority vote, but no candidate qualified, the distribution of votes being approximately as follows: Villeda Morales, 121,000 (about 4,500 short of a majority); Carías Andino, 78,000; and Williams Calderón, 53,000. Carías Andino forestalled the newly elected congress in deciding the election by requiring the Nacionalista members to boycott its meetings, paralyzing congressional action for lack of quorum.

Confronted by this rupture in electoral procedure, Lozano Díaz took complete control, hoping to keep the country at peace until new elections could be held. At first, he estimated that this might take from one to two years, and by Aug. 1955, it seemed likely that he would attempt to resolve the crisis early in 1956. He proposed to hold elections for a constituent assembly which would rewrite the constitution, choose a president and presumably also act as the unicameral congress. For the constituent elections, all male voters were required to register before Oct. 31, 1955, and for the first time, female voters could register voluntarily.

While preparing for the new *de jure* administration, Lozano Díaz secured co-operation by taking members of all three parties into the government. This included the cabinet as well as the member advisory council which was created from the deadlocked congress. This council was comprised of 24 Liberals, 12 Nacionalistas and 12 Reformistas, but as its name suggested, functioned in an advisory capacity only. Labour, which had supported Villeda Morales heavily, was appeased by the decree of a preliminary code, the country's first, granting such concepts as the right to organize, the right to strike and minimum wages. The disastrous strikes of 1954 were not repeated, but the threat of strikes in the banana industry brought a new contract from the Standard Fruit company. The United Fruit company also announced certain new benefits for its workers.

The foreign relations of Honduras were generally peaceful. A border dispute flared with Nicaragua in May but proved to be of little consequence. However, it served as a pretext for President Somoza of Nicaragua to suggest that the two countries should combine to settle all difficulties. He was referring in part to the old dispute involving the area of Mosquitia awarded to Honduras through arbitration by King Alfonso XIII of Spain in 1906. Nicaragua had never recognized this award. Mention of this dispute somehow involved Honduran ambassador to the United States, Rafael Heliodoro Valle, in difficulties with the government in March. The resignation of this scholar-diplomat was much deplored in Washington, D.C., where he had brought substantial recognition to his country in the literary field.

Salvador and Honduras took certain retaliatory trade measures in May, but no further action was reported. Honduras co-operated in the charter meetings of the Organization of Central American States (*q.v.*) which began in August.

Economically, Honduras was still suffering during 1955 from the twin blows of strike and flood which it experienced in 1954. These were added drought in 1955. For the first time since 1950, the Tela Railroad company, a principal United Fruit company subsidiary, did not pay its dividend in June. However, a public works program to cost about \$50,000,000 was being financed by the International Bank for Reconstruction and Development, the United Fruit company had announced a \$30,000,000 expansion program, and a large land reclamation project was about to go into operation in the Sula Valley. Mineral prospecting continued, especially oil exploration, which was beginning on a large scale.

(R. HN.)

Education.—In the 1953-54 school year there were 2,214 public and private primary schools with 4,007 teachers and 117,292 pupils. Secondary, normal and commercial schools had 884 teachers and 6,847 students. The National university at Tegucigalpa had 843 students. According to the 1950 census, 64.8% of those 10 years of age and over were literate.

Finance.—The monetary unit is the lempira, officially valued at 49.5 U.S. currency in 1955. Government expenditure in the fiscal year 1953-54 (July 1-June 30) totalled 54,723,291 lempiras; net revenue, 53,668 lempiras. The deficit was financed out of the accumulated surpluses from previous years and by the issuance of bonds. The 1955-56 budget was reported at the equivalent of \$38,000,000. The internal debt was 7,277,224 lempiras on June 30, 1954; there was no external debt. Currency in circulation (June 30, 1955) totalled 37,000,000 lempiras; bank deposits, 29,100,000 lempiras. The cost-of-living index (Tegucigalpa) stood at 152 in Aug. 1955 (1948=100).

Trade and Communications.—Exports during the fiscal year 1953-54 amounted to 133,753,294 lempiras (unadjusted for banana undervaluation); imports were 98,466,668 lempiras. Chief exports were bananas (51%), coffee (19%), silver (7%), lumber (5%) and cattle (1%); important imports included machinery and transport materials, including vehicles (21%), chemical products (15%), textiles (14%) and petroleum products (7%). Leading customers were the U.S. (77%), Canada (7%), Salvador (6%), the Netherlands (5%) and Cuba (2%); leading suppliers, the U.S. (69%), the Netherlands Antilles (5%), Germany (5%), Salvador (3%) and Japan (3%).

Highway mileage totalled 816, confined to the northern banana area. Railway mileage (1952) was 1,124. On Oct. 1, 1954, there were 2,260 automobiles and 3,376 trucks. According to *Lloyd's Register of Shipping*, 10 vessels (100 tons and over) aggregating 438,834 gross tons were registered under the Honduran flag on June 30, 1954. Telephones (Jan. 1954) numbered 7,000, 60% of which were automatic.

Agriculture.—Banana exports in the 1953-54 fiscal year totalled 12,771 stems, of which 9,798,492 went to the U.S. and 1,328,831 to Canada. Other exports in 1953-54 were coffee 159,440 bags of 132 lb. 1; cotton 681 metric tons; coconuts 5,063,956 nuts; copra 519 tons. Coffee production in the 1954-55 season was estimated at 221,000 bags. The (1952) numbered 907,000. Forest exports in 1953-54 included 2,200 bd.ft. of mahogany logs and lumber and 45,542,000 bd.ft. of lumber.

Minerals.—In the fiscal year 1953-54, 5,216.283 troy ounces of silver and 49,516 ounces of gold were exported.

Money: see SUGAR.

Hong Kong. This British colony on the southeast coast of China consists of Hong Kong Island and the New Territories (the latter of Kowloon peninsula and numerous islands, leased from China in 1898 for 99 years). Area: colony 36 sq.mi. (Hong Kong Island 32 sq.mi.); New Territories 355 sq.mi. (incl. Lantau Island 58 sq.mi.). Total pop.: (1931 census) 849,751; (1954) 2,277,000. Language: Chinese (Cantonese): approximately 2,277,000. Chief towns: Victoria (cap.), pop. (1955) 767,000; Kowloon about 900,000. Governor in 1955, Sir Alexander Grantham.

History.—A. T. Lennox-Boyd, United Kingdom secretary of state for the colonies, visited Hong Kong in July 1955. On July 1 he announced the extension for two years of the term of office of the governor, Sir Alexander Grantham, following representations by all the British and Chinese commercial and political bodies in the colony. This was Grantham's third extension. Investigation of the crash near the Great Natuna Islands,

Borneo, on April 11 of the Air India "Kashmir Princess" led to the almost certain conclusion that a time bomb had been put aboard the plane at Kai Tak airport, Hong Kong. On June 12 the Hong Kong police offered \$100,000 (Hong Kong) for information leading to the arrest of those responsible.

Private building activity, mostly domestic, increased in 1955 by 40% over the preceding year. Another section was added to the huge secretariat. More than 130,000 squatters had now been resettled, more were currently being rehoused in seven-story concrete blocks at the rate of 5,000 squatters a month. In two years no more flimsy, inflammable squatters' huts would be left. A low-cost housing society was building 2,000 flats for 16,000 manual and clerical workers, on the North Point waterfront.

The entrepôt trade with China still suffered acutely from the embargoes and the diversion of Chinese commerce to Soviet bloc countries. But compensation was afforded by the great success and expansion of local industry which in 1955 provided 30% of the total exports. Cargo tonnages handled at Hong Kong in 1954 were up by 150,000 tons from 1953. But value of trade was 11% lower. However, at the end of the first quarter of 1955 trade was up 12½%, compared with the same period of 1954. For the first time since the rehabilitation of the colony after World War II, the government budgeted for a deficit. Expenditure was rising far more rapidly than revenue, largely because of the great public works building expenditure.

The elaborate tomb of a Chinese country gentleman of some time between A.D. 220 and 618 was unearthed in Kowloon. It had three chambers, one with hemispherical ceiling, and a T-shaped antechamber.

(W. V. Pl.)

Education.—Schools (1953-54): 1,106. Pupils: primary 170,800; secondary 42,700. Teachers' training colleges 3, students 233. University of Hong Kong (1954-55): students 863, academic staff 130.

Finance and Trade.—Monetary unit: Hong Kong dollar, valued in 1955 at 17.5 U.S. cents. The following budget figures are in Hong Kong dollars (1953-54 actual; 1954-55 est. in parentheses): revenue \$396,881,966 (\$389,480,000); expenditure \$355,407,770 (\$388,262,050). Foreign trade (1954): imports £215,000,000; exports and re-exports (excluding bunkers) £151,000,000. Main sources of imports (1954): China £43,200,000; U.K. £23,920,000; U.S. £18,240,000; nonsterling O.E.E.C. (Organization for European Economic Cooperation) countries £43,428,000; Malaya £10,116,000; other Asian and African countries £44,880,000. Main destinations of exports (1954): China £24,480,000; Malaya £20,040,000; nonsterling O.E.E.C. countries £21,012,000; U.K. £10,188,000; U.S. £9,132,000; other Asian and African countries £46,440,000. Main exports: entrepôt trade, chiefly textiles.

Honours and Awards: see AMERICAN LIBRARY ASSOCIATION; ANTHROPOLOGY; ART EXHIBITIONS; GEOGRAPHY; LIBRARIES; LITERARY PRIZES; MINERALOGY; MOTION PICTURES; NOBEL PRIZES; PULITZER PRIZES; RADIO AND TELEVISION; ROMAN CATHOLIC CHURCH; SOCIETIES AND ASSOCIATIONS, U.S.; THEATRE; etc.

Hoover Commission. The Commission on Organization of the Executive Branch of the Government, popularly known as the Hoover commission because its chairman was former Pres. Herbert Hoover, was created under an act unanimously adopted by both houses of congress and approved by Pres. Dwight D. Eisenhower on July 10, 1953. It concluded its work on June 30, 1955, after having been granted an extension of one month because of inability to complete its assignment by the time limit set in the original act, which was May 31, 1955.

The results of the commission's studies and appraisals were embodied in 19 separate reports. These reports contained 314 recommendations designed to reduce the cost of government operations, to discontinue unnecessary government activities, to end duplication and overlapping, to bring about such changes in government policy as are deemed to be in the public interest, and to make the federal departments and agencies generally more serviceable to the public.

"ONE BABE THAT'S REALLY LOST IN THE WOODS," a cartoon of 1955 by Holland of the *Chicago Tribune*

Chairman Hoover in the commission's final report to congress on June 29, 1955, pointed out that the problems considered "have by no means been purely financial" and that, broadly speaking, the following six objectives were sought:

- To preserve the full security of the nation in a disturbed world.
- To maintain the functioning of all necessary agencies which make for the common welfare.
- To stimulate the fundamental research upon which national security and progress are based.
- To improve the efficiency and eliminate waste in the executive agencies.
- To eliminate or reduce government competition with private enterprise.
- And, perhaps the most important of all, to strengthen the economic, social and governmental structure which has brought us, now for 166 years, constant blessings and progress.

The first Commission on Organization of the Executive Branch of the Government, of which Hoover also was the chairman, was created by congressional act of July 7, 1947. That commission concerned itself chiefly with reorganization of departments and agencies and their relations with each other. Its proposals were directed "to removing the roadblocks to more effective organization and the reduction of expenditures."

The second commission "dealt more extensively with the functional organization of the executive branch and with questions of policy" than did the previous commission. This was in accordance with the wider authority granted in the 1953 act and with the expressed wish of congress. That act directed that the commission "study and investigate the present organization and methods of operation of all departments, bureaus, agencies, boards, commissions, offices, independent establishments and instrumentalities of the Government, except the Judiciary and the Congress of the United States, to determine what changes therein are necessary in their opinion to accomplish the purposes set forth . . ."

The second commission was also directed by congress to "submit interim reports at such time, or times, as the commission deems necessary" and was authorized to propose "such constitutional amendments, legislative enactments and administrative actions as in its judgment are necessary to carry out its recommendations." The commission did not propose any constitutional amendments, although it did recommend various legislative remedies. It had occasion frequently, as its reports and recommendations were made public and provoked con-

trovery, to draw attention to the wide scope of its authority as expressed in the act.

For the investigative phases of its work, the commission created "task forces" or study groups, composed of eminent citizens with experience in government, business, the professions and academic fields. Among the members of these task forces were many who had had experience in the executive agencies of government, including the military establishment.

In the course of their work, the commission and its task forces inquired into 17 functional activities. Of the 64 federal executive agencies, 60 were studied. The agencies examined accounted for 95% of the expenditures in the executive branch of the federal government.

The recommendations of the commission did not necessarily coincide with those of the task forces. Aside from the facts, information and conclusions submitted by the task forces, the commission in arriving at its own recommendations drew upon the experience and knowledge of its individual members, as well as upon the results of independent investigations by the commission's staff.

Reports were submitted by the commission to congress on the following subjects:

Personnel and civil service; paperwork management; federal medical services; federal lending, guaranteeing and insurance agencies; transportation; legal services and procedure; use and disposal of federal surplus property; subsistence services (food and clothing); business enterprises in competition with private industry; depot utilization (warehousing and storage); research and development in the government; overseas economic operations; real property management; budget and accounting; business organization of the department of defense; intelligence activities; and water resources and power.

Chairman Hoover estimated that savings sufficient to balance the federal budget and to permit a reduction in taxes could be realized through the adoption of the commission's recommendations. (The federal budget was out of balance by nearly \$4,000,000 at the end of the fiscal year on June 30, 1955.) The task forces which studied the various executive departments estimated potential annual savings at more than \$8,500,000, which admittedly contained some duplication. The return from \$10,000,000,000 to \$15,000,000,000 in capital funds to the treasury could be accomplished, according to unofficial estimates based upon commission and task force reports, through the liquidation of unnecessary agencies, the disposal of surplus personal and unneeded real property, and the recovery of government's investment in various federal agencies.

"The primary purpose of the Commission," it said in its final report to congress, "was to recommend methods by which savings could be made in the expenditures of the executive branch without injury to the security or welfare of the country." Concern for the national interest pervaded the entire series of reports. The commission also sought to eliminate any suggestion that meritorious governmental activities or services, for which there was a demonstrated need, be eliminated. The commission did, however, recommend the elimination of nonessential government activities of various types, and the substitution of private enterprise for government enterprise where the former can perform a service or a function more efficiently and at less cost.

The commission and its task forces drew attention to high subsidies in various government enterprises and recommended that such subsidies, except where clearly in the national interest, be discontinued, or be fully disclosed to the public. The commission repeatedly in its reports expressed disapproval of conditions under which the general taxpayer is levied upon to pay for special benefits to a fraction of the population. Except

what was characterized as "gold-bricking," this criticism, however, was not directed toward the benefits and privileges allowed to war veterans. The commission urged that where government competes with private business it impose charges sufficient to cover true costs.

Almost half the recommendations submitted by the commission would not require congressional action. They could be put into effect by the executive departments. An extensive program of executive action on these recommendations was initiated. About 50 identifiable administrative recommendations were adopted by various departments on their own initiative within a short time after the commission submitted its reports. A number of anticipated recommendations were effectuated while they were being discussed by task force members with executive departments.

More than 175 bills relating to the commission's various recommendations were introduced in congress before that body adjourned in August. Bills implementing various recommendations were expected to receive active consideration at the session beginning in Jan. 1956.

Clarence Francis, chairman of the Citizens Committee for the Hoover Report, reported the results of an analysis of the commission's recommendations, saying (Aug. 24, 1955) that the "controversial aspects of the program can easily be exaggerated. . . . There is very general support for, and no known opposition to, 194 of them," he said. "There is general support for, and mild opposition to another 75. The remaining recommendations have drawn strong opposition, but they are also warmly supported in other quarters."

Chairman Hoover in a statement June 30, 1955, the day the commission ceased to exist, described the complexity of the federal government's activities in the following language: "The Federal medical services are carried on by 26 different executive agencies; legal services by 54 different agencies; research and development by 29 agencies; lending, guaranteeing and insuring by 104 different agencies; transportation by 22 agencies; activities in competition with private enterprise by a dozen agencies, and so on."

"A large part of our wasteful methods in the government arise," Hoover said, "from systems of administration which were efficient enough before the fabulous growth of the federal executive branch by about 14 times the size of 25 years ago. Some of these faulty systems are due to obsolete legislation which obstructs progress. Some are due to the tenacity of government agencies to the idea that their empires are sacrosanct. Some are due to the pressure groups that profit from the present set-up of these agencies and resent all change. The problems we deal with are mostly beyond the remedy of any single official. And I may say at once that there are many able and dedicated officials in government who are struggling to unwind these tangles."

Under the act creating the commission and defining its duties, the following members were appointed:

By the president—Herbert Brownell, Jr., attorney general of the United States; Arthur S. Flemming, director of Office of Defense Mobilization; James A. Farley, former postmaster general of the United States; Herbert Hoover, former president of the United States.

By the president of the senate—the then Sen. Homer Ferguson (resigned April 4, 1955); Sen. Styles Bridges (succeeded former Senator Ferguson April 4, 1955); Sen. John L. McClellan; Solomon C. Hollister, dean of the college of engineering, Cornell university; Robert G. Storey, dean of the school of law, Southern Methodist university.

By the speaker of the house—Rep. Clarence J. Brown of Ohio and Rep. Chet Holifield of California; Joseph P. Kennedy,

former ambassador to Great Britain, and Sidney A. Mitchell, who was the executive director of the first Hoover commission.

The commission comprised seven Republicans and five Democrats. The notation was made in the final report to congress that the commission "never once divided upon party alignment." (See also CIVIL SERVICE.) (E. LY.)

Hormones: see ENDOCRINOLOGY.

Horse Racing. Nashua, bay colt from the Belair Stud stable of William Woodward, Jr., gained laurels as top three-year-old of 1955 and clinched honours as "horse of the year" by defeating Swaps, pride of the west, in a match race at Chicago, Ill., on Aug. 31. Nashua, champion of the east, was ridden by Eddie Arcaro and at the end of the 1¼-mi. run was 6½ lengths ahead of Swaps, owned by Rex C. Ellsworth. Each horse carried 126 lb. in the \$100,000 winner-take-all contest. Willie Shoemaker was aboard Swaps, who entered the race with eight straight victories as a three-year-old. Nashua had a record of eight triumphs in nine starts, having lost to Swaps in the Kentucky Derby. The Ellsworth colour-bearer injured his right front foot in the match race and was retired for the balance of 1955. Nashua went on to win the Jockey club Gold cup at Belmont Park, Elmont, N.Y., on Oct. 15. Winning \$52,850 in the Gold cup, Nashua raised his earnings to \$945,415, a total surpassed only by Calumet farm's Citation, who won \$1,085,760. Nashua suffered his second setback of the campaign on Sept. 24 when he ran third in the \$106,700 Sysonby stakes at Belmont Park. The King ranch's High Gun took that event by a head from Jet Action.

Sunny Jim Fitzsimmons, 81-year-old dean of trainers, who handled the Belair string, including Nashua, and the Wheatley racers, was among the year's top trainers. Arcaro, with numerous stake victories, was leading jockey in money earned while Willie Hartack, with more than 375 winners early in November, was far ahead in number of victors ridden.

Highlights of some of the major U.S. races of 1955 follow:

Kentucky Derby.—Swaps, ridden by Shoemaker, defeated favoured Nashua by 1½ lengths in the blue-ribbon classic before 100,000 at Louisville, Ky., on May 7. The winner paid his backers \$7.60 for \$2. Third money went to John W. Galbreath's Summer Tan. Swaps earned \$108,400.

Preakness.—Nashua set a Pimlico record of 1 min. 54.6 sec. for 1⅜ mi. in winning the 79th running of the stakes at Baltimore, Md., on May 28. In giving Jockey Arcaro his fifth Preakness triumph, Nashua defeated Mrs. Marion du Pont Scott's Saratoga by a length, with Clifford Moer's Traffic Judge third.

Belmont Stakes.—The 87th running of this classic at Belmont Park on June 11 resulted in an easy triumph for Nashua and Arcaro as they took first money of \$83,700. Blazing Count was second and Portersville third.

Dwyer Stakes.—Arcaro rode Nashua to a five-length decision over Saratoga at Aqueduct, N.Y., on July 2.

Arlington Classic.—A 3-10 favorite, Nashua was extended to the limit to win the \$148,500 race at Arlington Park, Chicago. Arcaro got his mount home with only a half length to spare over Traffic Judge.

Wood Memorial.—Nashua beat Summer Tan by a neck in the \$111,700 event at Jamaica, N.Y. Ted Atkinson rode Nashua, who won \$75,100.

Flamingo.—Arcaro and Nashua survived a claim of foul to win the \$141,800 Flamingo at Hialeah Park, Miami, Fla. Saratoga was second and Cup Man third. The victor's reward was \$104,600.

Florida Derby.—Nashua, with Arcaro aboard, defeated Blue Lem by only a neck in the \$148,750 race at Gulfstream Park, Hallandale, Fla. The event, run over a sloppy track, added \$100,000 to Belair's earnings.

Santa Anita Derby.—Swaps scored a half-length victory over Jean's Joe in this \$137,500 race at Arcadia, Calif. Johnny Longden was up on the victor.

Californian.—The Kentucky Derby victor set a world mark of 1 min. 40½ sec. for 1⅜ mi. on June 11 at Hollywood Park, Inglewood, Calif. Ridden by Dave Erb, Swaps defeated Determine to earn \$63,700.

Westerner.—Swaps took the \$57,750 race at Hollywood Park, by six lengths.

American Derby.—Swaps beat Traffic Judge by a length in the \$146,425 test at Washington Park, Chicago. In his debut on a grass course, Swaps tied the American turf mark of 1 min. 54½ sec. for 1⅜ mi.

Belmont Futurity.—Nail, owned by Mrs. A. A. Bigelow of Palm Beach, Fla., took \$100,425 of the purse of \$125,125 at Belmont. Head Man was second.

Gardenia Stakes.—H. E. Jackson's Nasrina won the \$130,300 stake at Garden State Park, Camden, N.J. The winner gained \$87,575 of the world's richest purse for two-year-old fillies.

Hawthorne Gold Cup.—Hasseyampa won the \$94,050 race that marked closing day at Hawthorne track, Chicago.

Ladies Handicap.—C. T. Chenery's Manotick was a surprise winner in the \$62,000 test at Belmont Park.

Trenton Handicap.—Social Outcast set a Garden State Park record for 1 1/4 miles in winning the \$50,000 added event in 2 min. .01 sec.

Gallant Fox Handicap.—Misty Morn took the \$85,550 race by three lengths at Jamaica.

Remsen. Nail won the \$64,425 stake by defeating the 9-2 favorite, Prince John, at Jamaica.

Washington (D.C.) International.—El Chama and Prendase, Venezuelan entries, ran first and second at Laurel, Md. El Chama, owned by Carlos Rincones of Caracas, Venez., finished a head in front of Prendase, carrying the silks of José Siccaldi. Favoured Social Outcast was third. The victor earned \$50,000.

Arlington Handicap.—Hasty House farms' Platan, with Johnny Adams in the saddle, earned \$104,650 by winning at Chicago. The gross purse of \$161,600 made the event the world's richest race on grass. Platan set a new American record of 1 min. 54 3/8 sec. for 1 1/8 mi.

United Nations Handicap.—Mrs. H. L. Nathenson's Blue Choir won the \$104,600 turf event at Atlantic City, N.J.

Garden State Stakes.—The richest purse in the history of the sport was won on Oct. 29 when the Elmendorf farm's Prince John was victor at Camden, N.J. Jockey Angel Valenzuela rode the 24-1 shot to a nose victory over C. V. Whitney's Career Boy. The event had a gross purse of \$282,370 of which \$157,918.50 went to the winner.

Temple Gwathmey Handicap.—The world's richest jumping race, grossing \$57,300, was taken by Neji at Belmont. Carrying the top weight of 167 lb. that included Frank (Dooley) Adams, number one steeplechase rider, Neji brought his year's earnings to \$91,405.

San Fernando Stakes.—Poona II, ridden by Shoemaker, was first at Santa Anita, setting a world turf record for 1 1/8 mi. of 1 min. 40 3/8 sec.

Widener.—Surviving a claim of foul, Hasty Road won the \$132,800 Widener at Hialeah. He earned \$95,600 in leading Capeador by a neck, with Social Outcast third.

Santa Anita Handicap.—Shoemaker and Poona II teamed to capture the \$140,300 contest.

Swift Stakes.—Nance's Lad, owned by H. A. Dabson, scored one of the year's major surprises by winning at Belmont. Boston Doge met his first setback in 11 starts when he ran third in the seven-furlong sprint. Informant was second.

Washington Park Handicap.—Jet Action, with Shoemaker up, was first in the \$152,950 race at Chicago.

Washington Park Futurity.—Swoon's Son, owned by E. G. Drake, won the \$147,845 stake for his sixth straight victory and became the leading juvenile money winner of the year with \$221,120.

Arlington Lassie.—Judy Rullah took the \$95,505 stake for a fourth straight triumph.

Sunset Handicap.—Social Outcast won the \$110,500 race at Hollywood Park.

Chicagoan.—Honey's Alibi, owned by H. M. Warner, won the first running of the \$62,500 Chicagoan at Washington Park.

Arlington Futurity.—Swoon's Son took the \$144,580 race by three lengths.

Delaware Handicap. Parlo, a four-year-old miss, won the richest race in the world for fillies and mares on July 2. Parlo took \$99,900 of the \$151,500 purse.

Hollywood Gold Cup.—King ranch's Rejected beat Alidon by a nose with Determine third, in the \$137,100 race.

Harness Racing.—Scott Frost from the Shafter (Calif.) stables of Sol Camp became the first winner of the sport's triple crown by taking the Hambletonian, Kentucky Futurity and Yonkers Futurity. The nation's leading three-year-old trotter driven by Joe O'Brien, captured the 30th running of the Hambletonian at Good Time Park, Goshen, N.Y., in straight heats on Aug. 3. The race grossed \$86,863.32, with the winner taking \$51,075.63. Scott Frost took the \$73,840 Yonkers (N.Y.) Futurity, richest night race of the sport, on Sept. 1. Defeating Galophone, the victor earned \$36,550.80 and set a one-year earnings record for a harness racer, bringing his total to \$119,651.80. Scott Frost added to his winnings on Oct. 6, taking the \$62,700 Kentucky Futurity at Lexington.

Quick Chief, owned by John Froehlich of Brookville, N.Y., won the Little Brown Jug race that grossed \$66,683 at Delaware, O., and was first in the \$71,040 William H. Cane contest at Yonkers (N.Y.) raceway. Adios Harry, owned by J. Howard Lyons of Greenwood, Del., and Adios Boy, property of the estate of J. S. Turner, Sr., of Nassawadox, Va., were other prominent racers during the year.

A record total of \$500,000 was paid for Adios, 15-year-old stallion, on Aug. 29. The price was four times higher than the previous record paid for a standardbred. Hanover Shoe Farm of Hanover, Pa., owned by L. B. Sheppard, bought the stallion from D. Miller, owner of Meadowlands farm at Meadowlands, Pa.

Halls of Fame.—The new \$300,000 home of the National Museum of Racing was dedicated by Gov. Averell Harriman of New York on Aug. 16. Located at Saratoga Springs, N.Y., site of the 91-year-old Saratoga track, the museum became the second in New York state to represent horse racing, the harness sport.

TRAINER MESHACH TENNEY AND SWAPS prepare to bed down the night before the Kentucky Derby. Swaps beat highly favoured Nashua in the 193 classic, but later lost a match race with the same horse at Washington Park, Chicago, Ill., in August.

Hall of Fame being located at Goshen. Earle Sande, rider of three Kentucky Derby winners, eleven other jockeys and six trainers were named to the Hall of Fame in 1955. Gallorette, second leading money-winning mare of all time (\$445,535), was voted first place in nation-wide balloting to determine America's greatest racing mares. Also named were Twilight Tear, Regret, Top Flight, Miss Woodford, Busher, Beldame, Princess Doreen, Bewitch and Imp. The balloting was conducted by the Delaware Steeplechase and Race association. (T. V. H.)

Canada.—Prior to June 1955 subsection 3 of Section 178 of the Criminal Code of Canada provided that all pari-mutuel betting on horse races in Canada be under the supervision of an officer appointed by the minister of agriculture and that the cost of such supervision be borne by the racing association conducting the race meeting.

In administering this section, the department of agriculture, under whose jurisdiction this duty falls, found that the rising cost of providing supervision was creating a hardship on the smaller racing associations in Canada. For this reason, legislation was enacted at the second session of the 22nd parliament, 1955, which now provides that the person or association conducting a race meeting shall pay to the receiver general of Canada one-half of one percent of the total amount of bets made through the agency of a pari-mutuel system operated under such supervision, on any race run at such meeting.

The moneys derived through this levy would be used to finance the carrying out of the supervision and would enable the department of agriculture to provide a more adequate and uniform supervision on all race tracks. The federal government does not derive any revenue from pari-mutuel betting. A pari-mutuel tax is collected by the provincial government of the province in which the betting is conducted. (J. D. HN.)

Great Britain.—In the National Hunt season for 1954-55, the Champion hurdle was won by Clair Soleil and the Gold cup steeplechase by Gay Donald. The Grand National steeplechase went to the Irish horse Quare Times. T. Molony was National Hunt champion jockey for the fifth time.

The flat racing in 1955 suffered various disruptions—because of the newspaper strike the first month passed in obscurity; the railway strike caused the royal Ascot meeting to be postponed a month and consequently training schedules were dislocated; the unusually fine summer brought hard ground and small fields; and, lastly, the coughing epidemic in August and September was very severe.

The three-year-old filly Meld won the Thousand Guineas, the Oaks and the St. Leger, being the first filly to accomplish such a feat since Pretty Polly at the beginning of the century. The other champion was the three-year-old sprinter Pappa Fourway, who won all his eight races and could stand comparison with the flying Abernant, the greatest sprinter since World War II. Our Babu ran on determinedly to take the Two Thousand Guineas; and the Derby was won by Mme. Suzy Volterra's Phil Drake from Panaslipper and Acropolis. But Acropolis failed only by a head to hold off Vimy in the King George VI and Queen Elizabeth stakes.

The Ascot Gold cup was won by the Italian Botticelli. The Eclipse stakes went to Darius and the Coronation cup to Nartor. Royal Palm took the Nunthorpe stakes; and at Ascot, Camerlane the St. James's Palace stakes, Nucleus the King Edward VII stakes, Elopement the Hardwicke stakes and Prince Earle the Gold vase.

The two-year-old filly Star of India remained unbeaten. P. Smith was champion jockey again. (R. M. GN.)

Horses: see LIVESTOCK.

Horse Shows: see SHOWS.

Horticulture. World horticulture made important advances in 1955. New pesticides and fertilizers and improved methods of applying them proved helpful. Attention was given to killing weed seeds in the ground. Means were found to release nitrogen in the soil gradually. Spraying with planes was stepped up, about 7,000 planes being used in the United States alone.

Marketing of flowers through supermarkets was a trend appearing in Europe, while in Germany automats for vending flowers were noted. A greatly increased sale of flowers in Germany was reported, but the people of the Netherlands bought more flowers per capita than those of any other country, Great Britain coming next and Italy third. The use of plastic pots in place of clay pots was spreading rapidly, especially in Germany. This practice was also making some headway in the U.S., and pointed toward the eventual elimination of clay pots, at least by amateurs.

The British government began an examination of horticultural marketing methods, about which there had been much complaint. An international competition for new irises was founded by the Italian Horticultural society in co-operation with the mayor of Florence. In Australia 95% of the currant crop was set by spraying with hormones. The spraying of corn in Peru was reported to have increased the crop by 400%. The production of vegetables in Haiti was increased 40% through United States help. Iran's pistachio trees, unproductive for 18 years, were reported to have produced \$3,000,000 worth of nuts.

There was, however, another side to the picture. The freeze in April, which completely ruined the peach crop in Georgia, took a heavy toll of gardens throughout the southern states of the United States. Hurricanes brought floods in August which caused enormous losses in the northeastern states, losses of market gardeners in Massachusetts alone being estimated at \$3,000,000. Amateur gardeners and commercial florists suffered great damage. The California flower industry had heavy losses in September, when the temperature remained at more than 100° for seven days. New England suffered throughout the summer from a heavy infestation of Japanese beetles, making the growing of roses and certain other flowers difficult. The U.S.S.R., Bulgaria and Poland were reported to be short of pesticides with which to control insects.

A Better Lawn and Turf institute was organized by seed growers and experiment stations with headquarters in Kansas. The Weed Society of America was formed in Fargo, N.D., with R. H. Beatty as president. Work was begun on the construction of a \$1,000,000 flower market in San Francisco, Calif. The National Council of State Garden Clubs accepted an invitation of the St. Louis Botanic garden to construct a building on the garden's grounds in which to establish its permanent headquarters. The Allied Florists association of Washington, D.C., presented Pres. Dwight D. Eisenhower a complete flower garden covering 840 sq. ft. for his home at Gettysburg, Pa. The garden contained 155 specimen boxwood plants and when finished would be surrounded by a serpentine fence. Richard P. White, executive vice-president of the American Association of Nurserymen, was awarded the George Robert White medal of honour. The New York International Flower show was omitted, but announcement was made that it would be held in 1956 in the huge building formerly occupied by the John Wanamaker store. R. B. Farnham was named director. The building boom in the U.S. caused a heavy demand for nursery stock for new gardens. Few large estates were being planted. Almost 95% of all nursery stock delivered went to home gardeners.

The biennial International Succulent Plant congress was held in London in September with speakers from many parts of the world. The world congress of Interflora was held in Vienna,

Aus., June 4-9, with 300 delegates representing 19 nations. Interflora is the European counterpart of the American Florist Telegraph Delivery association.

Once in five years an international flower show is held at Ghent, Belg. The one held early in May 1955 had a tremendous display and a very large attendance. The 14th International Horticultural congress was held in Scheveningen, Neth., Aug. 29-Sept. 6. There were 894 delegates, representing 63 countries, with 73 from the U.S.

The Netherlands had a good growing year for bulbs, but shipments were about one week late in reaching the United States. New and serious complications arose from the fact that England was now growing tulips in quantity, but was reputed to be sending out smaller bulbs than is permitted in the Netherlands, where ten-centimetre bulbs are the minimum allowed in the trade. It was reported that English bulbs were sent to Canada and reached the U.S. from that country, interfering with the market for guaranteed-size bulbs. Japan also started shipping out tulip bulbs which were undersized, according to the claims of Dutch growers. Paper white narcissi, grown chiefly in France, were in short supply. Shipments of lily-of-the-valley pips from Germany were adequate.

The daffodil crop in the Pacific coast states of the United States was satisfactory.

Cranberry growers in the U.S. found themselves again building up a surplus. The total estimated yield of 1,068,900 bbl. was only slightly less than in 1954. Vegetable and fruit growers in the eastern states had a disappointing season. (See also BACTERIOLOGY; FRUIT; VEGETABLES.) (E. I. F.)

Hospitalization Insurance: see HOSPITALS; INSURANCE.

Hospitals. During 1954 a total of 20,345,431 persons were hospitalized and 3,342,599 infants were born in the 6,970 hospitals in the United States listed by the American Hospital association. An average of 1,342,508 patients and 45,337 newborn infants were cared for in these hospitals every day. In addition, an estimated 65,397,318 persons went to these hospitals for treatment that did not necessitate their remaining overnight.

Comparison of these figures with those of 1953 shows that more persons were receiving medical treatment in hospitals and more babies being born in them than ever before.

Of the 6,970 hospitals, 79% had fewer than 200 beds per hospital and 61% had a bed complement of less than 100. These hospitals provided a total of 1,577,961 beds for the population of the U.S., an average of 226 beds per hospital. This meant that for every 1,000 persons there were 9.8 hospital beds. The majority of the beds were in nonfederal short-term general and special hospitals (35%) and hospitals for mental and nervous disorders (43.8%).

In the nonprofit general hospitals, which provide most of the nation's hospital service, the cost of caring for the patient exceeded what he paid for it by \$1.71 a day. Operating expenses for all such hospitals for the year were \$2,276,457,000, but the patients paid for their care only \$2,106,194,000. The difference was made up by voluntary contributions to these charitable institutions from individuals, foundations and industry and by allotments from city, county and state governments for the care of indigent patients.

Broken down to a daily basis, the cost of caring for the patient in the short-term nonprofit general hospitals averaged \$22.78 according to the annual survey of the American Hospital association. This was an increase of \$1.69 a day over the \$21.09 daily cost of the previous year. Medical advances, however, continued to make it possible to shorten the patient's average

stay in these hospitals from 7.6 to 7.5 days. Thus, while rise in average cost per patient day was 8%, the average cost per hospital stay rose only 6.6%.

One of the major reasons behind the higher cost of hospital care was personnel. Nonprofit general hospitals reported that in 1954 they employed an average of 207 persons for every 100 patients, as compared with 193 the previous year. This resulted in better patient care but also in higher payrolls. Payroll expenses alone took 60% of these hospitals' operating dollars, an increase of 1.4% over the 58.6% in 1953. Higher salaries were also a factor in this.

In spite of the greater number of employees per 100 patients, a shortage of personnel continued to be a major problem of hospitals. Although slightly more students entered schools of nursing, the number was not sufficient to meet the deficit; the estimated 46,000 professional graduate nurses needed to staff the nation's hospitals adequately. (See NURSING.)

Because advancements in medical science are resulting in an older population, attention of the hospital field turned toward care for this group of persons. In 1955 the congress authorized appropriations totalling \$111,000,000 for the hospital construction (Hill-Burton) program. This included \$90,000,000 for basic construction program and \$21,000,000 for hospitals for the chronically ill and impaired, rehabilitation facilities, diagnostic centres or diagnostic and treatment centres and nursing homes.

The sum of \$1,200,000 was allocated for research projects on the effective development and utilization of hospital service facilities and resources.

During 1954 the number of persons in the United States with some type of hospital expense protection increased by 4.3% to a new high of 101,493,000. The hospital-sponsored nonprofit Blue Cross plans, celebrating the 25th anniversary of the payment idea, made payments to hospitals of more than \$76,676,000 in 1954.

The program for accrediting hospitals undertaken jointly in 1952 by hospitals, physicians and surgeons was continued. One objective of this program was to provide the public with information about hospitals that meet minimum standards of good

MOUNT SINAI HOSPITAL, opened at Los Angeles, Calif., in 1955

hospital care. During 1954 the Joint Commission on Accreditation of Hospitals surveyed, on request of the hospitals themselves, 1,376 hospitals. This brought the total of hospitals accredited in the U.S. and Canada to 3,513.

In Sept. 1954 the country's hospitals voted to expand, through their national association, their program of research into more progressive hospital management and operations that would improve the care of the patient. During 1955 the first part of the American Hospital association's expanded program of service to hospitals got underway.

One of the most significant developments in Canada during 1954 was the marked increase of activity in the rehabilitation of disabled persons. The federal government in 1953 added a new grant to the already extensive health grants program. Known as the medical rehabilitation grant, it headed a list of four new ventures in the national health field. The others were laboratory and radiological services grant, a child and maternal health grant and the extension of the hospital construction grant to apply to nursing school facilities located in hospitals or in nurses' residences.

Activity in the mental health field continued in 1954, with the establishment of many new clinics and other facilities for the treatment of mental and nervous disorders. Initial steps were taken to develop uniform standards for psychiatric nursing. During 1953 a Canadian group was organized to assist in and augment the work of the Joint Commission on Accreditation of Hospitals. Two hospital surveyors were engaged early in 1954, as representatives of the doctors and hospitals of Canada, to visit Canadian hospitals. During the year, 155 Canadian hospitals were surveyed.

A total of 1,398 Canadian hospitals were listed by the Canadian Hospital association for 1954. These hospitals had a total of 186,562 beds, of which 47% were in the short-term general and special hospitals, 34% in the mental and allied hospitals and the balance among other specialized categories. The average daily operating cost per patient in the 434 short-term nonprofit general hospitals in Canada was \$14.19. The average stay for patients in these hospitals was ten days. (E. L. Cy.)

International.—The ninth congress organized by the International Hospital federation was held at Lucerne, Switz., in May 1955. The theme chosen for discussion was "Mental Well-being of Patients in the General Hospital." It was decided to arrange a study tour to be held in Ireland in 1956, and for the next congress to be held in Lisbon, Port., in 1957.

Great Britain.—The cost of hospital service in Great Britain for 1954-55 was originally estimated at £321,000,000. A supplementary estimate for England and Wales was submitted in Feb. 1955 providing for a further sum of £2,600,000. The cost for 1955-56 was estimated at £345,000,000.

A *Report on Hospital Costing* was issued by the working party set up by the ministry of health in 1953 to devise a system of costing, with regard to the need to limit to the minimum the cost in money and manpower of introducing such a system. It recommended the gradual introduction of a comprehensive system, starting with the largest general hospitals with an annual expenditure of £150,000 or more.

The minister of health announced proposals for expanding the hospital building program in 1956-57 and 1957-58. New building projects would be started to cost £7,500,000 and £10,000,000, respectively, and £2,000,000 and £4,000,000, respectively, would be provided for replacement of plant. (A. G. L. I.)

Hotels, U.S. Approximately 54 new hotels, valued at \$146,000,000, and representing 10,098 new guest rooms, were built or started in the U.S. during 1954, according to the American Hotel association. This compares with 104 new

FONTAINEBLEAU HOTEL, Miami Beach, Fla., opened in 1955

hotels built in 1953, valued at \$267,700,000, and 97 hotels built in 1952, valued at \$160,000,000.

In addition, approximately 2,450 more rooms were added to existing buildings by U.S. hotels, during 1954.

Hotels completed or under construction in 1954-55 included: the Fontainebleau, Miami Beach, Fla., 554 rooms (\$15,000,000); Hotel Statler, Hartford, Conn. (\$5,500,000); Bal Harbour, Miami Beach, Fla., 260 rooms (\$3,000,000); Hotel DeLido, Miami Beach, Fla. (\$3,500,000); Golden Gate hotel, Miami Beach, Fla. (\$6,500,000); Hotel Riviera, Las Vegas, Nev., 315 rooms (\$3,500,000); Royal Nevada hotel, Las Vegas, Nev. (\$5,000,000); Jackson Hole lodge, Wyo., 330 rooms (\$6,000,000); Casa Blanca, Las Vegas, Nev. (\$3,500,000); the Plainsman, Albuquerque, N.M., 225 rooms (\$2,000,000); Treadway inn, Rochester, N.Y., 140 rooms (\$1,600,000).

In addition, several other major projects were planned or were under construction during 1955, including a \$35,000,000 combined hotel and department store for Denver, Colo., to be built by Webb & Knapp, New York realtors; a \$10,000,000 resort centre for Rangeley, Me., to include 500 cottages and to be built by S. C. Noyes Co., and the Queen Elizabeth hotel, at Montreal, Can., to be built by the Hilton corporation at a cost of \$20,000,000 and scheduled to open in 1957.

Average hotel occupancy during 1954 was 73.7% compared with 75.8% in 1953.

A survey by the American Hotel association indicated that U.S. hotels had spent nearly \$3,000,000,000 in the last five years on modernization and rehabilitation. New hotel facilities for motorists included adjoining parking lots, lighted, paved and fenced-in; adjoining or underground garages, including many with direct entrances to the hotel; and special motor entrances, provided in some cases with separate registration desks and direct elevator service to guest-room floors. Among the special arrangements for family groups were "family units" designed to accommodate as many as four members of a family in beds, cots or cribs; baby-sitting services; special dining facilities for family groups with children; and nurseries equipped with toys and cribs.

According to the 1955-56 edition of the *Hotel Red Book* there were more than 15,582 hotels in the U.S., with a value in excess of \$8,200,000,000 (buildings, furniture, fixtures) exclusive of land. Their 1,640,000 rooms could accommodate more than 2,000,000 guests each night. During the calendar year 1954, the nation's hotels were host to more than 260,000,000 room guests.

Gross sales of the nation's hotels in 1954 were \$2,575,802,000

and were divided as follows: room sales, 44.1%; meals, 34.0%; alcoholic beverages, 13.6%; packaged liquor sales, .8%; other merchandise, 1.6%; space rental to concessionaires, 1.4%; and other, 4.5%.

A "universal type" credit card which enables travellers to charge all normal hotel bills and to cash checks at hotels throughout North America, sponsored by the American Hotel association, is issued by the American Hotel Credit corporation, Greenwich, Conn. Called the Travelcard, it is sold for \$5 to corporations and individuals. More than 53,000 Travelcards were in use by the travelling public during 1955.

Founded in 1910, and official spokesman for the hotel industry, the American Hotel association is a federation of 80 state and regional associations in the United States, Canada, Mexico, Bermuda, Hawaii, Alaska, Puerto Rico and the Virgin Islands. Its membership was in 1955 comprised of approximately 6,000 hotels representing about 75% of the nation's hotel rooms.

(C. A. HH.)

Housing. The U.S. housing market of 1955 was a mixture of boom activity and intimation of decline. The volume of new construction gave every evidence of reaching levels second only to the peak of 1950. Real-estate turnover continued at a brisk rate. Rents and vacancies moved up fractionally and the market generally was characterized by increased competition.

During the first seven months of the year, 922,300 nonfarm dwelling units were started, a number equivalent to an annual seasonally adjusted rate in excess of 1,300,000. Roughly three out of four starts were in major cities and their surrounding suburban areas, while the remainder were located in nonmetropolitan places. About 90% of all new dwelling units were in one-family houses, with 6% in apartment structures of five or more units. Virtually all of the new dwellings were privately financed, with less than 2% in public ownership.

In the early months of the year, inflationary pressures resulting from the record levels of construction began to appear in various sectors of the market. Land prices rose, and construction costs moved upward. Temporary shortages were felt in a number of building materials, notably sheetwork, wallboard, portland cement and certain steel items. Home prices, however, did not rise in any significant degree. Thus, there was a narrowing of the margins between costs and prices and resultant lower profits. Used-home prices were firmer than in the previous year, in part because of the 1954 changes in Federal Housing administration regulations which brought credit terms on existing homes close to those for new. In general, the market became more competitive than it had been in some time.

Government officials were particularly concerned about these developments, especially in view of the fact that the annual rate of construction was about double the rate of new household formation. It was felt that inflationary pressures could be generated by higher prices on scarce building materials put into what might turn out to be surplus houses. In the early spring a cautious step was taken to tighten mortgage credit by requiring that closing costs of home purchases, such as fees for title search and for attorneys, be paid in cash. Previously, a buyer in some instances could include these settlement charges in the mortgage.

Further steps were taken in midsummer, when the credit terms under the government's mortgage guarantee programs were tightened. Veterans administration loans, which previously had required no down payment and could run as long as 30 years, were limited to a 25-year repayment period and required a down payment of at least 2%. Similarly, FHA loans required a 7% down payment on the first \$9,000 of value plus 27% on any amounts above this sum. This compares with 5% and 25% under the previous regulation.

Some observers maintained that this action was to a large extent unnecessary because private lending institutions had imposed restrictions of their own which were more stringent than those established by the government. Moreover, developments in the financial markets seemed to contract the general supply of mortgage funds. In the New York federal reserve district, banks stopped the practice of "warehousing" mortgage loans. Since a good many large builders and even some insurance companies had made use of the temporary warehouse credit until such time as more permanent investors or investment funds were available, the abandonment of this practice influenced the flow of VA and FHA mortgages.

Further contraction in funds available for mortgage purposes resulted from the decline in price and the consequent increase in yield on long-term government bonds. For example, the old series of long-term bonds, the 2.5s of 1967-72, increased in yield from 2.78% in June to 2.98% by midsummer, and the new series, the 3.25s of 1983 and the 3% bonds of 1995, increased in yield from 2.93% to somewhat in excess of 3%. Yields on government bonds approached the levels at which they became competitive with the net return available from home loans—particularly the FHA and VA mortgages.

Aside from any question of comparative yields, declining prices for government bonds always reduce the funds available for mortgage loan purposes. A larger proportion of mortgage funds comes from the liquidation of government bonds held by the major types of financial institutions. In a period of declining bond prices, many of these investors can liquidate only at prices below their acquisition costs. Despite the fact that funds can be reinvested in higher-yield obligations at this time, many lenders are unwilling to show a capital loss on their books. As a result, mortgage money tends to be limited to new savings and to amortization payments.

Vacancy and Withdrawal Rates.—The fear of overbuilding was allayed somewhat by a nation-wide survey of vacant houses conducted by the U.S. department of commerce. The survey revealed that only 2.2% of all dwelling units in the United States were unoccupied and available for sale or rent. In 1950 the comparable figure was 1.6%. Secretary of Commerce Sinclair Weeks, in releasing these figures, maintained the data showed that the demand for housing continued to be strong and that the market was absorbing the near record number of new dwelling units that were being constructed. The national vacancy rate, however, did not necessarily reflect the situation for any given locality. The national figures were averages in which housing shortages in some areas were offset by surpluses in others. The problem thus was to secure an adequate distribution of homes geographically and by price range.

In all, 8% of the total dwelling stock was vacant in April 1955. These included seasonally occupied units (2.6%), units rented or sold awaiting occupancy (0.5%), units held off the market (1.5%) and dilapidated units (1.2%). The remaining 2.2% were for sale or rent. From a market point of view, no significant change in the vacancy picture had occurred between 1950 and 1955.

One of the major reasons that vacancy rates had not risen to any marked degree, despite the decline in net household formation, was to be found in a survey of the bureau of labour statistics which revealed a higher rate of withdrawal of dwelling units from the housing supply. For years analysts had assumed that the replacement market for housing (unlike that for automobiles or other consumer durables) was of little or no importance, and that the principle demand for new construction therefore had to come through additions to households. The findings of the bureau of labour statistics were thus of major significance.

In the cities for which information had been released, 1% or more of the rental units were demolished, condemned or otherwise withdrawn from housekeeping use in recent years. In some cities the rate was as high as 2%. On the basis of these data, rough estimates were made which indicated that 250,000 to 300,000 nonfarm dwelling units may have been withdrawn from the housing supply during each of the last few years. The U.S. Census studies also indicated that the addition of dwelling units to the housing inventory through structural conversions was outweighed by conversion from dwellings to stores or other nonresidential uses, or from small apartments to larger units. Thus it appeared that housing retirements may have accounted for most of the difference between the annual number of new nonfarm households formed and the substantially larger number of some dwelling units built. Unfortunately, withdrawals included many sound houses that were demolished to make way for public improvements or private nonresidential areas such as office and commercial buildings.

Housing Amendments of 1955.—For the fifth consecutive year bitter controversy centred around the annual housing act, and as usual the differences focused on the public housing program. Early in January the president recommended a two-year public housing program of 35,000 units per year. In the course of the year a number of bills were introduced into the houses of congress, some of which provided for no public housing at all, while others authorized as many as 135,000 units per year plus an additional 50,000 for special accommodations for elderly persons. The act, finally passed long after the scheduled adjournment date, provided for a maximum of 45,000 units between the date of enactment and July 31, 1956. Restrictions were removed, limiting new public units to cities with official redevelopment programs (under title i), and units need no longer be programmed only for persons displaced by slum clearance or other governmental activities.

The 1955 act further advanced the slum clearance and urban renewal program by authorizing an increase of \$400,000,000 in capital grant funds to local governments in 1956 and 1957, plus an additional \$100,000,000 to be used at the direction of the president. Loans and advances were now permitted to aid the development of predominantly open land for industrial or other nonresidential use, but capital grants were still not available for such purposes. The local authority was required to determine the necessity for such projects, and loans and grants for such purposes were limited to 2.5% of the gross costs of all other renewal projects in the area.

The Federal Housing Administration's general mortgage insurance authorization was increased by \$4,000,000,000 and a number of specific provisions of the various sections of the act changed. Mortgage insurance ceilings were raised from \$5,000,000 to \$12,500,000 on multifamily rental, co-operative or renewal projects. For the latter two types of projects, the method of valuation for mortgage insurance was changed from "estimated value" to "estimated replacement cost." This substitute could make larger loans possible and thus provide incentive for sponsors to engage in this type of building activity. Other provisions affecting the FHA included the insurance of mortgages on land and utilities in trailer parks, the military housing program and the elimination of the title ix defense housing program established at the inception of the Korean war.

The Home Loan Bank board, formerly one of the major constituents of the Housing and Home Finance agency, was established as an independent body, reporting directly to the president. Its new name was the Federal Home Loan Bank board, a title it bore in previous years.

Improving American Housing Standards.—Despite the fact that new building had continued at extremely high levels during

MODERN APARTMENT HOUSE constructed in 1955 by a Munich, Ger., manufacturing firm for its employees

the postwar period, neighbourhood deterioration and obsolescence of structures had spread in virtually every urban area. It was estimated by the American Council to Improve Our Neighborhoods (ACTION) that of the 1955 nonfarm housing inventory of 42,500,000 dwelling units, 5,000,000 were slums and 20,000,000 required some sort of rehabilitation. This organization calculated that an investment of \$100,000,000,000 was required during the coming decade, over and above the regular current expenditures, to restore American housing to acceptable standards of occupancy and environment. According to ACTION, these funds would be used in a three-pronged attack: "\$40 billion for minimum rehabilitation and upgrading of non-farm, non-slum housing which is below standards of safe, sanitary, and convenient family living; \$50 billion for clearing and replacing the slums which cannot be salvaged; and \$10 billion for local neighborhood improvement of recreation, traffic, and other public services in rehabilitation areas." At the rate of \$10,000,000,000 a year, rehabilitation would constitute less than 3% of the present annual gross national product. Since the proportion of income that the American consumer devotes to housing had declined in recent years, an additional 3% would merely mean a return to a previous level of housing expenditures. The significance of such expenditures was seen in the fact that \$100,000,000,000 represented 40% of the current value of the entire non-farm housing stock.

On the whole, the construction of 1,550,000 new houses a year was required to accommodate the anticipated number of new families and to replace the existing substandard and obsolete houses, according to calculations made by the Twentieth Century fund. It was expected that 1,200,000 would be provided, on

the average, through regular market channels to families with sufficient income to pay the going price, but that 350,000, representing the excess of need over demand, would only be constructed if some form of public subsidy was forthcoming. A public housing program of this dimension was eight to ten times the size that congress had authorized in recent years.

Housing Accommodations in 1955.—A profile of the housing accommodations of the American people in 1955 was revealed in a study sponsored by the federal reserve board. According to the *Federal Reserve Bulletin* for Aug. 1954, the survey indicated that "changes in a family's housing arrangements are associated with changes in the size and composition of the family, in its financial position, in the job location of the breadwinner, and in housing costs. Individual preferences for owning or renting, apart from the type of housing obtained, also appear to enter into consumer thinking about housing." Among the more significant findings of the survey were:

1. The number of families (excluding those on farms) that owned their own homes increased by one-third between 1948 and 1955. In the latter year, 55% of all families were homeowners, compared with 49% seven years earlier. The largest increase in home ownership occurred in the younger families—those headed by persons 25 to 44 years of age.

2. The trend to home ownership had pervaded all sectors of the population. While only 9% of single persons 18 to 44 years of age were homeowners, the survey revealed that 40% of single persons 45 to 64 years old and almost half of the single persons over 65 years of age were in this category.

3. In younger families the incidence of children seemed to be a more important incentive to home ownership than in older families. Among families with heads 18 to 44 years old, 35% of those with no children under 18 were homeowners, while 52%-65% of families with young children owned their own homes. Among the older families (heads 45-65) home ownership was 69%-70% regardless of the incidence of children under 18.

4. Four out of five families found their dwellings fully or "fairly" satisfactory. A larger proportion of homeowners than renters tended to be satisfied with their present accommodations. Surprisingly enough, of the group who lived with relatives (and these constituted 10% of all "spending units"), only 1 in 12 found this arrangement unsatisfactory. This indicated that a negligible amount of housing demand could be expected to come from doubled-up families.

5. Older families tended to occupy larger quarters than younger families. Households whose heads were under 45 years of age averaged one and one-quarter room per person, while families the heads of which were 55 or over occupied more than two rooms per person. It was suggested that there is a tendency to enlarge quarters as the family grows, but that parents tend to retain the additional space after the children leave home.

6. A sharp rise in mortgage debt was associated with the increase in home ownership. Between 1949 and 1955 the number of mortgaged owner-occupied homes rose from 8,700,000 to 13,200,000, the proportion mortgaged jumped from 45% to 54% and the median size of mortgage increased from \$3,000 to \$4,700. The availability of liberal financing terms during the entire postwar period not only seemed to foster the boom in residential construction, but also acted as an inflationary influence on home prices. In view of the volume of new construction, the high rate of turnover, increased loan-to-value ratios and mounting home prices, it was inevitable that aggregate mortgage debt would reach astronomical dimensions. The liberalization of credit was in large measure the result of the expanded insurance and guarantee operations of the Federal Housing administration and the Veterans administration. The survey indicated that approxi-

mately 35% of all home mortgages were under the FHA or programs. (CH. RA.)

Canada.—The volume of housebuilding activity in the first half of 1955 was greater than in the corresponding period of a previous year. Economists agreed that housebuilding was a major factor in the increase in over-all national business activity. The demand for new dwellings, particularly those for home ownership, was at high levels in most areas. Mortgage funds continued in good supply, and there was some reduction in interest rate charged under the National Housing act. Some local and temporary shortages of building materials were reported but, in general, building materials and labour were readily available. However, building costs were, on the average, slightly higher than year before.

In fact, the building cost increases were anxious signs for more farseeing private building contractors, to say nothing of the government's Central Mortgage and Housing corporation. For instance, setting an index of 100 in 1949, all residential building materials had the following price indexes: 1948, 95.5; 1950, 106.4; 1954, 121.7; June 1955, 124.3. Setting an index of 100 in 1949, all construction workers had the following hourly wage-rate indexes: 1948, 95.5; 1950, 105.3; 1954, 139.4; June 1955, 143.1. Composite indexes of costs of building materials and wage rates of construction workers in residential building thus were: 1948, 95.4; 1949, 100.0; 1950, 106.0; 1954, 128.5; June 1955, 131.4.

Total expenditures on new housebuilding, in the period January to June, amounted to \$518,700,000, which was 27% more than in the first six months of 1954. This increase resulted from a 2% increase in over-all building costs and a 25% increase in the volume of activity. Part of the increase in housebuilding activity represented work done on the dwellings started in the latter part of 1954. This showed up in a rise in the number of dwellings completed, from 41,571 in the first six months of 1954 to 52,228 in the first six months of 1955. Toward the middle of the year, however, work done on dwellings started after the beginning of the year was largely responsible for the high volume of activity.

Starts of new dwellings totalled 57,997 in the first half of 1955. This was 25% more than in the corresponding period of 1954, when starts were delayed by a wet spring and by the revision of the National Housing act. Taking account of seasonal factors, the rate of dwelling starts in the first six months of 1955 therefore was 128,000 per year, or 12.8% more than in 1954. Most of the increase was in single-family dwellings, which reflected the new higher home ownership trend. (C. CY.)

Other Countries.—The total number of new permanent dwellings in England and Wales built during the 12 months ended June 30, 1955, was 300,211, a figure which fell just short of the postwar record production of 308,952 new permanent dwellings for the calendar year 1954. In spite of a decrease in the numbers of completions toward the end of the 12 months ended June 30, a slight increase in the numbers under construction at that date might have meant that the government's target figure of 300,000 houses a year would be maintained in 1955. Altogether, 2,078,505 new permanent dwellings were provided in England, Wales and Scotland under the postwar program. June 30, 1955, and 2,541,507 family units of accommodation were provided, including conversions and adaptations of existing buildings, repair of unoccupied war-damaged buildings and temporary houses.

During 1954 the minister of housing and local government had introduced a guarantee scheme to assist those with limited capital to purchase inexpensive houses on mortgage. Under the scheme, the ministry of housing, the local authority and

Dwellings Completed in Western European Countries and the United States in 1954

Country	Population*	Dwellings
Austria	6,919,000	45,000†
Belgium	8,798,000	43,000†

building society jointly took the extra risk involved in making advances of a higher proportion of the valuation of the property than the building society alone would normally be prepared to make. During the last quarter of 1954, 3,000 advances were made, and during the first half of 1955 advances increased to more than 5,000 a quarter.

The restrictions on credit imposed as an economic measure led to an increase in interest rates charged by building societies in the summer of 1955. The rate at which local authorities could borrow for housing purposes was also raised.

The main housing work of the year had been in the continuation of local authorities' postwar programs for the provision of more houses to reduce the shortage of separate dwellings, to combat overcrowding and to replace slums and redevelop obsolete areas. Local authorities were engaged in drawing up slum-clearance programs for submission to the minister of housing, and they were encouraged to take clearance action without waiting for the approval of the comprehensive proposals. The resumption of the full exercise of slum-clearance powers under the Housing acts led to greater emphasis on redevelopment of congested areas, and in the technical field this was reflected in the organization of a Symposium on High Flats by the Royal Institute of British Architects. The larger cities and conurbations were finding that they had fewer sites available for housing within their boundaries, and that they could not redevelop at a reasonable standard without creating a problem of overspill population. As a result, greater attention was paid to the Town Development act, 1952, which enabled two local authorities to make an arrangement whereby overspill from a congested city was rehoused in a small town wishing to expand. Early in 1955 the minister of housing clarified the position regarding financial assistance available from the government and from the rates of the large authority toward services and housing provided in an expanded town. He also recommended the establishment of green belts to check the unrestricted sprawl of built-up areas. Greater emphasis on slum clearance led to special interest in the human problems of rehousing. A subcommittee of the Central Housing Advisory committee reviewed the residential qualifications required by many local authorities before allocating dwellings to applicants and the problems of unsatisfactory applicants and tenants.

Slum clearance and redevelopment were also the concern of many European countries, and the study groups on this subject were crowded at the International Housing and Town Planning Congress held in the autumn of 1954 at Edinburgh, Scot. Figures for house production in west European countries during 1954 (see Table) showed that in most cases rates had been maintained or improved on previous years. No comparison should be made between different countries since needs, standards, methods of presenting annual statistics and even the definition of a new separate unit differ widely.

The U.S.S.R. was said to have completed 32,000,000 sq.m. in urban areas and 470,000 dwellings in rural areas. In an article

in the *Times* (London) on June 1, 1955, it was stated that in theory a family of five was entitled to 155 sq.ft. of dwelling space, which compared with about 950 sq.ft. for a five-person council house in England. Although it was difficult to obtain figures for east European countries, it appeared that housing output had increased.

In other parts of the world, particularly where industrial de-

velopment and the exploitation of natural resources were creating the need for new townships, housing had been an important concern of government agencies, and in many British colonial territories new housing departments had been set up.

Humour of 1955. Television has created a climate for intimate, relaxed, low-key humour reminiscent of Stephen Leacock's definition of humour as "A kindly contemplation of the incongruities of life." Below are printed some of the best examples of television humour of 1955, selected by artists from their own work.

SID CAESAR ("The Professor," from *Caesar's Hour*, NBC-TV, written by Sid Caesar and Mel Tolkin, Aaron Rubin, Phil Sharp, Charles Andrews and Sheldon Keller; © 1955, Shelllic Corp.)

THE PROFESSOR: (Open on glass door . . . it reads . . . Mammoth Pictures—Board of Directors . . . conference room . . . dissolve to interior board of directors' meeting of movie company. It is luxuriously furnished board room with Carl, Howie and a few others . . . they are seated around table smoking cigars . . . pads, pencils in front of them. Howie is on feet addressing group.)

HOWIE: Gentlemen, Mammoth Pictures is in a serious situation. The New York banks who are our stockholders only know that we are operating at a loss. For that reason they have sent us a man, an expert in the field of motion pictures, who will make a complete analysis of our problems and offer some valuable suggestions.

CARL: I don't care who the New York banks are sending . . . I'm not letting any outsider tell me how to make pictures.

HOWIE: Just a minute, J.B., you may be the producer, but the New York bankers own this studio lock, stock and barrel and they are behind this man 100 per cent. Our jobs and our futures are in his hands . . . we have to listen to him. Besides he happens to be a very successful and brilliant movie maker from Vienna. (Buzz on phone table. . . Howie picks it up.) Yes? Send him right in. He's here gentlemen . . . Prof. Ludwig von Kleinmacher. (Sid comes in very businesslike carrying brief case, walks right to Howie, who greets him with handshake.)

SID: Your name?

HOWIE: John Baxter.

SID: You're fired . . . (to Carl) and you, out . . . All of you . . . you're all fired! Pack your kodaks. We start clean. . . .

CARL: This is preposterous! You can't do a thing like that! I protest! SID: I like your spunk. You're a spunky boy. You're hired . . . and that goes for the rest of you too. Okay, now we got a staff, let's get to work.

HOWIE: Professor, on behalf of our movie company I would like to welcome you to the organization. Here, have a cigar. (Offers him open box of cigars, Sid takes handful, stuffs them in pocket.)

SID: (As he takes cigars) My wife is a chain smoker. (Takes box.) My children like to play with boxes.

HOWIE: Professor, you spent all of yesterday in our projection room looking at all the pictures we made last year. What would you suggest might help us?

SID: A miracle . . . a big miracle, because what I saw there I tell you, you could get arrested for putting out stuff like that. Whatta matter with you . . . people might go to see that stuff.

CARL: Well, Professor, what do you suggest we do?

SID: We have to keep growing, we have

to find new ideas . . . we have to be ingenious. We need realism . . . we gotta look for new places to make pictures . . . everybody has gone to Italy and France and Africa to make pictures. They've done pictures under water, on the water, between the water . . .

CARL: That's impossible!

SID: Impossible! Never say a thing like that. That's two words I never want to hear again. It's men like you who've stopped progress in its tracks. That's what they told Louis Pasteur when he invented the airplane . . . that he couldn't fly . . . and we're all flying today . . . all because of Louis Pasteur.

CARL: Professor . . . Louis Pasteur discovered a cure for rabies and he also discovered how to remove the germ properties from milk, and we call it pasteurization.

SID: Spunky, you just blew the Christmas bonus. Do you like the big house in Beverly Hills, with the swimming pool? You like to ride around in the Jaguar . . . you like walking around in a big office . . . ?

CARL: Oh you mean Louis Pasteur, the one who invented the airplane!

SID: That's right . . . Merry Christmas. Now it's all settled. Louis Pasteur invented the airplane. . . . Right?

ALL: Right!

SID: Now for this musical . . . we get only the best to write the music. We get Beethoven.

CARL: But Beethoven is dead.

SID: (Shocked . . . takes off hat.) Beethoven . . . gone! Ludwig . . . this is a shock . . . You don't read the paper a few days and you don't know what's going on. Well . . . tell you who'll we get . . . Mozart!

CARL: Mozart is dead.

SID: (Shocked.) Wolfgang . . . gone! I gotta send a note to the wife. And he was such a healthy looking man with those long curls . . . Beethoven and Mozart . . . were they both in the same bus crash?

CARL: No, Professor.

SID: Beethoven and Mozart kerfunkt! Well, let's not waste any more time on them. . . . If we can't get them . . . we can't get them. How about Tchaikovsky?

CARL: Tchaikovsky is dead too.

SID: Ah ha, I got you. . . . I made that name up. There is no such name as Tchaikovsky. Right?

ALL: Right!

SID: I came in here with a brief case . . . ah, here it is. Gentlemen, I have a picture for you that will bring us millions of dollars. (Takes heavy script from brief case.) Here it is, I wrote it in German. But we translate it and we got a GREAT picture . . . *Vergangen mit der Wind*.

CARL: (Who has been looking at him suspiciously.) Professor, how would you translate that title, *Vergangen mit der Wind*?

SID: *Vergangen mit der Wind*? Oh, I don't know . . . *Away With the Wind* . . . *Goodbye to the Wind* . . . *So Long With the Wind*!

CARL: (Leans across table . . . pointedly.) *Gone With the Wind*?

SID: Spunky, you did it again. That's a great title! Yah, that's good . . . *Gone With the Wind*. Now, here's what we do. We get Clark Gable to play Rhett Butler, and for Scarlett O'Hara we get . . .

HOWIE: Professor! Professor! That movie has already been made! It's been done!

CARL: David O. Selznick made the picture.

SID: An Irishman made this picture . . . a German picture? (Crushed.) The story about the Civil War? . . . It was done? . . . With Rhett Butler and Scarlett O'Hara? . . . Done? (They nod.) . . . and the whole picture is four hours long? (They nod.) . . . Tell me just one thing—in this picture that was already done, who wins the North or the South?

HOWIE: The North.

SID: Well, that's too much. They got the same switch too. He robbed it from me? Right?

ALL: Right!

SID: I've come to a conclusion! We can't compete with CinemaScope, Bias-scope, Flourescope, etc. etc. They have vista-vusion . . . and stereophonic sound . . . and we can't compete with this. . . . We have to find a new market. And I've found it. LATE TELEVISION! They're buying rotten pictures like there was no tomorrow. We'll make the best rotten pictures that can be made. If anyone can make rotten pictures, we're the ones that can do it. Right?

ALL: That's right!

SID: Anybody got any rotten ideas? (*Fadcut*)

AUDREY MEADOWS (*The Honeymooners*, CBS-TV, written by Marvin Marx and Walter Stone)

"I do not consider myself in any way an authority on comedy, but I believe a great deal of the success of all of us on *The Honeymooners* is due entirely to the believability of the characters. There is the kind of a joke that we call 'nudgers' because the people watching the show so often nudge each other, remembering when a similar incident happened in their own lives. For instance:

"Ralph and Alice (the Honeymooners) are arguing about spending money, and Ralph accuses Alice of spending all his money on clothes. He opens Alice's drawer

and shows all the clothes she has there. To this Alice replies, 'Go ahead, Ralph; you think I've got so many clothes. Take a look at them! They're all very modern. I'm the first girl in town to wear a shortie nightgown . . . that's 'cause I'm still wearin' the one I had when I was a kid!'"

EVE ARDEN (*Our Miss Brooks*, CBS-TV)

"Oddly enough my favorite humorous—and possibly philosophical—quote of the year was not uttered by any comedian. It is credited to Earl

Thacker, a Honolulu realtor. Said Mr. Thacker: 'Everyone is of some if only to serve as a horrible example.' For some reason, and it may be my perverse sense of humor, this seems to me to have a sort of Twain immortality."

GARRY MOORE (CBS-TV)

Ode to a tooth

All hail the tooth, the little tooth.
All hail the tooth, so white and smooth,
All hail the tooth, the little tooth—
Whether it's tight or whether it's looth!

Oh, the tooth is more than a thing
of beauty,
It's also a tool for heavy duty.
At least one lower and one on top
We need in order to chew things op.

For you and me and Marlene Dietrich,
Eating without 'em would be a neat trick.
For you and me and Hopalong Cassidy,
The chewing of food is a grim necessity.
Yes, mostly all of our people do it—
Even in Boston, Massachewit!

Oh, the tooth indeed is a vital item—
When you get mad at people, how else can you bite 'em?
Without 'em every poppy and mummy
Would find that life is very gummy.

Store teeth, too, are very grand—
When you get mad you can gnash 'em by hand!
So keep your teeth as strong as swords—
Whether they're yours or Montgomery Ward's.

Why, our national life would be a mockery
Without this piece of oral crockery.
In fact, the tooth—bicuspid or wisdom—
Is the base of our economic sizz-dom!

For without a tooth we cannot eat
A steak—or any other meat.
Thus Armour's, Swift's and all their branches
Would have to close down all their ranches;
And cowboys, broke, out in Nevada,
Would ask each other: "What's de madda?"

In short, my friends, this mighty nation
Needs the tooth for its foundation.
Each breakfast, luncheon, dinner and supper plate
Owes its being to our upper-plate.

So brush your teeth at least twice daily,
Whether you're Harvard or you're Yale.
In fact, my friends, you even might
Buy your teeth a brush tonight.

So go to a drugstore—be it north or south—
And get yourself a good paste in the mouth.

GEORGE GOBEL (NBC-TV)

"It's all my mother's fault, my b
George Gobel I mean. Mom is the one
decided I should have a name. An
wasn't that she already didn't know w
was, because she's known me ever sin
was—she just thought it would be nice
me to have a name. And I went along
her. The George is for my uncle, Ge
Hermansky, and the Gobel, of course, i
my father—Gobel Hermansky. And
kinda glad Mom named me George G
too, because that's what everybody
me.

"I think brothers are nice, but I r
had any. See, I was an only child. It's
that my parents didn't care for chil

. . . it's just that they didn't care much for me. I mean, they figured
was the best they could come up with, they just wouldn't fool with it
more. . . . I had to eat all the cake myself . . . and all the ice c
myself . . . and all the cookies myself. Oh, I tell you true: I w
chubby little rascal.

"Alice is my wife . . . you know those election bets. She used to b
fiancée . . . but I didn't know enough to leave a good thing alone.
she treats me real good—just like I was one of the family. Particu
on birthdays. See, Alice regards each of my birthdays as a stepping
to that annuity.

"I have three children. That is, Alice and I have three children. TH
community property. And I like children as well as the next fellow
though there are times when I must admit I do prefer the next fello
children. But see, when you have three children you have some so
problems. Like, for instance, at breakfast: you go crazy trying to
out how to cut a grapefruit so it comes out even!

"My hobby is gardening. Well, not really gardening. I just say ga
ing, but my hobby is not gardening. That's my hobby: *not garden*
And it's not that I don't like to grow things, because I do like to

things. For example, I like to grow flowers and trees—but nothing seems to—see, some guys can grow anything. They have a green thumb. But me—I got a brown thumb. Take the fellow who lives next door to me. You should see his place. He just throws seeds right out the kitchen window. When he finishes eating . . . grapefruit seeds, peach stones, cherry pits . . . just tosses 'em out . . . doesn't even bother to cover 'em with dirt. And you oughta see his backyard. As far as the eye can reach—nothing but garbage."

JIMMY DURANTE (NBC-TV)

Typical quotations from Durante's 1955 shows:

"He should hang by da rope."

"Five minutes wit Durante and everyone's a bum!"

"Whadya mean, work too hard, I'm a teen-ager."

"Too much work for a man of 35."

"Good-lookin' guys are a dime a dozen—I'm a novelty."

"It's the man dat makes da clothes."

"José [Iturbi], make way for Nosey."

EDDIE CANTOR (NBC-TV)

"I'm frankly concerned about some of the school kids today. It looks as if the 'three R's' have been changed to readin', riotin' and 'rhythmic. And did you ever watch those kids driving hot rods? It's murder! They trip off the fenders, the hood and all the extra stuff, to make it go faster. You won't believe this—but last week I saw three kids driving a 936 carburetor!"

STEVE ALLEN (Tonight, NBC-TV)

STEVE: Welcome to *On and On*.

(Music: Sprightly, lilting theme. Peppy. Fade out.)

(Camera: Close up of sign that reads: *On and On*.)

STEVE: Yes, friends, here we are again with that wonderful old panel show *On and On*, the game that goes on and on, week after week, bringing you an endless parade of people, faces, names and—fun! And now, it's meet the panel of *On and On*!

(Camera: Panel has 15 people on it. It extends for some 30 feet. A small name tag is hung before each panelist. Shoot a close-up of each person as Steve does intro.)

STEVE: First of all, that charming actress, currently playing the lead in *Our American Cousin* at Ford's theatre. Washington, D. C. . . . Miss Elberta Freestone. Next, the well-known drama critic for the *Carson City, Nev., Times-Gazette* . . . Mr. Bennett Croveny. And now . . . that irrepressible young comedy star, whose laughable antics you enjoy every Thursday night on his own show *Nutty as a Fruitcake*: Danny Birdbath.

Next . . . the well-known author, whose latest book *I Wed Three Wives* is still way up there . . . Mr. Porfirio Candelabra.

Here now is that popular columnist for the *New York Drover's Journal* . . . winner of the Eberhard Faber Eraser award for the year's greatest number of inaccuracies . . . Barton Billingsley.

Next . . . the very charming television personality. . . You see her every Friday evening in her own popular show *Wrestling From Ridgeood Grove*. . . Morphine Blunt.

And I'm sure you'll recognize this next face . . . (It is a dog.) One of V's most popular figures . . . author . . . columnist . . . *bon vivant* . . . and star of the new movie *Seven Hounds for Seven Spaniels* . . . (Now show dog.) Rin Tin Von Redheart.

Next . . . the prominent leading man whose latest picture, *Birth of a Nation*, may be seen at the Smithsonian Institute . . . Roderick Brodick.

And next to Mr. Broderick . . . another one of our popular panelists . . . co-author of such best-sellers as the New York telephone directory . . . and the Diner's Club Restaurant list . . . Mr. Roy Fangschleister.

And then . . . the prominent international figure . . . former governor of Ellis Island . . . and the president's personal representative to the Brooklyn Dodgers . . . Jim Blyrclean.

Next, one of Broadway and Hollywood's best-known personalities . . . you've heard of the list of the ten best-dressed men in the world? Well, here is Mr. Jules Green.

And now . . . our next panelist . . . a prominent society figure, who has just returned from a nation-wide lecture tour, and who leaves immediately for tonight's show for a two-week stay at the Luxor Baths . . . Mr. Wright Passanante.

And I'm sure you'll all be glad to see that we have with us once again this week . . . the very wonderful music critic for *Popular Mechanics* magazine . . . whose latest article, "Beethoven and the Downdraft Carburetor," appears in the latest issue . . . Rodney Camshaft.

Next to Mr. Camshaft is that lovely lady of radio and television, currently appearing on Broadway . . . in the picket line in front of Lindy's . . . Janet Sage.

And next to Miss Sage . . . is that popular actor and man-about-town presently playing the title role in the picture *Phfft*. . . And that's our panel!

And now for our game. As you know we always . . . (Looks at watch) . . . but I see that once again we don't have much time for the game. We're a little late folks, so good night and be sure to join us next week ten once again it'll be time for *On and On*!

LUCILLE BALL AND DESI ARNAZ (I Love Lucy, written by Jess Oppenheimer, Madelyn Pugh and Bob Carroll, Jr., © Desilu Productions, Inc.)

The preface to the situation is:

Lucy, discovering a misspelling on their marriage licence, is afraid that they are not legally married, so she wants Ricky to go through the ceremony again.

Sentimentally, she insists on being married by the same justice of the peace, in the same little upstate town, after Ricky has proposed in the same spot with the same words he used the first time.

They are just arriving at the original proposal site . . .

(The scene is an outdoor wooded area. There are two fairly large trees and a board seat between them. There are bushes around, grass on the ground, and we will probably hear a bird or two. Lucy walks into the scene.)

LUCY: I told you this was the place. You see—there's that seat between those two trees.

(Ricky is loaded down. He is carrying a blanket, a picnic basket, a thermos, a jacket, a cushion, etc.)

RICKY: Oh yeah. Lucy, the least you could do is carry half of this stuff. What's the big idea of making me carry everything?

LUCY: That's the way you used to do things before we were married. Remember?

RICKY: Oh.

(He puts the stuff down.)

(Lucy sits on the seat. Ricky sits beside her. It's a very tight fit.)

LUCY: I don't remember this seat being so small. The trees must've grown in a little from each side.

(Ricky looks down at her hips.)

RICKY: Let's face it. We've grown out a little from each side.

(They scrunch around and manage to get fairly comfortable.)

LUCY: Dear, doesn't being here again make you feel romantic?

RICKY: Yeah. Let's eat.

(Lucy gives him a look.)

(He reaches in and takes a sandwich out of the basket and starts to munch on it.)

LUCY: The last time I offered you a sandwich and you said, (Dreamily.) "Who needs food, I want to feast on your beauty."

(Ricky puts the uneaten piece of sandwich down.)

RICKY: (With his mouth full.) Who needs food, I want to feast on your beauty.

LUCY: Somehow it sounds different than it did then.

RICKY: (Rummaging through the basket.) What do you want to start with—chicken salad or peanut butter?

LUCY: I want to start with a proposal.

RICKY: But I've already started this sandwich and it's—

LUCY: (Warning.) Ricky—

RICKY: All right. Now, let's see.

LUCY: Down on your knee.

RICKY: Oh, no. Now wait a minute. The ground's wet.

LUCY: Down on your knee. I want it to be just like it was before.

(Ricky gets down on one knee, grumbling in Spanish.)

LUCY: (With a giggle.) I even took your wallet out of your pocket and left it home.

RICKY: What??? (He grabs at his pocket.) What did you do that for?

LUCY: Don't you remember? You forgot your wallet the day you proposed and when we got married I had to pay for the licence.

RICKY: I didn't marry a woman—I married an elephant.

LUCY: Well—thanks!

RICKY: I meant your memory.

LUCY: Oh. Well, go ahead.

RICKY: (Trying to remember.) Uh—

LUCY: You said, "Lucy, I can't live without you. . ."

RICKY: Lucy, I can't live without you.

LUCY: "I love you madly . . ."

RICKY: I love you madly. What did you leave my wallet home for? I don't have my driver's licence or anything.

LUCY: (Pointedly to get him back on the track.) "I know I don't deserve a wonderful girl like you."

RICKY: I know I don't deserve a wonderful girl like you.

LUCY: (Starry-eyed.) "Lucy, will you marry me?" (Pause.) Lucy—will you marry me? (Pause.) Well, what's the matter?

RICKY: (He can't resist the joke.) Well, this is a pretty important step in my life. I don't want to rush into anything.

LUCY: WHAT?!! (She gives him a big whack on the shoulder and he falls over backward laughing.) Well, it's nice to know where I stand.

RICKY: I was only kidding. Sit down, honey. (He gets back up on his knee. She bursts into tears.) Lucy, I'm going to propose. (He takes her hand.) Lucy, will you— (She jerks her hand away.)

LUCY: (Tearfully.) Never mind. It's a big step for me too and I'm not going to rush into anything.

RICKY: Aw, honey, can't you take a joke?

LUCY: A joke? What's funny about the fact that you don't want to marry me?

RICKY: I do too want to marry you.

LUCY: You do not! The real truth slipped out.

(He tries to put his arms around her.)

RICKY: Lucy, baby . . .

(She pulls away.)

LUCY: Don't Lucy baby me. I'm Miss MacGillicuddy to you and, for your information, I wouldn't marry you if you were—Xavier Cugat!

(She stalks out of the scene.)

RICKY: Lucy—wait—hold on—wait for me.

(He tries to pick up all the equipment and hurries after her.)

Humphrey, George Magoffin (1890—), U.S. government official, was born on March 8 at Cheboygan, Mich., and received his law degree from the University of Michigan, Ann Arbor, in 1912. Until 1918 he practised law in Saginaw, Mich., and in that year he was appointed general counsel of the M. A. Hanna company, steel and coal manufacturers, at Cleveland, O. In 1925 he was named vice-president and in 1929 president of the company, which he expanded into a large and profitable industrial enterprise. He became chairman of the board in May 1952. During the administration of Pres. Harry S. Truman, Humphrey accepted two quasi-federal posts—chairman of the U.S. department of commerce's business advisory council in 1946, and head of a survey of German industrial plants conducted by the Economic Cooperation administration in 1948–49.

Humphrey was selected by Dwight D. Eisenhower to be U.S. secretary of the treasury in the administration that took office in Jan. 1953. He shortly thereafter let it be known that the administration's fiscal policy would be to balance the national budget before cutting taxes; he blamed the mounting federal debt on the preceding Democratic administrations. On Aug. 27, 1953, however, he declared that the "turning point" had been reached on the road toward balanced budgets.

In 1955 Humphrey successfully opposed a Democratic move to grant flat tax reductions of \$20 to each U.S. income taxpayer and dependent. He predicted on Aug. 25 that the federal budget for the fiscal year 1955–56 would be balanced, "barring some unforeseen development."

Hungary. A people's republic of southeastern Europe, Hungary is bounded west by Austria, north by Czechoslovakia, east by Rumania and south by Yugoslavia. Area: 35,905 sq.mi. Pop.: (1949 census) 9,204,799; (1954 est.) 9,750,000. Language (1949 census): Hungarian 98.7%; German 0.2%; Slovak 0.3%; others 0.8%. Religion (1949 est.): Roman Catholic 70.6%; Calvinist 22.8%; Lutheran 3.3%; Orthodox 0.4%; Jewish 1.9%. Chief towns (pop. 1954 est.): Budapest (cap.) 1,781,085; Miskolc 135,780; Debrecen 113,248; Szeged 88,590; Pecs 87,140; Győr 65,630; Kecskemet 64,170. First secretary of the Hungarian Workers' (Communist) party, Matyas Rakosi; chairman of the presidium of the national assembly, Istvan Dobi; chairman of the council of ministers in 1955, Imre Nagy and (from April 18) Andras Hegedus.

History.—A major crisis in the leadership of the Hungarian communist regime was resolved in April 1955 with the removal of Imre Nagy from the premiership, his replacement by Andras Hegedus and a convincing reassertion of power by Matyas Rakosi, the first secretary of the Communist party. This was accompanied by a thorough condemnation of the new course in economic policy with which Nagy has been associated and a reversion to the orthodox communist policy of maximum concentration on the development of heavy industry and on the speedy collectivization of agriculture.

Nagy was dismissed from all his positions in the party and government. Among the charges laid against him were that he "put the brakes on Socialist construction, industrialization and especially the expansion of heavy industry, . . . obstructed the development of the collective farm movement, . . . tried to push the party into the background, . . . to subordinate the party to organs of the State and the Patriotic People's front." His disgrace was complete.

The reversal of policy was first signalled by the passing of a resolution in the party central committee at the beginning of March. This admitted that industrial and agricultural output had actually fallen during 1954 and that the total national income had been appreciably below that of 1953. After the change

SPRING SESSION of the Hungarian national assembly which in 1955 adopted a resolution to relieve Imre Nagy of his duties as chairman of the council of ministers. Andras Hegedus was elected to succeed Nagy

of leadership the greatest attention was first directed to agriculture. A party resolution in June declared that collectivization must proceed at such a rate as to ensure that more than half the country's arable land was collectivized before the end of 1960. Though the authorities declared that entry into the collectives should be "voluntary," much pressure was exerted on the peasants for the rest of the year. It was claimed that more than 30,000 new members had joined the collectives at the beginning of August. Tax exemptions, higher prices and other privileges were used to induce peasants to enter the "Socialist sector."

The 1955 budget, announced in April, revealed that 35% of the total investments went into heavy industry, 26% to agriculture (almost twice the 1953 figure) and only 8% to the consumer goods industries.

The Patriotic People's front, which was set up in 1954 and which had appeared at one point to be likely to replace the Communist party as the main political organization, was brought back under communist control. Despite assurances that the front had lost none of its importance, little attention was paid to it in the latter half of the year. Two amnesties were announced during the year, one applying to persons serving sentences for political offenses in Hungary, and the other applying to Hungarians living abroad.

In May the Hungarian government took part in the meeting of communist countries in Warsaw at which the eastern European defense organization was set up. Under this agreement Hungary's forces were put at the disposal of a joint military command in Moscow. In September it was announced that the armed forces would be reduced by 20,000 men. (See also EASTERN EUROPEAN ECONOMIC PLANNING.) (D. F.)

Education.—Schools (1954): primary 6,185, pupils 1,208,000, teachers 5,000; secondary 405, pupils (including those enrolled for evening courses) 162,500; vocational, pupils 57,000; institutions of higher education 21 (including 5 universities), students 47,500, teaching staff 7,200. National minorities schools (1953): Slovak 147, Serbo-Croat 88, German 66, Rumanian 28.

Finance.—Monetary unit: forint with official exchange rate, high and fluctuating, of 11.74 forints to the U.S. dollar. Budget (forints, 1954 actual; 1955 estimates in parentheses): revenue 45,300,000,000 (46,961,000,000); expenditure 44,000,000,000 (45,458,000,000), including 28,000,000,000 (25,200,000,000) invested in the national economy.

Foreign Trade.—(1950) Imports U.S. \$265,000,000; exports U.S. \$257,000,000. Main sources of imports (1950): Poland, Czechoslovakia, Rumania and Bulgaria 35.4%; U.S.S.R. 22.7%. Main destinations of exports: four eastern European countries 36.6%; U.S.S.R. 25.7%. Hungarian trade with 17 western European countries (1953): exports U.S. \$17,800,000; imports U.S. \$67,500,000.

Transport and Communications.—Roads (1951): 15,976 mi. Licensed motor vehicles (Dec. 1950): cars 16,000; commercial 15,500. Railways (1951): 7,100 mi. Air transport (1948): flights 4,447; mileage flown 25,800; passengers carried 36,111. Danube shipping (Dec. 1947): merchant vessels 514; gross tonnage 118,700. Telephones (1954 est.): 122,000. Radio receiving sets (1953): 887,000.

Agriculture.—No reliable data published since 1950. Main crops (metric tons, 1948–50 average): wheat 1,817,000; rye 775,000; barley 674,000; oats 265,000; maize 2,862,000; potatoes 2,018,000; sugar beets 1,765,000; rice (1951) 50,000. Livestock (1955 est.): cattle 1,983,000; pigs 800,000; sheep 1,032,000; horses 550,000.

Industry.—Employment in industry (1954): 885,000. Production (metric tons, 1954 est.): coal 1,900,000; lignite 20,100,000; crude oil 1,190,000; electricity 4,830,000,000 kw. hr.; pig iron 820,000; steel 1,490,000; alumina 1,260,000; aluminum 32,800; cement 950,000. Textiles (sq. metres, 1954 est.): cotton fabrics 226,000,000; woollen fabrics 12,100,000. Leather shoes (1954 est.): 10,000,000 pairs.

Hurdling: see TRACK AND FIELD SPORTS.

Hutchins, Robert Maynard (1899–), U.S. educator. was born on Jan. 17 in Brooklyn, N.Y. He left Oberlin college, Oberlin, O., in 1917 to serve in the U.S. ambulance corps during World War I. Entering Yale university, New Haven, Conn., in 1919, he received his B.B. in 1921 and his LL.B. (*magna cum laude*) in 1925. In 1923 he was appointed secretary of Yale university and in 1927 dean of its law school. In 1929, at the age of 30, he became the fifth president (and, in 1945, the first chancellor) of The University of Chicago.

Hutchins resigned in 1950 (effective June 30, 1951) as chancellor of the university and as a member of its board of trustees to join the Ford foundation as an associate director. He continued as chairman of the board of editors of Encyclopædia Britannica, Inc.

On May 24, 1954, the Fund for the Republic, an independent organization established in 1953 with a grant of \$15,000,000 outright from the Ford foundation, announced the election of Hutchins as its president. The purpose of the fund was to help remove restrictions on freedom of expression and thought in the United States. On Jan. 13, 1955, the fund announced a \$50,000 survey of the influence of communism on all phases of U.S. life. Seaborn P. Collins, national commander of the American Legion, attacked this survey on Sept. 11 as an attempt to show that communism was no particular menace to democracy. Other members of the Legion, however, defended the fund's objectives.

In his first report as president of the fund issued Aug. 21, 1955, Hutchins declared that "in some particulars the atmosphere [of civil liberties] is better than it was five years ago [but] still such as to give cause for alarm."

Iceland. An island republic of the North Atlantic, Iceland has an area of 39,768 sq.mi. and a population of (1950 census) 144,263; (1955 estimate) 155,000. The capital,

Reykjavik, is the only large town (pop. 1953 estimate 60,024). Religion: Lutheran Christian. President in 1955: Asgeir Asgeirsson. Prime minister: Olafur Thors.

History.—The progressive boom in Iceland's economy produced its most prosperous year in 1954. Fisheries failures early in the year were partly compensated by a good fall herring catch, but construction was the greatest boost to the economy. Much of this building was financed by the United States (Keflavik airport), and the domestic economy was still unsure and unstable. Early in 1955 a wave of strikes hit key industries and disrupted communications. Eventually 10% wage increases were granted and the government promised the establishment of a long-demanded unemployment insurance fund.

The dangers of fishing were dramatized by several trawler disasters, both English and Icelandic, and by the "arrest" of the British trawler "Churchill" for illegal fishing in Icelandic waters. Large numbers of small whales wreaked destruction on the herring nets until a contingent of United States soldiers, armed with machine guns, went out with the fishermen and killed scores of the whales.

Foreign trade fairs were opened in Reykjavik in July with impressive exhibits of Russian, Czech and Chinese wares. The U.S.S.R. and Czechoslovakia had recently been among Iceland's best customers for fish.

Reforestation was being pushed vigorously, with a goal of 3,000,000 plantings per year. The state supported the program, and permitted a special additional tax on cigarettes for this purpose. Plans were under discussion also for further development of the tremendous power potential in the rivers, only 1.3% of which was harnessed.

Iceland continued to play an active role in the Scandinavian group of states. President and Mrs. Asgeirsson made an official visit to Norway aboard the Icelandic ship, the "Gullfoss," and were royally received. Reykjavik received a number of conferences and conventions including a congress of Scandinavian cooperative society leaders, where the proposal for a common Scandinavian currency was mooted.

(F. D. S.)

BIBLIOGRAPHY.—Amy Elizabeth Jensen, *Iceland, Old-New Republic* (1954); C. F. Bayerschmidt and L. M. Hollander (trans.), *Njál's Saga* (New York, 1955).

Education.—In 1954 there were 224 elementary schools with 15,566 pupils and 708 teachers, 56 secondary schools with 4,586 pupils and 367 teachers, 3 grammar schools with 841 pupils and 55 teachers and 49 other schools with 3,507 pupils and 339 teachers. The University of Iceland had 692 students and 61 professors and lecturers.

Finance.—The monetary unit is the króna, valued at 6.14 cents, U.S. currency, official rate, in 1953. The 1955 budget estimated revenue, current and capital, at 516,302,000 kr.; expenditure, 515,301,000 kr. Revenue in 1954 was 542,531,000 kr.; expenditure, 526,196,000 kr. The national debt (Dec. 31, 1954) was 473,108,000 kr., including external debt of 214,006,000 kr.; net state assets (Dec. 31, 1953), 521,013,000 kr. Currency in circulation (July 31, 1955) was 303,165,000 kr. The cost-of-living index (Reykjavik) stood at 181 in Aug. 1955 (1948=100).

Trade and Communications.—Exports in 1954 totalled 845,912,000 kr.; imports, 1,130,397,000 kr. Leading exports were fish and fish products (96%), wool (1%) and hides and skins (1%); leading imports, petroleum products (12%), wood (5%), iron and steel (4%) and ships (4%). Leading customers were the U.S. (17%), the U.S.S.R. (15%), the U.K. (9%) and Italy (7%); leading suppliers, the U.S. (20%), the U.S.S.R. (12%), the U.K. (11%) and western Germany (8%).

Highway mileage (1955) was 5,123; registered motor vehicles (Jan. 1, 1955) included 7,508 automobiles and buses and 4,685 trucks. In Oct. 1954 the merchant marine had 665 vessels aggregating 99,006 gross tons, including the fishing fleet of 51 trawlers and 571 other vessels aggregating 56,527 gross tons.

Fisheries and Livestock.—In 1954 the sea fisheries yielded 387,528 metric tons, including 179,450 tons of frozen fish and 104,536 tons of salted fish. Livestock (Jan. 1, 1954) included 390,400 sheep, 45,400 cattle and 38,100 horses. Wool production (1954) was 860 metric tons. (J. W. Mw.)

Ice Shows: see SHOWS.

Ice Skating. Tenley Albright of Newton Center, Mass., and Hayes Alan Jenkins of Akron, O., dominated the figure skating picture in 1955 as they swept senior laurels in world, North American and United States competition. In the international meet at Vienna in mid-February, Miss Albright

SPEED CHAMPION Sigge Ericsson of Sweden defeated two Soviet skaters to win the world championship at Moscow Feb. 20, 1955. The championship was based on performance in four races from 500 to 10,000 m. in length

gave a brilliant exhibition in both the school figures and free skating to regain the title she held in 1953. Carol Heiss, New York city, with 180.31 points, was second to Miss Albright, who was credited with 190.96 points. Jenkins scored 203.7 points to take world honours for the third consecutive time. Ronald Robertson, Los Angeles, Calif., with 201.12 points, was second. Britain's team of Jean Westwood and Larry Demmy captured the dance title for the fourth time. Another British pair, Pamela Wright and Paul Thomas, were runners-up. Frances Dafoe and Norris Bowden, Canadian couple, retained the pairs championship.

Miss Albright again defeated Miss Heiss in the senior women's division of the North American meet at Regina, Sask., in March. The closest rival to Jenkins for the men's award was his younger brother, David. Other victors included Miss Dafoe and Bowden, pairs; Mr. and Mrs. Edward Bodel of Orinda, Calif., dance.

In the national championships at Colorado Springs, Colo. (March 30-April 2), Miss Albright took the women's prize for the fourth straight time and Jenkins won the men's honours for the third year in a row. Other winners were Nancy Heiss, New York city, junior women; Tom Moore, Seattle, Wash., junior men; Robin Greiner and Carol Ann Ormaca, Berkeley, Calif., senior pairs; Ray Sato and Barbara Stein, Los Angeles, silver dance; Mr. and Mrs. Edward Bodel, gold dance; Los Angeles Figure Skating club, team point trophy.

Alain Giletti, 15-year-old Frenchman, won the men's crown in the European championships, a closed meet. Hanna Eigl, also 15, of Austria triumphed in the women's division.

Speed Skating.—Ken Bartholomew, Minneapolis, Minn., won his sixth straight senior men's title and the tenth of his career in the national title tests at St. Paul, Minn., Jan. 29-30. He was first in the 880-yd. and 5-mi. events and second in the 220 yd. Pat Gibson, University of Wisconsin, Madison, coed, swept the five senior women's races to retain her crown. In

keeping the junior girls' laurels, Mary Novak, Chicago, Ill., the 220 yd. in 20.4 sec. to break the 13-year-old national record of 20.6 sec.

A field of 300 from Canada and the U.S. competed in the North American meet at Saranac Lake, N.Y., Feb. 12-13. Winners included Jay Hasbrouck, Newburgh, N.Y., senior men; Pat Gibson, senior women; Kenneth Lebel, Lake Placid, N.Y., intermediate boys; Jeanne Ashworth, Wilmington, Mass., intermediate girls; David Arends, Cedar Rapids, Ia., junior boys; Mary Novak, junior girls. Indoors, Mrs. Barbara De Schell of Detroit, Mich., won the women's North American for the fourth time and Bill Disney of Pasadena, Calif., led the men. World championships were held in Moscow, U.S.S.R., for men and at Kuopio, Fin., for women, with the following gaining titles:

Men	Women
All-around—Sigge Ericsson, Sweden	All-around—Rimma Zhukowa, U.S.S.R.
500 m.—Toivo Salonen, Finland	500 m.—Tamara Rykova, U.S.S.R.
1,500 m.—Oleg Goncharenko, U.S.S.R.	1,000 m.—Tamara Rykova
5,000 m.—Knut Johannesen, Norway	3,000 m.—Rimma Zhukowa
10,000 m.—Sigge Ericsson	5,000 m.—Rimma Zhukowa

Idaho. Six states and the Canadian province of British Columbia form the borders of Idaho and combine to form in its 83,557 sq.mi. of land and water within the oddly shaped boundaries of the state. Within the confines of Idaho the elevation varies from about 750 ft. above sea level at the mouth of the Clearwater and Snake rivers, to nearly 13,000 ft. where Mt. Borah rears its jagged peaks.

The estimated population for July 1, 1955 was 606,000, versus the 1950 official census recorded the presence of 588,637 persons in Idaho, of whom 57.1% were rural and 42.9% urban. There were 561,988 native white; 19,407 foreign-born white; 1,050 Negro and 6,192 other races. The largest cities with their populations (1950 census) are: Boise (capital) 34,393; Pocatello 26,100; Idaho Falls 19,218; Twin Falls 17,600; Nampa 16,185; Lewiston 12,985; Coeur d'Alene 12,198; Moscow 10,593; and Caldwell 10,487.

History.—The sesquicentennial anniversary of the arrival of Lewis and Clark in Idaho in Oct. 1805 was observed in a number of areas of northern Idaho, the region through which the expedition passed en route to the Pacific ocean. Notable among these were the observances at Salmon and Lewiston, with other points along the Clearwater and Snake rivers.

During 1955 Idaho joined the long list of states having environmental agencies created by statute for the purpose of encouraging industrial, commercial and tourist expansion, when the legislature authorized the Idaho State Commerce and development commission.

Under the leadership of Gov. Robert E. Smylie (R.), necessary steps were taken to co-operate with Pres. Dwight D. Eisenhower in developing local participation in conference education, preparatory to the White House conference in November.

Incumbent state officials, whose terms were to expire Jan. 1, 1959, included: governor, Robert E. Smylie (R.); lieutenant governor, J. Berkeley Larsen (R.); attorney general, Gray Smith (R.); secretary of state, Ira Masters (D.); treasurer, Mrs. Ruth Moon (D.); auditor, N. P. Nielson (R.); mines inspector, George McDowell (R.); superintendent of public instruction, Alton P. Jones (R.).

Education.—Enrolment in Idaho schools of approximately 146,000 students in 1955, in 497 elementary and 132 secondary schools, represented an increase of 23.7% over the approximately 118,000 enrolled in 1950. There were approximately 5,000 teachers employed in the state, and the state appropriated in excess of 25% of its general funds for education or an amount equal to approximately \$20,000,000.

The University of Idaho, at Moscow, is the state university and cultural college, while the Idaho State college, also a four-year granting institution, is located at Pocatello. Junior colleges, established under district laws, are located at Boise and Coeur d'Alene, and provide

colleges include Ricks college at Rexburg, College of Idaho at Caldwell, and Northwest Nazarene college at Nampa.

Social Insurance and Assistance, Public Welfare and Related Programs.—The number of recipients of old-age assistance showed a decline from 928 to 8,764 in the year ending June 30, 1955, while the average grant dropped from \$55.22 to \$54.83. Part of this decline was credited to the increase in the number of persons receiving old-age and survivors insurance benefits.

Unemployment compensation benefits paid during the fiscal year ending June 30, 1955, averaged \$22.85 per week (prior year: \$23.16) for a total of \$4,549,844, compared with \$5,009,416 in the prior year. The fund balance increased by \$723,453 to reach a total at the end of the fiscal year of \$33,454,222. Approximately 13,200 employers in Idaho were covered by the Employment Security act in 1955.

Communications.—The state highway system, administered by the Idaho highway board, covers approximately 5,000 mi. of roads and has a normal annual program of about \$28,000,000. Four transcontinental railroads, with a combined mileage within Idaho of 2,738 mi., serve the state. Air transportation is furnished by United, Western and West Coast Airlines. Telephones in service exceed 161,000, a gain of more than 85% since 1945.

Banking and Finance.—Eleven national banks, with 56 branches, reported deposits of \$407,391,000 and 27 state banks, with nine branches, reported deposits of \$125,092,000 at the beginning of 1955.

There are nine federal savings and loan associations in the state.

The Idaho state budget for the fiscal biennium ending June 30, 1957, totaled \$134,094,107, including all funds from all sources, with \$49,552,559 from the state general fund and \$84,541,938 from other funds and sources, an increase of \$15,584,756 or 13%, over the \$118,509,351 appropriated for the biennium which ended June 30, 1955. Major expenditures authorized were highways \$51,850,000, education \$33,300,000 and public welfare \$24,425,000.

After having enjoyed freedom from state guaranteed debt since 1951, Idaho legislators in 1955 approved a state bond issue of \$2,000,000 to cover a state building program.

Agriculture.—Preliminary figures for the 1954 Idaho farm income were: livestock and livestock products marketed \$139,617,000; crops \$184,885,-

Table I.—Principal Crops of Idaho

Crop	Indicated 1955	1954	Average, 1944-53
Wheat, bu.	34,773,000	35,343,000	37,657,000

to; government payments \$5,865,000; home consumption \$11,416,000; total \$341,783,000 compared with \$354,113,000 (revised) 1953 income.

Manufacturing.—Value added by manufacturing in the forest products industry in the amount of \$79,200,000 in 1954 led all types of manufacturing, out of a total of approximately \$188,000,000 added in that year. Lumber production totalled about \$70,000,000 in 1954 and there were 250,000 freight cars loaded in 1954. Out of a total of 23,658 nonagricultural employment in 1954, lumbering accounted for 12,133, food processing 533 and other manufacturing 4,992.

(E. W. M.)

Mineral Production.—Table II shows the preliminary figures of Idaho's mineral output for 1953 compared with 1952. Only those whose value exceeded \$100,000 are listed. Idaho had the only substantial output of

†Value included with other minerals.

Antimony in 1953 and was first among the states in silver, second in lead and zinc, third in mercury, phosphate rock and pumice, fourth in vanadium, and fifth in tungsten; and ranked 29th in the value of its mineral output, with 0.47% of the U.S. total.

Illinois. A north central state of the United States, admitted to the union in 1818 as the 21st state, Illinois is nicknamed the "Sucker state" and is sometimes called the "Prairie state." During its 1955 session the Illinois general assembly adopted "Land of Lincoln" as the state's official slogan. Total area: 56,400 sq.mi., of which 55,935 sq.mi. are land. Population (1950 census): 8,712,176, including 4,319,251 males and 4,392,925 females, 8,046,058 white and 666,118 non-white. Population classed as urban in 1950 was 6,759,271 or 77.6%; as rural, 1,952,905 or 22.4%.

The July 1, 1955, population estimate was 9,297,000. Chicago

(population, 1950, 3,620,962) is the largest Illinois city, followed by Peoria (111,856), Rockford (92,927), East St. Louis (82,295) and Springfield, the capital (81,628).

History.—The principal offices in Illinois government were occupied in 1955 by William G. Stratton, governor; John W. Chapman, lieutenant governor; Charles F. Carpentier, secretary of state; Latham Castle, attorney general; Warren E. Wright, treasurer; and Orville E. Hodge, auditor.

The Illinois legislature, in its 69th biennial session, passed an all-time high of 1,162 pieces of legislation; 973 of these bills became law; 189 were vetoed.

The major accomplishment of the 69th general assembly was reapportioning the state's legislative districts; the question of legislative reapportionment was approved by the voters in the 1954 general election after the 68th general assembly had adopted legislation calling for a vote on the proposition. It was the first legislative reapportionment of the state since 1901. The new amendment to the Illinois constitution provided for 58 senatorial districts and 59 representative districts (formerly 51 of each). Senate districts would elect one senator and house districts three representatives. Thirty-four senate districts were outside Cook county, 18 in Chicago, and six in Cook county. These districts were permanent and assured downstate control of the senate. Representative districts were divided on the basis of near-equal population in the three geographic divisions. Downstate had 29 districts, Chicago 23 and Cook county outside Chicago had 7, giving Cook county a slight control over the house. These districts would be redrawn to account for population changes in 1963 and every 10 years thereafter.

Other major pieces of legislation passed by the 69th general assembly were: an increase in state sales tax from 2 cents to 2½ cents on the dollar for a two-year period ending June 30, 1957; authorization for cities to levy a one-half cent city sales tax without referendum; an amendment to the state constitution revising the revenue article to be submitted to the voters in the 1956 general election; a record-breaking appropriation of \$339,000,000 to modernize Illinois highways; enlargement of the state police force from 500 to 600 men; an increase in unemployment compensation up to \$40 a week for an individual with four or more children; authorization to build a Cook county convention hall; provisions for the establishment of a Waukegan port district; absentee voting privileges for shut-ins; authorization for county seats to establish public building commissions (this would enable Chicago to start its \$400,000,000 Fort Dearborn redevelopment project); establishment of a new personnel department in the state government.

Major vetoes by Gov. William G. Stratton were: Korean War veterans bonus; salary increase for state employees.

Drought conditions were relieved somewhat by fall and spring rains. The 1954 average rainfall for the state was 26.67 in. Rainfall for the first eight months of 1955 averaged 24.56 in. Average rainfall for the entire state is normally about 38 in. a year.

Education.—Estimated enrolment in the state's 2,349 public school districts for the 1955 fall term was 1,502,727 as compared with 1,431,756 in 1954. There were 36,307 teachers for 1,135,544 pupils in the first eight grades, and 15,905 teachers for 367,183 students in the secondary grades. In addition to the public school districts, there were 325,173 pupils enrolled in 920 private elementary schools, and 63,461 students in 178 private secondary schools. There were 69 institutions of higher education in Illinois in 1955. The legislative appropriation for state aid to schools in the 1955-57 biennium was \$224,330,000. This increase of \$56,915,374 over the previous biennium would be used to increase the aid per pupil from \$173 to \$200 per school year. Vernon L. Nickell was the superintendent of public instruction in 1955.

Social Insurance and Assistance, Public Welfare and Related Programs.—Gross expenditures under the state's public assistance programs totalled \$153,965,000 in the fiscal year ended June 30, 1955, an increase of \$12,292,000 over the preceding year. The number of persons dependent upon public aid increased from 254,489 to 282,220 in the same period. In the fiscal year closing June 30, 1955, the Illinois public aid commission reported the following average monthly number of recipients of

public assistance and average payments to each (preceding year's figures in parentheses): old-age pensions, 97,801, \$58.66 (104,021, \$56.93); aid to dependent children, 80,017, \$33.43 (76,878, \$32.49); blind assistance, 3,600, \$63.92 (3,743, \$62.63); disability assistance, 5,872, \$79.04 (5,370, \$75.12); general assistance, 94,952, \$34.40 (64,501, \$34.92). In addition, the state expended \$5,493,000 in the 1954-55 fiscal year for burials of public assistance recipients and medical aid to the indigent.

The average weekly number of unemployment compensation claimants during 1955 through the week ended Aug. 27 was 107,200, as compared with 159,400 during the corresponding period of the previous year.

In the state's five penal institutions the average daily population during Aug. 1955 was 9,068, a decrease of 183 from the same month of 1954. On Sept. 1, 1955, 21 state welfare institutions showed an average daily population of 49,977, an increase of 191 over the Sept. 1, 1954, figure. These institutions and their populations were (Sept. 1, 1954, figures in parentheses): 13 mental hospitals, 47,808 (48,206), 8 educational institutions and homes 2,169 (1,580). The three correctional institutions and two forestry camps under the supervision of the Illinois youth commission had an average daily population of 1,210 during Aug. 1955.

Communications.—Contracts for highway construction work in the first nine months of 1955 totalled \$77,100,000. Illinois, with a 12,000-mi. primary highway system, contained 125,000 mi. of roads, 104,000 mi. rural. The Illinois toll road commission, created by act of the state legis-

lature in 1953, planned to sell \$400,000,000 worth of bonds to finance 193 mi. of turnpike construction, beginning in the spring of 1956.

There were 78 railroads (71 steam and 7 electric) operating in Illinois. These trains ran on 12,555 mi. of main track to serve 80% of the state's communities. In 1955 there were 15 scheduled airlines and 116 bus companies serving the various communities in the state. On Sept. 1, 1955,

Source: U.S. Department of Agriculture.

there were 3,200,476 motor vehicles (all types) registered in Illinois. Navigable waterways, internal and bordering, totalled 1,147 mi.

Banking and Finance.—There were 914 banks operating in the state on June 30, 1955, six more than on the same date of the preceding year. Of this number, 525 were state banks and 389 national banks. State banks on June 30, 1955, showed total deposits of \$4,189,946,746 and total resources of \$4,488,219,727. National banks on the same date had

Source: U.S. Department of Commerce, Annual Survey of Manufactures, 1953.

total deposits of \$10,417,311,000 and total resources of \$11,287,762,000. For the 1955-57 biennium Governor Stratton approved legislation appropriating \$1,736,250,557 to operate the state government.

In the first eight months of 1955, major sources of state income produced the following amounts (1954 comparative figures in parentheses): sales tax, \$146,737,909 (\$134,946,838); motor fuel tax, \$94,372,292 (\$89,762,329); motor vehicle registrations, \$69,160,994 (\$63,550,201); cigarette tax, \$20,679,154 (\$20,199,554); public utility tax, \$20,923,407 (\$19,281,821); liquor gallonage tax, \$16,075,254 (\$15,006,851).

It was estimated that the increase in the state sales tax from 2 cents to 2½ cents on the dollar for the period July 1, 1955, to June 30, 1957, would result in an estimated increase in state revenue of \$101,500,000 for the two-year period.

Agriculture.—Almost 86% of the total land area of Illinois is in farms; its 181,860 farms were valued in 1954 at more than \$6,965,000,000. The average farm size was 170 acres.

Illinois grows 43 different field crops on 30,920,908 acres. Corn is

the largest crop; hog production provides the greatest income to the farmer.

Manufacturing.—The value added by manufacturing to Illinois production in 1953 was \$10,111,624,000, as compared with \$9,319,779,000 in 1952. Manufacturing industries employed an average 1,316,089 workers during 1953, as compared with 1,255,635 during 1952. Salaries and wages of manufacturing workers totalled \$5,668,441,000 in 1953, as compared with \$5,156,159,000 in 1952.

Total nonagricultural employment in Illinois stood at 3,314,200 in Aug. 1955, as compared with 3,271,300 in Aug. 1954. (D. F. H.)

Mineral Production.—Table IV shows the tonnage and value of the mineral commodities in Illinois in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953, Illinois was first among the states in the production of fluorspar, second in tripoli, third in stone and fourth in coal; and stood eighth in value of its mineral output, with 3.21% of the U.S. total.

Illiteracy. During 1955 it became more widely recognized that the increase of the world's population was exceeding the increase of educational opportunity, with the result that the number of illiterates in the world was growing.

Such illiteracy statistics as were available were largely estimates. Country-wide figures for Libya reported only 20% of the population literate, and literacy education was intensified with Palestinian refugees often serving as teachers. Peru reported 42% of its people literate, Thailand 50%, the Republic of China (Formosa) 65% and the Philippines 65%. By comparison, literacy in the United States was reported at nearly 98%.

Through the International Cooperation administration (formerly Foreign Operations administration or Point Four program) the United States continued to make its resources available in many other countries in the fight against illiteracy.

In Vietnam and adjacent countries the national languages were more widely used in literacy teaching, and the great availability of books helped to reduce illiteracy.

In Indonesia widespread literacy classes lowered the illiteracy rate to less than 60%. To surmount the handicap of illiteracy in the last election, illiterate adults were taught the emblem of the various parties, registered by fingerprints and taught techniques of ballot-box voting.

Growing opportunities to use the newly acquired reading skills increased the literacy rate in Burma. It was reported that India was at a point where it could use experience gained in reducing illiteracy to give technical assistance to its Asian neighbors. In the Republic of Korea rapid strides were made in lowering the illiteracy rate.

In Turkey new roads and other improved communication facilities heightened the effectiveness of the literacy campaign.

In Egypt various means of eradicating illiteracy were used. There were special classes for policemen and civil servants. A special arrangement, businessmen and landowners paid for instruction of illiterate employees who attended classes. Classes were established in barracks for soldiers, in prisons for prisoners whose terms exceeded nine months and in social welfare centers. In Liberia thousands of adults were taught to read and write not only in their own dialects but in English as well.

Venezuela used reading and writing centres, mobile units

libraries, literacy teacher-leaders and groups. In some areas the literacy education teachers (*maestros alfabetizadores*) worked with other specialists comprising the rural advancement service through co-ordinated activities.

The rural normal schools of Bolivia added a requirement that teacher trainees, before they leave the normal school, must teach at least ten illiterates to read and write. Literacy education opportunities were increased in Nicaragua. Curriculums were revised and the textbook for the literacy course was improved. Through cultural missions, the most distant parts of the country were reached.

The Dominican Republic and Mexico reported continued emphasis on literacy education. In Ecuador the national union of journalists was legally authorized to participate in the literacy campaign.

In the development of school facilities for persons in certain territories of the French union, it was deemed necessary to teach illiterates in simple French to enable them to communicate with each other despite a diversity of vernacular languages.

Italy continued its struggle against illiteracy. About 100,000 persons annually completed the course for illiterates. Poland also continued to make intensive efforts to eradicate illiteracy.

The recently established literacy campaign in Portugal began to show encouraging results. The work was so comprehensive that illiterate persons received help in becoming integrated fully and actively into the national community.

Rumania emphasized the abolishment of the causes of illiteracy and the prevention of its recurrence. Illiterate adults, until recently constituting a problem, had been taught to read and write, so that there was little or no recognized illiteracy in that country.

Greece reported that, although there had been universal compulsory education up to the sixth grade since 1911, the peasants (particularly women) were still largely illiterate. During the year, evening schools continued to be operated in the rural areas.

The United Nations Educational, Scientific and Cultural Organization (UNESCO) continued with increasing effectiveness to stimulate more positive results in the varied efforts to banish illiteracy. Such persistent questions as the following were examined: Should illiterates be taught in their own vernaculars or in the pertinent world language? Is a little literacy better than none, or should a certain standard of functional literacy be the goal? What kind of literature should be used to teach people whose tradition has been entirely oral? What are the best means of ensuring that persons who have just learned to read will not relapse into a state of illiteracy? (See also ISLAM.)

Immigration, Emigration and Naturalization.

Total arrivals in the United States, which had levelled off at 18,000,000 during the year ended June 30, 1954, resumed the previous upward trend in 1955 and rose to 123,859,654. This rise was chiefly in border traffic, particularly along the Mexican border.

As in past years, 97% of the total arrivals consisted of alien and citizen border crossers. The remainder included immigrants, crewmen and other nonimmigrants admitted for temporary visits, as well as citizens arriving from countries other than Mexico and Canada.

United States Immigrants.—More than 237,000 immigrants were admitted to the United States for permanent residence during the year ended June 30, 1955, an increase of 14% over the 208,177 admitted during the preceding year. The 237,790 immi-

grants admitted in 1955 included 29,002 refugees admitted under the provisions of the Refugee Relief act of 1953. Table I shows the major countries of birth of the immigrants admitted.

Table I.—Immigrant Aliens Admitted to the United States by Classes and Principal Countries of Birth, Year Ended June 30, 1955

Country or region of birth	Total admitted	Quota immigrants	Spouses and children of U.S. citizens	Natives of western hemisphere countries, their spouses and children	Ministers, their spouses and children	Other non-quota immigrants

The upward trend in quota immigration noted in 1954 was broken in 1955, when 82,232 quota immigrants were admitted. This 13% reduction in quota immigration may be explained in part by the fact that a number of immigrants admitted as non-quota immigrants came under the provisions of the Refugee Relief act of 1953.

With the exception of Great Britain, Ireland and Sweden, countries of northern and western Europe almost filled their quotas in the year. Quota immigration from a number of southern and eastern European countries, however, was low because the quotas of these countries had been mortgaged under the provisions of the Displaced Persons act; for example, quota immigration from Lithuania, Yugoslavia, Poland and the U.S.S.R. equalled about one-half of their annual quotas.

Of the 82,232 quota immigrants admitted in the year ended June 30, 1955, 17% were admitted under preferences established by the Immigration and Nationality act, 80% were non-preference quota and 3% were admitted under section 3(c) of the Displaced Persons act of 1948, as amended, which provides for the issuance of visas to out-of-zone refugees.

The number of selected immigrants of special skill or ability rose from 2,456 in 1954 to 3,012 in the year ended June 30, 1955.

Not since 1927 had so many nonquota immigrants been admitted to the United States—155,558 in the year ended June 30, 1955. The principal groups in this category were spouses and children of United States citizens, of whom 30,882 were admitted; natives of independent countries of the western hemisphere and their spouses and children, with 94,274 admitted; and persons admitted under the provisions of the Refugee Relief act of 1953, 29,002 admitted.

A 17% increase in nonquota immigration from the western hemisphere was primarily the result of a rise in immigration from Mexico and the West Indies. Immigration from Mexico during the past five years had increased from 6,372 in 1951 to 50,772 in 1955.

The admission of refugees under the provisions of the Refugee Relief act of 1953 was slow in starting, but speeded up during the year ended June 30, 1955, with the admission of 29,002 refugees. As of June 30, 1955, a total of 29,823 immigrants had been admitted under the act. The largest single group admitted consisted of 18,796 Italian relatives of United States citizens

or alien residents, residing in Italy or Trieste.

Nonimmigrants.—Nonimmigrants are aliens who enter the United States for temporary periods or alien residents returning from temporary visits abroad. The figures in Table II do not include such special groups as agricultural labourers, border crossers and crewmen.

Table II.—Nonimmigrant Aliens Admitted to the United States, Years Ended June 30, 1954–55

Class	1955	1954
Total nonimmigrants admitted	620,946	566,613
Foreign government officials	26,288	23,095
Representatives to international organizations	6,003	5,601
Temporary visitors for business	68,696	61,029

Returning resident aliens	61,442	55,887
Other nonimmigrants	25	59

*New classes under the provisions of the Immigration and Nationality act.
Source: Immigration and Naturalization Service, United States Department of Justice.

Nonimmigrant admissions had tripled since the end of World War II, and in the year ended June 30, 1955, reached a new high of 620,946, a 10% rise over the preceding year. More than half of the nonimmigrants admitted were temporary visitors for pleasure, of whom approximately 40,000 more visited the United States in 1955 than during 1954.

The principal countries or regions of birth of the nonimmigrants admitted during 1955 were the West Indies (103,339); Mexico (76,155); England, Scotland and Wales (67,266); South America (51,750); Asia (40,718); and Germany (33,226).

Emigrants and Nonemigrants.—Emigrants are, by definition, aliens who depart from the United States after a residence exceeding one year in the United States, with the intention of remaining abroad. In the year ended June 30, 1955, 31,245 emigrants departed, including 15,617 to Europe; 4,924 to Asia; 2,918 to Canada; 2,062 to the West Indies; 2,922 to South America; and 2,802 to other countries.

Nonemigrants are either resident aliens who depart for a temporary visit abroad or visitors in the United States who return home. Of the 634,555 nonemigrants who left the United States during the year ended June 30, 1955, 50,012 were resident aliens leaving for temporary periods and 584,543 were aliens who entered as tourists, transits, government officials and others who had been in the United States for less than one year.

Apprehensions and Expulsions of Aliens.—In June 1954 a concentrated drive was begun to apprehend and expel Mexicans illegally in the United States. As a result, for the first time in more than a decade illegal crossing over the Mexican border was brought under control. The control of the border was maintained throughout 1955 and was a major factor in the reduction

Table III.—Aliens Deported From the United States by Cause Years Ended June 30, 1950–55

these, 232,769 were voluntary departures, of which 221,381 took place at the Mexican border, and 15,028 were deportations under orders of deportation.

Included among the aliens deported were 47 of the subversive class and 666 racketeers and other criminals.

Aliens in the United States.—Section 265 of the Immigration and Nationality act requires that in January of each year all aliens must notify the immigration and naturalization service of their current addresses.

The resident alien population had remained at approximately 2,300,000 for the past five years. Three-fourths of the alien population were concentrated in the northeastern states of New York, Massachusetts, New Jersey and Pennsylvania; in the north central states of Illinois and Ohio; and in the southwestern states of California and Texas.

The alien population was declining in the heavily populated eastern states and was growing in the north central and southwestern states.

Naturalizations.—Naturalizations granted during the year ended June 30, 1955, numbered 209,526, an increase of 78% over 1954.

Table IV.—Principal Countries of Former Allegiance of Persons Naturalized in the United States, Years Ended June 30, 1951–55

Statutory authority exists for the reacquisition of citizenship by persons who lost citizenship under certain conditions. During 1955, 930 persons thus repatriated themselves, including 67 women who lost citizenship through marriage. In addition, 15,323 certificates of derivative citizenship were granted to persons who derived citizenship, and 7,379 certificates were issued by reason of birth abroad to citizen parents.

The United States citizenship of 197 persons was revoked usually because of the establishment of permanent residence abroad within five years after naturalization. In addition, 4,202 persons expatriated themselves by voluntary action. (See also LAW.) (J. M. Sg.)

Income, Distribution of: see WEALTH AND INCOME, DISTRIBUTION OF.

Income and Product, U.S. For the first three quarters of 1955, the U.S. national income was at an annual rate (seasonally adjusted) of \$31,500,000,000 and the gross national product amounted to an annual rate of \$384,000,000,000. Both of these comprehensive measures of the value of the nation's output were at record highs. They were about 7% above the totals for calendar year 1954. From 1953 to 1954, national income and gross national product had registered small declines.

(The annual rate data represent the average of estimates for the first three quarters which have been adjusted for seasonal influences and multiplied by four to facilitate comparisons with previous annual totals.)

Since prices in the first three quarters of 1955 were only slightly higher than the average for 1954, the bulk of the

in the number of expulsions. In the year ended June 30, 1954, more than 1,000,000 aliens were expelled from the United States, but during 1955 the number was down to 247,797. Of

crease in the dollar value of national output represented higher physical volume. The quantity of goods and services produced in the United States in the first nine months of 1955 was at a rate larger than in any other year. It was one-third higher than in 1946, the first full post-World War II year, and more than twice as high as in 1929. On a per capita basis (that is, after allowance for population increase over the period), real national output in 1955 was three-fifths greater than in 1929.

The flow of personal income, which had increased slightly from 1953 to 1954 despite the dip in national output, showed further expansion. In the January–September 1955 period, personal income aggregated \$300,000,000,000 on an annual rate basis, 4% above the 1954 calendar-year total of \$287,000,000,000.

Meaning of Income and Product Measures.—National income, as defined by the U.S. department of commerce, measures the nation's output of goods and services in terms of its factor cost—the aggregate earnings of labour and property which arise from current production. Earnings are measured in the forms in which they accrue to residents of the nation, before deduction of taxes on those earnings. As such, they consist of the compensation of employees, the profits of corporate and unincorporated business enterprises, net interest and rental income of persons.

Personal income is the current income received by persons from all sources, including transfers from government and business but excluding transfers among persons. It differs from national income by the inclusion of transfers (such as relief, veterans' pensions and government interest disbursements) which are not in return for current productive services, and by the exclusion of earnings (social insurance contributions and undistributed corporate income) which are not actually received by persons in the current period.

Gross national product or expenditure measures the nation's output of goods and services in terms of market value. It is "gross" in the sense that no deduction is made for depreciation charges and other allowances for durable capital goods used up in the productive process. Other business products used up by business in the accounting period are excluded. Gross national product comprises the purchases of goods and services by consumers and government, gross private domestic investment (including the change in business inventories) and net foreign investment.

Broad Patterns of Change.—Expansion of income and product in 1955 may be viewed briefly against the background of developments in the 1953–54 business readjustment.

Continuing the 1950–52 uptrend, national income and product showed further increases in the first half of 1953. Declines occurred in the ensuing three quarters, followed by a firming over-all economic activity in the second and third quarters of 1954. Despite the downturn in national output, the flow of income to individuals was well maintained. Personal income preceded only slightly from the 1953 mid-summer high point, and disposable income—personal income less personal taxes—showed an actual rise. This strength of the individual income flow was a key factor in the general demand situation as it supported a high level, gradually rising flow of consumer expenditures.

The upswing of economic activity that started in the fall of 1954 was one of the most vigorous and pervasive on record. Its dimensions may be seen from the gross national product figures. After declining from an annual rate of \$369,300,000,000 in the second quarter of 1953 to a level of about \$358,000,000,000 in the second and third quarters of 1954, gross national product advanced strongly over the course of the next year—attaining the unprecedented magnitude of \$392,000,000,000 by the third quarter of 1955. From analysis of personal income, retail sales

and other monthly indicators, it was evident early in the fourth quarter of 1955 that the momentum of economic forces was still upward, and that the United States was on the threshold of a \$400,000,000,000 economy.

The production downturn from the summer of 1953 to the spring of 1954 mainly reflected (1) a declining curve of purchases by the federal government for national security purposes; and (2) a shift by business from inventory accumulation to liquidation. The forces that shaped the subsequent recovery, however, were mostly different. Reversal of the shift in inventory investment, it is true, was a factor of some significance in the upsurge of gross national product from the fall of 1954 through the third quarter of 1955. But national security purchases were maintained at their reduced level in this period and accounted for none of the advance in "final purchases" (gross national product less change in business inventories). This advance was wholly civilian in character. It reflected, in the main, a diversified array of increases cutting across the broad categories of personal consumption expenditures and private construction and equipment outlays.

Gross National Product.—Personal consumption expenditures in the first three quarters of 1955 were at an all-time high of \$250,900,000,000—\$14,400,000,000, or 6%, more than in 1954. Consumer outlays for durable goods, nondurable goods and services—as well as for the great bulk of individual items comprising these broad categories—were all larger in the 1955 period.

While the buoyancy of consumer markets in 1955 reflected the trend of income, it is significant that the rise in consumer expenditures outstripped that in disposable personal income. Extensive use was made of consumer credit, which increased about one-fifth from the third quarter of 1954 to the same period of 1955.

After declining from \$51,400,000,000 in 1953 to \$47,200,000,000 in 1954, gross private domestic investment registered an upsurge to the record annual rate of \$58,300,000,000 in the first nine months of 1955. In the latter period, the business system resumed the accumulation of inventories, and private outlays for producers' durable equipment and industrial, commercial and residential construction showed expansion over 1954.

Swings in business inventories were a feature of the 1953–54 economic adjustment and of the ensuing recovery. Inventory accumulation by business rose in the second quarter of 1953 and then showed a slackening in the next three months. This was followed by four successive quarters of sizable liquidation, during which business adjusted stocks more closely to current sales levels. With the upturn and broad expansion of economic activity, the reduction of inventory stocks tapered in the last quarter of 1954 and was replaced by inventory build-up in 1955.

In contrast to the volatile course of business inventory change, "fixed" investment in new construction and equipment fluctuated within a narrow range throughout 1953 and 1954 and

Table 1.—Gross National Product or Expenditure

(In 000,000,000s of dollars)*

Item	1955†	1954	1953	1952

moved upward in 1955. Nonfarm residential building levelled off in the spring quarter, whereas outlays for industrial and commercial construction and for producers' equipment showed continued gains.

Purchases of goods and services by federal, state and local governments in the first three quarters of 1955 were at an annual rate of \$75,400,000,000, about \$1,500,000,000 below the total for 1954. The decline was wholly in the federal segment, as state and local government expenditures—continuing a steady postwar uptrend—rose \$2,000,000,000 over the period.

Expenditures for purposes of national security, comprising nine-tenths of total federal government purchases, reached a postwar peak rate of \$53,200,000,000 in the second quarter of 1953, dropped by one-fourth over the next year and a half, and were relatively stable in the first three quarters of 1955. At an annual rate of \$40,700,000,000, national security outlays in the third quarter of 1955 absorbed 10% of the total gross national product, as compared with 14% in the second quarter of 1953 and 6% in the second quarter of 1950, just prior to the attack on South Korea.

National Income.—Nearly all industrial divisions of the economy contributed to the expansion of national income from 1954 to the first three quarters of 1955. (See Table II.)

The only exception was agriculture, where a further downdrift in farm prices combined with general stability in costs led to a contraction of income originating.

The largest gain, both absolute and relative, occurred in manufacturing. It was this industry—especially its durable goods sector—that had been most affected by the 1953–54 economic readjustment. As shown in the table, income originating declined from 1953 to 1954 in manufacturing and the related mining and transportation industries but held stable or increased moderately in the other broad divisions.

Substantial recovery in manufacturing income began in the fall of 1954 and was accelerated during the following winter and spring. By mid-1955 the recovery had carried beyond the 1953 peak and income in most types of manufactures was expanding vigorously in response to the broadened demand for industrial products.

Changes in the distributive share pattern of national income in the period 1953–55 reflected primarily shifts among industries. Major developments related to corporate profits, compensation of employees, and income of unincorporated enterprises.

In the three industry divisions chiefly affected by the business readjustment—manufacturing, mining and transportation—practically all income originates in corporations. Within the corporate system, the principal effect was on profits. As shown in Table III, corporate earnings dropped sharply from 1953 to 1954—although profits after tax were stable—and then rebounded strongly in 1955, whereas the changes in employee compensation were much less volatile.

The income of unincorporated enterprises in the aggregate changed little from 1954 to 1955. This over-all stability reflected an appreciable drop in farm income that was approximately offset in the total by an upturn in the income of business and professional proprietors.

Table III.—National Income by Distributive Shares

Disposition of Personal Income.—During the strong upturn in 1955, personal income in the United States first exceeded the \$300,000,000,000 mark in May and climbed to \$306,000,000,000 (annual rate) by the third quarter of the year.

For the first nine months as a whole, the annual rate of personal income, as already noted, was \$300,000,000,000. Disposable income was at an annual rate of \$266,700,000,000 as compared with \$254,800,000,000 in 1954. (See Table IV.)

Personal saving amounted to an annual rate of about \$16,000,000,000 in the first nine months of 1955. This was somewhat lower than in the three previous years. (See also BUDGET; NATIONAL; BUSINESS REVIEW; CONSUMER CREDIT; DEBT, NATIONAL; PRICES; WEALTH AND INCOME, DISTRIBUTION OF.)

Income Tax: see TAXATION.

India. This republican member of the Commonwealth of Nations in southern Asia consists of a union of states. Area and populations of the states are shown in the table.

Language falls into two main groups: (1) *Indo-Aryan* northern, including western Hindi (spoken by 47% of the population), Bengali (8%), Marathi (7%), Gujarati (5%); western Hindi's most important derivative is vernacular Hindustani which occurs as (a) literary Hindi, with Sanskritized vocabulary and the Devanagari script, used by educated Hindus; Urdu, with Persianized vocabulary and the Perso-Arabic script.

sed by educated Moslems; and (c) the widely understood colloquial Hindustani, much used in commerce, the military services, etc., written in Perso-Arabic Devanagari or Roman characters and with many technical words of English origin. (2) *Dravidian* or southern, including Telugu (9%), Tamil (7.5%), Kannada (4.4%) and Malayalam. English is used for all official purposes, but is to be replaced by Hindi in the Devanagari script by 1965. Religion: Hindu (about 85%), Moslem (9.9%), Christian (2.3%), Sikh (1.7%), Jain, Buddhist, Parsee, Jewish, etc. Chief towns other than the union capital and provincial capitals (pop., 1951 census): Ahmedabad 788,333; Cawnpore 255,383; Poona 480,982; Howrah 433,630; Amritsar 325,747; Coimbatore 373,665; Madura 361,781; Benares 355,777; Allahabad 322,295; Indore 310,859.

President in 1955, Rajendra Prasad; prime minister, Jawaharlal Nehru.

History.—Foreign Affairs.—There was no change in the foreign policy of seeking friendship with all, and Delhi was one of the great junctions of co-existence. Among the visitors were the prime ministers of the U.S.S.R., Burma, Egypt and the Sudan, the king of Saudi Arabia, the foreign ministers of the United Kingdom, Australia and Canada and the United Nations secretary-general. Relations with Canada were particularly

"I SAY, YOU CHAPS, just stop pumping for a moment and let's talk this over, huh?" a cartoon of 1955 by the Indian artist Ahmed of the *Hindustan Times* (New Delhi)

India was one of the sponsors, held at Bandung, Indonesia, in April. In June he undertook a tour of Czechoslovakia, the U.S.S.R., Poland, Yugoslavia, Austria, Italy and the United Kingdom.

The two immediate problems were the Portuguese settlements and Pakistan. As the Indian government had ruled out the use of force and Portugal had declared that transfer of sovereignty could not be effected by peaceful means, the impasse was complete. In July railway traffic between India and Goa was suspended, and the Portuguese legation in New Delhi was asked to close down from Aug. 8. *Satyagrahis* (nonviolent resisters) from India tried to enter Goa; at first the Portuguese authorities merely deported them but later resorted to drastic action. Early in August two were killed; the climax came on Aug. 15 when hundreds of *satyagrahis* entered Goa, and the Portuguese shot 22 dead, injured 225 and imprisoned many more. Four days later the Indian government severed diplomatic relations. On Sept. 1, the Indian consulate-general at Goa was closed down, and Portugal was asked to close its consulates in Bombay. To prevent further casualties *satyagrahis* were prevented from crossing the border.

Relations with Pakistan were better than for many years. After border clashes in March and May the prime minister and foreign minister of Pakistan visited New Delhi to co-ordinate steps to prevent further incidents; and the occasion was used to have "full and cordial" talks on Kashmir. An *ad hoc* territorial agreement on the use of the Indus waters during the six months from April to September was reached. After taking into account Pakistan's ability to transfer water in replacement from the western rivers, amounts for additional canal withdrawals by India from the three eastern rivers were settled. In August a train service between Calcutta and Lahore was inaugurated, thus establishing direct land communications between East and West Pakistan.

Home Affairs.—In the elections held in Andhra in February the congress won 146 of 196 seats, and formed a stable ministry. In Travancore-Cochin during the same month the Praja-Socialist ministry was defeated and the congress took over. The commission, appointed the previous year to examine the question of reorganization of states, submitted its report in October. It recommended that the number of Indian states be reduced from 27 to 16, with 3 territories directly administered from the centre. This scheme was based on the need for linguistic and cultural homogeneity, balanced by financial, economic and administrative considerations.

The Institut Français de Pondichéry was opened on March 20. In the July elections to the municipal councils and the representative council of Pondicherry state, congress won a majority

friendly and Lester Pearson, Canada's external affairs minister, who came to inaugurate a dam named after his country, offered India technical assistance in the form of an atomic reactor, aircraft and a magnetometer aerial survey of mineral resources in Rajasthan. A trade pact was signed with the German Federal Republic, and a loan of Rs.200,000,000 was granted to Burma. Jawaharlal Nehru, besides attending the conference of Commonwealth prime ministers in London in January, led the Indian delegation to the Asian-African conference, of which

PRIME MINISTER NEHRU escorting Helen Keller, deaf and blind authoress, to a reception given in her honour at New Delhi, India, during her world tour of 1955

with the Communists a close second; the latter had a majority in Pondicherry itself.

A marriage act was passed prescribing monogamy and permitting divorce for Hindus and another law enforced the abolition of untouchability by the constitution by making the treatment of anyone as an untouchable a criminal offense.

The government decided to introduce decimal coinage and a metric system of weights and measures. A commission was appointed to consider the question of the replacement of English by Hindi as the official language of the union government by 1965; and another commission was assigned the task of consolidating and revising statute law and reviewing judicial administration.

Production and Planning.—The last year of the first five-year plan was one of fulfilment. The Ganguwal powerhouse, the first unit of the Bhakra-Nangal hydroelectric project in the Punjab, was switched on in January and in November work was begun on the construction of the main dam of the project. The Ahraura dam on the Gurie river near Benares was completed in January; the Durgapur barrage, part of the Damodar valley project, was opened in August; and at Messanjore in West Bengal the main dam of the Mayurakshi project, built largely with aid received from Canada under the Colombo plan, was named the Canada dam and inaugurated in November by the external affairs minister of Canada.

The Machkund hydroelectric power scheme, serving Andhra and Orissa, was switched on in August. The first national newsprint factory at Nepanagar in Madhya Pradesh, and an oil refinery with an annual crude oil production of 2,000,000 tons, set up by the Burmah Shell company at Trombay on the west coast, both started production in March; the Hindustan machine tool factory was established near Bangalore; and the railway coach factory in Perambur near Madras city went into production in October. An agreement was signed with the U.S.S.R. in February for the establishment at Bhilai in Madhya Pradesh of

a steel plant with an initial capacity of 1,000,000 tons of ingots and an eventual production of 1,000,000 tons of rolled products. To co-ordinate iron and steel production a separate ministry of iron and steel was created.

The second five-year plan, which was to come into operation in March 1956, was being formulated. The government (Congress party) defined its objective at its annual session at Avadi near Madras, in January as the creation of "a socialistic pattern of society"; and to enable its easy achievement the country's constitution was amended during the year to vest the state with powers of compulsory acquisition and requisition of private property.

The state had the discretion to determine the amount of compensation to be paid and the courts were only empowered to decide if the compensation was illusory or amounted to fraud under the constitution. The Imperial Bank of India was nationalized and converted on July 1 into the State Bank of India. This state-sponsored commercial bank was to open branches in the rural areas. The second plan would lay great emphasis on heavy industry and minerals. It envisaged capital expenditure, mostly in the public sector, of between £3,000,000, £4,000,000, and would aim at increasing the national income at an annual rate of 5% and at providing employment for 12,000,000 people. Education.—Schools (1951-52): primary 215,036, pupils 19,298,614 teachers (including kindergarten) 554,730; secondary 22,639, pupils 5,343,836, teachers 230,419; colleges to intermediate standard 149, pupils 251,855; vocational (including 131 schools of fine arts and 3,358 schools of oriental studies) 5,149, pupils 235,806, teachers (1950-51) 20,719. Adult education centres 43,453, pupils 1,066,437. Teachers' training schools and colleges 857, students 72,931. Universities (1955) 32; other institutions of higher education (1951-52, including fine arts, oriental studies and physical training) 662. Total number of students (1954-55) 505,400.

Finance and Banking.—Monetary unit: rupee, with an exchange rate of 4.762 to the U.S. dollar. Budget (1955-56 est.): revenue Rs. 4,690,000,000, expenditure Rs. 4,990,000,000. Total public debt (March 1955) Rs. 30,398,600,000, of which Rs. 1,169,800,000 were foreign debt. Currency circulation (Dec. 1954) Rs. 12,190,000,000, (Mar. 1955) Rs. 10,300,000,000. Bank deposits (Dec. 1954) Rs. 6,250,000,000, (Mar. 1955) Rs. 6,700,000,000. Gold and foreign exchange (May 1955) U.S. \$1.72 billion, (Dec. 1954) U.S. \$1,782,000,000.

Foreign Trade.—(1954) Imports Rs. 5,978,000,000; exports Rs. 5,620,000,000. Main sources of imports: U.K. 25%; other sterling area 27%; continental European Payments Union countries 19%; U.S. and Canada 13%. Main destinations of exports: U.K. 32%; other sterling area 25%; U.S. and Canada 18%; continental E.P.U. countries 9%. Main export commodities: jute and bagging 22%; tea 23%.

Transport and Communications.—Roads (1953): 432,800 km. Motor vehicles (1953): cars 167,500, commercial vehicles 133,700. Railways (1953) 55,200 km.; traffic (1952-53): 57,994,000,000 passenger-km. freight, (1953-54) 48,024,000,000 ton-km. Shipping (July, 1954): merchant vessels of 100 gross tons and over 216; total tonnage 516,000. Air transport (1953): 385,773,000 passenger-km.; cargo, 26,428,000 ton-km. flown 30,902,000, (1954) 37,600,000. Telephones (March 1955) 210,868. Radio receiving sets (1953): 680,000.

Agriculture.—Main crops (metric tons, 1954; 1955 in parentheses): wheat 7,917,000 (8,676,000); rice 36,894,000; maize 2,991,000; tea 2,700; peanuts 3,884,000; linseed 395,900; cottonseed 1,454,000; cotton lint 727,000; jute 572,000; tobacco 254,700; (1953-54) millet 8,510,000; sorghum 8,040,000; barley 2,831,000; (1953) chick-peas 4,624,000; potatoes 1,997,000; coffee 30,100; rapeseed and mustard seed 839,000; sesame 539,000; sweet potatoes and yams (1952) 1,186,000; cassia (1951) 1,254,000. Sugar, raw value (1954) 1,533,000. Rubber, natural (1954) 21,800. Livestock (1951): cattle 155,099; sheep 38,829; pigs 4,420,000; chickens 67,135; ducks 6,624,000; buffaloes 42,854; goats 47,121,000.

Industry.—Electricity 7,497,000,000 kw.hr. Production (metric tons, 1954): coal 37,361,000; pig iron 1,972,000; crude steel 1,704,000; copper, refined 7,300; lead, refined 1,810; aluminum 4,970; cement 467,000; cotton yarn 706,800; woven cotton fabrics 4,590,000 metres; (metric tons, 1953): salt 3,050,000; manganese ore, metal 897,000; sulphuric acid 110,800; caustic soda 23,300; gold 6 kg. Bicycles (1954) 372,000. Index of machinery production (1948=100) 190.

India, Portuguese: see PORTUGUESE OVERSEAS TERRITORIES

Indiana. An east north central state of the United States, popular name "Hoosier state." Indiana was admitted to the union Dec. 11, 1816, as the 19th state. Total area of the state is 36,291 sq.mi., including 86 sq.mi. of inland lakes and rivers. Pop.: (1950 census) 3,934,244, (July 1, 1955, est.) 4,325,000; 59.9% of the population was defined as urban (1950). Capital and largest city: Indianapolis (pop. 1950) 427,173. Other large cities: Gary 133,911; Ft. Wayne 133,607; Evansville 128,636; South Bend 115,911; Hammond 87,594; Terre Haute 64,214; Muncie 58,479; East Chicago 54,263; Anderson 46,820.

History.—Legislation enacted by the 1955 Indiana legislature included provision for state bonus payments of up to \$555 for Indiana veterans who served in the Korean war theatre and \$600 or next of kin of veterans who died from service-connected causes. State aid to local schools was increased by \$23,500,000 for the 1955-57 biennium as compared with the previous biennium. Workmen's compensation maximum benefits were increased from \$30 to \$33 weekly, and unemployment compensation benefits from \$27 to \$30 weekly. Employers of four or more persons (previously eight or more) were made subject to the state unemployment compensation law. Legislation also permitted teachers and other public employees to vote on coming under the federal old age and survivors insurance program as well as their own state retirement plans. Approximately \$14,000,000 was made available for school construction loans to local school units with insufficient local financial resources.

State officials in 1955 were: George N. Craig, governor; Harold W. Handley, lieutenant governor; Crawford F. Parker, secretary of state; John Peters, treasurer; Curtis E. Rardin, auditor; Edwin K. Steers, attorney general; and Wilbur Young, superintendent of public instruction.

Education.—The estimated number of public schools in the state in 1955 was 2,350. Enrolment in the elementary schools was 479,398 with 10,100 teachers. Enrolment in the junior high schools was 128,693 with 2,280 teachers. Enrolment in the high schools (grades 9-12) was 192,989 with 6,650 teachers. Parochial schools had an enrolment of about 78,750. For the year 1954-55, the state appropriated about \$68,390,000 for the support of schools, in addition to the sums provided by local units of government. There were about 70,377 enrolled in 35 Indiana colleges and universities in Sept. 1955.

Social Insurance and Assistance, Public Welfare and Related Programs.—In 1954-55 the state's welfare program cost \$40,706,640, of which \$20,562,475 was furnished by federal funds, \$9,638,877 by state funds and \$10,706,288 by county funds. Old-age assistance cost \$21,434,632, blind assistance \$1,216,015 and aid to dependent children \$9,028,924. In addition, child welfare cost \$2,697,217 from state and county funds. Receipts of the state for unemployment insurance for the year ending June 30, 1955, were \$27,784,816. Benefits paid out were \$40,125,395.

In 1955 the state maintained ten institutions for mental patients, including an epileptic village; eight homes, hospitals and schools, and six penal and correctional institutions. As of June 30, 1955, inmates of mental institutions totalled 17,466 and of penal and correctional institutions 6,645.

Communications.—The total mileage of state highways in 1955 was 17,657, with county roads totalling an additional 76,204 mi. The state highway expenditure for roads amounted to \$59,348,691 during the fiscal

year 1954-55. Steam railroad first-line trackage measured approximately 508 mi. There were 90 mi. of electric railways. The estimated number of telephones in the state on Jan. 1, 1955, was 1,362,700. There were 75 commercial airports, 35 municipal airports, 4 military airports, 72 personal landing fields, 3 seaplane bases and 2 helicopter landing areas in the state as of July 1, 1955.

Banking and Finance.—On June 30, 1955, there were 354 state banks and trust companies with 77 branches. On the same date the total resources of these banks were \$1,755,470,308. Deposits totalled \$1,625,766,67. There were 123 national banks and 61 branches on Dec. 31, 1954. Their resources amounted to \$2,513,822,000 and deposits totalled \$2,333,398,000 as of April 11, 1955. State savings and loan companies

numbered 157 and their assets were \$375,366,302 as of Dec. 31, 1954. The state's 73 federal savings and loan associations listed assets amounting to \$563,733,313 as of December 31, 1954.

State expenditures for the fiscal year 1954-55 were \$150,011,315 general fund, \$165,006,424 dedicated funds, total \$315,017,739. Receipts

were \$143,433,182 general fund, \$156,176,319 dedicated funds, \$299,609,501 total. At July 1, 1955, there was a balance in the state treasury of \$76,000,000. The state constitution prohibits any long-term borrowing and Indiana therefore has no state debt.

Agriculture.—Cash receipts from farm marketing in 1954 totalled \$1,158,432,000, or about 3¾% of the national total. (G. N. Co.)

Manufacturing.—Data on manufacturing and industry for 1953 (latest available in 1955) are shown in Table II.

Table III.—Mineral Production of Indiana

(Short tons, except as noted)

Mineral	Quantity 1952	Value 1952	Quantity 1953	Value 1953
Clays	1,331,000	\$ 1,700,000	1,654,000	\$ 2,514,000
Coal	16,350,000	64,977,000	15,812,000	62,354,000

Stone	9,127,000	21,965,000	8,714,000	21,696,000
Other minerals	31,009,000	...	35,544,000
Total	\$162,031,000	...	\$169,179,000

*Values for processed materials are not included in the totals.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Indiana in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953, Indiana ranked 20th among the states in value of its mineral output, with 1.18% of the U.S. total.

Indians, American. During 1955 the federal government continued its efforts to place elsewhere its historic responsibility to American Indians. The full session of the 83rd congress had witnessed an almost unparalleled drive to lodge federal supervisory and service activities with whatever jurisdiction would accept them—state, county, local school district, private foundation or another federal agency.

On Oct. 7, 1955, first-hand reports of the progressive withdrawal of federal supervision over the nation's approximately 400,000 Indians were presented to the eighth annual meeting of the Governors' Interstate Indian council in Santa Fe, N.M. Congress in 1954 had passed termination laws affecting six Indian groups of about 25,000 persons in the states of Oregon, Wisconsin, Utah and Texas. Two of the most difficult situations developed in Wisconsin and Utah, it was reported at the council session.

The legislation for Wisconsin involved mainly the Menominee tribe, with 3,000 members, about 234,000 ac. of reservation lands, and assets, mainly in timber, estimated at somewhere between \$33,000,000 and \$66,000,000. George M. Keith, deputy director of the Wisconsin department of welfare, reported that the legislation had caught the state without any program for the integration of this long-segregated people and property. He said that the state was faced with a tremendous task to work out a transfer program before the law's deadline of Dec. 1958.

Two of the 1954 acts concerned tribes in Utah. One, the so-

Table I.—Principal Crops of Indiana

for 1954-55. Steam railroad first-line trackage measured approximately 508 mi. There were 90 mi. of electric railways. The estimated number of telephones in the state on Jan. 1, 1955, was 1,362,700. There were 75 commercial airports, 35 municipal airports, 4 military airports, 72 personal landing fields, 3 seaplane bases and 2 helicopter landing areas in the state as of July 1, 1955.

Banking and Finance.—On June 30, 1955, there were 354 state banks and trust companies with 77 branches. On the same date the total resources of these banks were \$1,755,470,308. Deposits totalled \$1,625,766,67. There were 123 national banks and 61 branches on Dec. 31, 1954. Their resources amounted to \$2,513,822,000 and deposits totalled \$2,333,398,000 as of April 11, 1955. State savings and loan companies

called Paiute act, involved five small tribes whose members were scattered outside the reservation. Francis McKinley, a Ute Indian and a council delegate, said that these Indians had been receiving a minimum of federal services, so that federal withdrawal would mean little change. The second Ute bill, however, posed a mass of still unsolved problems, since it necessitated splitting of the 1,000,000-ac. Uintah-Ouray reservation, together with its assets, including \$15,000,000 in cash. There were about 1,800 Indians in the group. The termination act applied only to a dissident mixed-blood group of 450. The others did not want to sever their ties with federal trusteeship. Complex corporate plans to separate their respective equities would be necessary to meet the tight time schedule demanded in the legislation.

Two Indian groups in Oregon were affected by termination bills. One, involving 55 coastal bands numbering 10,000 to 15,000 Indians, presented few problems because they were already relatively well integrated. In connection with the second group, the 2,100-member Klamath tribe, however, many problems remained to be worked out within the specified four-year termination period. These included division of 1,000,000 ac. of land and \$50,000,000 to \$100,000,000 in tribal assets.

Meanwhile, in Washington two major legislative acts were passed by congress that were concerned with improving the present status of Indians. One of these, public law 47, corrected an anomalous situation that had existed in the big Papago reservation in southern Arizona for many years. The other, public law 255, authorized longer-term leasing of restricted Indian lands for public, religious, educational, recreational, residential, business and other purposes. While this bill contained certain threats of complete alienation of Indian property, neutral observers believed that, with properly drawn regulations under the act, Indian interests would be protected. The bill itself had certain safeguards, such as reappraisal provisions at five- to ten-year intervals.

As for the Papago legislation, under the executive order of 1917 which created the 2,000,000-ac. reservation, title to minerals under the tribal lands were not vested in the tribe (as it is on all other Indian reservations) but was left open for entry by any citizen under the mining laws of the United States. When a mining claim is patented, the patent conveys title not only to the minerals but also to the surface of the land, which is thus alienated from tribal ownership. As of Dec. 1953 about 12,000 ac. of grazing land on this reservation were included in mining claims. The Papago Indians contended that under the old conditions mineral claimants could use their land indefinitely without getting a patent. Recent uranium strikes in the west increased their concern that the land might be lost to the tribe for stock-grazing purposes. Public law 47 closed the reservation to entry, gave the tribe title to minerals and permitted mining to be carried on under a 1938 law.

There were other measures introduced in congress which received various degrees of investigation and consideration. These bills were still pending for possible action in Jan. 1956.

The following are the most important measures in the senate which had general interest or applicability.

S. 401, introduced by Sen. George W. Malone of Nevada, would abolish the functions of the bureau of Indian affairs, remove guardianship of Indians and repeal the Indian Reorganization act. Under terms of the bill the bureau would be abolished in three years after enactment.

S. 704, introduced by Sen. Edward J. Thye of Minnesota, would provide for the termination of federal supervision over Indians of southern Minnesota.

S. 1373, introduced by Sen. James E. Murray of Montana and others, was to promote the economic use of Indian lands and alleviate and adjust the heirship problem involved in Indian trust or restricted allotments. Companion measures to this were house resolutions 4226 and 4512. They were introduced by Congressmen Lee Metcalf of Montana and E. Y. Berry of South Dakota.

S. 1746, introduced by Sen. Mike Mansfield and Sen. James E. Murray, both of Montana, would continue the Indian Claims commission, which expires under existing law on Aug. 13, 1956, until April 10, 1962. Com-

panion house bills were H.R. 220, 238, 1563, 3238 and 5313. They were introduced by Representatives Victor Wickersham of Oklahoma, C. Albert of Oklahoma, Ed Edmondson of Oklahoma and Lee Metcalf of Montana. Representative Wickersham introduced two resolutions for the same intent with slightly different wording, numbered 220 and 3238.

S. 2222, introduced by Sen. Harley Kilgore of West Virginia, would amend title 18, entitled "Crimes and Criminal Procedure," of the United States code to provide a criminal sanction for the embezzlement or theft of the property of Indian tribal organizations. This measure was introduced in the house as H.R. 6403 by Rep. Emanuel Celler of New York.

S. 2252, introduced by Sen. Arthur Watkins of Utah, would close membership rolls of tribes, bands or communities and other groups of Indians in the United States for the purpose of ownership rights in the property of such groups.

There were other measures introduced in the house that were not passed. The major ones were:

H.R. 1562, introduced by Representative Edmondson of Oklahoma, to promote the education and rehabilitation of Indians of the United States and its territories. Rep. Stewart Udall of Arizona introduced a similar measure, H.R. 3141.

H.R. 1591, introduced by Representative Metcalf of Montana, to assist the several states in providing scholarships to enable Indian high school graduates to pursue education at colleges and universities.

H.R. 3239, introduced by Rep. Clifton Young of Nevada, to terminate federal supervision over Indians in Nevada.

H.R. 4669, introduced by Rep. Edith Green of Oregon, to provide assistance for the control of juvenile delinquency.

H.R. 5957, introduced by Representative Berry of South Dakota, amend public law 280. This was the act of Aug. 15, 1953, which granted certain states jurisdiction over crimes committed by or against Indians within that state's boundaries, and also gave the other states the right to assume that jurisdiction. Senate bills 27, 1606 and 51 (the latter containing the provision that this must be done only with the consent of the Indians involved, in accordance with historic Anglo-American theory of government) and house resolutions 2624, 2654, 2833, 4219, 6036, 6402 and 6439 all dealt with the same matter.

H.R. 7384, introduced by Rep. Fred Marshall of Minnesota, to promote the welfare and to facilitate the orderly termination of federal supervision and control over Indians and Indian property of Minnesota. Sen. Hubert Humphrey of Minnesota introduced a similar measure, S. 2685.

On the executive front, the drive to divest the federal government of its supervisory role over Indians was marked by two major developments during the year: (1) completion of the transfer of the Indian bureau's health program to the United States public health service, a division of the department of health, education and welfare, as of July 1, 1955; and (2) progress toward the bureau's transfer of its Indian extension work to the states.

The transfer of the bureau's health activities represented the largest reduction of program responsibilities in the history of the 165-year-old agency. It included transfer of approximately 3,600 employees and real property valued at around \$40,000,000. Among the 970 buildings located throughout the United States and Alaska were 56 hospitals in 13 states and the territory of Alaska, 21 health centres and 13 boarding school infirmaries.

While moving toward termination of federal trusteeship, the bureau during the year took steps to improve current conditions of Indian schoolchildren, principally Navajos. Under the Navajo Emergency Education program, the total enrolment of Navajo children in federal, public and mission schools, both off and on the reservation, was increased from 16,215 at the beginning of the fiscal year to 23,679 at the end, leaving a balance of 5,000 unenrolled children. Plans were made, however, to make schooling available for all Navajo children who could attend during the fall of 1955.

During the fifth year of operation, the Navajo-Hopi long-range rehabilitation program authorized by the act of April 1950, produced numerous basic improvements for the benefit of the two tribal groups in such fields as education, conservation and resource survey, irrigation and road improvement. (See *INDOCHINA*; *ROMAN CATHOLIC CHURCH*.) (C. J. S. D.)

Indochina: see CAMBODIA; LAOS; VIETNAM.

Indonesia. This is an Asian republic consisting of two groups of islands: (1) Major Sunda Islands (Java, Sumatra, Borneo, Celebes); (2) Lesser Sunda Islands.

sa Tenggara (Bali, Lombok, Sumba, Sumbawa, Flores, part Timor); (3) Molucca (Maluku) archipelago (Halmaheira, Am. Ambon, etc.). Area 575,893 sq.mi. Pop. (mid-1955 est.): 154,500; two-thirds live on Java. Large indigenous groups on Java: Javanese 42,000,000, Sundanese 13,500,000, Madurese including the inhabitants of the island of Madura) 6,700,000; Sumatra: Menangkabaus 3,100,000, Bataks 1,800,000; on the Sunda Islands: Balinese 1,700,000; on Celebes: Buginese 1,000,000. Nonindigenous groups: Chinese 3,000,000, Europeans mainly Dutch) 75,000. Language: as well as the Indonesian official language (Bahasa Indonesia), an adaption of Malay, 25 other languages and about 250 dialects are spoken. Religion: Islam (Shafi'i) about 90%; Christian 4.3%; Buddhist 3%; Hindu 2.2%. Chief towns (pop., 1951 est.): Djakarta (cap.) 1,000,000, Djokjakarta 1,800,000, Surabaya 1,100,000, Bandung 1,000,000, Semarang 311,000, Surakarta 266,000, Medan 260,000. President, Achmed Sukarno. Premiers in 1955: Ali Sastroamidjojo and (from Aug. 11) Burhanuddin Harahap.

History.—The year 1955, like the previous one, was marked by impending political, economic and financial crises. Backed by nationalists and Communists, the Ali cabinet continued its policy of closer political and economic relations with the Soviet Union and Communist China. In April Indonesia was host to representatives of 29 countries, including China, at the Asian-African conference (*q.v.*) in Bandung that unanimously adopted a resolution in which every kind of colonialism was condemned and the "liberation" of Dutch New Guinea was demanded.

The Communist fast-increasing influence and the deterioration of the financial and economic position brought the Socialists, the Masjumi (Moslems) and the Christians together in a common front. Accusing the government of widespread corruption, of squeezing large sums of money out of import licences thereby unduly increasing the already high cost of living) in order to bolster up party funds for the planned general election of 1955, of incompetence in combating the insurgents' movements on Java, Sumatra, Achin, Celebes and in the Moluccas, they put forward in Dec. 1954 a no-confidence motion in parliament, which, however, was defeated by a narrow margin.

In his annual report, published in Aug. 1955, Sjafruddin Prawiranegara, director of the Bank of Indonesia, laid stress on Indonesia's ominous financial position. From March 31, 1954, to March 31, 1955, currency circulation increased from 7,000,000 rupiah to 7,480,000,000 rupiah; gold backing, however, decreased from 1,358,000,000 rupiah to 952,000,000 rupiah, although the total backing (including foreign exchange holdings) increased from 1,549,000,000 rupiah to 2,731,000,000 rupiah because of increased export revenues (rubber), limitation of imports and foreign loans. The budget deficit amounted to 10,000,000 rupiah. He warned that financial disaster could be averted unless monetary equilibrium was restored by improving production through the increase of trained workers and vital goods and attracting foreign investments.

Meanwhile, high army officers refused to acknowledge the government appointment of Major General Utojo as the new chief of staff and sided with the political opposition. The government was finally forced to resign on July 22. Three weeks later Burhanuddin Harahap (Masjumi) formed a new government, mainly composed of Moslem, Socialist and Christian ministers. The new government started by appointing a new chief of staff acceptable to the army (Colonel Nasution, leader of the government demonstration of Oct. 17, 1952), fighting corruption, diminishing or abolishing export duties and soliciting financial help from the United States and under the Colombo Plan.

With the whole army mobilized to assure peace and order, the general election duly started on Sept. 29, to be completed in

December.

In October Indonesia's new request to put the dispute about the status of Dutch New Guinea on the agenda of the UN general assembly got the required two-thirds majority vote.

(G. W. O.)

Education.—(1954) Schools: primary 32,223, pupils 6,285,432, teachers 109,864; secondary 2,737, pupils 404,981, teachers 21,986; vocational 925, pupils 101,205. Teachers' training colleges 540, students about 45,000. Universities 3, faculties 138, students 17,387.

Finance and Banking.—Monetary unit: rupiah, with a basic selling exchange rate of 11.48 rupiah to the U.S. dollar. Budget (1954 est.): revenue 8,163,000,000 rupiah; expenditure 10,754,000,000 rupiah. Internal debt (Dec. 1954) 5,027,000,000 rupiah, external debt 5,237,000,000 rupiah. Currency circulation (Dec. 1954) 7,542,000,000 rupiah; (Aug. 1954) 6,417,000,000 rupiah. Deposit money: (Dec. 1954) 3,541,000,000 rupiah; (Aug. 1954) 3,114,000,000 rupiah. Gold and foreign exchange (March 1955, central bank only) U.S. \$273,000,000; (total including other banks, Dec. 1954) U.S. \$299,000,000.

Foreign Trade.—(1954) Imports 7,172,000,000 rupiah; exports 9,759,000,000 rupiah. Main sources of imports: Japan 22%, Netherlands 11%, other continental European Payments union countries 17%; U.K. 5%; other sterling area 22%; U.S. and Canada 15%. Main destinations of exports: Malaya and Singapore 26%; Netherlands 19%; U.K. and sterling area 14%; other continental European Payments union countries 9%; U.S. and Canada 17%. Chief exports: rubber 31%; petroleum products 26%; tin 7%; copra 6%.

Transport and Communications.—Roads (1953) 70,300 km. Motor vehicles in use (1954): cars 57,000, commercial vehicles 44,700. Railways (1954): 6,681 km.; freight carried 6,375,000 metric tons. Shipping: merchant vessels of 100 gross tons and over (July 1954) 125; total tonnage 91,085. Air transport (1954): 180,097,000 passenger-km.; freight 7,452,000 ton-km. Telephones (Jan. 1954): 63,977. Radio receiving sets (1953): 326,000.

Agriculture.—Main crops (metric tons, 1954): rice (Java and Madura) 7,140,000; tea 35,300; copra (exports) 297,000; sugar, raw value 720,000; soy beans 305,000. (1953): maize 2,416,000; sweet potatoes 1,319,000, (Java and Madura, 1954) 1,053,000; cassava 8,528,000, (Java and Madura, 1954) 6,400,000; peanuts 196,000; palm kernels 42,400; palm oil 160,600 (exports, 1954, 140,200); coffee 61,700 (exports, 1954, 36,000). Livestock (Sept. 1952): cattle 4,569,000; sheep 2,230,000; pigs 1,099,000; horses 549,000; buffaloes 2,851,000; goats 5,615,000. Fisheries (metric tons, 1953): sea 375,000; inland 242,000.

Industry.—Fuel and raw materials (metric tons, 1954): crude petroleum (11 months) 9,794,000; coal (11 months) 813,600; tin concentrates, metal content, 36,400; natural rubber 757,100; bauxite, dried equivalent (1953) 150,000.

Industrial Health. Certain activities of recent years took definite form in 1955, of which the most symbolic was the affiliation of occupational medicine with aviation medicine and public health within the American Board of Preventive Medicine, which was approved at the meeting of the American Medical association in Atlantic City in June.

Behind the recognition of the specialty by the Council on Medical Education and Hospitals of the American Medical association, and by the Advisory Board for the Medical Specialties, lay the development of a sound core of professional training in a number of schools in the United States and abroad, by means of which, more than by any other criteria, the nature and scope of occupational medicine (commonly spoken of as industrial medicine in its limited application to industry, as differentiated from its general concern with the impact of man's occupation upon his health) came to be defined. Back of this training, too, lay the still growing awareness of industrial physicians and medical educators that the hygienic needs of our industrial society demand, for their satisfaction, the application of a new brand of preventive medicine; that, without abandoning the disciplines and techniques of preventive medicine which had served the community well in the era characterized largely by microbiotic threats to human health, there was urgent need to cultivate the new methods of a preventive medicine that would bring under control the hazards to health created by man's applications of the physical sciences to his daily life.

The palliative character of industrial medicine, in its earlier preoccupation with the treatment of the end results of human exposure to dangerous environmental conditions, and with its emphasis on disability and workmen's compensation, was giving way rapidly to the viewpoints and techniques of industrial hygiene, environmental appraisal and control, and rehabilitation.

The ultimate social and economic consequences of this change in viewpoint and strategy could only be imagined, but they began to be apparent.

The effects of the new orientation of industrial medicine, now potentiated by formal professional sanction, could be expected to find their way into general medical practice, by virtue of the growing demands made upon physicians generally to spend some part of their time in industrial practice, especially in small industries. Approximately half of the U.S. work force was employed in such industries, and the almost utter lack of preventive medicine within these thousands of establishments was an outstanding problem of industrial and community health. Medicine in the U.S. had shown great capacity for responding to clear calls to duty, and it was to be expected that the new knowledge of preventive medicine in industry would find expression and application through appropriate emphasis on this aspect of the training and practice of physicians. A hopeful sign of progress in this direction was manifest in the consideration given to this subject in recent months in conferences of practising physicians and medical educators.

The recognition and the definition of occupational medicine as a specialized field of medical research, training and practice had even wider potential consequences, however, than those suggested above. It had been apparent, recently, that modern industrial production and distribution had altered not only the environment in which the work of the world was done but also the physical basis of modern life. The hazards of industry show themselves on streets and highways, and find their way into man's food and water supplies and into the air he breathes, in the form of chemical contaminants; they invade the household as the machinery of comfort and convenience, and as chemicals that find a wide range of usage. The evidence for the reality of these hazards is seen in the high incidence of fatal and disabling accidents, especially on the highways and in the home. In the latter connection, a new mechanism for the distribution of pertinent information in emergency had come into existence, as a sign of the times and also as a significant note of progress, in that "poison centres" had been and were being set up in a number of cities. These were in readiness to convey to physicians the available information for the prompt handling of cases of accidental poisoning which had become so common, especially among small children.

(R. A. K.)

Canada.—The federal department of national health and welfare through its occupational health division continued during 1955 the promotion of sound health practices in all industries and occupations throughout Canada. This was accomplished by close liaison with the provincial authorities in an advisory and consultant capacity. Specific projects included investigation of the problem of back injuries, study of health services for small plants, air pollution surveys, dust control, promotional and educational work in furthering occupational nursing, research on the hazard of new insecticides, establishment of safe standards, and greatly increased activity in the field of radiation control, including surveys of uranium mines.

In the Atlantic region, activity in iron ore in Labrador, in copper in Gaspé, Que., and in established fishing and lumbering industries led to an increased awareness for health services which was reflected in institutes for industrial nurses. Ontario and Quebec are the most industrialized provinces of Canada. During the year the Quebec government engaged an industrial nursing consultant; in Kitchener, Ontario, a pilot study project started providing small plants with health services. The Ontario division of industrial hygiene continued its close control of silicosis, and studied industrial absenteeism and the standardization of records.

Essentially the prairie provinces are agricultural, yet a

foundry survey was completed in Manitoba, and with the continuing oil development in Alberta, many subsidiary industries brought with them the need for control of new hazards. A study of arsenical air pollution was continued in Yellowknife, N.W.

British Columbia is in a unique position in that it contains several "company" towns which are almost completely isolated. Examples are the smelting town of Trail, and the aluminium establishment of Kitimat. This illustrates one of the fundamentals of occupational health practice in Canada, that the vast distances make essential good understanding between all levels of health authorities in handling the problems.

(M. I. W.; M. P. G. R.)

Great Britain.—The practice of industrial health has hitherto been largely regarded as supplementary to management and concerned mainly with accidents, occupational diseases, environmental hygiene and welfare. It was now realized that the outlook is too narrow and that industrial health must increasingly participate, within its limitations, in management. At the International Labour conference (Geneva, Switz., 1955) the main theme was labour management relations in the developing industrial society. Human relations emerged as vital to health, physical, mental and social. Strikes and restrictive practices reflected by absenteeism might represent disease in industry and were no less important to the health department than accidents and diseases. In Great Britain, 1955 was marked by paralyzing strikes in docks, transport and coal mines. The department of social science, University of Liverpool, published a significant investigation on *The Dock Worker, An Analysis of Conditions of Employment in the Port of Manchester*. Similar in the copper mining industry of Northern Rhodesia this same problem presented itself in the controversy on African advancement.

The International Labour conference unanimously recommended that vocational rehabilitation services should be made available to all disabled persons. In Great Britain the provision of sheltered employment in Remploy factories was restricted on account of excessive costs. The re-employment of infective cases of tuberculosis proved highly controversial and intractable. The United Kingdom government promised to implement the recommendations of the Gower's committee (1951) by extending factory legislation to nonfactory employments. The minister of labour set up an expert committee to advise him on the necessary measures and priorities. At the Atoms for Peace conference (Geneva, Aug. 1955) considerable attention was directed to the risks of injury from exposure to radiation from radioactive fission material and waste products. It was emphasized that absolute protection was not practicable and that the public must take a "calculated risk." The departmental committee appointed to review the Diseases provisions of the National Insurance (Industrial Injuries) act issued their report. The committee accepted the validity of the distinction between injury by accident and injury by gradual process and recommended that research into occupational health hazards was essential to the effective working of the act. Infant Mortality. Mortality in the first year of life reached a record low point in the United States during the first eight months of 1955, with a rate of 26.4 per 1,000 live births, a reduction of 1.9% from the corresponding rate for the like period of the year before. During the whole of 1954 there were 107,100 deaths in the first year of life; the infant mortality rate was 26.6 per 1,000 live births. Alm

three-quarters of these infant deaths occurred during the first days of life. Compared with 1915, the earliest year for which data are available, when the infant mortality rate was 99.9 per 1,000 live births, the figure for 1954 represented a decline of 73%.

Among the white population in the United States, infant mortality is appreciably lower than among the nonwhite population. The latest available data relate to the year 1952, when the rates per 1,000 live births were: white males, 28.7; nonwhite males, 43; white females, 21.1; and nonwhite females, 41.7.

As in the United States, England and Wales also recorded a reduction in infant mortality in 1955, the decrease during the first six months amounting to 4% compared with the like period of the year before. Throughout all of England and Wales, 17,160 deaths under one year of age were recorded for the whole of 1954, corresponding to a rate of 25.4 per 1,000 live births; this is 5% lower than in 1953. The latest available data for Canada, covering 1954, showed 13,841 deaths under one year of age at a rate of 31.8 per 1,000 live births; the decrease from the year before amounted to 10%. In New Zealand the population of European origin recorded an infant mortality rate of 20 per 1,000 live births in 1954, the same as in 1953. Australia had an infant mortality rate of 22.5 per 1,000 live births in 1954 (excluding the experience of full-blood aborigines). Recent infant mortality rates for a number of countries are shown in the following table.

A detailed survey of infant mortality throughout the world and the biological, social and economic factors bearing upon the problem were contained in volumes i and ii of a report by the department of social affairs of the United Nations, *Foetal, Infant and Early Childhood Mortality*, published in 1954. According to the report, almost all mortality in the first month of life and almost all foetal deaths are related to developmental and genetic factors. However, there are exceptions in deaths that may be attributed to accidents of pregnancy and childbirth. On the other hand, mortality in infancy after the very early period of life is largely the result of environmental factors. However, some environmental factors, such as nutrition and prenatal care,

may also affect foetal and neonatal mortality.

The leading causes of death in the first year of life among infants in the United States during 1954 were: immaturity (unqualified), 5.4 per 1,000 live births; postnatal asphyxia and atelectasis, 4.4; congenital malformations, 3.9; birth injuries, 2.8; influenza and pneumonia, except pneumonia of the newborn, 2.0; and certain gastrointestinal diseases, 1.1. (See also DEATH STATISTICS.)

Insurance. *Life Insurance.*—At the beginning of 1955 approximately 93,000,000 persons in the United States owned \$334,000,000,000 of life insurance in legal reserve companies, an increase of almost 10% in one year and about 130% in ten years. This insurance was composed of \$201,000,000,000 ordinary, \$94,000,000,000 group and \$39,000,000,000 industrial. By the end of 1955 the total amount of life insurance had expanded to around \$370,000,000,000. In Canada at the beginning of 1955 around 6,000,000 policyholders owned about \$24,100,000,000 of life insurance, made up of \$16,800,000,000 ordinary, \$5,500,000,000 group and \$1,800,000,000 industrial. By the end of 1955 the total amount of life insurance in Canada had increased to about \$26,000,000,000.

Although the amount of legal reserve life insurance owned by policyholders in the United States and Canada was very large, the total was equal to only a little more than one year's personal income of the residents of those countries. Nevertheless, the United States and Canada continued to rank high above other countries in the ratio of life insurance in force to personal income. Premiums paid for life insurance in the United States in 1954 amounted to 2.9% of people's income, while in Canada it was 2.7%.

During 1954 legal reserve life insurance companies made benefit payments to United States families of more than \$4,947,000,000, which was double the total of 1944. Beneficiaries received \$2,072,000,000 of this in the form of death benefits, while living policyholders received \$2,875,000,000 as matured endowments, annuity payments, surrender values, policy dividends and the like. Benefit payments to Canadian families in 1954 amounted to \$312,000,000, of which \$119,000,000 represented payments to beneficiaries and \$193,000,000 payments to living policyholders.

United States veterans and servicemen held about \$43,000,000,000 of national service and United States government life insurance and, in addition, under the Servicemen's Indemnity act of 1951, each man in service had available a gratuitous indemnity of \$10,000 (decreased by any national service and United States government life insurance he might have) in event of death during active military service. (See also VETERANS ADMINISTRATION, U.S.)

There was also \$13,000,000,000 of life insurance in force in fraternal societies, assessment associations and savings banks. The survivor benefits provided by the Social Security act afforded death benefits to certain members of the families of persons covered by the law.

Assets of United States and Canadian life insurance companies continued to grow rapidly, reaching \$87,600,000,000 for United States companies and about \$6,000,000,000 for Canadian companies at July 31, 1955. Substantial life insurance investments are made across the border, especially by the companies doing life insurance business in both countries. United States companies had about 3% of their assets invested in Canada, while Canadian companies had about one-quarter of their assets invested in the United States.

Investments by United States life insurance companies in industrial and miscellaneous bonds of United States corporations rose to \$16,730,000,000 on July 31, 1955, and in addition nearly \$770,000,000 was held in foreign industrial bonds, chiefly Canadian. Likewise, investments in public utilities grew to a new high of \$13,310,000,000 in the United States, plus another \$430,000,000 in Canada. United States life companies had only recently begun to expand mortgage holdings in Canada. Their loans outstanding on United States properties amounted to \$27,500,000,000 on July 31, 1955, compared with about \$275,000,000 on Canadian properties. Although ownership of government securities had declined since World War II, the companies still held \$11,075,000,000 in the United States and nearly \$1,030,000,000 in Canada.

The net interest rate earned on total assets of the United States companies in 1954 was 3.24% (after taxes and expenses). Although interest rates on new investments declined through early 1954, they later turned upward. (L. A. L.)

Property Insurance.—The year 1954 started in an auspicious manner for the property insurance business. At first all lines of insurance showed profits, no mean feat when it is considered that there are 25 separate classifications. Then came the hurricanes. Within 45 days Hurricanes "Carol," "Edna" and "Hazel" blew the profits away. Companies which emphasized fire insurance and its collateral lines were hard pressed to complete the year on a break-even basis. The net tally was an over-all loss ratio (incurred losses and loss adjustment expense to earned premiums) which approximated the 1953 loss ratio, hovering about the 57% mark. The expense ratio continued to climb and moved up 0.5% to 1%. For 1954 the expense ratio for the stock companies was in the neighbourhood of 36.5%.

The first half of 1955 showed an upward trend in premium volume. For a representative group of 160 stock property insurance companies the gain in premium volume amounted to about 6%. In many ways this was a real gain, for the motive force no longer derived from inflation and rising rate levels. There was an increase in extended coverage insurance rates because of the hurricane effects, but generally rate levels tended downward. Substantial rate reductions were made in some fire insurance lines and in the highly profitable automobile physical damage field.

The over-all loss ratio for the first half of 1955 was 3.7 points above the ratio for the first half of 1954. The expense ratio remained constant. This produced a net combined loss and expense ratio of 92.3% (loss ratio 55.4%; expense ratio 36.9%). These averages are somewhat misleading. They include specialty companies whose loss ratio is usually lower than that of the general writing companies. Further, some specialty companies have expense ratios considerably lower than those of the general writing companies. If the specialty companies were eliminated from this analysis the over-all loss and expense ratios would probably be somewhat higher.

The fire and casualty field continued during 1954 and 1955 to be sharply competitive among various groups of companies. Conditions were nearly perfect for such spirited competition. Rates were adequate; surpluses were substantial for reserving purposes; the market was no longer subject to tremendous up-

heavals; insurance was being bought in more and more substantial amounts rather than being sold. This latter observation sprang from the economic and legal sanctions calling for insurance; e.g., financial responsibility laws and pressure of mortgagors for fire and extended coverage insurance.

Fire Insurance.—The decline in straight fire insurance premiums, begun in 1951, continued during 1955. Underwriting experience in fire insurance alone was better in 1954 than in 1953, but the prospects were not so bright for 1955. Extended coverage experience was disastrous in 1954. It was estimated that three hurricanes "Carol," "Edna" and "Hazel" resulted in insurance losses of almost \$275,000,000. Substantial rate increases were therefore imposed in the geographical areas where major losses occurred. The New England Fire Insurance Rating Association, for example, effective Dec. 31, 1954, filed extended coverage rate increases of approximately 150% on residence in Maine, Massachusetts and Rhode Island and of 50% in Connecticut.

Marine Insurance.—Ocean marine insurance premiums continued their slow decline in 1954 and the first half of 1955. Underwriting experience was improving. This very competitive field was complicated by dollar shortages and exchange restrictions in many countries.

Inland marine insurance continued to break premium volume records. This expanding area of insurance recorded a volume of \$325,000,000 in premiums written for 1954 compared with \$28,000,000 written in 1933. The loss picture was spotty. Overall, this was a profitable field for the insurance companies.

Casualty Insurance.—Workmen's compensation insurance premiums declined slightly in 1954 and the first half of 1955. Loss ratios were moving upward largely because of strong drives in legislative circles to increase benefits.

Accident and sickness insurance made gains, but at a slow rate: 10% in 1954, compared with 18% in 1953. The premium volume approximated \$2,750,000,000. Loss ratios remained favourable. The life insurance companies had seized the leadership in premium volume. Of the ten leading writers of accident and sickness insurance in 1955, eight were life insurance companies and the other two had affiliations with life insurance companies.

In the general liability lines, premiums were up about 10% but the profit margin remained slim.

Fidelity and surety bonds experienced substantial growth. Most of the upsurge in premiums resulted from the renewal of three-year fidelity bonds. Surety bonds continued to grow in volume primarily because of the building boom.

Miscellaneous small lines such as plate glass, burglary, theft, boiler and machinery were generally satisfactory.

Generally, it might be said that in 1954 and the first half of 1955 the fire and casualty insurance industry continued to offer flexible coverage at reasonable rates, backed by excellent claims adjustment and engineering service. (L. J. A.)

Hospital, Medical and Surgical Insurance.—Growth in the number of persons in the United States covered by some form of health prepayment program continued without let-up during 1955, as major attention to health and welfare benefits again came from organized labour. By the end of the year more than 105,000,000 persons in the United States held some form of coverage against hospital costs, more than 91,000,000 had dental protection and medical expense coverage extended to \$100,000,000. Blue Cross coverage in the United States and Canada exceeded 51,000,000 by the end of 1955, while the combined nonprofit Blue Shield plans had enrolled 37,000,000 for surgical protection and 27,000,000 for medical expense.

Although a revised version of the administration's proposed health reinsurance program was reintroduced in the U.S. Congress, it received comparatively little attention. Support for

appeared to be waning as Marion B. Folsom replaced Oveta Culp Hobby as secretary of health, education and welfare. Various bills proposing health insurance programs were also introduced in the congress but did not receive important support or public attention during the year. However, the recodified tax laws provided important clarifications of taxability to employers and employees of contributions for health programs and benefits received under them. In general, such payments and contributions continued to be deductible and nontaxable, in accordance with past practice under unclear legislation.

Nineteen compulsory cash sickness insurance bills were introduced in ten states during 1955 but all were defeated; no such proposals had been enacted since the New York program was adopted in 1949. Despite the 1955 Ford and General Motors so-called "guaranteed annual wage" settlements, it appeared that organized labour would continue to press for compulsory cash sickness legislation.

Extension of "catastrophic" or "major medical expense" coverages in the United States, largely through insurance company programs, continued cautiously during the year, with some apparent reluctance to expand vigorously in this direction by some carriers. Blue Cross and Blue Shield adopted in principle a recommended pattern of extended benefits designed to extend the basic service benefit concept of the nonprofit plans into longer periods of coverage and additional areas of care, but only a few of these plans had placed such coverage on the market by the end of 1955.

A revised middle-way program of compulsory national health insurance went into effect in Sweden on Jan. 1, 1955, replacing voluntary plans which, with state aid, had covered 65% of the population. Unlike the British system, Sweden's program called for partial payment for care received by the patient and direct contribution by each individual for insurance. The program was expected to triple the government's contribution for health benefits, to \$150,000,000 a year. (A. G. S.)

Great Britain.—Results published in 1955 revealed new ordinary life sums assured written by British offices in 1954 at more than £1,000,000,000, against about £850,000,000 in the preceding year. A flattening out of the rate of increase of group business was accompanied by an increased volume of new business through individual contracts. Industrial sums assured written by eight leading industrial life offices were £209,589,000 compared with £203,878,000 in 1953, and the average sum assured per industrial policy was £54 against £53.6 in 1953, £48 in 1952 and £45.2 in 1951.

The combined fire and accident premium revenue in 1954, as disclosed in the accounts of 24 selected British offices, was £447,744,000, compared with £428,943,000 and £407,430,000 in the two preceding years. The fire underwriting results reflected heavy earthquake and hurricane losses in the year. The over-all profit ratio for the two departments fell from 6% to 4.9%.

Premium income of the British marine market further con-

Table II.—*Marine Insurance in Great Britain*

Year	(in £000)			
	Premiums	Profit and loss credit	Fund	% of Premiums
1952	48,231	4,716	68,849	142.7
1953	44,130	3,317	70,167	159.0
1954	40,304	4,416	67,875	168.4

Life assurance in 1955 was maintained at a high production level. The distribution of the business followed closely the pattern of the previous year, with a substantial proportion written under new pension and group assurance schemes and in the form of increases under existing schemes. In general, however, the field for new industrial pensions gave evidence of a degree of sales resistance not met with a few years earlier. Endowment assurances specially written to provide retirement benefits for "executive and noncontrolling directors" remained an important factor in the new business total, as also policies of a short-term nature in connection with *inter vivos* gifts, and policies providing for estate duty payments, much of which was placed under the provisions of the Married Women's Property acts. The family income type of policy assuring income for dependents was in demand, and there was an added interest in individual endowment assurances based on maturity at age 65 for the purpose of augmenting the pension benefit granted under the national scheme.

Industrial and scientific development in many countries, combined with a general inflationary tendency, assisted income in the fire account and to a limited degree offset rate reductions in certain areas. Losses by fire were heavier than in 1954. The record of many large fires in the United Kingdom was dominated by an estimated loss of £1,000,000 at a Birmingham cycle accessories warehouse. In the overseas field, the emphasis was on the number of important fires, and these, with severe hurricane losses under extended coverage, again produced a considerable total. Flood damage, unlike windstorm, is not included as a general extension to a fire policy, so that the account was but little affected by devastating floods in the northeastern United States and elsewhere.

The world's trouble spots made no pronounced impact either on the volume or out-turn of the account.

Accident and general insurance increased both in volume and revenue total. Motor insurance, the largest separate section of the composite accident account, was freely sought but, because of unfavourable trading results over a long period, underwriting proceeded with caution. An upward revision in rates for certain classes of private cars and commercial vehicles operating in the United Kingdom became effective in December. Public liability insurance expanded and indemnity covers for £25,000 and £50,000 were commonplace. The insurance of employers' liability showed generally more favourable results. There was an increased demand for fidelity insurance and a sustained interest by employers in group accident insurance to close the gap between employees' wages and the benefits as provided under the National Insurance acts.

Personal accident, burglary and plate glass business was written in the main on profitable lines.

Underwriters of marine risks, hulls and cargo, had to contend with intensive competition and rate cutting in the British market and many areas overseas, and premium income proved difficult to hold even at previously reduced levels. In the aviation market the progressive increase in the insured value of aircraft hulls together with the huge accumulations of liability at risk both in the air and on the ground were absorbed without undue strain on resources.

Interior Decoration. A survey of interior decoration in 1955 showed great variety and individuality but few clear-cut trends. There was more design to fit specific situations and less widespread imitation of successful experiments.

It was a colourful year, highlighted by the final and sweeping victory of colour in the appliance field, but no particular colours or combinations emerged as favourites comparable with the chartreuse, green and yellow, the charcoal and pink or the pumpkin and turquoise of recent years. Combinations of the neutral earth tones remained popular, but so did monochromatic pastels, especially pink, as well as the basic white scheme sparked with such vivid and dissonant combinations as peacock blue, magenta and orange. Shades of purple, from heliotrope to the deep tones, were used to some extent but probably reflected the availability of a more complete colour range in almost every type of product rather than a true trend.

Interior decorating reflected many changes in architectural practices in 1955. In both homes and commercial buildings, air conditioning made the use of light colours and delicate fabrics more practical and more popular, and the choice between "warm" and "cool" colours a matter of preference rather than necessity. On the other hand, the ever-increasing size of glass areas in all types of new construction produced new types of window treatments to provide positive and flexible control of sunlight and sun heat.

Furniture in 1955 took a new approach toward greater interchangeability and flexibility of use. Small armless chairs appeared which could be lined up to give the appearance of a single long bench. Storage pieces were made in modular dimensions and finished on all sides, to be placed side by side, stacked on top of one another or projected into the room to serve as a room divider. Chests were designed for bedroom, living or dining room use, and many had interchangeable interior features for various types of storage. Small tables were equally suitable for use beside a bed or a living room chair.

In traditional furniture styles, Italian Provincial showed a sudden surge of popularity. The work and influence of Scandinavian and Italian designers were still much in evidence, as were Oriental influences, both Japanese and Chinese. The continuing trend toward scaled down and simplified period ornamentation in traditional styles, on the one hand, and toward softer, warmer, discreetly ornamented modern styles, on the other, resulted in many collections intermediate in feeling. There was great diversity between the products of individual designers rather than any general style. The main points in common were a general adherence to traditional proportions for each piece; upholstered pieces were less severely tailored and chair backs were somewhat higher than in most modern styles; wood members were subtly shaped rather than sharply sculptured.

Walnut and mahogany continued as the most-favoured woods, but there was much use of birch, maple, pecan, beech, cherry, white walnut and elm, some quantities of teak and pine, and limited amounts of rosewood, ebony and other exotic woods. Dull, open-pore finishes, permitting the grain to show through, were almost universal. There was minor use of oil-stain and lacquer finishes but virtually no high-gloss of any type. Brown wood tones from amber to dark walnut were far and away the favourites for almost every variety of wood, though gray finishes began to show up strongly toward the end of the year.

Furniture generally showed free use of contrasting materials like cane, straw cloth, metals, leather, stone, shell and many types of plastic. Vividly coloured plastics were frequently combined with wood, and some new, more textural plastics were introduced.

The major emphasis in floor coverings was on more brighter colours and on area and accent rugs. Random, natural textures were in high favour. There was considerably more use of nylon, even in modestly priced carpeting, along with rayon, viscose and wool. Cotton rug manufacturers were also using nylon and rayon, and their products showed much more use of pattern. Hard-surface coverings displayed more vivid and extensive colour ranges, but few innovations in pattern.

Drapery fabrics emphasized sheers and many types of textured casement cloths, especially in the moderately priced brackets. Printed Fiberglas, in many weights, came into more extensive use. Upholstery fabrics tended toward smoother, less heavily textured surfaces, slight and restrained use of metallic yarns and considerably more use of nylon. Most important, probably was the introduction of new processes to make many kinds of fabrics resistant to soil- and water-spotting.

In wall coverings, large but widely spaced patterns were more popular, and there was much interest in sectional scenic, floral and simulated textures, grass cloth, wheat straw, brick, stone and wood, reached new peaks, but a slight decline was perceptible. There was somewhat more use of highly formal, elegant materials like flocked designs, *moirés* and damasks, silky-textured okami wood. Matching papers and fabrics were moving away from small, all-over designs toward larger, freer patterns.

In lighting fixtures, whether for wall, ceiling, floor or table, adjustability to various positions through the use of pulleys, slides, pivots and universal joints seemed to be of prime importance. There was, however, a revival of interest in ceiling fixtures, especially the many-branched, pierced-brass varieties. Lamps generally seemed to be returning to smooth surfaces, classic shapes. International Bank for Reconstruction and Development.

The International Bank for Reconstruction and Development makes medium- and long-term loans to meet urgent economic needs in its member countries. Established by the United Nations Monetary and Financial conference which met at Bretton Woods, N.H., in July 1944, by 1955 the bank had 58 member countries and a subscribed capital of \$9,050,500,000. It had operated at a profit and had built up reserves amounting on Oct. 1, 1955, to approximately \$195,000,000.

International Bank, Member Countries, Oct. 1955

Afghanistan	Denmark	Indonesia	Pakistan
Australia	Dominican Republic	Iran	Panamá
Austria	Ecuador	Iraq	Paraguay
Belgium	Egypt	Israel	Peru
Bolivia	El Salvador	Italy	Philippines
Brazil	Ethiopia	Japan	Sweden
Burma	Finland	Jordan	Syria
Canada	France	Korea	Thailand
Ceylon	German Federal Republic	Lebanon	Turkey
Chile	Greece	Luxembourg	Union of South Africa
China	Guatemala	Mexico	United Kingdom
Colombia	Haiti	Netherlands	United States
Costa Rica	Honduras	Nicaragua	Uruguay
Cuba	Iceland	Norway	Venezuela
	India		Yugoslavia

Lending Operations.—During the fiscal year ending July 30, 1955, the bank signed loans totalling the equivalent of \$400,000,000, or more than in any other year in its history. 20 loans made were in 14 countries and territories and, in earlier years, were mainly designed to strengthen basic services.

A total of \$160,000,000 was lent for transport. The largest

in for this purpose was an amount of \$61,000,000 to finance the rehabilitation and modernization of the Pacific Railroad of Mexico. In Colombia \$16,000,000 was lent to add an extension of 190 mi. to a new railway line which would carry the network to the interior to the Caribbean coast. A loan of \$11,000,000 in El Salvador was to be used to finance the construction of a highway which would open up the fertile but undeveloped coastal area.

In East Africa, rail, port and other transport services would benefit from a loan of \$24,000,000 which would cover part of the cost of imports needed for an expansion program in Kenya, Uganda and Tanganyika. More than half of a loan of \$54,500,000 to Australia was to be used to finance imports of transport equipment. A loan of \$20,000,000 was made to Belgium to help modernize the inland waterways and improve the port of Antwerp.

The bank lent \$110,000,000 for power, almost half of it in South Asia. A loan of \$19,000,000 for a hydroelectric project in Ceylon would increase the power supply in Colombo and in the surrounding area. In India the bank lent \$16,000,000 for a thermal plant to be constructed by the private companies which supply the bulk of the power in Bombay.

A loan of \$14,000,000 in Pakistan would more than double Karachi's generating capacity, thus relieving an acute power shortage in the city.

In Europe nearly half of a \$70,000,000 loan in Italy was to be used to add to the generating capacity of the south. In Austria the bank made two power loans totalling \$22,000,000. The two hydroelectric projects financed would supply neighboring countries as well as the domestic market. Part of a loan of \$12,000,000 in Finland was to be used to help finance a hydroelectric project in the north and a thermal station on the west coast.

A loan of \$4,500,000 was made for power in Colombia. It would help finance steam and hydroelectric capacity near the growing city of Cali.

A total of \$67,000,000 was lent for agriculture. This included \$3,000,000 in Peru, where 125,000 ac. of uncultivated land in the northwest would be irrigated and imports of farm equipment would be financed. A loan of \$5,000,000 for farm machinery was made in Colombia. The loans in Italy and Australia also included funds for agriculture.

Lending for industry and for other development purposes amounted to \$72,000,000. This would help finance expansion and modernization of pulp and paper mills in Finland and the establishment of a number of privately owned industrial enterprises in southern Italy and Sicily and of a cement plant in Peru. In Norway and Australia funds were provided for imports of various types of capital equipment for industry. To help mobilize capital for industrial enterprise in India, the bank assisted in setting up the Industrial Credit and Investment corporation and made a loan of \$10,000,000 to it.

In the period July 1, 1955, to Oct. 1, 1955, the bank made 12 further loans, amounting to \$112,000,000. Five of these, amounting to \$56,000,000, were for transport services. They included \$8,000,000 for road improvements in Guatemala, and smaller amounts for the same purpose in Panamá and Peru. In Pakistan \$5,000,000 was lent for reconstruction and modernization in the port of Karachi.

In Thailand the bank lent \$12,000,000 to renew and modernize the state railway.

A further \$23,000,000 was lent for electric power services. This would help finance a hydroelectric project in Algeria and thermal plants in Managua, Nicaragua, and Montevideo, Uruguay.

The bank also made its first loan in Lebanon. The sum of \$7,000,000 was lent to assist in financing the first phase of a

program for the development of the Litani and Bisri rivers, to benefit both power and agriculture.

In Nicaragua the bank made a loan for the importation of equipment for land clearance, erosion control, pasture improvement and milk processing.

In East Pakistan a new paper mill, using local bamboo as raw material, received a loan of \$4,000,000.

By Oct. 1, 1955, the number of loans made since the bank started operations had risen to 136 in 40 countries and territories. The gross total of loan commitments stood at \$2,436,000,000. Bank disbursements amounted to approximately \$1,770,000,000.

Financial Operations.—The bank's net earnings during 1954-55 reached a new record figure of \$25,000,000. Borrowers made all payments of interest and principal due during the year.

Four issues of bonds, amounting to the equivalent of \$88,000,000, were sold by the bank during the fiscal year. They included the first sale of Netherlands guilder bonds, as well as U.S. dollar, Canadian dollar and pound sterling bonds. In Aug. 1955 a second guilder issue was sold.

On Oct. 1, 1955, the total of the bank's bonds outstanding was equivalent to approximately \$850,000,000, of which nearly half were held outside the United States.

Private investors showed greater willingness to place their capital abroad, and the bank was able to sell increasing amounts of its loans to other investors. During 1954-55 these sales amounted to \$99,000,000, almost all of them without benefit of the bank's guarantee.

A new method was developed of linking bank loans with the investment abroad of private funds. The loans to Belgium and to Norway were made simultaneously with public offerings of bonds in the United States by the borrowing governments.

Other Activities.—The bank continued to give advice and assistance on a wide range of development problems. Three general survey missions—to Nigeria, Malaya and Syria—completed their work during the year. Another such mission—to Jordan—was organized. Other developmental assistance covered specific matters such as agricultural improvements in Japan, scientific and industrial research in Ceylon and electric power development in Mexico.

Plans were completed by the bank for the establishment of an Economic Development institute to act as an economic staff college for senior officials from less developed countries. The first course, which was to be of six months' duration and would have 16 participants, was to begin in Jan. 1956.

Some of the final steps were taken toward the organization of a bank affiliate to be known as the International Finance corporation. The purpose of the corporation would be to stimulate investment in productive private enterprises, particularly in less developed areas. The articles of agreement were drawn up early in 1955, and the governments of almost all the bank's member countries indicated their intention to join the corporation. It was hoped that the corporation would come into existence early in 1956.

International Geophysical Year, 1957-58.

During the International Geophysical year, 1957-58, the world's scientists were scheduled to conduct the most comprehensive study of the earth ever undertaken. Intensive investigations throughout the world were to be carried out in meteorology, latitude and longitude determinations, geomagnetism, gravity measurements, ionospheric physics, aurora and air glow, solar activity, cosmic rays, glaciology, oceanography, seismology, and through rocket and satellite explorations of the upper atmosphere. Forty-one nations were formally participating in the program: Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Canada, Chile, Chinese People's Republic (Communist China), Czechoslovakia, Denmark, Finland, France, German Democratic Republic, German Federal Republic, Greece, Hungary, Iceland, India, Ireland, Israel, Italy, Japan, Mexico, Morocco, Netherlands, New Zealand, Norway, Pakistan, Peru, Philippines, Poland, Spain, Sweden, Switzerland, Tunisia, Union of South Africa, United Kingdom of Great Britain and Northern Ireland, United States of America, the U.S.S.R. and Yugoslavia. Each country would plan and execute its own program, under a general plan developed by the co-operating countries through a co-ordinating international committee.

The United States National Committee for the International Geophysical Year, established by the National Academy of Sciences, was in charge of planning, directing and executing the U.S. program. Federal sponsorship and support for the program was obtained by the committee through the National Science Foundation, the government agency charged with responsibilities for federally supported basic research. Congress appropriated \$12,000,000 for the U.S. effort.

Because the sun dominates activities on the earth, continuous measurements would be made of changes in solar radiations over the whole range of wave lengths or colours, not only visible light, but down to the invisible X-rays and up to the radio waves. Solar flares would be studied and correlated with changes in cosmic rays, ionospheric and auroral disturbances and meteorological phenomena.

Measurements of temperatures, pressures, humidities and winds during the period would provide information about weather patterns. Emphasis had been placed on high-altitude meteorological observations (up to 100,000 ft.) along four lines of stations (10° E., 75° W. and 110° and 140° E.) extending from the north to the south pole. These observations would be particularly useful in studies of the movements of air masses around the world.

Problems having to do with the nature of oceanic currents, temperatures, composition, sea-level fluctuations and total water content would be studied by oceanographers. Emphasis would also be given to glacier studies, particularly in the arctic and antarctic.

The ionosphere, a region of rarefied ionized gas between 50 and 250 mi. above the surface of the earth, is a complex region of the atmosphere, fluctuating in height and depth and varying in ionization. It is affected by solar activity, geomagnetic disturbances, the aurora and perhaps by meteors. Predicting its effect on radio transmission is one of the major problems in ionospheric physics. Investigations planned by the U.S. involved the arctic, antarctic and equatorial Pacific regions as well as the Americas.

Both aurora and air glow, known to affect radio communications, are optical phenomena of the upper atmosphere and appear as light emitted by atoms and molecules of the atmosphere at about 37 mi. and higher. The aurora, which is the terminus of the path of ionized particles from the sun and the only visible portion of this path, enables theoretical geophysicists to learn a

great deal about this stream of particles, its path through space, its capture in the equatorial ring and its subsequent bombardment of the atmosphere in the auroral zones about 23° from the magnetic poles. Spectroscopic, visual and photographic observations of the aurora would show its distribution. Radar would provide a record of the ionization associated with the aurora.

Geomagnetism has broad and basic implications in the study of the ionosphere, radio-wave propagation, aurora and cosmic rays, as well as other fields of science. U.S. scientists were to explore the physical mechanism causing geomagnetic storms which frequently cause strong aurora displays and radio blackouts and also the ionospheric disturbances. The U.S. would establish stations in Alaska, Antarctica and the equatorial Pacific and an east-west chain of five stations stretching about 1,000 mi. across the western states, with a shorter north-south chain of three stations.

There are clear connections between cosmic rays and solar activity and the earth's magnetic field and magnetic storms. Cosmic rays represent a powerful tool with which to investigate magnetic phenomena many thousands of miles from the earth. Studies of cosmic rays require simultaneous measurements widely made over the earth, and parallel studies of solar activity, geomagnetism, aurora and ionospheric physics.

New techniques permit direct measurement of the upper atmosphere by means of large, ground-launched rockets with an altitude range of about 200 mi. Small rockets, launched from balloons and aircraft, were to be used during the International Geophysical year for measurements up to approximately 60 mi. U.S. rocket studies would be co-ordinated with those of other nations, particularly at crucial times of unusual solar activity. Rockets would measure atmospheric pressure, temperature, density; the earth's magnetic field, especially during auroral displays; night and day air glow; solar and ultra-violet light; X-rays; auroral particles; ozone distribution; ionospheric characteristics and densities; and cosmic radiation.

Observations over a longer period of time would be possible when the U.S. launched satellites which would circle the earth at a distance of 200 to 800 mi., telemetering scientific data back to the earth. The satellites were expected to remain aloft for many weeks, circling the earth approximately once every 90 minutes.

Seismic soundings were to be used for measurement of the depth of ice in Antarctica and mapping of the buried rock faces. Geophysicists would study the earth's deeper structural locations of earthquake rifts or zones of instability in the antarctic continent and various types of microseisms and their relation to meteorological conditions. This work would be co-ordinated with that of an international network for studying the earth's crust and of the deep interior.

The United States planned activities in the arctic, subarctic, middle latitudes of the northern and southern hemispheres including the United States, Central America, South America and adjacent parts of the Atlantic and Pacific oceans), equatorial Pacific and antarctic and subantarctic regions. (H. O. ...)

International Labour Organization.

The International Labour Organization conference, 38th session, held at Geneva, Switz., June 1955, was the chief event of 1955. More than 700 delegates, advisers and observers represented the organization's 70 members. Representatives from other international bodies made a total of 74 countries and territories in attendance, including Spain, the Philippines and such nonmetropolitan territories as Barbados, Gold Coast, Jamaica, Malta, Nigeria, Sierra Leone and Singapore.

The central feature was the report of the director-general, David A. Morse, U.S.A., which dealt with labour-management

relations and was debated by more than 150 speakers, including the U.S. secretary of labour and heads of labour departments of many other countries. Because of its tripartite character, representing employers, workers and governments, the conference had become the centre for airing the conflicts of economic and social ideas of the whole world.

Morse's reply to the criticisms he received was the star event of the conference. He said, substantially, that bridging the gap between technical advance and social thinking has become an urgent task wherever human rights, freedom of association and dignity of labour are denied. To deal with such issues by due process of law has become equally imperative, but "the task of learning to work together for a common objective which benefits society as a whole is the highest work any of us have to face in our lifetime. For the world as a whole this task is today posed in terms of the greatest urgency."

The director-general appointed a committee, under the chairmanship of a former president of the International Court of Justice, to report on the extent of freedom of employers' and workers' organizations from government domination in the 70 ILO member states. The conference also adopted a resolution which requested a review, in the light of the discussion of the director-general's report, of ILO activities as a whole, to promote better human relations in industry everywhere.

The conference adopted one new convention, to abolish penal sanctions for breach of contract of employment by indigenous workers, and a resolution asking a future conference to adopt a more extended measure. The conference also adopted two recommendations: (1) for vocational rehabilitation of the disabled, with a resolution to include war-disabled; and (2) on international standards for treatment of migrant workers in underdeveloped countries.

Both the conference committee and the report of the experts agreed that the supervisory machinery, unique among international institutions, showed improvement, but that more could be accomplished if the employers' and workers' organizations sent their comments, as is their constitutional right and duty. Complaints were general that the load was heavier because of greater application of standards.

Among the resolutions debated and adopted by the conference were those on the tenth anniversary of the United Nations; employment of women; protection of trade-union rights; peaceful uses of atomic energy; disarmament and the use of resources freed by reduction of armament expenditure; elimination of discrimination; labour-management relations; protection of labour; and industrial safety.

Technical assistance and ILO operational work had become increasingly more important than legislative work, especially since the UN adopted its technical assistance program and made the ILO its specialized agency for most of its projects.

Ratifications of conventions numbered more than 1,500 for the first time at the close of the 1955 conference. The conference voted \$7,395,725 for the 1956 budget and allocated that amount as follows: U.S.A. 25%; United Kingdom and U.S.S.R. each 10%; Germany 4.35%; Italy 2.5%; Japan 2%; and all other countries lesser amounts. (See also CHILD LABOUR.)

(S. MCC. L.)

International Law. The secretary-general of the United Nations in his report to the tenth general assembly in Sept. 1955 commented on the slow progress in establishing the rule of law in international relations, and added "we are now, I hope, entering a period that will provide a more favorable atmosphere for strengthening the influence of law in international affairs."

Status.—The right of dependent peoples to determine their own status was asserted at an international conference which

met at Bandung, Indonesia, in April 1955. Present were representatives of 28 recognized and potential states from Asia and Africa, representing more than half the world's population. The conference declared that colonialism is an evil which should soon be ended, affirmed that subjection of peoples to alien rule was contrary to the United Nations charter, declared support for the freedom and independence of all peoples and called upon the colonial powers to carry out these principles. (See ASIAN-AFRICAN CONFERENCE.) Commenting on this, the Belgian representative at the San Francisco conference of June 1955, celebrating the tenth anniversary of the signing of the United Nations charter, expressed his conviction that "complete equality of the races, with all its natural consequences, . . . has become a reality and any contemporary statesman who refuses to admit it will be bound to make a good many mistakes."

The sentiment within the United Nations favoured universal membership in that body, manifested by the statement of an Indian representative at San Francisco that the United Nations "was not intended to be either a Holy Alliance or an exclusive club." The Soviet Union indicated its willingness to admit all the Bandung states to the United Nations, and the independence of Austria was restored by great power agreement during the year, but up to the opening of the tenth session of the general assembly in Sept. 1955 the deadlock in the United Nations on membership and on representation of China continued.

South-West Africa, which continued as a mandated territory under the Union of South Africa in accord with an advisory opinion of the International Court of Justice in 1950, remained controversial. The Union of South Africa, which wished to annex the territory, claimed that the United Nations procedure of supervision through the general assembly acting by a two-thirds vote amounted to more extensive supervision than had existed under the League of Nations council in which the South African government had a veto. An advisory opinion on the issue was requested of the International Court of Justice. The court advised that its opinion of 1950, calling for the same degree of supervision by the United Nations as was exercised by the League of Nations, referred "to the extent of the substantive supervision" and "not to the manner in which the collective will of the General Assembly is expressed." While it found that comparison of the procedures of the United Nations and the League of Nations "presents insurmountable difficulties of a juridical nature," it indicated that observance by the general assembly of its characteristic procedures "cannot be considered as instituting a greater degree of supervision than that which was envisaged by the previous opinion of the court" (International Court of Justice Reports, 1955, p. 12).

Several issues concerning status were discussed judicially. A United States circuit court of appeals reversed the court below which had held that Yugoslavia was not the same state as Serbia and that consequently an extradition treaty of 1902 between the United States and Serbia was no longer valid. The U.S. state department, appearing as *amicus curiae*, objected on the ground that the termination of treaties was a political question, and it regarded the Serb-Croat-Slovene state formed after World War I, whose name was later changed to Yugoslavia, as the same state as Serbia (*Ivancevic v. Artukovic*, 211 Fed. 2nd, 565, 1954). A New York court held that the consul general of the *de jure* government of Lithuania was competent to appear in behalf of citizens of Lithuania under a treaty between the United States and Lithuania, although in fact that state had been absorbed by the Soviet Union for a number of years (Matter of Mike Shaskus, *New York Law Journal*, p. 12 [1954]). A United States court held that Okinawa is not under the *de jure* sovereignty of the United States, and consequently the inhabitants do not owe permanent allegiance to the United States. The

peace treaty with Japan gave the United States extensive jurisdiction but not sovereignty. Japan retained "residual sovereignty" or "*de jure* sovereignty" (*U.S. v. Shiroma*, 123 Fed. Supp. 145, 1954).

Rights of States.—The extent to which international law permits states to impair the rights of individuals for public purposes has been frequently discussed. An Italian court held that the Anglo-Iranian Oil company could not recover oil which came from properties which it had owned in Iran. The company's claim that nationalization of these properties by Iran amounted to confiscation without compensation contrary to international law was rejected. The Iranian "act of state" within its territory had to be recognized by other states, and furthermore the United Nations had recognized the legitimacy of the Iranian nationalization decree. Consequently in pursuance of its duty under the Italian constitution to apply international law the court had to reject the company's claim (*Anglo-Iranian Oil Company v. Societa S.U.P.O.R.*, Civil Tribunal of Rome, 1954; *American Journal of International Law* [*A.J.*], vol. 49, p. 259 [April 1955]).

A number of cases dealt with the immunities of states and their agents. The U.S. supreme court, following pronouncements of the department of state qualifying the immunities of foreign sovereigns, held that the Chinese (Nationalist) government, though not in actual control of most of the territory it claimed, was to be treated as a sovereign so long as it was recognized by the United States, but it was not immune from setoffs raised in an action it brought against a United States bank (*National City Bank of New York v. Republic of China*, 348 U.S. 356, 1955). A New York court held that a bank nationalized by Bolivia did not enjoy sovereign immunities claimed by the Bolivian ambassador because it was only an agent of the Bolivian state and not the state itself (*Koster v. Banco Minero de Bolivia*, *A.J.*, vol. 48, p. 667 [Oct. 1954]).

Italy applied the distinction between governmental and commercial activities of foreign sovereigns and their agents in a number of cases. A Soviet film corporation, though claimed by the Soviet government to be engaged in governmental business, was not considered exempt from Italian jurisdiction which regarded its activities as of a type commonly considered commercial in the community of nations (*Florida v. Sovexportfilm*, Tribunal of Rome, *A.J.*, vol. 49, p. 98 [Jan. 1955]). An Italian court held that the chief executive of a state or its diplomatic agent can represent the state in litigations, but the personal immunity of a diplomatic officer does not prevent a summons to him when he acts as representative of his state in an action where the latter is not immune because the issue concerns commercial matters (*Castiglioni v. Yugoslavia*, Tribunal of Rome, *A.J.*, vol. 49, p. 99 [Jan. 1955]). Italian courts had held that a servant of a diplomatic officer is not immune for acts in his personal capacity (*Case of Mohammed Layed Ahmed*, Tribunal of Rome, *A.J.*, vol. 49, p. 100 [Jan. 1955]), but a diplomatic agent, in this case a third secretary, was exempt from jurisdiction even for unofficial acts (*Lagos Carmona v. Baggianini*, Tribunal of Rome, *A.J.*, vol. 49, p. 101 [Jan. 1955]). On the other hand, the same tribunal held that the chancellor of the United States embassy in Rome was subject to civil jurisdiction of the courts, affirming that this was a rule of customary international law and should be applied even though the United States granted total immunity to the administrative personnel of foreign embassies on a basis of reciprocity (*Soc. Arethusa Film v. Reist*, Tribunal of Rome, *A.J.*, vol. 49, p. 102 [1955]).

The controversial status of executive agreements was dealt with by the U.S. supreme court on *certiorari* from the court of appeals in the Capps case. The court of appeals had held that an executive agreement was void if it transcended the policy of

congressional legislation. The supreme court, however, while affirming the decision of the court below, did it on the ground that the contract involved, which had been made to carry out the executive agreement, had not been violated and expressly declined to discuss the issue of the validity of the executive agreement (*U.S. v. Capps*, 348 U.S. 296, 1955).

Rights of International Organizations.—Proposals of the United States to permit review of decisions of the United Nations Administrative tribunal were criticized in the general assembly as cumbersome and inimical to the independence and efficiency of the secretariat required by the charter, and making the assembly, usually a party to the dispute, a judge in its own case. Extensive consideration by a special committee set up by the general assembly in the spring of 1955 resulted in no consensus. The matter was to be considered by the tenth assembly.

A tribunal of Trieste held that the International Refugee organization does not have international juridical personality but does the United Nations, but an employee has to follow his agreement with the organization for arbitration of disputes with it, so the court could not exercise jurisdiction (*Vicelli v. I.R.O.*, Tribunal of Trieste, *A.J.*, vol. 49, p. 102 [Jan. 1955]).

Rights of Individuals.—The Commission on Human Rights of the United Nations, after five years of discussion, presented the tenth general assembly with two covenants of human rights, one dealing with political and civil rights and the other with economic, social and cultural rights, both including a clause of the right of self-determination. Colonial powers objected to the clause and to the absence of a clause excluding the automatic application of the convention to dependencies. Federal states objected to the failure to include a "federal clause" confining the covenants to matters within the competence of the central government. The high commissioner of refugees objected to the failure to include the right of asylum, which was included in the Universal Declaration of Human Rights. Several Asian powers objected to the division of the field between two covenants and to the inadequacy of procedures for enforcement. No individual right of petition to international agencies was provided. Other states thought that even the mild procedure provided for encroached on the domestic jurisdiction of states. The United States, apparently because of the latter objection, declared that it would not ratify either of the covenants.

The agreement of Oct. 5, 1954, dividing the Trieste territory between Italy and Yugoslavia, provided for implementation of the intention of these two countries to assure protection of human rights in the area. The Universal Declaration of Human Rights approved by the general assembly of 1948 was to be applied in Trieste as operative law. This declaration had been recognized as a standard for human rights in certain conventions on refugees, in the Japanese peace treaty and in the Somaliland trusteeship agreement.

A United States court held that a native-born American who also was a Japanese national did not expatriate himself by participation in Japanese elections. It held that a native-born citizen of the United States cannot be deprived of his nationality without his consent, and consequently the act of Congress depriving such persons of nationality by participation in foreign elections was null and void (*Taradi v. Dulles*, 121 Fed. Supp. 6, 1954).

A British court held that Polish fugitives in Great Britain were not extraditable under a treaty with Poland because they were political offenders excepted from extradition by the treaty. Their offense had been committed in escaping from a fish trawler, whose officers were seeking evidence of their anti-communist character (*Re Kolczynski* 1955, 1 All Eng. L.R. 31).

War and Aggression.—Discussion concerning the right

confiscate enemy property in time of war continued, in connection with the Dirksen bill before the U.S. senate to restore such property in the hands of the alien property custodian (Philip Jessup, *A.J.*, vol. 49, p. 57 [Jan. 1955]). A California court held that the immunities of consular properties provided for in the treaty between the United States and Germany of 1923 continued in spite of the war and made the German consulate in San Francisco immune from local taxation even though it was taken over during the war by the alien property custodian (Brownell v. *San Francisco*, 271 Pac. 2d 974, 1954). The British House of Lords held that war existed between Israel and the Arabs in 1954, consequently money owed to an Arab bank was properly deposited with the Israel custodian in Israel. But the plaintiff's right was suspended, not destroyed, by the existence of war (*Arab Bank v. Barclay Bank* 1954, All Eng. L.R. 26).

A United States court held that France was neutral in 1943 during the Vichy regime and a French citizen could therefore claim immunity from United States draft as determined by the director of selective service. Such determinations were held political in character and the decisions of the executive bound the courts (*U.S. v. Bussoz*, 218 F. 2d, 683, 1955). The United States court of claims held that the American owner of properties in Austria taken over during the war as a United States officers' club was entitled to compensation under the fifth amendment. Constitutional rights, in the opinion of the court, followed the flag even to enemy territory, though at the time Austria was not in fact enemy territory. Furthermore, an executive agreement by which Austria, in return for a sum of money, agreed to free the United States of liability in such cases could not nullify constitutional rights and could not qualify the jurisdiction of the court of claims accorded by an act of congress. The court left open the question of whether a formal treaty might have these effects (*Seery v. U.S.*, 127 Fed. Supp. 601, 1955). An Italian court held that former members of the German armed forces charged with the mass slaughter of civilians in Italy were liable for crimes under international law. They were not protected by their status as British prisoners of war, by the Geneva convention or by the claim that their action constituted legitimate reprisals (Case of Kapper, Italian Supreme Military Tribunal, *A.J.*, vol. 49, p. 96 [Jan. 1955]).

A Philippine court held that it had no jurisdiction over decisions of United States military officers confiscating scrip in possession of a former United States employee in Okinawa. These officers were immune from the jurisdiction of Philippine courts under international law (*Johnson v. Turner*, Philippine Supreme Court, *A.J.*, vol. 49:94, Jan. 1955).

International Adjudication.—Apart from the advisory opinion concerning South-West Africa referred to above, the International Court of Justice decided two cases during the period under review. In the Monetary Gold case between Great Britain and Italy, the court held that since it had no jurisdiction over a controversy between Italy and Albania vital to decision, it could not give a judgment. The case arose out of some gold found in Germany by the Allies after the war and determined by an arbitral tribunal to belong to Albania. Great Britain claimed that the gold should be turned over to it to pay the award of the International Court of Justice against Albania in the Corfu Channel case. Italy, however, insisted that it had prior claims against Albania. The court found that although Albania was free to submit its controversy with Italy to the court, and could in fact intervene in the case between Great Britain and Italy, it had not done so, and, therefore, since international jurisdiction depends upon consent of the parties, the court could not deal with the controversy between Italy and Albania (Case of the Monetary Gold, I.C.J. Reports, 1954,

p. 191).

The International Court of Justice, having earlier determined its jurisdiction in the Nottebohm case, decided on the merits in April 1955, holding that Nottebohm, of German origin, resident most of his life in either Germany or Guatemala, but naturalized in Liechtenstein in 1939, was not entitled to the protection of the latter state for injuries he received in Guatemala. Although a state can normally protect its citizens for injuries received abroad, citizenship acquired without a minimum actual connection with the naturalizing country need not be recognized in international law (Nottebohm Case, I.C.J. Reports, 1955, p. 4). The case was important in determining that nationality for international purposes is not solely a domestic question.

During the year France withdrew its claim against Lebanon in behalf of the Beyrut Electric company which had been pending in the court.

Codification.—The United Nations International Law commission submitted to the tenth assembly a report on the regime of the high seas on which it had been working for five years. The commission also urged modification of its statute to strengthen its work. Its suggestions included transfer of its seat to Geneva, five-year terms for its members, arrangements for co-operation with the Inter-American Council of Jurists, especially in the latter's Mexico City conference in 1956, and more extensive publication of its documents.

The tenth assembly was to consider the draft convention on arbitral procedure submitted by the commission in 1953 and distributed after debate to the states for comment. The responses from the states were meagre, and some expressed the opinion that the procedures set forth in the draft convention go beyond the voluntary character of arbitration fundamental for that institution and distinguishing arbitration from judicial settlement. The draft provides for the establishment of a tribunal at the initiative of one party if the other will not agree in cases which come under the terms of an arbitral convention binding both.

The International Law commission presented alternative proposals that the draft be open for ratification as a convention, that it be the basis of discussion in an international conference and that it be submitted to governments as a model for future negotiations.

Juristic Discussion.—Outstanding among recent books on international law were the studies on the sociological foundations of international law by Charles De Visscher and of the process of international legal development by Sir Arnold MacNair, both writers former presidents of the International Court of Justice. Julius Stone's analysis of the law of pacific and nonpacific settlement of international disputes and Walter Schiffer's analysis of the international community were antidotes to overoptimism on the prospects of a law-governed world.

Influenced by F. S. C. Northrop's and Arnold J. Toynbee's philosophical and historical discussions of the ideological differences among the civilizations of the world, international lawyers were giving attention to the consequences for their subject of the extension of the international community to the world and the entry into independent status of peoples previously subject to European domination (Josef L. Kunz, *A.J.*, vol. 49, p. 370 [July 1955]).

There were numerous meetings of national and international societies devoted to international law during the year. The Hague Academy of International Law held its 26th session at The Hague in July and August 1955. Lectures were given on the historical development of international law, treaty law, general principles, definition of aggression, proscription and responsibility for acts of armed forces. The Inter-American Bar

association met in New York city in April 1955 and concerned itself with the continental shelf, arbitration and review of the United Nations charter among many other topics. At the 49th annual meeting of the American Society of International Law in Washington in April 1955, Pres. Philip Jessup opened a vigorous discussion on the relation of power, facts and law in international affairs. Attention was given during the meeting to regional organizations, international claims commissions and the recognition of China. The Ford foundation announced during the year grants for improving international legal studies to the law schools of Harvard, Columbia, Michigan, Stanford and California universities. On the basis of this grant, the University of Michigan held a conference in June 1955 at which the policy-science approach to international law, the law of international trade and investment, international agreements, fisheries, atomic energy and the United Nations were discussed. Attention was also given to topics inviting research in the field and to methods of education in international law. (See also UNITED NATIONS.) (Q. W.)

International Monetary Fund.

The International Monetary fund came

into existence on Dec. 27, 1945, when its articles of agreement (formulated by the United Nations Monetary and Financial conference, Bretton Woods, N.H., in July 1944) were signed by 29 governments. After an inaugural meeting in March 1946 in Savannah, Ga., the fund officially began operations on May 6, 1946, at its seat in Washington, D.C. On Dec. 18, 1946, the fund announced agreement to the initial par values of 32 of its members and on March 1, 1947, announced its readiness to commence exchange transactions.

As of Sept. 30, 1955, there were 58 members with aggregate quotas of \$8,750,500,000.

International Monetary Fund, Member States, Sept. 30, 1955

Afghanistan	Denmark	India	Pakistan
Australia	Dominican Republic	Indonesia	Panamá
Austria	Ecuador	Iran	Paraguay
Belgium	Egypt	Iraq	Peru
Bolivia	El Salvador	Israel	Philippines
Brazil	Ethiopia	Italy	Sweden
Burma	Finland	Japan	Syria
Canada	France	Jordan	Thailand
Ceylon	German Federal Republic	Korea	Turkey
Chile	Greece	Lebanon	Union of South Africa
China	Guatemala	Luxembourg	United Kingdom
Colombia	Haiti	Mexico	United States
Costa Rica	Honduras	Netherlands	Uruguay
Cuba	Iceland	Nicaragua	Venezuela
		Norway	Yugoslavia

Terms and conditions for the membership of Afghanistan and the Republic of Korea were approved at the ninth annual meeting in Sept. 1954. Afghanistan and the Republic of Korea became members of the fund on July 14, 1955, and Aug. 26, 1955, with quotas of \$10,000,000 and \$12,500,000, respectively.

Pursuant to the terms of a board of governors' resolution, Czechoslovakia ceased to be a member of the fund as of Dec. 31, 1954, for failure to fulfil its obligations to supply certain information required under the fund agreement and to consult with the fund on its exchange transactions. On June 23, 1955, the representatives of Czechoslovakia and the managing director of the fund signed an agreement for the settlement of all accounts.

Assets of the fund as of Sept. 30, 1955, were approximately \$8,738,610,000, including \$1,750,550,000 in gold, \$6,168,730,000 in national currencies (including \$1,642,210,000 in U.S. dollars) and \$814,550,000 in subscriptions receivable from member governments.

During the 12 months ending Sept. 30, 1955, three members purchased currency from the fund amounting to \$43,750,000 as follows: Colombia purchased \$25,000,000 for pesos in Dec. 1954; Iran purchased \$8,750,000 for rials in Jan. 1955; and the

Philippine republic purchased \$10,000,000 for pesos in Jan. 1955. Since the beginning of operations in March 1947, total sales of currency by the fund, including Belgian francs, pound sterling, deutschmark and U.S. dollars, amounted to approximately \$1,207,700,000.

In the same 12 months, Australia, Austria, Ceylon, Denmark, Ethiopia, Finland, the Federal Republic of Germany, India, Iran, Mexico, Paraguay and Turkey repurchased amounts of their currencies with gold and dollars totalling \$125,641,921, bringing the total repurchases since the beginning of fund operations to \$731,810,472, of which \$108,336,295 was paid in gold and \$623,474,176 in U.S. dollars.

Changes in two members' par values were made during the year. The Nicaraguan par value was changed from 5 to 10 córdobas per U.S. dollar and the Pakistan par value from Rs. 3.30852 to Rs. 4.76190 per U.S. dollar.

Nine members of the fund had not yet agreed on an initial par value with the fund, one had changed the agreed par value and had not yet agreed with the fund on an authorized par value, and two had decided that temporarily their exchange rates could not be maintained within the specified margins of the par value agreed with the fund. For several other members the proportion of their total international transactions that was carried on at exchange rates governed by the established par value was small.

As of March 1952, members which availed themselves of transitional arrangements under article xiv of the fund agreement, which provided for the possibility of applying payment restrictions without prior approval of the fund, were required to consult with the fund annually concerning the further retention of their restrictive arrangements. As of Oct. 1955, 47 of the 58 members of the fund availed themselves of the transitional arrangements under article xiv.

In 1954 the fund held consultations with the members maintaining restrictions under article xiv, section 2 of the fund agreement. The picture as a whole during the 1954 consultation period was one of cautious but sustained effort to relax restrictions, consolidation of gains linked with a desire to make further progress, and general improvement despite certain setbacks. General economic trends were everywhere being closely observed as indicators of opportunities for further measures of liberalization. The *Sixth Annual Report on Exchange Restrictions* published in June 1955 reviewed the 1954 consultation surveyed recent developments in the field of restrictions and outlined the restrictive systems of individual countries. In the 1955 consultations the fund's main interest was to ensure the maintenance of the current momentum in the relaxation of restrictions.

In a decision taken in June 1955, the fund welcomed the steps taken by some members to reduce reliance on bilateral arrangements which involved the use of exchange restrictions and represented limitations on multilateral payments. It urged the full collaboration of all its members to reduce and eliminate as rapidly as practicable reliance on bilateralism. Unless this policy was energetically pursued by all countries, both convertible and inconvertible, the fund warned, there would be a serious risk that widespread restrictions, particularly of a discriminatory character, would persist. Moreover, the persistence of bilateralism might impede the attainment and maintenance of convertibility.

The fund was having discussions with its members on the need to retain existing bilateral arrangements or their ability to facilitate the reduction of bilateral arrangements by other countries. The fund was exploring with all countries which were parties to bilateral arrangements which involved the use of exchange restrictions the need for the continuation of the

arrangements, the possibilities of their early removal and ways and means, including the use of the fund's resources, by which the fund could assist in this process.

The tenth annual meeting of the board of governors was held in Istanbul, Tur., from Sept. 12 through Sept. 16, 1955. At that time, the *Annual Report* of the executive directors was presented to the board of governors. The report recorded the various activities of the fund during the fiscal year ended April 30, 1955. It also discussed the prospects of convertibility of currencies, reviewed international trade and payments developments and the recent monetary, fiscal and development policies of various countries. The report stated that in 1954 and the first half of 1955, further considerable progress had been made in the direction of freer and less discriminatory trade, on the basis of freer and more multilateral payments arrangements. Already during the year benefits had accrued from the widening freedom of international payments recorded in the previous year. Many countries had shown a determination to advance further steps toward the liberalization of trade and currency convertibility, and the environment created by the international payments situation had been favourable for these advances. The report also stated that, in the further development of the favourable trends that had been apparent during the last two years, the fund had an important part to play. Its practices, particularly with regard to the use of its resources, had been developed to the point where, in association with its members, it could actively promote the attainment of their common objectives.

The fund's policy concerning the use of its resources was summarized in the *Annual Report*. The fund invariably grants members' requests for gold *tranche* drawings, unless there are overwhelming reasons for not doing so. The fund's attitude toward applications for drawings within the first credit *tranche* is liberal and, should the need arise and should the justification be substantial, drawings on subsequent *tranches* will be permitted. Finally, the fund continues to be ready to introduce fund-by-fund arrangements. (See also INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT.) (F. A. Sd.)

International Trade. World trade in 1955 again expanded toward new levels, continuing its steady rise since 1952. The value of exports was expected to be in the neighbourhood of \$80,000,000,000 for the year. Following setbacks in some areas in late 1953 and early 1954, the economy of almost every major country in the world is flourishing. All economic indicators in industrial countries pointed to 1955 as a record year for production and foreign trade. In underdeveloped countries, many new projects were under way to help raise domestic standards of living and the levels of agricultural and industrial activity; these tended also to stimulate greatly their levels of foreign trade. In some areas, inflation was threatening to influence adversely the volume and value of foreign trade, but international measures were very generally being taken to halt this threat.

The figures in Table I indi-

cate that trade was increasing much more rapidly on the European continent than elsewhere. In the first half of 1955 continental western Europe's exports rose 14% above those of the same period of 1954, while exports of overseas dependencies were up by 6%. Less spectacular gains were registered by the United Kingdom, British overseas dependencies, United States and Canada, and the rest of the world (including Japan). Two areas, Latin America and the independent sterling countries, showed some fall in export revenues, primarily as a result of lower raw material prices in 1955. Intra-European trade and trade between Europe and other industrial countries rose more sharply than trade between the primary-producing and the industrial countries.

Although there were wide variations in the stability of prices of individual commodities moving in world trade, the price index for the world as a whole showed in the early months of 1955 a slight fall from the level of a year earlier. On the other hand, the increase in the *volume* of goods was about 10% greater in the first quarter of 1955 than in the first quarter of 1954.

During 1955, tariff negotiations were concluded between Japan and certain contracting parties to enable Japan to accede to the General Agreement on Tariffs and Trade (GATT), and on Sept. 10, after receiving enough favourable votes for accession, Japan became the 35th contracting party to GATT. The new agreement provided for certain reductions in the tariffs of the negotiating countries on Japanese goods and tariff concessions by Japan on its imports from them. With the passage of a new three-year extension to the Trade Agreements act of 1934 by the U.S. congress, granting authority to make further modest reductions in U.S. tariffs, new multilateral trade negotiations were planned for Jan. 1956 in Geneva, Switz. About 26 nations signified their intentions to take part in this new round of negotiations, the fourth to be held since World War II. At the ninth session of the contracting parties of the general agreement, held between Oct. 1954 and March 1955, it was recommended to the member governments that a permanent organization be created to administer GATT, to be known as the Organization for Trade Cooperation. The new organization would come into being when accepted by countries representing 85% of GATT trade. (See also TARIFFS.)

United States.—United States trade in nonmilitary goods was soaring toward new highs during 1955, assuming that the reported trade for the first half of the year gave accurate indications of its trend. During January–June U.S. exports of nonmilitary goods were well above recent semiannual levels, totaling \$7,000,000,000. This was an 8% gain over the latter half of 1954 and more than 10% above the first half of 1954. If military exports are included, the total value of all exports declined slightly in the first six months of 1955 from the level a year

Table I.—World Trade, 1951–1955*

Country	(In millions of dollars)				1955

*Excluding U.S.S.R., European Soviet satellites and mainland (Communist) China.

†Partially estimated.

earlier. Contrasting with the increase in nonmilitary exports, there was a reduction between the two periods of more than one-half in military shipments under the Mutual Security program.

Imports made a good gain over the 1954 level, recovering most of their loss subsequent to mid-1953, and reaching \$5,500,000,000 in January-June 1955. The increase over the first half of 1954 was somewhat dampened by the low level of coffee imports. If these are excluded, the gain was 11% over the level of a year earlier. This gain in the value of imports from the first half of 1954 reflected an increase in volume. The unit value index for imports remained unchanged between the two periods, lower coffee prices counterbalancing higher rubber and copper prices.

The favourable U.S. export balance of about \$1,500,000,000 was the same as that in the last six months of 1954. This was well above the levels of the first half of 1954 and the 18 months preceding. The increased expenditures in the United States relative to sales on the part of foreign countries helped to reduce the rate of accumulation of their gold and dollar holdings, although it did not completely halt their growth.

The largest share of the increase in nonmilitary exports from January-June 1954 to January-June 1955 was in nonagricultural commodities. Of these, iron and steel mill products jumped to a high well above any half-year since mid-1952. Half of this advance of \$135,000,000 was in scrap, and reflected especially a 24% increase in scrap exports to western Europe where steel production was soaring. Exports of automobiles, parts and accessories rose by \$100,000,000 from the first half of 1954 to the first half of 1955. Increases of about \$50,000,000 each occurred in exports of nonelectrical machinery and chemicals.

Exports of agricultural products, at \$1,561,000,000 in the first half of 1955, equalled their level of the last half of 1954 and were much higher than their January-June 1954 total. Surplus disposal programs of the U.S. government were key factors in this rise. Such programs included expanded sales of farm products for foreign currencies, barter transactions, famine relief shipments and donations to private welfare agencies for distribution abroad.

The latter tripled their shipments of food by comparison with the figures for either half of 1954. Most of these foods were surpluses, chiefly dairy products, obtained from the department of agriculture for distribution in friendly countries. A total of more than 40 countries received foods through these channels, the chief countries of destination being Italy, India, Egypt, Yugoslavia and the German Federal Republic (west Germany).

The movement of cotton abroad fell sharply from the high figure of the first six months of 1954, but remained well above the low levels prevailing from mid-1952 through 1953. The reduction of 53% in rice exports reflected chiefly a deep cut from the record level of the first six months of 1954 in exports to Japan, where dollar receipts from U.S. military spending had fallen off considerably and sizeable reductions in imports of rice had been planned.

Imports of nonfood commodities in the first half of 1955 advanced by almost \$500,000,000 above their total of a year earlier, regaining completely their decline from January-June 1953. This rebound occurred mainly after the beginning of the year, following virtual stability in 1954. It reflected increased demands by U.S. industry and rising consumer purchasing power as the domestic economy recovered rapidly from the 1953-54 dip in industrial production. Most major nonfood commodities shared in the rise from the low rates of importation prevailing in the first half of 1954. In terms of dollar values, the principal increases occurred in petroleum, crude rubber, sawmill products and textile manufactures. Imports of crude petroleum and fuel oil, which for two years had been steady at a semi-

annual rate of about 185,000,000 bbl., jumped to 220,000,000 bbl. The value of these imports, together with other petroleum products, rose about \$90,000,000 above their first-half 1954 total. Booming U.S. demand for petroleum products and the working off of excessive stocks explained the sharp rise.

The gain in the value of crude rubber imports was of about the same absolute magnitude as that in petroleum products, but was proportionately much greater—almost 75%. This rise resulted mainly from an increased unit value—17½ cents per pound in January-June 1954 compared with 28 cents a pound in the corresponding period of 1955. The quantity of rubber imports also increased by about 9%.

Imports of foodstuffs, in contrast to those of most industrial materials and finished manufactures, were lower by \$289,000,000 than in the first half of 1954. This contraction was traced almost entirely to coffee and cocoa. The total quantity of coffee imported through June 1955 represented an unusually small amount for that season, and the unit value averaged only 8 cents per pound compared with 63 cents for the first six months of 1954.

Table II.—United States Trade by Principal Areas and Countries

Country	General imports (In millions of dollars)			General exports*		
	1954 Jan.-June	1954 July-Dec.	1955 Jan.-June	1954 Jan.-June	1954 July-Dec.	1955 Jan.-June

*Totals include all shipments from United States customs area, except supplies to United States forces abroad for their own use. Country totals exclude items in the "special category" class, i.e., commodities to which security restrictions apply regarding publication of detailed export statistics.

As can be seen from the figures in Table II, the principal trading partner of the United States continued to be Canada, who accounted for 23% of both imports and nonmilitary exports in the first half of 1955. Trade with Latin America as a whole declined, while trade with Europe was soaring, having risen 30% between the two half-year periods.

The year 1955 saw the enactment into law of the president's bill, H.R. 1, to lower tariffs and to extend the Trade Agreements act. The essential features of the bill included, in addition to authority to enter into trade agreements for another three years, authority to reduce rates of duty existing on January 1, 1955, by 5% annually during each of the three years of the act. Further, the president was given authority to reduce rates of duty which were above 50% ad valorem down to that level over the three-year period. Several important amendments were written into the bill. One provided that increased imports should be considered as the cause or threat of serious injury to domestic industry whenever the tariff commission found that increased imports contributed "substantially" toward causing or threatening serious injury. It was under this provision of the new law that the president found that the U.S. bicycle industry had suffered or was threatened with serious injury. In a proclamation dated Aug. 18, he granted relief to the domestic industry by increasing duties on imported bicycles.

Canada.—Canadian trade in 1955 was characterized by con-

ing recovery from the recession of 1953-54. The value of ports in January-June 1955 showed a 10% increase over the level of the first half of 1954; imports rose almost correspondingly by 8%. The most important change in the direction of Canadian trade in the first six months of 1955 was the marked increase in the imbalance with the United Kingdom. Canada's export surplus with Britain, which was about \$80,000,000 (Canadian dollars here and throughout this section) in January-June 1954, rose to \$200,000,000 in the like period of 1955. This increased imbalance was brought about by divergent movements. The dock strike in the United Kingdom severely affected Canada's imports from Britain in this period, but not its exports to that country. In addition, British automobiles and machinery faced stronger competition in Canada from domestic producers and from other foreign countries. Exports of Canadian produce to the United Kingdom, on the other hand, were in greater demand. Grain, metal and forest product exports rose substantially. The British share of Canadian exports increased by more than one-third, to 19% of the total, while imports from Britain decreased from 10% to about 8% of total imports.

Trade with the United States continued to be responsible for the major share of Canada's trade. Large increases were recorded in exports to the U.S. of wood pulp, metals, asbestos, fertilizer, farm implements, lumber, iron ore and petroleum. Exports of wheat and barley, however, declined sharply. Canada increased purchases in the U.S. in every major commodity group, with especially sharp rises recorded in imports of automobile parts and nonfarm machinery in the iron and products group. The figures in Table III show these commodity changes for the United States and the United Kingdom.

Other important destinations for Canadian products were the Commonwealth countries of South Africa, Australia, New Zealand, and India and western Europe, especially the German Federal Republic and the Netherlands. Imports from all areas, except the United Kingdom, increased in the first half of 1955. Among Canada's principal export industries, those three where there had been heavy investment in recent years—chemicals, iron ore and petroleum—made major contributions to the rising trade level. Exports of petroleum rose by more than 260% between the January-June 1954 and 1955 periods, and those of iron ore by 200%. Exports of grains, which contributed heavily to the low level of exports in mid-1954, changed little in value from the 1954 level. Prices of wheat were below those of the first half of 1954, but those of barley, rye and oats moved upward. Newsprint paper, consistently Canada's largest export since 1950, retained that position in 1955 and showed a con-

BRITISH-MADE TRAWLER, first of 20 being built under a trade contract with the U.S.S.R., entering the water after launching at Lowestoft, Eng., in 1955

tinued upward movement. Planks and boards replaced wheat as the second largest export commodity. By value, Canada purchased substantially more imports of rubber and products, aircraft, vegetables, automobile parts and internal combustion engines in world markets, but substantially less coffee.

Latin America.—The *Economic Survey of Latin America for 1954*, published by the United Nations in July 1955, indicated a balance of payments surplus for this region during 1954, although at a level \$700,000,000 under the surplus of 1953. If Venezuela, a large foreign exchange earner through its exports of petroleum, is excluded, the area showed a net deficit in its payments position of \$150,000,000. This deterioration was ascribed primarily to five countries—Argentina, Brazil, Bolivia, Cuba and Uruguay. Declines in exports of the area to the United States were offset in part by increased shipments to western Europe. Imports from western Europe also rose, as these countries made special efforts to recover Latin American markets by low prices and expanded credit facilities. With those Latin American countries especially affected by the dollar shortage, many European countries worked out bilateral trade and payments agreements. The trade of Argentina, Brazil and Uruguay also increased significantly with eastern Europe.

From the incomplete information available for the first half of 1955, it appeared that the payments surplus of the Latin American republics as a group had again declined. Those countries whose major exports are coffee, cocoa or wheat were particularly affected by lower prices following the earlier boom periods. There were wide variations in the strength and weakness of the trade of the individual countries in this area. Among the countries experiencing difficulty with their trade in the early months of 1955, as compared with a year earlier, were Colombia, El Salvador, Haiti, Argentina, Brazil and Uruguay. In contrast, the trade of Cuba, Mexico and Venezuela was steadily rising.

The first half of 1955 proved especially unsatisfactory for the Brazilian economy. As Brazil normally depends upon a surplus in foreign trade to pay for its "invisible" expenditures such as insurance, freight, etc., a trade deficit brings serious consequences. In the year 1954, instead of the customary trade surplus, there was a deficit on trade alone of \$72,000,000 and

a total current account deficit of \$230,000,000. Brazil's foreign indebtedness was increased by \$200,000,000 and its holdings of foreign exchange dropped as well. This aggravated its position when, in 1955, unsettled conditions in the coffee market continued. Imports had to be further restricted, but still the trade deficit, which in January-June 1954 totalled \$19,000,000, rose to \$49,000,000.

Argentina's trade position also worsened in 1955 because of smaller earnings of foreign exchange from cereal exports. The 1954-55 wheat crop was the largest since 1938-39, but its appearance coincided with a large international surplus, lower world prices and marketing difficulties. As of the end of Aug. 1955, 40% of the estimated export surplus of 4,000,000 tons was unsold. The corn crop, on the other hand, was reduced by drought so that it little more than met domestic needs. This catastrophe resulted in an important loss in foreign exchange earnings. Imports into Argentina had been tightly restricted for two years. The only alternative to further curtailment to meet the new deficit was to draw down foreign exchange reserves, rebuilt with difficulty through import austerity in 1953 and 1954.

Venezuela represents the largest Latin-American market without exchange restrictions, and competition for Venezuela's trade in recent years has been keen. In 1954 this country imported about \$900,000,000 worth of goods and exported \$1,700,000,000, mostly of petroleum. In the first quarter of 1955 on an annual rate basis, imports had risen to \$1,000,000,000 as exports climbed to a new high of \$1,900,000,000.

The Mexican economy recovered strongly in the first half of 1955, after a depressed state following devaluation of the peso in April 1954. Exports were well above those of a year before, especially of base metals, cattle, agricultural products and crude petroleum. The value of imports was reduced by about 12%, mainly in foodstuffs, in January-June 1955 compared with a year earlier. Mexico's gold and dollar reserves, which had sunk to about \$100,000,000, by mid-1955 had recovered to nearly \$300,000,000. There was still a trade deficit for the first six months amounting to \$50,000,000, but earnings from the tourist trade and other invisibles receipts resulted in a substantial improvement in Mexico's balance of payments.

Western Europe.—A wave of prosperity had been sweeping over western Europe for nearly three years. Industrial production in this area, which rose by about 8% in 1954, was reaching new levels in 1955. Industrial output had risen 25% in seven years, paced by chemicals where production had doubled since 1948. Production of crude steel and generation of electricity hit all-time peaks early in 1955. Gold and dollar reserves reached a new high of \$13,607,000,000 at the end of the January-March quarter.

This buoyant situation was naturally reflected in western European trade patterns, as can be seen in Table IV. The value and volume of imports reached record levels in the first quarter of the year, while exports were only fractionally below their record high of Oct.-Dec. 1954. Liberalization of trade controls continued, both among western European nations and with their trading partners in the dollar area, despite continued dollar deficits. This action brought closer the free convertibility of European currencies.

The German Federal Republic's trade position in the western European scene continued to be a leading one. Its exports in 1954 rose by 20% above the level of the year before, from \$4,400,000,000 to \$5,300,000,000. In the first half of 1955 exports reached \$5,800,000,000 on an annual basis. West Germany's imports, which in January-June 1955 exceeded the 1954 level by 18%, expanded even more than exports. This was primarily because of the government's program of liberalizing trade. In March and again in Nov. 1954, west Germany freed

certain imports from European and dollar countries from controls. On May 28, 1955, an extension of the free dollar was made.

As trade was further freed from controls, the favourable trade balance declined somewhat, but west Germany remained only major European power with a substantial excess of exports over imports in January-June 1955. The German Federal Republic's recovery from defeat and devastation reached a turning point when on May 5, 1955, it became once again a sovereign nation, a member of the North Atlantic Treaty organization of the Western European union. Industrial production in the Federal Republic, little more than half prewar Germany in 1945, now surpassed that of prewar Germany. In 1954 west Germany replaced Canada as the third ranking world trader, following the United States and the United Kingdom.

*Based on two months' data. †Not available.

The French economy enjoyed so good a year in 1954 that the end of December almost every sector had reached the highest levels in history. This expansion made possible France's first favourable balance of payments since the end of World War I. Prosperity persisted into 1955, with continued economic expansion and price stability. The volume of exports, which in 1954 was 25% above 1950, by the end of the second quarter of 1955 had climbed to 40% above 1950. The volume of imports in 1955 was even higher relative to the 1950 base, 46% above the 1950 level. In value terms, France's trade had achieved a small surplus during the first half of 1955. This was brought about by a continuing favourable balance with overseas countries of the French union and with foreign countries, except the dollar and sterling areas. There was a substantial deficit with both of the latter. French reserves of gold and foreign currencies at mid-1955 were at their highest level since the end of the war.

The Belgian economy completed one of its best quarters in the end of June 1955. Exports during the first six months totalled \$1,340,000,000 and imports were \$1,369,000,000, leaving a trade deficit of \$29,000,000, well under that for the comparable period of 1954. Compared with a year before, exports by destination for the first four months of 1955 rose 26% to European destinations, 33% to North America, 43% to Oceania and 21% to South America. In the same period, imports from North America, and especially from the United States, rose by 22% those from Asia 18%, and from Africa 17%. Purchases in Latin America dropped by 35%, mainly because of reductions in imports of coffee from Brazil, Haiti and Guatemala and cereals from Argentina.

The year 1955 brought greater prosperity to the Netherlands. Rising imports were paralleled by growing exports. Despite the lowering of export and import prices, the value of trade

1954 was 15% above the 1953 level. In the first six months of 1955, the value of trade rose another 8%. Because of the easing of import restrictions in 1954, imports were more largely responsible than exports for these rises. Nevertheless, both showed healthy gains. By the end of 1954, the Netherlands' gold and foreign exchange reserves had reached a level five times that of mid-1951. Restrictions against dollar goods had become virtually nonexistent, although the Netherlands ran its usual deficit with the dollar area on its trade account.

As with the other western European nations, the Italian economy in 1954 and 1955 was in high gear. Industrial production was rising and foreign trade was good. In an attempt to reduce its trade deficit, Italy (aided by a bumper wheat crop) limited its imports in 1954 to about the same level as in 1953, while exports rose by 8%. Toward the end of 1954, Italy liberalized dollar imports of certain raw and semifabricated materials. Following this, imports rose by about 10% during the first half of 1955. Demand for Italian exports continued strong, and their value rose, but more slowly, by 4½%.

United Kingdom.—The foreign trade of the United Kingdom during the 12-month period ending June 30, 1955, was severely distorted by two dock strikes, one in Oct. 1954 and the other lasting from May 23 to July 3, 1955. British exports in the second quarter of 1955 were 12% below those of the first quarter, which, however, the carry-over from the October dock strike helped raise to especially high levels. Exports in the entire first half of 1955—when the effects of the two stoppages partially

were drawn on to meet a part of this increasing deficit.

Although the January–June 1955 exports were thought to be less than they would have been but for the strike, all main classes of exports, except fuels and textiles, rose as compared with the like period of 1954. Exports of nonelectrical machinery were 4% above a year before, with increases to Finland, Belgium and the U.S.S.R. being notable, although North America and Australia took less. In road motor vehicles and aircraft there was an increase of more than £1,000,000 a month (5%). Ten thousand more cars were exported than in the corresponding period of 1954. Australia, New Zealand and South Africa were the chief purchasers, with exports declining to Sweden and North America. Textile exports declined in this period, cotton yarns and fabrics suffering a serious drop of 17%.

Total imports in the first half of 1955 were 14% greater than in the same period of 1954. The food, beverages and tobacco group showed a rise of 13% compared with a year earlier, with cereals increasing by 64%, meat by 8% and tea by 17%. These were partially offset by declines in imports of dairy products and sugar. There was a major reduction in the value of imports of raw wool, almost wholly because of lower prices, and of cotton and oilseeds. Other important increases were in the value of imports of rubber, reflecting a price rise, wood, pulp, metaliferous ores and scrap, coal (a tenfold increase) and petroleum. Some of these changes are shown in the figures in Table VI.

Of the average monthly increase in exports of £8,500,000 in the first half of 1955, £3,500,000 went to sterling area countries. Higher shipments to Australia and New Zealand alone accounted for more than half of this rise. Most other sterling area countries except Pakistan increased their purchases in Britain. The smallest proportionate increase in British imports in the January–June period was in arrivals from the sterling area, which rose by only 2% compared with the preceding year. A large increase in the value of sterling tea and rubber imports, together with lesser rises in the value of animals, meat, cereals, tobacco and grey cotton cloth, was nearly counterbalanced by declines in imports of sterling oilseeds, wool and cotton. In the first half of 1955 there was, therefore, a slight improvement in Britain's adverse balance of payments position with the rest of the sterling area, compared with the first half of 1954, but a definite deterioration when compared with the second half.

Britain's exports to the dollar countries as a group did not rise in value in the 18 months ending June 30, 1955. Improved exports to the United States in the first six months of 1955 were balanced by declining shipments to Canada. At the same time, there were substantial increases in purchases from the dollar area, amounting to nearly 50% more than in the first six months of 1954. These increases covered a large variety of commodities, including cereals, animal feed, wood pulp and paper, timber, chemicals, ores and scrap, iron and steel, nonferrous metals, nonelectrical machinery and coal.

Trade with the continental O.E.E.C. (Organization for European Economic Cooperation) countries and their dependencies rose to new levels as a result of the increased program of liberalization of trade and the continuing level of prosperity on the continent. Machinery, iron and steel, and metal manufactures were of increasing importance in the export trade to the continent, while more bacon, margarine, timber, wood pulp, nonelectrical machinery and coal swelled Britain's imports from these countries to a level 15% above that of a year earlier.

Table V.—United Kingdom's Trade, by Areas

(In monthly averages in millions of pounds sterling)

	Total	Dollar area	Sterling area	O.E.E.C. countries and possessions	Rest of world
General imports, c.i.f.					
1954: First half	279	45	133	66	35
Second half	284	58	117	71	38
1955: First half	317	66	136	75	40
Exports and re-exports, f.o.b.					
1954: First half	233	31	113	65	24
Second half	229	31	111	64	23
1955: First half	242	31	117	68	26
Excess of imports over exports					
1954: First half	46	14	20	1	11
Second half	55	27	6	7	15
1955: First half	75	35	19	7	14

offset each other (although the 1955 strike was considerably more severe)—were 3½% above the first half of 1954. Imports, on the other hand, although lower by 11% in the second quarter of 1955 than in the first, were nevertheless 14% greater in the entire first half of 1955 than in the like period of 1954. These substantial increases reflected the rising levels of economic activity in the United Kingdom.

With imports rapidly expanding to meet demands of industrialists and household consumers, the trade gap in the first six months widened to a serious degree, as can be seen from the figures in Table V. This was in part the result of an increase in import prices of about 5% over the first half of 1954 not matched by any change in export prices. Britain's gold and dollar reserves declined during the summer months, as they

"LADY, BEWARE!" a cartoon by Holland of the *Chicago Tribune* published in 1955

Union of South Africa.—At mid-1955 the South African economic situation remained extremely bright. Exports, which had risen steadily in value since 1952, were relatively stable at \$490,000,000 for the January-June period, while imports totalled nearly \$750,000,000.

These trade figures exclude exports of gold, one of the union's major exports, production of which was rising further in 1955 above the high levels of 1954.

Exports of wool during the first half of 1955 were at about the level of a year earlier, but diamond exports had risen sharply. In the first five months of 1955, their value was nearly equal to that for the entire preceding year.

Despite a high level of national income and general prosperity, imports of consumer goods into the Union of South Africa continued to be tightly controlled, at 53% of the 1948 level for the year 1955. A policy for lifting these controls was announced which would proceed slowly on a step-by-step basis in order to allow domestic industries to adapt themselves to the removal and to prevent undue hardship.

Middle East.—Available information on 1955 exports from middle eastern countries showed substantial gains over 1954. Production of crude oil, the area's major export commodity, amounted to about 79,000,000 metric tons in the first half of 1955, nearly 10% greater than the output of the previous six months and 20% above the corresponding 1954 period. Kuwait was once again the leading producer, Saudi Arabia second, Iraq third and Iran a low fourth. Expansion of exports had led to rising imports for these countries. Many development plans were under way, necessitating imports of capital equipment as well as consumer goods.

The trade of Syria was continuing to rise, as was that of Israel. Both countries run a substantial trade deficit, which tends to increase as both exports and imports grow in value. This deficit is met each year by foreign capital and remittances, and in the case of Syria, by oil revenues.

Egypt's trade balance deteriorated somewhat during the January-June 1955 period compared with the like period a year earlier. This deterioration—a deficit of £E17,800,000 during the first half of 1955 compared with a surplus of £E9,200,000 in the first half of 1954—was caused almost equally by an increase

in imports and a decline in exports. Imports increased by £E1,000,000 to a total of £E85,000,000 in the first six months 1955, and exports, at £E67,200,000, had dropped by £E13,000,000. Exports of raw cotton, which are about 85% to 90% Egypt's total exports, declined heavily, as foreign demand was reduced. France continued to be Egypt's best customer, followed in declining order by India, the German Federal Republic, Italy, the United Kingdom, Japan and the United States. To help overcome difficulties in the cotton trade in 1955, the government of Egypt entered into barter arrangements with certain countries and granted export credit facilities.

Late in May 1955, a preparatory conference took place in Beirut, Lebanon, looking toward the eventual establishment of an economic organization for the near and middle east. The governments represented included the Arab league countries (Egypt, Iraq, Jordan, Lebanon, Libya, Saudi Arabia, Syria and Yemen) and Afghanistan, Ethiopia, Greece, India, Iran, Pakistan and Turkey. The conference approved a draft agreement to be submitted to their respective governments, stating the objective of the proposed organization which was to assist in the economic development of the member countries, including the encouragement of trade among them with a view to increasing the standard of living of their peoples.

Far East.—The far eastern countries showed a generally rising export and import business in the first six months of 1955 as the figures in Table VII indicate. The most remarkable upsurge was that of Japan. In the first half of 1955, exports to the world were \$892,000,000 and imports were \$1,222,000,000, leaving an adverse balance of \$330,000,000. This compared with a deficit in the first half of 1954 of \$692,000,000. Of the reduction in the deficit between the two periods of \$362,000,000, 52% represented lowered imports and 48% increased exports. Japan's exports of iron and steel products rose 72% above the level of 1954, causing this group of commodities to replace cotton fabrics as the principal export commodity. Between the two years, nearly all of Japan's exports rose in volume with the exception of cotton fabrics, exports of which declined by 22% in the latter period. Half of Japan's 22 major import commodities declined in value from the first half of 1954 to the first half of 1955. Of these, raw cotton, down 12%, and rice, lower by 46%, were the most important. The terms of trade for

Table VII.—Trade of Principal Far Eastern Countries

Philippines . . .	396	394	455	545	600	6

Japanese goods declined slightly compared with those of a year earlier. Export prices dropped a little in May and June, while import prices remained steady.

In 1955 Japanese accounts showed a partial shift from the dollar to the sterling area as a source of supply. The sterling area also became relatively more important as the destination for Japanese exports. With respect to the dollar area, Japan's balance of payments deficit of \$207,000,000 in the first half of 1954 changed to a surplus of \$78,000,000 in the corresponding period of 1955. These changes represented a substantial reduction in purchases from the dollar area together with an expansion of exports to that area. Sterling area accounts changed

from a deficit of \$5,000,000 to a surplus of \$82,000,000. With other (so-called Open account) countries, Japan's \$35,000,000 surplus in the first half of 1954 changed to a \$20,000,000 deficit in the like period of 1955. Both sales and purchases with countries in this group declined.

The trade of the Philippines continued at high levels in the first half of 1955. As the shipping shortages of the latter part of 1954 were overcome, exports returned to the high levels of early 1954. However, prices for coconut products and sugar, the principal exports, although relatively stable since the end of 1954, were still well below levels of the first half of 1954. Imports rose sharply in the 1955 period, necessitating a net decline in reserves and a drawing of \$10,000,000 from the International Monetary fund during the second quarter. In an effort to correct this imbalance between exports and imports, authorities in mid-1955 took steps to restrict imports in order to prevent further declines in reserves. The Philippines and the United States, its principal trading partner, signed a new trade agreement on Sept. 6, 1955, by which it was agreed that duties on commodities traded between the countries would slowly rise to the same level as those levied on other partners.

Keeping pace with India's buoyant industrial production, and encouraged by a continuance of the government's liberal import control policy, that country's imports during the first six months of 1955 rose by 15% over the corresponding period of 1954. Exports rose in value by nearly the same percentage, as prices for India's principal export commodities remained high. The price of tea, which had risen spectacularly in 1954, finally broke in April 1955, after which export totals dropped off. The terms of trade which had improved in the early months of 1955 therefore deteriorated somewhat during the second quarter. India became the second largest exporter of cotton cloth in the world during 1954, second only to Japan. Its largest single customer for cotton cloth was the United Kingdom, with the African continent also a major market. This development indicated clearly the progress of one phase of India's first five-year plan, since it is not necessary to go far back in history to find the United Kingdom the leading exporter of cotton cloth, with India one of its principal markets.

The trade of other far eastern countries was slowly expanding in 1955. Pakistan, Malaya and Ceylon increased their exports, and imports edged slightly upward as well. While the trade position of few countries in the far east was completely satisfactory to them, the economic outlook in this area was generally encouraging, and economic and trade development plans were being carried out with success.

Oceania.—Australia's trade balance in the year ending June 30, 1955, showed a deterioration from the position of the year before, changing from a surplus of \$329,000,000 in 1953-54 to a deficit of \$152,000,000 in 1954-55. This new deficit had to be met by a substantial reduction in Australia's international reserves.

During 1954-55 total imports amounted to \$1,889,000,000 and exports to \$1,737,000,000. To meet this problem, Australia imposed new import restrictions in March 1955. These were beginning to be reflected in import figures by mid-year, and seemed likely to bring about a better balance by the end of the calendar year. The decline in the value of exports was brought about by lowered income from Australia's exports of primary products. A decline in the price of wool of 12%, compared with the season a year earlier, reduced sharply the value of sales of its principal export earner. Barley, sugar and egg export earnings also dropped, although lamb, butter and wheat earned more income than in 1953-54.

The economy of New Zealand, like that of Australia, is greatly dependent on exports of wool, meat and dairy products. Declin-

ing prices in export markets caused a deficit in the first six months of 1955 of £NZ17,000,000 compared with a surplus of £NZ110,000,000 in the like period of 1954. With the ending of the United Kingdom's bulk purchase agreements of the World War II and postwar periods, New Zealand had been forced to seek out new markets for its products, although Britain remained overwhelmingly the principal destination for its exports. During the 1954-55 season, one of New Zealand's largest new customers was the U.S.S.R. (See also BUSINESS REVIEW: EXCHANGE CONTROL AND EXCHANGE RATES; FOREIGN INVESTMENTS; INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT; INTERNATIONAL MONETARY FUND.) (F. L. H.)

International Wheat Agreement: see AGRICULTURE; WHEAT.

Interstate Commerce Commission. The duties and powers of the U.S. Interstate Commerce commission are set forth in the Interstate Commerce act, passed in 1887 and later amended in many important particulars, and in related acts. The act, divided into four parts, deals with the regulation of (1) railroads, related agencies and oil pipelines; (2) motor carriers; (3) water carriers; and (4) freight forwarders. The commission's regulatory powers extend, among other things, to carrier charges; to questions involving the valuation and financial reorganization of railroads; to the issuance of securities; to acquisitions of control of carriers by other carriers or persons; to accounting practices and the filing of reports; to matters involving proposed institutions of new services by motor and water carriers or freight forwarders or the construction, abandonment and operation of lines of railway; and to safety of facilities and operations in rail and motor transportation. Much interstate motor and water transportation is carried on under exemptions from regulation and by private carriers.

Commissioner Everett Hutchinson succeeded Commissioner Charles D. Mahaffie during 1955. On July 1 Commissioner Hugh W. Cross became chairman for one year in succession to Commissioner Richard F. Mitchell.

There were no amendments to the act during 1955, although a number of important changes received consideration. Major changes would be effected by two bills introduced in the congress—S. 1920 and H.R. 6141—following a report on a special study made by a committee appointed by Pres. Dwight D. Eisenhower and composed of certain members of the cabinet. Extensive hearings were expected to precede any congressional action on provisions of the two bills.

The Defense Transport administration was abolished and its remaining functions, having to do primarily with mobilization plans for national defense requirements, were transferred to the commission under a transport mobilization staff directed by Commissioner Owen Clarke, who had served as defense transport administrator.

There was no general increase in rail freight rates during the year. Motor carriers of general freight in various areas received authority in the year to advance their rate levels. The rail share of intercity ton-miles was slightly less than 50% in 1954. Railroad revenue, \$9,925,000,000 in fiscal 1955, was 59.2% of the revenues of all carriers subject to the commission's jurisdiction.

The upswing in general business activity affected transportation agencies. In the first seven months, rail ton-miles, revenues and net income after taxes increased 11.9%, 5.5% and 73.0% above the level of that period of 1954.

Expenditures for capital improvements in the first half of 1955 were at a considerably lower level than in the same period

of the preceding year. However, technological and operational advances, such as further use of diesel locomotives, occurred.

Floods, droughts and labour disturbances affected traffic movements and required car service orders and other remedial measures by rail and other carriers. Beginning in May 1955, car shortages reached serious proportions. The building of freight cars fell to an extremely low level, while retirements continued at a substantial pace. Five service orders were issued to alleviate the car supply. Motor facilities were in ample supply and there were substantial additions to the equipment of inland waterway carriers. Improvements of highways and construction of toll roads were carried forward at a high level.

Regulated carriers varyingly faced such continuing problems as heavy passenger-train deficits, high costs of handling small shipments, extensive competition of private and exempt carriers, shifts in industry location and adverse highway and street conditions. The transportation milieu remained one of severe inter-agency and other competition with respect to rates, operating authorities and other matters. The commission's work was made markedly more complex by reason of this condition. (See also RAILROADS.)

(R. F. ML.)

Intestinal Disorders: see STOMACH AND INTESTINES, DISEASES OF THE.

Intoxication, Alcoholic. In the year 1955 the study and treatment of alcoholic intoxication in its acute and chronic forms progressed mainly along three lines: (1) the extension of existing organizations and institutions for the care and treatment of problem drinkers; (2) the enormous output of valuable contributions to the literature of this field of knowledge; and (3) the development of pharmacological aids in treatment.

Foremost in its national and increasingly international activities was the group formerly known as Alcoholics Anonymous whose general service headquarters officially assumed the title, The General Service Board of Alcoholics Anonymous Inc. (See SOCIETIES AND ASSOCIATIONS: *Alcoholics Anonymous*.) Other organizations were also making steady progress along educational and preventive lines. Among these was the National Committee on Alcoholism, Inc., New York, N.Y.

In nearly every state of the union, there were special groups of which two might be mentioned as typical. The Boston Committee on Alcoholism, Inc., provided an information and guidance centre and had a regular radio program, consisting of a weekly broadcast, plus regular meetings, university courses and special professional assemblies for medicine, industry and the courts. Active in another section of the country was the National Committee on Alcohol Hygiene, Inc., Atlanta, Ga., which performed a similar function in the south. This organization, which was founded in 1944, published a widely distributed periodical *Alcohol Hygiene*.

The year 1955 was remarkable in the number and variety of publications on this subject. A veritable milestone was the volume *Etiology of Chronic Alcoholism*, edited by Oskar Diethelm. This volume represented the result of a five-year program of investigations supported by the National Research council and carried out by a team of investigators from various disciplines. Particularly interesting in this volume was the chapter "Familial and Personal Background of Chronic Alcoholics," by Manfred Bleuler, psychiatrist and director of the Burghölzli Psychiatric clinic of the University of Zurich, Switz. The organic features of brain disease following the excessive use of alcohol were covered in an authoritative manner by H. Houston Merritt, professor of neurology, Columbia university, in his new *Textbook of Neurology*. Merritt covered the subject of acute and

chronic alcoholism in several sections of this volume. Especially interesting were two articles, "The Ego Factors in Surrender in Alcoholism" by Harry M. Tiebout, and "The Definition of an Intoxicating Beverage" by Leon A. Greenberg, both of which were published in the *Quarterly Journal of Studies on Alcohol*.

Drug treatment remained essentially the same—withdrawal of alcohol, restoration of vitamin and mineral content of the body and the use of various medications along with psychotherapy. In 1955 progress in drug treatment was emphasized by the increasing use of chlorpromazine and the use of Reserpine (Serpasil) in cases of delirium tremens. In this disorder the restoration of body fluid and salt, vitamins, minerals and sedation were essential.

In summary, the year 1955 marked a definite stage of advanced progress in the treatment of what is commonly called alcoholism. Opinions still varied as to whether alcoholism is a primary metabolic disease or a symptom of an underlying disorder. The bulk of evidence favoured the latter and, as for the underlying disorder, it seemed increasingly clear that the alcoholic individual (or the problem drinker) is dealing with depression or some other form of emotional disturbance manifested by symptoms related to increasing anxiety. The alcoholic therefore, is usually attempting self-medication, using alcohol as a drug. Fortunately, there are better drugs and new techniques of psychotherapy and physical treatment to help the individual deal more effectively with his own anxiety, social maladjustments, frustration and underlying depression. (See also LIQUORS, ALCOHOLIC.)

Iowa. Iowa, nicknamed the "Hawkeye state," was admitted to the union in 1846 as the 29th state. Located in the north-central region, it comprises 56,290 sq.mi., of which 245 sq.mi. are inland water surface. The census figures for 1950 showed a population of 2,621,073, of which 52.3% was rural. The federal estimate of population for July 1, 1955, was 2,690,000 not including men in the armed services. The capital and largest city is Des Moines, with a 1950 population of 177,965. Other chief cities are Sioux City, 83,991; Davenport, 74,549; Cedar Rapids, 72,296; Waterloo, 65,198; Dubuque, 49,671; and Council Bluffs, 45,429.

History.—The 56th general assembly met in Des Moines on Jan. 10, 1955, and adjourned on May 4. Gov. Leo Hoegsberg, elected in Nov. 1954, was inaugurated on Jan. 11. Other state officers were lieutenant governor, Leo Elthon; secretary of state, Melvin D. Synhorst; auditor, Chet B. Akers; treasurer of state, M. L. Abrahamson; secretary of agriculture, Clyde Spry; attorney general, Dayton Countryman; superintendent of public instruction, J. C. Wright. All the state officers, the eight representatives in congress and Senators Bourke B. Hickenlooper and Thomas E. Martin were Republicans.

Appropriations for operating the state government were increased from a total of \$244,745,391 for the 1953-55 biennium to \$273,071,121 for the 1955-57 biennium. To provide for this increase, certain taxes were raised. The sales tax was increased from 2% to 2½%; income taxes were raised; gasoline taxes were increased one cent; and the sales tax was applied, for the first time, to cigarettes, beer and bowling. The question of a toll road received considerable attention, and an authority was created to construct a toll road with revenue bonds if and when

toll road in any adjoining state reaches the Iowa border. Efforts to reapportion the representation in the general assembly on the basis of changing centres of population were voted down in spite of a constitutional provision for periodic reapportionment. Provision was made for the appointment of a legislative research director to aid the lawmakers in drawing up needed legislation, such director to be appointed by a committee of three senators and three representatives.

The visit of the Russian farm delegation to Iowa in the summer of 1955—a visit originally suggested by the *Des Moines Register*—caused great interest and received wide newspaper and radio coverage. Great scientific interest was aroused in late summer by the discovery of the bones of Ice Age man near Turin in western Iowa. Archaeologists believed the skeletons to be those of nomadic Indians who roamed Iowa about 7,000 to 10,000 years ago—the oldest ever uncovered in the state.

Education.—During 1953-54 Iowa had 3,588 public elementary schools, with 399,477 students; 829 high school districts with 123,477 students; and 16 public junior colleges with 7,368 students. The number of teachers and superintendents in the public schools was 23,975. Teacher salaries in 1954-55 averaged \$3,260 as compared with the national average of \$3,932.

There are 26 colleges and universities in the state. The state supports three institutions: the state university at Iowa City; the agricultural college at Ames; and the teachers college at Cedar Falls. Enrolment in the three state institutions increased from a total of 19,388 in 1954 to 21,491 in 1955, or 10.8%. The enrolment in all the colleges in Iowa showed an increase of 12.8% over 1954, while veteran enrolment increased 47%, from 4,570 in 1954 to 6,752 in 1955. The appropriation for the three state-supported schools by the 1955 legislature was \$39,297,062 for the 1955-57 biennium, as compared with \$36,571,416 for the 1953-55 biennium.

Social Insurance and Assistance, Public Welfare and Related Programs.—The 1955 allocation for social welfare totalled \$33,070,000 for 1955-57, as compared with \$34,640,000 for 1953-55. Contributions to the state unemployment fund as of June 30, 1955, were \$4,034,830, compared with \$5,059,204 for 1954; benefit payments were \$7,222,934, compared with \$8,496,319 for 1954; the reserve fund, as of June 30, 1955, totalled \$107,067,487.

Iowa's three penal and two correctional institutions had 2,517 inmates as of Sept. 1, 1955. The six mental hospitals had 8,440 patients.

Communications.—Iowa had in 1955 a total of 8,658 mi. of paved highway. Expenditures for construction in the fiscal year 1954-55 were \$31,569,149; maintenance costs for the same period were \$10,252,732. The state was served by 12 major railroads. Class I roads had a total of 5,515 mi. of track. In 1954 these roads carried 4,349,616 passengers and 2,223,964 tons of freight. The number of passengers carried by motorbus during 1952 was 13,197,165. There were, in 1954, 110 mi. of oil pipeline, 1,034 mi. of gasoline pipeline and 2,999 mi. of natural-gas pipeline in Iowa. In 1955 there were 1,265,480 registered motor vehicles, private and commercial.

Iowa has about 850,000 telephones, about 50 radio stations, 9 very-high-frequency and 2 ultrahigh-frequency television stations. There are about 70,000 mi. of electric transmission lines in the state and 97% of all farms are electrified.

Banking and Finance.—There were, as of June 30, 1955, 562 state banks in Iowa, 160 bank offices, 253 small-loan licensees and 280 credit unions under the supervision of the state banking department. Total assets of the 562 state banks as of June 30, 1955, were \$1,911,830,624 (an increase of \$7,987,547 over the 1954 figures); total deposits were \$1,752,958,339 (an increase of \$3,036,160 over the 1954 figures). As of April

Table I.—Principal Crops of Iowa

Crop	Indicated 1955	1954	Average, 1944-53
Corn, bu.	459,971,000	540,015,000	540,971,000

Source: U.S. Department of Agriculture.

In 1955, there were 95 national banks in the state with total deposits of \$88,126,000 and total resources of \$935,270,000.

The revenue received from all special taxes and liquor profits in Iowa for the fiscal year ending June 30, 1955, was \$203,201,379, an increase of \$8,104,872 over the 1954 figures. The largest single item was the state % sales tax, which brought in \$54,873,792; the gasoline tax was second, with a total of \$43,612,095; motor vehicles brought in \$36,964,716; while the state income tax totalled \$21,900,216. The state general fund had a balance of \$27,000,000 to start the 1955-56 fiscal year. Total property taxes for 1954, assessed locally in 1955, were \$251,913,029. The federal income tax paid by Iowans in 1953 was \$535,808,882. The per capita tax paid in 1953, including state, property and federal income, was \$364.

Agriculture.—Agriculture is the leading industry in Iowa. The state has 25% of all grade A land in the country and produces more than 10% of the nation's food. There were 194,623 farms in Iowa in 1954, compared with 196,251 in 1953. These farms had a total of 34,733,154 ac.; the average size was 178.5 ac. Of the total Iowa farms, 49.6% were owner-operated; 50.4%, tenant-operated.

The total cash income of Iowa farmers for 1954 was \$2,356,759,000; of this total, \$1,892,210,000 was from the sale of livestock; \$456,011,-

Table II.—Livestock of Iowa, Jan. 1

	1955	1954
Hogs	12,048,000	10,433,000
Cattle	6,279,000	5,746,000

000 from crops; and \$9,538,000 from government payments. The total cash income was \$39,851,000 less than in 1953. On Jan. 1, 1955, there were 63,705 trucks on Iowa farms, 279,457 tractors, 81,763 grain combines and 107,238 mechanical corn pickers; all figures showed an increase over the 1954 figures.

Manufacturing and Industry.—Iowa's principal industries are based on farm needs and farm production: agricultural machinery, meat-packing plants, food processing plants. There were 3,736 manufacturing plants

in Iowa, employing 168,750 persons, in 1954. The average weekly wage was \$76.39. The estimated value of all manufactured products was \$3,800,000,000. Iowa's per capita income for 1954 was \$1,667, an increase of \$149 over the 1953 figure. (M. Te.)

Mineral Production.—Table IV shows the tonnage and value of those mineral commodities produced in Iowa in 1952 and 1953 (preliminary) whose value exceeded \$100,000. Iowa ranked third among the states in production of gypsum and in 1953 stood 33rd in the value of its mineral output, with 0.36% of the U.S. total.

Iran (PERSIA). An independent kingdom of western Asia, Iran is bounded east by Pakistan and Afghanistan, north by the U.S.S.R., west by Turkey and Iraq and south by the Persian gulf and Arabian sea. Area: 636,293 sq.mi. Pop. (1955 est., no census ever taken): 21,037,000. Language: mainly Persian, but Turkic and Armenian in the northwest, Kurd in the west, Arabic in the south and Pushtu in the east. Religion: Moslem, mainly Shia but the Kurds (850,000) are Sunni; Christian (there are about 50,000 Gregorian Armenians, a few thousand Catholic Armenians and 40,000 Nestorians); Jewish 40,000; and about 10,000 Zoroastrian. Chief towns (1950 est.): Tehran (cap.) 618,976; Tabriz 279,168; Isfahan 196,134; Meshed 191,794; Hamadan 123,931; Shiraz 116,274; Resht 111,978; Kermanshah 108,484. Ruler, Shahanshah Mohammed Riza Pahlavi; prime

ministers in 1955, Gen. Fazlollah Zahedi and (from April 7) Hussein Ala.

History.—When the shah returned to Tehran from his visit to Europe and America in March 1955, the prospects for Iran seemed more stable and assured than in any year since World War II. Foreign relations were on a sound footing; the settlement of outstanding disputes with the U.S.S.R. and the signature of a treaty of commerce and navigation with India (both in Dec. 1954) were followed by an exchange of ambassadors with Japan in February and a treaty of friendship, economic relations and consular rights with the United States in August. U.S. military and financial aid continued at a high level (\$45,000,000 for the fiscal year 1955–56). Many countries competed for contracts in Iran, and these were awarded on a basis of deliberately balanced distribution. A contract for a pipeline from Abadan to Tehran was divided between French and British firms in April; a £30,000,000 contract for the reconstruction and extension of Iran's roads was awarded to a British firm in May; contracts aggregating £57,000,000 for various building projects were shared by three firms (U.S., French and western German) at the end of August; and the German Federal Republic also received a contract for supplying 180,000 telephones.

The "iron curtain" countries were largely excluded from this revival of political and economic co-operation between Iran and the outside world, though the shah accepted an invitation to pay a formal visit to Moscow. The process of re-establishing Iran's links with the west reached a climax with the announcement on Oct. 11 of the government's intention to join the Baghdad treaty, which already linked Turkey, Iraq and Pakistan with Great Britain in a defensive system covering the northern tier of middle eastern countries adjoining the U.S.S.R. This decision was formally put into effect on Nov. 3, after a Soviet note of protest had been rejected.

In domestic affairs the situation was less satisfactory, though greatly improved since the days of Mohammed Mossadegh. The aftermath of the conspiracy against the regime, which had been uncovered in 1954, still remained to be liquidated; and General Zahedi's government failed to satisfy the shah of its ability to deal with the internal state of the country, especially with the wide prevalence of graft and corruption. The shah spoke publicly on March 22 of the misery of the masses of the population and plainly warned his government of his dissatisfaction. Two weeks later, on April 5, he accepted Zahedi's resignation and appointed in his place Hussein Ala (at that time minister of court, and more than once previously prime minister). Ala received a vote of confidence in the *majlis* by 92 votes to 2 (with 7 abstentions) on April 17, but a few days later he, like Zahedi, retired to Europe for medical treatment, leaving the foreign minister, Abdollah Entezam, to take charge. After Ala's return to Iran a considerable reshuffle of the government took place in August.

Meanwhile the arrest and punishment of conspirators continued. Kazem Hasibi, formerly Mossadegh's oil adviser, was arrested on March 21, and five other colleagues of Mossadegh were arrested for conspiracy against the regime on May 19. On Aug. 18 six officers convicted of participation in the 1954 conspiracy of the Communist-controlled Tudeh party were shot—the last of a long series; thereafter the shah commuted the remaining death sentences. The shah's preoccupation with the task of political conciliation and social reform was further shown in the continuation of his program of distributing land among the peasants (starting with his own) and by a ban on the cultivation of opium, which became law on Oct. 4.

See L. P. Elwell-Sutton, *Persian Oil* (London, 1955). (C. M. WE.)

Education.—Schools (1953–54): primary 5,959, pupils 790,200, teachers 26,965; secondary (1950) 333, pupils (1953–54) 119,300, teachers (1950) 3,546; vocational (1950) 186, pupils 7,776, teachers 494. Uni-

versities 2, students (1951) 5,600. Teachers in training (1950) 1,414.

Finance and Banking.—Monetary unit: rial, with a principal buying rate of 75 and a principal selling rate of 76.5 to the U.S. \$1. Budget (1954–55 actual; 1955–56 est. in parentheses): revenue 10,848,000,000 rials, (12,065,648,000 rials); expenditure 13,058,479,000 rials, (15,591,302,000 rials). Currency circulation: (Oct. 1954) 9,780,000,000 rials, (April 1955) 9,840,000,000 rials. Bank deposits: (Oct. 1954) 10,590,000,000 rials, (April 1955) 13,200,000,000 rials. Gold and foreign exchange: (Dec. 1954) U.S. \$186,000,000, (Aug. 1955) U.S. \$204,000,000.

Foreign Trade.—(1954) Imports (including those by oil companies) 22,090,000,000 rials; exports 12,300,000,000 rials. Main sources of imports: U.S. and Canada 24%; Germany 15%; Japan; other continental Europe 15%. Main destinations of exports: U.S.S.R.; Germany 16%; other continental Europe 22%; U.S. and Canada 9%; U.K. 6%; Japan. Main export commodities: rugs 16%; cotton 17%; petroleum (1953) 2%, (1951) 61%.

Transport and Communications.—Roads (1953) 26,000 km. Motor vehicles in use (1953): cars 24,100; commercial vehicles 21,200. Railways (1954) 2,567 km.; passenger-km. (March 1952–53) 386,000,000 freight, ton-km. (March 1954–55) 1,221,600,000. Telephones (Jan. 1955) 39,300. Radio receiving sets (1950) 184,000.

Agriculture.—Main crops (metric tons, 1954): wheat 2,100,000; barley 820,000; cottonseed 87,000; cotton, lint 50,000; jute 4,000; rice 522,000; beet sugar, raw (1954–55) 68,000; raisins 50,000; dates 140,000; tobacco (1953) 18,500; sesame (1953) 10,000; tea (1951–52) 3,500. Livestock (1951): sheep 18,000,000; horses 365,000; mules 126,000; asses 1,200,000; buffaloes 12,000; goats 700,000; cattle (March 1955) 5,000,000; camels (1949) 600,000; chickens (1949) 13,000. Wool production (1954) 10,000 metric tons.

Industry.—Raw materials (metric tons): crude oil (1954) 2,946,000; coal (1953) 150,000. Manufactured goods (metric tons, 1953): cement 52,400; cigarettes 5,772,000; tobacco 5,167; cotton, ginned 43,000; (1951) motor fuel 2,205,000; kerosene 1,260,000; all fuel oils 8,247,000.

Iraq. An Arab kingdom, Iraq is bounded northwest by Syria, north by Turkey, east by Iran, southeast by Kuwait and the Persian gulf, south by Saudi Arabia and west by Jordan. Area: 171,599 sq.mi. Pop.: (1947 census) 4,816,185; (1954 est.) 4,948,000. Language: Arabic 77%, Kurdish 15%, other 8%. Religion: Moslem 93.6%, Christian 3.1%. Chief towns (pop., city proper, 1947 census): Baghdad (cap.) 364,041; Mosul 203,273; Karbala 122,719; An Najaf 106,776; Basra 94,000; Kirkuk 93,000. King, Feisal II; prime minister in 1955 Nuri es-Said.

History.—Iraq's proposed adherence to the Turco-Pakistan defense treaty had wide repercussions in the country's foreign relations. Early in Jan. 1955 the Soviet government withdrew its representative from Baghdad in view of "Iraq's unfriendly attitude" and at the end of the month the Arab league, inspired by Egypt, exerted considerable pressure on Iraq to force it to withdraw from its Turkish commitments. Meanwhile the Turkish prime minister, Adnan Menderes, had paid a state visit to Baghdad, at which time he stressed that the new treaty would not be exclusive and the hope that it would attract the co-operation of other Arab middle east countries. After his visit the Iraqi prime minister, Nuri es-Said, emphasized that the proposed treaty with Turkey conflicted neither with the United Nations charter nor with the Arab league collective security treaty. His government's policy was designed to serve the vital aims of the Arabs and to assure Iraq's safety. At the end of the month, after the abortive mission to Baghdad of an Arab league delegation, Nuri es-Said refused to accept the terms dictated by Egypt that Iraq should sign the treaty only if it was approved by the majority of the Arab league. He protested officially to Cairo against the introduction into Iraq through Egyptian diplomatic channels of propaganda publications inciting Iraqi opposition to his government's policy.

On Feb. 24 the treaty was signed, having obtained the overwhelming support of both the Iraqi houses of parliament. In his speech recommending its acceptance, Nuri es-Said stated that Iraq had accepted no commitments outside its own frontiers or outside the frontiers of Arab countries, as specified in the Arab league security treaty, and that Iraq would continue to co-operate fully with the Arab states whether inside or outside the Arab league. But, he added, no one could dictate Iraq conditions for co-operation. On March 2 Egypt and Syria

signed an agreement to which Saudi Arabia and Yemen subsequently adhered. It laid down principles for close military and economic co-operation and included an undertaking not to join the Turco-Iraqi treaty. A fortnight later a Syrian delegation visited Baghdad and on the conclusion of its mission undertook 'to submit the Iraqi viewpoint to the Syrian government with a view to closing the Arab ranks and establishing the desired understanding between the Arab states.' On April 4 Great Britain adhered to the Turco-Iraqi treaty and a new agreement was announced covering Anglo-Iraqi relations. By it the British air bases would be handed back to Iraq while Great Britain guaranteed all assistance to secure their efficient upkeep. In the event of foreign aggression, Great Britain, at the request of Iraq, would send all material assistance for the defense of the country.

Meanwhile, the British foreign secretary, Sir Anthony Eden, visited Baghdad and on March 24 a new oil agreement between the Iraqi government and the foreign-controlled Iraq Petroleum Company was signed assuring Iraq of a notable increase in annual revenue; and on April 2 a final settlement of outstanding war debts between Iraq and Great Britain was made.

In August, on the outbreak of disturbances in Morocco, Iraq associated itself with the general protests of the Arab league and subscribed £250,000 for the relief of "Arab Morocco victims of French hostilities in Morocco." (O. M. T.)

Education.—Schools (1953-54) including private and foreign: primary 7,549, pupils 280,378, teachers 9,521; secondary 197, pupils 46,463, teachers 2,679; vocational 11, pupils 1,874, teachers 90; teacher training colleges 11, students 1,744, teachers 78. Institutions of higher education 2, students 5,255, teaching staff 234.

Finance and Banking.—Monetary unit: Iraqi dinar at par with the pound sterling and with an exchange rate of 0.359 dinars to the U.S. \$1. Budget (1955-56 est.): revenue 50,970,000 dinars, expenditure 51,550,000 dinars. Currency circulation: (Jan. 1955) 41,600,000 dinars; (May 1955) 44,000,000 dinars. Deposit money: (Jan. 1955) 22,000,000 dinars; (April 1955) 23,000,000 dinars. Foreign exchange reserves (all banks, April 1955) U.S.\$333,700,000.

Foreign Trade.—(1954) Imports 74,100,000 dinars; exports 155,600,000 dinars, of which 101,300,000 dinars by foreign oil companies. Main sources of imports: U.K. 31%; other sterling area 13%; France and other continental European Payments union countries 25%; U.S. and Canada 14%. Main destinations of exports: Netherlands 17.3%; Germany 14.04%; U.K. 11%; Denmark 10.13%; India 6%; U.S. 4.14%; Saudi Arabia 3%. Main exports: petroleum 88%; barley 6%; dates 2%.

Transport and Communications.—Roads (1953): 19,300 km. Motor vehicles in use (1955): cars 14,052; commercial vehicles (including buses, taxis) 16,716. Railways (1954): 1,690 km. Air transport (1954): passenger-km. 19,858,000; freight, 302,900 ton-km.; (1953) 1,144,000 km. Town. Telephones (March 1954) 28,010. Radio receiving sets (1953) 6,000.

Agriculture.—Main crops (metric tons, 1954; 1955 in parentheses): barley 1,240,000 (899,000); wheat 1,160,000; rice 180,000; cotton, lint 1,000; cottonseed 20,500; wool 8,000; dates (1953) 350,000. Livestock (1953-54): sheep 10,000,000; cattle 1,510,000; buffaloes 718,000; horses 300,000; mules 500,000; (1953 est.): asses 1,000,000; camels 00,000; goats 2,000,000.

Industry.—Crude oil production (1954) 30,084,000 metric tons.

Ireland, Republic of. The Republic of Ireland has about 85% of the area (south, centre and northwest 26 of the 32 counties) and about 75% of the population of the whole of Ireland. Area: 27,136 sq.mi. Pop.: (1951 census) 2,960,593; (1954 est.) 2,933,000. Languages: English about 76%, Erse (Gaelic) about 24%. Religion (1946 census): Roman Catholic 94.3%; Anglican 4.2%; Presbyterian 0.8%; Methodist 0.3%; Jewish 0.1%. Chief towns (pop., 1951 census): Dublin (cap.) 522,183; Cork 74,567; Limerick 50,820; Dun Laoghaire 47,920. President in 1955, Sean T. O'Kelly (Seán T. Ó Ceallaigh); prime minister, John A. Costello (Seán Ua Choisdealbha).

History.—The first six months of 1955 gave John A. Costello's interparty government no reason for alarm or despondency. The half-yearly exchequer returns showed ordinary revenue comfortably up and expenditure on the central fund and supply services slightly down. But this satisfactory budgetary position coincided with a mounting adverse balance of trade.

The explanation of the paradox lies in a system of taxation devised for industrialized Great Britain and taken over almost

BRITISH DETECTIVES carrying part of a load of arms and ammunition believed to have been stolen from an army depot by Irish terrorists Aug. 13, 1955. The arms were discovered in an empty shop in London

unchanged by a small agricultural country—an anomaly that became startlingly apparent in 1955. Under this system, income tax, normally a true mirror of national progress or adversity, remained virtually static, being paid by a small minority; and of the increase of revenue for the first six months of the year, almost £3,000,000 over that for the corresponding period for 1954, nearly half came from higher customs receipts; that is, as a reflection of a higher volume of imports. At the same time there was an ominous fall in exports, particularly of cattle and cattle products to Great Britain. Provisional figures for the first nine months of 1955 showed an excess of imports over exports of £71,021,000, an increase over the corresponding period of 1954 of £18,983,000. Part of this adverse balance was offset by a good tourist year, but the inner reality of the situation, with revenue buoyant and the balance of trade increasingly shaky, gave the government no cause for elation.

The trade squeeze began, in fact, to imperil the interparty government, and two results followed. First, the minister for finance, Gerard Sweetman, hinted at an inquiry into the whole system of taxation; second, Sean Lemass, formerly minister for industry and commerce in Eamon de Valera's government, produced a five-year economic plan clearly designed to form the main plank in the Fianna Fail, or opposition, party's platform for the next general election.

By October some observers were hinting that a general election might not be long delayed. The Irish banking system is, in effect, a kind of provincial reservoir connected by subterranean channels with the main reservoir in London, and the restrictions on credit in Great Britain were already having an effect in the republic. Sean Lemass' opposition party counter was to propose an ambitious program of capital outlay by government and public authorities, the finance to be provided by calling to some extent on the £228,000,000 of external assets held by the Irish banking system, but without reducing those funds below the level necessary to maintain liquidity of funds. Such a proposal, if translated from theory to reality, would involve a radical departure from the republic's hitherto extremely conservative financial policy. But the main significance of Lemass' opposition plan was that it foreshadowed the possibility of an Irish election fought for the first time on purely economic issues.

Meanwhile, if there were hints of new economic lines of division in Irish politics, there was one purely political issue on which government and opposition seemed to speak with one voice—or, more significantly, not to speak at all. The Irish Re-

publican army raids on barracks in Northern Ireland and Great Britain were condemned in the *dail eireann* by some speakers as "undemocratic," by others as right in principle but wrong in timing. The minister for external affairs, speaking for the government, threw cold water on the enthusiasm of the I.R.A. and its youthful admirers by publicly acknowledging that even if all British forces were withdrawn from Northern Ireland tomorrow, the problem of partition would remain unsolved. That, however, was as far as anybody went, and open recruiting for the I.R.A., not to mention advertising for recruits, continued unchecked. The crux of the matter was, as always, that any Irish government rash enough to challenge the I.R.A. might find itself out-bidden in political sentiment on the subject of Irish unity.

The same reservoir of political sentiment forbade any public declaration by the government on the subject of the republic's potential role as a member of the North Atlantic Treaty organization. The official attitude remained that to discuss such a matter on the basis of partition would be to admit by implication that partition was either justified or permanent, or both.

(D. L. I.)

Education.—(1953) Schools: primary 4,880, pupils 468,707, teachers 13,000; secondary 441, pupils 52,151, teachers 4,170; vocational 844, pupils 86,843. Teacher training colleges 10, students 1,173. Universities 2 (excluding St. Patrick's college, Maynooth), students (1952-53) 7,601, professors and lecturers 82.

Finance and Banking.—Monetary unit: (Irish) pound, at par with the pound sterling. Budget (1955-56 est.): revenue £110,620,000; expenditure £112,700,000. Internal debt (March 1953) £122,000,000, external debt £40,600,000. Currency circulation (May 1954) £71,600,000; (May 1955) £75,900,000. Bank deposits (May 1954) £86,800,000; (May 1955) £95,000,000. Gold and foreign exchange (May 1955) U.S. \$247,000,000.

Foreign Trade.—(1954) Imports £179,930,000; exports £115,100,000. Main sources of imports (1954): U.K. 56%; other sterling area 10%; continental European Payments union countries 16%; U.S. and Canada 9%. Main destinations of exports: U.K. 89%; continental E.P.U. 5%; U.S. and Canada 2%.

Transport and Communications.—Roads (1953) 80,600 km. Motor vehicles in use (Aug. 1953): cars 108,805, commercial vehicles 33,196. Railways (including cross-border systems, 1954): 4,170 km.; passengers carried (1952-53) 16,505,620; freight, ton-km. (1954) 444,000,000. Air transport (1954): passenger-km. 125,008,000; freight, ton-km. 1,973,400. Navigable inland waterways (1953) 800 km. Telephones (Jan. 1954): 103,798. Licensed radio receivers (1953): 406,000.

Agriculture.—Main crops (metric tons, 1954): wheat 450,000; oats 483,000; barley 179,000 (1955, 268,000); rye 3,000; potatoes 2,284,000; beet sugar, raw 101,000; flax fibre (1953) 2,200. Livestock: (Sept. 1954) cattle 4,494,000, sheep 3,113,000, pigs 958,000, chickens 13,462,000; (1953) goats 46,200, horses 329,000, mules 3,500, asses 105,700. Production (metric tons, 1954): wool 5,000; milk 2,505,000; butter 59,000; cheese 1,900; meat 189,000 (including pork 89,000, beef and veal 80,000).

Industry.—Fuel and power (1954): coal 200,800 metric tons; electricity 1,406,400,000 kw.hr.; manufactured gas 177,600,000 cu.m. New houses built under state aid (1954) 10,490. Index of industrial production (Dec. 1953; 1948=100) 150. Unemployment (May 1954) 8.4%, (May 1955) 7.3%.

Iron and Steel. Data presented in the three major parts of this article and the accompanying tables are based on the statistics available in Nov. 1955, as reported by the U.S. bureau of mines.

Iron Ore.—In 1954, the first shipments of iron ore were made from two new producing operations, in Venezuela in January and in Canada in July. Table I gives data on iron ore output by countries producing more than 100,000 tons yearly.

In the first eight months of 1955 iron ore outputs in Chile and Peru lagged behind the rate in 1954 but those in Canada and Venezuela had already exceeded production in the full year 1954.

Iron ore production in the United States, and imports from specified countries that supply the greatest quantities to the United States, are shown in Table II. In 1954 important progress was made in utilizing new or previously little used sources of iron ore supply. Imports increased but more significant was the increase in capacity of foreign sources for the United States. In 1954 imports of iron ore from Peru totalled 2,152,165 tons compared with 945,819 tons in 1953 and none in 1952. Although

*Estimate. †Preliminary.

the tonnage of magnetic taconite from Minnesota and flotation concentration of Michigan jaspers was relatively small, progress in research and in actual plant construction was significant. Also additional plants for ore beneficiation were built in 1954.

In the first eight months of 1955, output of iron ore in the United States totalled 73,634,000 short tons; imports were 16,108,502 tons (exclusive of ore containing 10% or more manganese) valued at \$108,167,442. Of this 79% was supplied by three countries—Canada 38%, Venezuela 34% and Peru 7%. Iron ore exports in the period totalled 3,146,489 tons, of which more than 96% went to Canada and 3% went to Japan.

Pig Iron.—World production of pig iron decreased in 1954. Table III gives the details. Output of pig iron in the United States

LAST FURNACE, first to be constructed with a hearth 30 ft. in diameter, operating near Detroit, Mich., in 1955. Built for the Great Lakes Steel Corp., the furnace required a crew of 90 men and had a rated capacity of 50,000 tons of pig iron per month

1953. Table V gives the data by countries. Output of steel in the United States declined 21% in 1954. Capacity for steel-making in the U.S. increased from 124,800,000 tons in 1953 to 125,800,000 tons in 1954, but the operating rate was 71% of capacity in 1954 against 94% of capacity in 1953. The first installation in the U.S. to employ the Linz-Donawitz steel-making process (an oxygen process) went into operation at Trenton, Mich., in 1954. The same company had two of the world's largest electric furnaces (200-ton capacity) in operation

Table VI.—Steel Industry in the U.S.

	(In thousands of short tons)

in the same locality. The world's largest blast furnace was under construction at Ecorse, Mich.

Table VI, which was compiled from data of the Iron and Steel institute, includes only those castings made by steel ingot producers. (See also FOREIGN INVESTMENTS.)

(F. E. H.; B. B. M.)

Iron and Steel Institute, American: see SOCIETIES AND ASSOCIATIONS, U.S.

Irrigation. United States.—Irrigation water supplies in the western states were much like those of 1954 except in the northwestern areas, where, although smaller, they were generally adequate. The decline in sufficiency was gradual from north to south. In Arizona, New Mexico, southern Utah, much of Nevada and localized spots in California the gravity supplies were extremely low and consequent pumping of ground water, especially in Arizona and California, was heavy. Studies by the U.S. geological survey in the San Joaquin valley disclosed an extensive valley floor subsidence attributed largely to long-continued overdraft. A utility company considered that a better distribution of the pumping draft could lessen the danger of depletion in various sections, as the normal sources of replenishment appeared sufficient to meet the current demands; however, if the near-drought conditions should continue through another season, the water shortages of many San Joaquin valley areas would become acute.

Again reservoir storage was depended upon to support many western valleys through the irrigation season, but in almost all such cases the carry-over supplies were smaller than at the opening of the 1954 season. The total March 31 storage of 114 reservoirs built or operated by the bureau of reclamation was about 9,400,000 ac.-ft., or 20%, less than on the same 1954 date. The Hoover dam storage on the Colorado river held less water than at any time since its first filling, while the Salt river (Arizona) reservoir system held barely two-thirds the 1954 amount. Later, localized benefits were received, notably in the Columbia and Colorado river basins, also in eastern New Mexico, southeastern Colorado and western Oklahoma, through above-normal precipitation, while in California cool spring temperatures in the mountains deferred snow melting and consequent runoff into the growing season of crops. On June 1, although storage in the bureau of reclamation reservoirs had been increased by more than 7,000,000 ac.-ft. and with flow into the northern units continuing, the total was still less than a year before. In mid-August the storages averaged 86% of the 1954 figures, which had likewise been less than in previous years. The bureau considered the available amounts enough to mature 1955 crops on most of its projects, but feared that holdover

CONTROL OF CATTAILS in drainage and irrigation ditches demonstrated by photographs taken in 1954 and 1955. Elimination of the plant was caused by application of Dalapon, a product of the Dow Chemical Co. especially designed for use on narrow-leaved plants

storage would be nearly exhausted before the 1956 season unless above-normal rainfall should occur meanwhile.

The geological survey announced the most extensive program in its history to investigate ground and surface water supplies throughout the nation. A congressional appropriation of \$4,350,000 to support the work was to be matched by state contributions. Drought conditions in the west and need for larger water supplies to meet irrigation and other increasing demands were cited as reasons for the program, irrigation use having increased from 65,000,000 ac.-ft. in 1920 to 72,000,000 ac.-ft. in 1940, 88,000,000 ac.-ft. in 1950 and 92,000,000 ac.-ft. in 1953.

Despite the threatening conditions of recent years, the irrigated acreage continued to grow, although largely at the expense of the ground water. A utility company estimated that the irrigated acreage in California, which had been getting about half its irrigation supply by pumping, was increasing at the rate of 500,000 ac. a year, while in the high plains of Texas, where ground water was almost the only irrigation source, the acreage was reported to have increased from about 1,900,000 ac. in 1950 to 2,500,000 ac. in 1952 and 3,000,000 ac. in 1953. The University of Nebraska announced that in 1954 alone more than 1,700 irrigation wells were installed in Nebraska, most of them east of the 100th meridian, this number being almost one-fourth the previous number in the state.

At the end of the 1954 season the bureau of reclamation had calculated that federally constructed works could supply either complete or supplemental water to 7,147,528 ac. in the 17 western states (about one-fourth their irrigated total). Congressional appropriations in 1955 supported a program expected to extend full service to 65,000 ac. of new lands and supplemental supplies to other areas. Ten new projects were to be started, with construction continuing on 34 others and operation and maintenance on 49. Prominent among the new undertakings were the Trinity unit of the Central valley project, California, and the Yellow Tail dam project, Montana. The Trinity project at a possible cost of \$220,000,000 was expected to provide 704,000 ac.-ft. of water for Central valley lands and 233,000 kw. of installed hydroelectric generating capacity. The system would include a 450-ft. earth- and rock-fill dam on upper Trinity river

and several tunnels and power plants. By these and other works surplus water would be diverted annually into the Sacramento river for the Sacramento canals unit as well as other lands farther south. The Yellow Tail development, part of the over-Missouri basin project, would have as its key structure a multipurpose dam on Big Horn river, creating storage capacity 1,375,000 ac.-ft. and generating capacity of 200,000 kw. The total estimated cost would be \$89,583,000.

Legislatures of North Dakota, South Dakota and Oregon enacted laws affecting withdrawal and use of ground water, thus bringing to 12 the number of western states having such controls. Still without statutory restrictions on diversion and use of percolating water were California, Nebraska and Montana; but the acreage irrigated with ground water in 1949 (last federal census) was 3,700,000, while in Texas, Arizona and Colorado, which had statutes authorizing the imposing of restrictions in limited areas, 2,600,000 ac. were reported. The effective regulation of ground water diversions was still absent in the areas that appeared to need it most.

Greece.—Contracts were let to start the long-studied Moudova project. While the primary purpose was production of electric power at the 150-ft.-high Nevropolis dam, irrigation 28,500 ac. (of 31,000 irrigable) in the Karditsa plain was to be effected with part of the water released at the dam. The irrigation obligation of \$2,300,000, to be assumed by a public irrigation district, was to be repaid from assessments on the benefited lands and the sale of water. Crops to be irrigated included cotton, wheat and other small grains, corn, sesame, beans, citrus fruits, vegetables, alfalfa and pasture. The total estimated cost was \$12,000,000 to \$13,000,000; the dependence on power capacity 84,000 kw.; date of functioning, 1959.

Israel.—Diversion of water from the Yarkon river was made via a 66-in. pipeline begun in 1953, which was expected, when in full operation, to supply water to 50,000 ac. in the Negev desert about 70 mi. southward. Completion was planned for 1956. The final cost of the initial project, including seven pumping stations and three reservoirs, was estimated at \$22,000,000. Beginning a twin line to the eastern Negev was planned for 1958. Service by both conduits was to increase the irrigable area of Israel 100,000 ac., or 50%.

Italy.—Progress in the government plan to improve living standards south of Rome included initial financing of the Cat

project, Sicily. The plan, based principally on a storage dam at Pozzillo, on the Salso river northwest of the Catania plain, proposed the irrigation of 75,000 ac. in 1,500 farms. Higher production of citrus fruits was expected, with a shift from beans and coarse grains to cotton, sugar beets, tomatoes and other vegetables and livestock forage. Project completion was scheduled for 1961 but with the major works in operation and water flowing by 1958. With full citrus production in about 1967 the value of annual farm production was expected to reach \$22,400,000, three times the 1955 value, with a quadrupling of net income to farmers and farm labourers. The final estimated cost was \$48,700,000.

Lebanon.—Partial financing of a government-sponsored project on the Litani river was announced by the International Bank for Reconstruction and Development, following feasibility studies by the U.S. bureau of reclamation. While the main purpose was to develop electric power, irrigation of 8,500 ac. in a narrow coastal strip between Beirut and Saida was also planned. The scheduled date of completion was 1961; total estimated cost (all phases), \$40,000,000. Principal crops would be citrus fruits, bananas and vegetables.

Venezuela.—Contracts were let for construction of the Guárico river dam, key structure of a project planned to irrigate 72,000 ac. To cost \$13,200,000, the dam would be 9½ mi. long, with a maximum height of 100 ft., creating a storage capacity of nearly 6,000,000 ac.-ft. Most of the land would be developed for beef and dairy production, but on the remainder corn, sesame, rice and black beans would be grown. Estimated cost of the project, to be completed in 1956, was \$30,000,000. (See also DAMS; FLOODS AND FLOOD CONTROL; SOIL CONSERVATION.) (P. A. E.)

Islam. On the whole 1955 was marked by a steady progress in cultural matters throughout Islam. There were also visible signs that Moslem countries were cementing their cultural ties with one another. The pace of the progress was accelerated by the exchange visits of heads of various Moslem states, such as the visits to Pakistan, Jordan, Iran and Egypt by King Ibn Saud of Saudi Arabia, those to Pakistan and Egypt by King Hussein I of Jordan, the visits to Pakistan and Iraq by Pres. Celal Bayar of Turkey, to Pakistan, Saudi Arabia and Egypt by Pres. Achmed Sukarno of Indonesia and the visits of the prime minister of Egypt, Gamal Abd el-Nasser, to Pakistan and Saudi Arabia. In Karachi a Pakistan Middle East society was formed to promote social, economic and cultural relations between Pakistan and the countries of the middle east.

The year saw the emergence of three great new Moslem states—the Sudan, Tunisia (which had achieved a limited form of home rule) and Nigeria, the state with the most Moslems in West Africa. Morocco and Malaya were also well on the way to independence and Algeria fought to achieve at least its cultural independence. In a homogeneous government, education in Tunisia began to be directed by a Tunisian minister of education for the first time since the French occupation in 1881, although the French language continued to be compulsory along with Arabic. In the Sudan the Sudanese officials who had replaced two-thirds of the expatriate officials did all in their power to wipe out adult illiteracy by providing adequate schools for the juvenile population. A good-will mission to Indonesia from Malaya resulted in arrangements for the interchange of experts to discuss the standardization of the Indonesian and Malay languages and to consult with one another on education and educational equipment.

The independent countries of Pakistan, Egypt, Saudi Arabia, Turkey, Indonesia and Iraq steadily progressed in their educational plans. In Pakistan the University of the Panjab, Solan, was actively engaged in preparing an encyclopaedia of Islam in

Urdu. The universities of West Pakistan devised ways and means of promoting Islamic studies, emphasizing the teaching of Islamic history, Arabic language and the contribution of Moslems to the advancement of culture. The government of Pakistan decided to construct a new university town near Karachi at a cost of £3,000,000. The government also announced a new £3,000,000 development plan for economic, social and educational advancement in the North-West Frontier province. In East Pakistan the government decided to open 6,000 primary schools. In Pakistan more than 1,300 village-aid workers were trained during the year to educate villagers in modern methods of agriculture. In Turkey work was started on the new Atatürk university in eastern Turkey and three new broadcasting stations were inaugurated. In Saudi Arabia the government decided to establish a university either at Jidda or Riyadh. The rector of the two-year-old National University of the Lebanon announced that a committee had been formed to compile an Arabic encyclopaedia. In Egypt 300 schools were built in accordance with the plan to wipe out illiteracy within ten years.

An Iranian good-will mission headed by the Iranian minister of education, Raza Jafri, visited Pakistan. Jafri stressed in his speeches the cultural and religious affinities of his country with Pakistan and voiced the desire for an interchange of teachers between Iran and Pakistan. Pakistan also received a cultural good-will delegation from Nigeria.

The second congress of the Arab Association for the Advancement of Science, held at Cairo, Egy., decided that an Arab dictionary of technical terms should be prepared to which the Arab league should be asked to contribute £50,000 toward the cost of production. The fourth annual convention of Arab students in the United States, held at the University of Wisconsin, Madison, adopted a resolution that the Arab league be asked to sponsor the immediate establishment of a national Arab university, equipped to train Arab men and women from all Arab countries. For the first time in Moslem history an international assembly of Moslem youth was held, at Karachi, Pakistan, in Jan. 1955. (A. Md.)

Isle of Man: see GREAT BRITAIN & NORTHERN IRELAND, UNITED KINGDOM OF.

Israel. A republic, proclaimed on May 14, 1948, Israel is bounded north by Lebanon, east by Syria and Jordan, south by Egypt and west by the Mediterranean. Area: 7,984 sq.mi. Pop.: (Nov. 1948 census) 782,000, including 713,000 Jews; (1955 est.) 1,748,000. Religion: mainly Jewish, but by 1952 there were 120,000 Moslems, 16,000 Druses and 40,000 Christians. Chief towns (pop., 1953 est.): Jerusalem (cap., Israeli part only) 143,500; Jaffa-Tel Aviv 354,500; Haifa 153,500. President of the republic in 1955, Isaac Ben-Zvi; prime minister, Moshe Sharett and (from Nov. 3) David Ben-Gurion.

History.—Relations with the United States became somewhat cooler in 1955 following greater U.S. interest in the Arab states. Little progress was made with the Eric Johnston plan for joint use of the Jordan valley waters by the adjacent countries. The shooting down of an Israeli commercial plane over Bulgaria in July impaired relations with that country. The visit of U Nu, prime minister of Burma, to Israel in May was followed by a 16-man purchasing commission from Burma. Trade and relations with Turkey improved in spite of the Turkish-Iraqi defense treaty in February.

Relations with Egypt seriously deteriorated, starting with the detention of the Israeli ship "Bat Galim" in Sept. 1954 and the Israeli "spy" trial in Cairo in December (leading to two hangings, one suicide and seven imprisonments) and culminating in heavy fighting in and around the Gaza strip in Sept. 1955.

Home Politics.—Elections to the *Histadrut* (General Federa-

tion of Jewish Labour) in May 1955 showed little change in the relative strength of the several labour parties. The municipal elections were followed by the usual interparty bargaining. The Religious parties refused to endorse a Labour mayor of Jaffa-Tel Aviv (Mrs. Golda Myerson, minister for labour), and the former right-wing mayor (Haim Levanon) retained office. As a result, the Religious parties mayor of Jerusalem was replaced by Gershon Agron, a Labour candidate and editor of the *Jerusalem Post*. The Labour mayor of Haifa, Aba Khushi, retained office.

In July, in the third Israeli general election, more than 1,000,000 electors had the vote, as compared with 500,000 in the first election in 1949. About 83% went to the polls and reversed to some degree the strengthening of the centre parties in the second election in 1951 in favour of the nationalists and the extreme left. The 14 parties represented in 1949, which were reduced to 13 in 1951, were further reduced to 10, none having fewer than five seats in a house of 120 members.

The libel charges brought by Israel Kastner, a former Jewish communal leader in Hungary and now an Israeli civil servant and a member of the Mapai (Labour) party, against an obscure Israeli periodical which accused him of sacrificing the bulk of the Jewish community to the nazis, resulted in July in acquittal on two charges and trifling damages on the third. This decision accentuated the attacks on the Mapai party and might have influenced the election results.

Economic Situation.—The nationalist disturbances in North Africa led to a strong movement of Jews toward Israel, in spite of French opposition. The quota of 30,000 new immigrants for the whole year from all countries had to be raised to 45,000 from North Africa alone. On arrival, the new immigrants were taken from ship to village instead of, as formerly, to temporary reception camps.

The first stage of the Huleh drainage scheme was completed. The 66-in. pipeline from the Yarkon river to the northern Negev, a distance of about 70 mi., was also completed. Oil was discovered in the northern Negev in September.

Agricultural production in 1955 rose by 22% over that in 1954; industrial output rose by 19% in the same period. The drive for greater efficiency in production and the cheapening of costs, coupled with the vigorous search for new markets, increased exports. Exports in 1955 covered 30% of imports as compared with 20% in 1951.

Creeping inflation continued. The cost of living index (1948=100) stood in June 1955 at 246. The rising cost of living led to a series of strikes by senior civil servants to secure higher salaries.

The budget for the year ending March 31, 1955, was balanced at IL.572,525,000. Increased taxation was imposed later in the year to cover the additional cost of settling more immigrants than had been originally anticipated. Collections from Jews abroad were also stepped up. The sale of Israel bonds in the United States, the Netherlands, Switzerland and Ireland, which provide much additional revenue for state investment in Israel, was also stepped up.

Miscellaneous.—The elections for the chief rabbinate resulted in the re-election of Israel Herzog as chief Ashkenazic rabbi and the election of Yitzhak Nissim as chief Sephardi rabbi. The latter election was invalidated by a supreme court decision and had to be revalidated by legislation. For the first time in 20 years, the Purim carnival was held in Tel Aviv in March. (See also RELIGIOUS EDUCATION.) (E. H. SL.)

Education.—(1953-54) Official schools: Hebrew primary 906, pupils 219,129, teachers 9,077; Arab primary 110, pupils 23,723, teachers 696; Hebrew secondary 75, pupils 14,640, teachers 1,308; Arab secondary 5, pupils 687, teachers 41; vocational and agricultural 69, pupils 8,229, teachers 1,028; Teacher training colleges 21, students 3,312.

Finance and Banking.—Monetary unit: Israeli pound, divided into 1,000

TROOP STRENGTH OF ISRAEL AND NEIGHBOURING ARAB STATES, 1955. Figures for Israel include a ready-reserve of 200,000 men

prutoth, with a principal exchange rate of IL.1.80 to the U.S. dollar (other rate, IL.1.30=U.S. \$1). Budget (1955-56): balanced at IL.63,000,000. Currency circulation: (Sept. 1954) IL.151,100,000; (Jan. 1955) IL.150,500,000. Bank deposits: (June 1954) IL.217,500,000; (Sept. 1954) IL.242,800,000. Gold and foreign exchange: (central bank, Jan. 1955) U.S. \$34,300,000; (other banks) U.S. \$34,700,000.

Foreign Trade.—(1954) Imports IL.438,400,000; exports IL.132,500,000. Main sources of imports: U.S. and Canada 31%; U.K. 10%; other continental European countries 36% (mainly Turkey and Finland). Main destinations of exports: U.K. 23%; U.S. and Canada 18%; Turkey 15%. Main exports: citrus fruits 36%; industrial products 19%.

Transport and Communications.—Roads (1953): 3,100 km. Motor vehicles in use (1953): cars 15,000, commercial vehicles 19,000. Railways (May 1954): 451 km.; passenger-km. (1953) 169,214,000; freight, ton-km. (1954) 124,200,000. Shipping: merchant vessels of 100 gross tons and over (July 1954) 32; total tonnage 119,162. Air transport (1955) passenger-km. 130,663,000; goods, ton-km. 4,153,000. Telephones (1954): 47,430. Radio receiving sets (1953): 211,117.

Agriculture.—Main crops (metric tons, 1954): wheat 31,400; barley 89,700; olives 21,000; olive oil 4,000; peanuts 16,700; bananas 11,000; oranges and tangerines 395,000; grapefruit 62,000; lemons, limes, etc., 13,000; figs (1952) 5,000. Wine production (1953): 6,000 metric tons. Livestock (1954): cattle 80,600; sheep 78,000; goats 100; chickens 3,659,000. Milk production (1954): 151,300 metric tons. Fisheries (total catch, metric tons, 1954): sea 2,300; inland 6,600.

Industry.—Electricity (1954): 896,400,000 kw.hr. Salt (1953): 21 metric tons. Manufactured goods (metric tons, 1954): superphosphate 74,500; cement 563,000; industrial diamonds (exports, value) IL.5,600. New dwellings completed (1954): 595,970.

Italian Literature.

The tenth anniversary of the Italian liberation was commemorated during 1955 through all mediums of expression by statesmen, historians and writers.

The history of the resistance was presented by M. Salvemini in *Storia della Resistenza Italiana* (Neri Pozza), C. L. Ragazzini in *Disegno della Liberazione Italiana* (Lischi-Nistri), and by R. Battaglia with G. Garritano with their *Breve Storia della Resistenza Italiana* (Einaudi). The background of the resistance

d the achievements of democracy were investigated by various experts in *Il Secondo Risorgimento* (Ist. Poligr. della Stato) and *Dieci anni dopo* (Laterza), the latter representing the opposition's point of view. The most noteworthy monographic and documentary works included *Un anno di lotta a Firenze* (Pontedera) by C. Francovich, *Uomini e città della Resistenza* (Laterza) by P. Calamandrei and *Non Mollare* (Nuova Italia), a phototypic edition of the first clandestine antifascist paper published in Florence in 1925.

The inventory revealed that, notwithstanding what had so far been achieved, the spirit of brotherhood and self-sacrifice, which united classes and parties for the common good during the Resistance, had cooled off with the end of hostilities. The spiritual and social regeneration for which many had fought against fascism and nazism had not taken place. If one compared concrete achievements with the magnitude of pressing social problems, little had been done and innumerable obstacles had been raised to prevent their solution. From this climate arose that general feeling of disappointment, discouragement, despair, bitterness and even apathy which pervaded the different social strata of the country and generated an involution of democratic life and a resurrection of conflicting political extremisms.

This state of mind was reflected in the bulk of the year's literary production. It was best epitomized in *Un banco di nebbia* (Mondadori) in which G. Soavi laid bare the spiritual plight of his generation which, left at the mercy of the fascist educational system, believed, obeyed and fought until they discovered for themselves that they had been betrayed by the government and particularly by their elders who had done nothing to open their eyes. They therefore emerged from the war with a desire to make over and a "fog bank" as their only base from which to take off toward the future.

That section of the same generation, either living a life of inertia in a spiritual vacuum or abandoned to their own destiny, was portrayed in R. Brignetti's *La deriva* (Einaudi) and P. Pasolini's *Ragazzi di vita* (Garzanti). The struggle and hopelessness of the humble whose attempts to rise are frustrated by a merciless society were delineated by I. Calvino in *Il sentiero dei nidi di ragno* (Einaudi), T. Varni in *L'escluso* (Mondadori), and L. di Falco in his *Paura del giorno* (ibid.). The repercussions caused by nature's violence and man's brutality, by squalor, dejection and selfishness, were graphically described by P. A. Quarantotti Gambini, *Amor militare* (Einaudi), and R. Romano, *Campane a quattro* (Mondadori), G. Testoni, *Il dio di Rosario* (Einaudi), G. Rimanelli, *Peccato originale* (Mondadori), B. Fenoglio, *La malora* (Einaudi), A. de Jaco, *Le domeniche di Napoli* (ibid.), N. Saito, *Gli appassionati siciliani* (Einaudi), and D. Rea, *Quel che vide Cummeo* (Mondadori).

The human, social and economic conditions of the have-nots and backward areas inspired a new unrhettorical documentary literary form and a crop of sensitive new writers coming from various professions. The most significant works included *Diario di un giudice* (Einaudi) by D. Troisi, a judge; *Il sarto della strada lunga* (ibid.) by G. Bonaviri, a physician; *Baroni e contadini* (Viareggio prize, Laterza) by G. Russo, an essayist; *Utopia e realtà* (Einaudi) by G. Guarnieri, an educator; and *Un paese* (Einaudi), the story and life of an Emilian town narrated by its inhabitants and presented by C. Zavattini, the movie writer.

A note of hope was struck by a group of mostly young writers, for whom courage and perseverance, love of life and of one's neighbours, combined with a deep appreciation of the simple and real values of life, can help man shoulder its burdens. This was the import of G. Zangrandi's *I Brusaz* (Deledda prize, Mondadori), G. Dessi's *I passerai* (Nistri-Lischi), G. Mosca's *Gianfrancesco* (Rizzoli), S. M. Bonfanti's *La Speranza* (Noi Donne prize, Einaudi) and G. Bonaluni's *Gli ostaggi* (Veillon prize,

Vallecchi).

This impressive exposé of the present social, moral and spiritual crisis was highlighted by two thought-provoking studies: E. Garin's *Cronache di filosofia italiana* (Viareggio prize, Laterza), a fine synthesis and interpretation of Italian thought during the first half of the present century, and A. Capitini's *Religione aperta* (Guanda), a profound search and plea for an up-to-date all-embracing religion.

The best novels produced outside the neorealistic field, both in critical and popular opinion, were V. Pratolini's *Metello* (Viareggio prize, Vallecchi), the poetic and warmly human story of a mason and of his Florence at the turn of the century; A. Moravia's *Il disprezzo* (Bompiani), the elegy of a conjugal conflict resolved by death and purified by memory; and V. Brancati's *Paolo il caldo* (Bompiani), a posthumous work on the moral and physical dissolution of the Sicilian aristocracy.

The outstanding collections of short stories, also not connected with the neorealistic trend, were *Un gatto attraversa la strada* (Strega prize, Mondadori) by G. Comisso—smooth, delicate, entertaining tales inspired by the realities of daily life, sublimated by time and fantasy; *Invito a pranzo* (Mondadori) by A. de Céspedes, who probes inner experiences with the skill of a surgeon; and *Un filo che si svolge in trenta anni* (Ceschina) by L. Repaci, which contains his best stories, including some on American themes, lost during the war.

C. E. Gadda published *Giornale di guerra e di prigionia* (Sansoni), his World War I diary in first draft, and G. Berto *Guerra in camicia nera* (Garzanti), his diary covering the last phase of the North African campaign. Both documents reveal the striking differences between the spirit of the fighting men and the conduct of the Italian army during the two world wars.

The field of criticism contributed such works of note as G. Ravegnani's *Uomini visti* (Viareggio prize, Mondadori) and E. Cecchi's *Di giorno in giorno* (Garzanti), which survey the contemporary literary scene; and E. De Michelis' fine essay on A. Moravia, *Introduzione a Moravia* (Nuova Italia). C. S. Singleton brought out the long needed new critical edition of Boccaccio's *Decameron* (Laterza), based on all manuscripts known to exist, and V. Pernicone integrated the *Stanze di Messer Angelo Poliziano* (Loescher-Cantore).

Numerous tributes were paid the muse of poetry. Among the most distinguished were C. Betocchi's *Poesie* (Viareggio prize, Vallecchi), S. Quasimodo's *Il falso e vero verde* (Schwarz), and A. Manfredi's *Poesie* (Mondadori).

In conclusion, 1955 proved to be a highly productive year. If it gives an impression of general bewilderment and of an alarming spiritual crisis, it is due neither to indifference nor lethargy. It should be construed rather as a vigorous sign of consciousness and concern, of courage and vitality symptomatic of the determination to find new solutions to old problems. (M. F. C.)

Italy. A republic of southern Europe, Italy is bounded on land northwest by France, north by Switzerland and Austria and northeast by Yugoslavia. The country includes the whole of the Apennine peninsula, the large Mediterranean islands of Sicily and Sardinia and a number of smaller islands. Area: 116,316 sq.mi. Pop.: (1951 census) 47,140,052; (1954 est.) 47,783,000. Language: mainly Italian, but in Venezia Tridentina there were about 210,000 German-speaking Tyrolean and about 10,000 speaking Rhaeto-Romance dialects; in the area east of Udine there were about 11,200 Slovenes, and the population of Val d'Aosta (about 6,600) was French-speaking. Religion: mainly Roman Catholic (99.6%). Chief towns (pop., 1951 census): Rome (cap.) 1,657,588; Milan 1,268,994; Naples 1,011,919; Turin 712,596; Genoa 680,563; Palermo 483,777; Florence 376,383; Bologna 339,195; Venice 316,228; Catania 297,531; Tri-

este 271,899; Bari 267,795; Messina 218,906; 12 towns with a population of from 100,000 to 200,000. Presidents in 1955: Luigi Einaudi and (from April 29) Giovanni Gronchi. Prime ministers in 1955: Mario Scelba and (from July 6) Antonio Segni.

History.—During 1955 the curious seesaw of Italian politics continued between the right and left within the Christian Democratic party and beyond it. Although the Christian Democrats were by far the strongest party, and although some of them were eager that their party should take the sole responsibility for governing the country, they still depended in the chamber upon the support of the small democratic parties, Social Democrats, Liberals and Republicans (of whom the Republicans no longer held office). Since the Liberals were a party of the right they were bound to clash with the Social Democrats over questions such as that of the rights of landlords to evict their tenants, over which legislation was discussed at length but not effected in 1955. Such differences were constantly exploited by the enemies of the Scelba government, the Communists and Nenni Socialists on the left and the Monarchists and neo-Fascists on the right.

The New President.—Since Luigi Einaudi's term of office as president of the republic had come to an end, the national assembly of both chambers met on April 28 to elect his successor. After two inconclusive ballots the choice lay between Cesare Merzagora, an industrialist and right-of-centre Christian Democrat who was president of the senate, and Giovanni Gronchi, another Christian Democrat politician known for his leftist inclinations. Ironically the secretary of the Christian Democratic party, the left-of-centre Amintore Fanfani, supported Merzagora, while a right-wing Christian Democratic group associated with Giuseppe Pella joined with the Communists and Nenni Socialists to vote for Gronchi. These tortuous intrigues, partly resulting from dislike of Fanfani, who was able but high-handed, gave Merzagora 245 and Gronchi 281 votes in the third ballot. The constitution required an absolute majority at this stage, so that this result was still inconclusive. But Merzagora stood down, and on April 29 Gronchi was elected by a huge majority. Since Gronchi had been known to favour the much-discussed "opening to the left" or plan of bringing Pietro Nenni, the pro-Communist Socialist leader, into the government, the new situation was viewed with consternation by many politicians. When, however, on May 12, the prime minister, Mario Scelba, made a formal resignation to the new president, the latter correctly refused to accept it.

On June 5 elections were held in Sicily. Instead of losing votes after their display of factiousness, the Christian Democrats increased their strength in the Sicilian assembly from 30 to 37 out of a total of 90 seats, at the expense of both Communists and neo-Fascists. A coalition government was formed at Palermo to include Christian Democrats, Social Democrats and Liberals as in Rome, and the Scelba government appeared to be rather more secure in consequence. On June 22, nevertheless, Scelba was forced to resign, not because of defeat in parliament, but because the right wing of his own party revolted again.

The Segni Cabinet.—The new crisis was quickly ended. On June 26 Antonio Segni, a former minister of agriculture with views similar to those of Fanfani, agreed to attempt the formation of a government, and on July 6 his cabinet was sworn in. It consisted of 14 Christian Democrats, 4 Social Democrats and 3 Liberals. Although the friends of Fanfani were well represented in the new government, two right-wing Christian Democrats, Guido Gonella and Giulio Andreotti—but not Pella—accepted office. It was noteworthy, too, that the ministry of public instruction, usually controlled by a Christian Democrat, went to a Social Democrat, Paolo Rossi, while Ezio Vanoni re-

mained as minister of the budget. The chamber of deputies the senate voted in favour of the government on July 18 22, respectively.

The formation of the moderate Segni government exasperated the extremists on both right and left. As soon as the summer holiday was over in September a "pact of action" was made between the neo-Fascist M.S.I. and the major group of Monarchists led by Alfredo Covelli; it was directed against the government and against the smaller group of Monarchists led by Achille Lauro, who supported Segni.

As for the hopes of the extremists on the left, although the presidential candidate had been chosen, the new government put an end to the project so warmly sponsored by the Social Democratic leader, Giuseppe Saragat, for an "opening to the left." In the first half of the year there were signs that, although their Socialist allies were thus sought after and had made gains in the Sicilian elections, the Communists themselves were losing ground. In April 1955 in the Fiat factories, where, it was thought, their influence had been on the wane for some time, shop steward elections led to the choice of only 59 members of the Communist-dominated Confederation of Labour by contrast with 100 Catholics and Independents. On Jan. 20 new regulations were issued regard to the recruitment of dockers in the port of Genoa led to a strike of about 1,600 repair workers. This strike, which was called by the Communists and which lasted until May 18 was followed by short sympathetic strikes by other groups of workmen under Communist influence, caused serious loss to the country, and ended in Communist defeat; in future, labour in the port was to be engaged by government officials and not by the old companies, which were dominated by the Communists. In the autumn, however, when shop stewards were elected at the Pirelli rubber works in Milan and the Alfa Romeo and Ilva works in Naples, the Communists were able to hold their position easily.

Economic Policy.—Segni lost no time in making a declaration on Aug. 1 in favour of the ten-year plan. This had been worked out in the first place by Vanoni and had been much discussed since the latter minister had made it public on Jan. 8. It aimed at a tremendous achievement in investment in the national economy, especially in southern Italy, and presumed a continuing annual increase of 5% in the gross national product. This was to lead to the creation of 4,000,000 new jobs in industry in the following ten years and to the reduction of unemployment to only 3½% of the available labour force. If this could be achieved Italy's biggest problem, that of surplus labour, might be solved since the rate of increase of the population was expected to decline after 1964.

The solution of the other great problem of the Italian economy, the supply of basic fuels, was brought substantially nearer during 1955. The production of methane gas continued steadily to increase, and it was used more and more for industrial and domestic purposes; in July a pipeline from the Po valley to Genoa was completed. But interest centred in 1955 upon the production of oil. This had been developed remarkably in Sicily by the "Petrosud" company, a combination of the Montecatini with the American Gulf Oil corporation, which had struck oil near Ragusa early in 1954; by June 1955 it was reported that there were six reservoirs with a total capacity of 8,000 cu.m. of oil at Palermo, so that ships calling there could now refuel on Sicilian oil. But already in February there had been still more sensational news when oil was struck at Alanno near Pescara in the Abruzzi; the Abruzzi oil was reported to be of better quality and dreams of becoming self-sufficient in petroleum, and all this would mean for the Italian economy, seemed no longer to be fantastic.

A political controversy had inevitably arisen over the ex-

ation of Italy's new oil supplies. Communists and Socialists considered that these should be monopolized by the state, and the same view was taken by Mattei and his colleagues of the Ente Nazionale Idrocarburi (E.N.I.), who regarded oil, like gas, as their affair. But the Liberal party and others on the right considered that the monopoly in the Po valley granted to E.N.I. in 1953 had reduced its efficiency and, further, that it was short-sighted to discourage the investment of foreign capital in Italian oil. Clearly, if Americans interested themselves in the matter they would wish to have oil development concessions made to them and not merely the chance to finance Italian state activities. This view was urged by Luigi Sturzo, himself a Sicilian, partly on the ground that the law passed by the Sicilian regional assembly in 1950, by allowing exploration permits to foreigners, had led to such successful development in the Ragusa area. Although Italy's oil potentialities aroused much interest during the rest of 1955, the exploitation of the Abruzzi finds (there was another important oil strike in that region on Sept. 28) was held up pending the necessary legislation. On Oct. 25 the cabinet did in fact approve a bill by which 60% of the value of the oil, after the cost of production had been subtracted, was to go to the Italian government.

Italy continued during 1955 to have an adverse balance with the European Payments union, as efforts to increase Italy's exports were still inadequate.

Foreign Policy.—The Italian parliament voted with substantial majorities for the Paris agreements which established the Western European union, the chamber of deputies by 335 votes to 215 on Dec. 23, 1954, and the senate by 139 to 82 on March 1, 1955. After that Italian representatives played an active part in the Western European union's affairs, for instance in the preparation of the plebiscite in the Saar. Scelba visited London from Feb. 15 to 20 and Canada and the United States from March 24 to April 8; the results were considered satisfactory, the United States offering help in the development of nuclear energy in Italy. On June 1 the first \$70,000,000 loan by the International Bank for Reconstruction and Development to the Massa del Mezzogiorno was announced, actually the result of a visit of Vanoni to the United States in the previous October.

On the whole the year 1955 was an anxious time for the Italian ministers of foreign affairs and of defense (Gaetano Martino and P. E. Taviani in both the Scelba and the Segni cabinets). The treaty of May 15 which neutralized Austria and caused the withdrawal of the troops which had occupied that country encouraged the fellow-travelling neutralists of Italy and left it in a much more exposed position from a military point of view. The government's apprehension on this score was increased by the apparent reconciliation of Yugoslavia with the U.S.S.R. and then by the tension which developed over Cyprus. When late in August the London conference on this matter brought something like a breach between Greece and Turkey, with a consequent threat to the survival of the Balkan alliance, Italian anxieties increased. But the chiefs of the North Atlantic Treaty organization decided that about 5,000 U.S. troops from Austria should be transferred to Italy, and the NATO manoeuvres on Italian soil in September also helped to reassure the rulers of Italy.

The first year after the return of Trieste to Italy (Oct. 1954) had left most of that city's economic problems unsolved. This was one reason for the conference held in Rome in November between Italy, Yugoslavia, Austria, the German Federal Republic and Hungary, the countries considered to be most concerned, to discuss the current aspect of the question of Trieste.

Education.—Schools (1953): primary 40,467, pupils 4,530,659, teachers 173,652; secondary 2,799, pupils 505,851, teachers 52,573; vocational 7,724, pupils 538,558, teachers 50,881. Teachers' training schools 435, students 67,990, teachers 8,849. Institutions of higher education (1954)

INAUGURAL RUN of the first subway train in Rome, It., Feb. 1955

52, of which 28 universities, with 211,128 students. Fine arts and music schools (1954) 100, students (1953) 19,018, teachers 2,219.

Finance and Banking.—Monetary unit: lira (pl. lire), with an official exchange rate of 624.9 lire to the U.S. dollar. Budget: (1954–55 est.) revenue 2,058,000,000,000 lire, expenditure 2,335,000,000,000 lire; (1955–56 est.) revenue 2,446,000,000,000 lire, expenditure 2,726,000,000,000 lire. Public debt (Sept. 1954): 4,036,000,000,000 lire. Currency circulation (Dec. 1954): 1,533,000,000,000 lire. Deposit money (Dec. 1954): 2,237,000,000,000 lire. Gold and foreign exchange (Nov. 1954): U.S. \$1,039,000,000.

Foreign Trade.—(Including Trieste, 1954): imports 1,501,000,000,000 lire; exports 1,022,000,000,000 lire. Main sources of imports: continental European Payments union countries 39%; U.S. and Canada 13%; U.K. 7%; other sterling area 17%; Latin America 6%. Main destinations of exports: continental E.P.U. 44%; Latin America 10%; U.S. and Canada 9%; U.K. 8%; other sterling area 10%.

Transport and Communications.—Roads (1953): 195,000 km. Motor vehicles in use (1954): cars 614,000, commercial vehicles 290,000. State railways (1954) 16,966 km.; passenger-km. (1953) 22,344,000,000; freight, ton-km. (1954) 12,862,000,000. Shipping: merchant vessels, 100 gross tons and over (July 1954), 1,146; total tonnage (Sept. 1954) 4,009,964. Air transport (1953): passenger-km. 229,183,000; freight, ton-km. 5,100,000. Telephones (Jan. 1954): 1,774,462. Licensed radio sets (1953): 4,849,000.

Agriculture.—Main crops (metric tons, 1954): wheat 7,251,000; maize 2,954,000; barley 278,000; oats 546,000; rye 115,000; potatoes 3,183,000; rice 859,000; beet sugar, raw (1953–54) 750,000; broad beans 534,000; dry beans 163,000; tobacco 63,900; olives 1,674,000; olive oil (edible) 240,000; oranges and tangerines 664,000; lemons 314,000; grapes (1953) 7,900; hemp 41,800. Wine production (1954) 45,000,000 hl. Livestock (1954): cattle 9,250,000; sheep 9,500,000; pigs 4,500,000; goats 1,850,000; horses (1953) 705,000; mules 401,000; asses 735,000; buffaloes 12,000. Meat production (metric tons, 1954): beef 367,200; pork 197,900; lamb 45,000. Cheese (1954) 337,000 metric tons.

Industry.—Index of employment in manufacturing, including public utilities and mining (Nov. 1954; 1948=100), 100. Fuel and power (metric tons, 1954): coal 1,073,400; lignite 638,000; gas (c.u.m. 1954) natural 2,982,400,000, manufactured 2,063,000,000; electricity (kw.hr., 1954) 34,649,000,000. Raw materials (metric tons, 1954): crude oil 69,600; iron ore (50% metal content) 1,092,700; pig iron 1,345,800; crude steel 4,208,000; lead, smelter 37,300; zinc, smelter 67,400; aluminum, smelter 57,600. Manufactured goods (metric tons, 1954): cement 8,755,000; cotton yarn 169,700; rayon filament yarn 63,200; rayon staple fibre 61,700; motorcars (units) 180,770; commercial vehicles 36,180. Merchant shipping launched (1953): 262,512 tons. Index numbers of industrial production (Jan. 1955; 1948=100): general 176; mining 185; manufacturing 178.

Ivory Coast: see FRENCH UNION; FRENCH WEST AFRICA.

Jamaica. A British colony in the Caribbean. Dependencies: Cayman Islands (93 sq.mi.; pop., 1953 est., 7,895) and Turks and Caicos Islands (202 sq.mi.; pop., 1953 est., 7,000); also Pedro and Morant Cays (2 sq.mi.). Area (colony): 4,411 sq.mi. Pop.: (1943 census) 1,237,063 (77% Negro, 18% mixed, less than 2% white); (Dec. 1953 est.) 1,503,047. Language: English. Religion: Christian, including (1943) Anglican 350,311; Baptist 318,655; Methodist 109,446; Presbyterian 92,975; Roman Catholic 70,535. Chief towns (pop., 1943 census, 1953 est. in parentheses): Kingston (cap.) 109,056 (142,464);

Spanish Town 12,007 (12,300); Montego Bay 11,547 (12,000). Governor in 1955, Sir Hugh Foot. Chief ministers W. A. Bustamante and (from Jan. 13) Norman Manley. Commissioners: A. M. Gerrard (Caymans), P. Bleackley (Turks).

History.—During 1955 Jamaica celebrated 300 years of association with the English crown. Distinguished visitors during the year included Princess Margaret and Princess Alice, countess of Athlone, Pres. Paul Magloire of Haiti, Luis Muñoz Marín, governor of Puerto Rico, Pres. William V. S. Tubman of Liberia and Adlai Stevenson of the United States.

In the general elections, held on Jan. 12, the People's National party under the leadership of N. W. Manley obtained 18 seats; the Jamaica Labour party, headed by W. A. Bustamante, 14. Jamaica participated in talks on the proposed British Caribbean federation.

Because the production of sugar in the island was in excess of its exportable quota under the international and commonwealth sugar agreements, it was proposed to cut back sugar production substantially as from 1957. The agricultural interests, fearful of a return of unfavourable terms of trade, pressed for guaranteed markets for exportable products.

Important items of policy which received legislative attention were: (1) a system of land bonds to give the government power to acquire land by bonds on a voluntary basis (with compulsory acquisition in special cases); (2) the establishment of a youth corps to take youths off the labour market and use their labour for the creation of capital assets; (3) the establishment of a farm development scheme to increase agricultural production and productivity.

(H. D. Hs.)

See W. A. Roberts, *Jamaica: The Portrait of an Island* (New York, 1955).

Education.—*Colony* (1953): Schools: public primary 691, teachers 4,204, pupils 214,500; secondary 27, teachers 384, pupils 7,800; vocational 10, teachers 64, pupils 2,260; teachers' training colleges 4, teachers 23, pupils 318. University college of the West Indies (1954), students 369, teaching staff 101. *Dependencies* (1952): Schools: primary 25, pupils 1,851; 1 middle, pupils 40; 4 private secondary.

Finance and Trade.—Monetary unit: pound sterling (with local notes). Budgets: *Colony* (1954-55 est.): revenue £15,336,464; expenditure £15,334,486. *Dependencies* (1953-54 est.): Cayman, revenue £60,208, expenditure £60,546; Turks and Caicos, revenue £75,818, expenditure £66,498. Foreign trade (colony, 1954): imports £37,200,000; exports £33,700,000. Principal exports: (colony), sugar, bananas, rum, copra, cocoa, pimento, citrus fruits, ginger, bauxite; (dependencies), turtles,

rope, salt, conches. Production: (metric tons, 1954) sugar 388,000; bananas (export) 190,685; rum (1953) 1,394,000 gal. (1955, ten months) 1,472,637 gal.; bauxite (1953) 1,240,000.

Japan. A constitutional monarchy consisting of four large islands in the northwestern Pacific, Hokkaido, Honshu, Kyushu and Shikoku (total area: 142,801 sq.mi.), and minor adjacent islands. Total population: (1950 census) 109,637; (est. Mar. 1955) 88,800,000. Chief cities (1950 pop.): Tokyo (cap.) 5,385,071; Osaka 1,956,136; Kyoto 1,101,800; Nagoya 1,030,635; Yokohama 951,189; Kobe 765,435. Principal religions: Buddhism, Shintoism. Emperor: Hirohito; prime minister in 1955, Ichiro Hatoyama.

History.—*Foreign Affairs.*—The year 1955 saw a rising demand among Japanese of all parties for a more independent foreign policy. The Hatoyama government, on taking office in Dec. 1954, made clear its desire for greater freedom of action within the framework of Japan's alliance with the U.S. and the free world.

The United States continued to press Japan for more rearmament, but Prime Minister Hatoyama had promised that the budget would not be materially increased. In April an agreement was reached whereby Japan's contribution to the cost of maintaining U.S. troops in Japan (originally set at \$155,000,000 annually) would be reduced by \$50,000,000 in the 1955-56 fiscal year, on condition that Japan increase its own defense outlay to \$30,000,000 and spend \$20,000,000 on enlarging airfields and the use of the U.S. (and eventually the Japanese) air force.

In August Foreign Minister Mamoru Shigemitsu visited Washington, D.C., where he outlined a plan to increase Japan's armed forces to 260,000 by 1960. This, the Japanese felt, would permit the withdrawal of all or most U.S. ground troops by 1958. The presence of U.S. troops was causing dissatisfaction and had given rise to a number of popular demonstrations. Shigemitsu, stating that the alliance with the U.S. was the keynote of Japanese foreign policy, nevertheless called for revision of the terms of the alliance. He also asked for the release of the remaining war criminals and the return to Japanese jurisdiction of Ryukyu and Bonin Islands. A joint communiqué at the close of his visit stated that agreement had been reached in principle on eventual treaty revision, gradual withdrawal of U.S. forces as Japan became strong enough to assume primary responsibility for its own defense, and progressive reduction of Japan's

PRINCESS MARGARET ROSE of Great Britain floating down the Rio Grande river, Jamaica, with Lady Hugh Foot, wife of the governor of Jamaica, during the princess' visit to the island in Feb. 1955

tribution to the cost of U.S. forces in Japan. Simultaneously, the U.S. announced the release of 22 war criminals.

During 1955 the U.S. made various efforts to assist Japan to become economically self-sufficient by expanding its foreign trade. As the result of a series of tripartite negotiations (including the U.S.) belonging to the General Agreement on Tariffs and Trade (G.A.T.T.) concluded agreements with Japan for the reciprocal reduction of tariff barriers. In some cases the countries concerned made tariff concessions to Japan and received equivalent concessions from the U.S., which in turn obtained concessions from Japan. These agreements paved the way for Japan's formal admission in September to membership in G.A.T.T. In Nov. 1954 a preliminary accord was reached with the U.S. on the transfer to Japan of \$100,000,000 worth of surplus agricultural products, chiefly cotton, wheat and rice. Of this, \$15,000,000 would be a gift, \$25,000,000 would be paid for in yen and spent by the U.S. in Japan for various purposes, and \$60,000,000 would be a loan to be used for Japan's economic development. The details of this transaction required extended negotiation because of differences of opinion on the terms of the loan and the uses to which it should be put, but in May 1955, an agreement was finally signed.

Following repeated overtures to Japan, the Soviet Union in 1955 formally offered to begin negotiations to end the anomalous state of war between the two countries. During the January election campaign Prime Minister Hatoyama stressed the need to "normalize" relations with the U.S.S.R. and Communist China. Conversations with Soviet representatives began in London on June 1. The U.S.S.R. demanded immediate withdrawal of U.S. forces from Japan, recognition of Soviet sovereignty over southern Sakhalin and the Kurile Islands (occupied by the Russians after World War II), closure of the straits giving access to the Sea of Japan to all warships except those of Japan, the U.S.S.R. and Communist China, and a clause barring Japan from "alliances or military coalitions directed against any power that fought against Japan in World War II." In return the U.S.S.R. offered to support Japan's admission to the U.N. and to conclude tariff and fisheries agreements. Japan found these conditions unacceptable. It was especially anxious to secure the return of Habomai and Shikotan Islands, north of Hokkaido, which it asserted were part of Japan proper and not the Kuriles. Japan also urgently demanded the return of Japanese prisoners in the U.S.S.R., said to number 13,000. Despite this wide divergence the talks continued during the summer.

Little progress was made toward establishing diplomatic relations between Japan and Communist China, but unofficial contacts increased. A Chinese delegation to Japan concluded in May an agreement with private Japanese organizations for £30,000,000 of trade each way. Agitation among Japanese businessmen for development of trade with mainland China and for further relaxation of the ban on strategic exports was unabated. Japan's relations with Korea continued to be bad in 1955 despite Japanese efforts at amelioration. In April an agreement was concluded with Thailand for settlement of war claims, but a tentative reparations agreement with the Philippines, reached in Manila in June, failed of confirmation in Tokyo.

Domestic Affairs.—After the fall of Shigeru Yoshida's Liberal cabinet in Dec. 1954, Ichiro Hatoyama was chosen by the diet as prime minister. Hatoyama's newly formed Democratic party (consisting of the former Progressive party plus dissident Liberals) did not have a majority, but the Socialists voted for Hatoyama after exacting a promise that he would soon dissolve the diet. In the Feb. 27 election the Democrats secured a majority in the lower house, while the Liberals lost heavily; Left Socialists also made substantial gains. Aside from the

budget, little important legislation had been passed when the diet adjourned in July. The January session was largely devoted to debate (with an eye on the coming election) on rearmament, constitutional revision, relations with China and the U.S.S.R., and financial policy. In the next session the government introduced a bill to set up a Constitutional Research council to study the question of revising the postwar constitution adopted in 1946 during the Allied occupation. Attention was centred on Art. 9, renouncing war and prohibiting any military establishment. Prime Minister Hatoyama favored amending this clause to remove any doubt of the legality of rearmament. The Liberals were also inclined to support such action, but it was opposed by both Socialist parties, who had enough diet seats to block amendment. Another government bill proposed to establish a National Defense council to formulate plans for rearmament and defense policy. Both bills were passed in the lower house but were killed by a Socialist filibuster in the upper chamber. The government, however, immediately set up the proposed defense council on a temporary basis.

On Oct. 14 the Left and Right Socialist parties reunited in a single Socialist party headed by the Leftist Mosaburo Suzuki. Spurred by this move, the Democrats and Liberals merged on Nov. 15 to form a single conservative (Liberal-Democratic) party under the former Liberal president, Taketora Ogata. Hatoyama was re-elected as prime minister on Nov. 22 with a new cabinet representing former Liberals as well as Democrats, but was expected to yield the office to Ogata in the spring of 1956.

In 1955 the Japanese Communist party, which though not formally outlawed had been operating largely underground and was losing strength, adopted a new policy emphasizing moderate and legal tactics and aimed at creating a popular front with other left-wing groups.

THOUSANDS OF JAPANESE lined up outside the imperial palace, Tokyo, Jan. 1955. They proceeded into the palace grounds to wish the emperor and empress a happy new year

Economic Affairs.—In the last half of 1954 and the first half of 1955 Japan's balance of payments position greatly improved (see Table I), in spite of a decline in U.S. "special procurement" orders. A notable expansion of exports was accompanied by a heavy reduction of imports. In consequence, Japan's holdings of foreign exchange, which had been falling dangerously, rose from \$788,000,000 on June 30, 1954, to approximately \$1,200,000,000 on June 30, 1955. The improvement resulted in part from the deflationary policy adopted by the government, on American advice, in the latter part of 1953, and partly from a combination of favourable external factors, including increased business activity in Europe and a relaxation of restrictions on Japanese exports in the sterling area.

Business conditions in Japan, however, were not particularly good in 1955. Industrial activity was still increasing, but there were some signs of overproduction. There was little new investment, because of the government's policy of restricting credit, and in some business circles it was argued that "austerity" had served its purpose and should now be relaxed in favour of a policy of encouraging economic expansion. Although Hatoyama

had been regarded as synthetic to such arguments appointed as his finance minister Hisato Ichimada, a servative financier and a money man.

Education.—In 1954 Japan had 22,036 primary schools with 314 teachers and 11,750,925 pupils; 15,906 secondary schools (lower and upper) with 331,933 teachers and 8,209,320 pupils; and 528 colleges and universities and junior colleges with 60,598 teachers and 560,000 students. Expenditures on education by the national government and local governments in the fiscal year 1953-54 were 414,672,000,000 yen.

Finance.—The monetary unit was the yen, with an official value of 1954-55 of 360 to the U.S. dollar. See Table II for other data.

Trade and Transport.—By value Japan's exports in 1954 were 77% of the 1934-36 average, in 1955 77%. Asia absorbed 49% of the country's exports (by value), followed by America 21%, South America 9%, Europe 9% and Africa 8%. America provided 46% of the country's imports, Asia 31%, Europe 8%, Australia 7%, and Oceania 6%. Manufactured goods formed 80% of total exports, raw materials and fuels 8%. Raw materials and fuels accounted for 58% of total imports, food 27%. Textiles, metal manufactures and machinery were the principal exports; textile fibres, cotton and ores the principal imports. See Tables III and IV for other data.

Agriculture.—After two years of poor rice crops, unusually good weather in the 1955 growing season was expected to produce a bumper crop, some 15% above the previous year. For other data see Table V.

Manufacturing and Mining.—In March 1955 the index of industrial production (1934=100) stood at 185.2, against 179.3 in March 1954. March 1955 indexes, on the same base, were (March 1954 figures in parentheses): utilities 270.1 (252.8), mining 121.6 (128.4), all manufacturing 185.6 (178.5), durable goods 219.7 (232.5), nondurable

Jehovah's Witnesses. Jehovah's Witnesses are a society of Christian ministers. They are elected through the Watch Tower Bible and Tract society, a nonprofit corporation organized in 1884. Preaching the "good news of the kingdom" by 642,929 ministers in 1955 was conducted in 158 lands through 78 branches.

Outstanding in the organization's activity for 1955 was an international series of 13 "Triumphant Kingdom" assemblies of Jehovah's Witnesses. Beginning in June, they were held on successive weeks in Chicago, Ill., Vancouver, B.C., Los Angeles, Calif., Dallas, Tex., New York, N.Y., London, Eng., Paris, France, Rome, It., Nuremberg and Berlin, Ger., Stockholm, Swed., The Hague, Neth., and Helsinki, Fin. The featured event was a Bible discourse, "World Conquest Soon—by God's Kingdom," heard by a total of 403,682 persons.

Thousands attended from more than 60 nations. A total of 100 U.S. and Canadian delegates travelled to Europe in 42 chartered aeroplanes and two chartered steamships. At the series of conventions 13,016 newly ordained ministers symbolized their dedication to Jehovah God's service by water baptism.

During 1955 the Watch Tower Bible and Tract society continued its building program to meet its expanding needs. New branch offices and printing plants were under construction in Toronto, Ont., and Brooklyn, N.Y. Other offices were being built in El Salvador and Costa Rica. The erection of a 13-floor plant costing approximately \$2,000,000 was expected to double the New York printing facilities. It was to be devoted to the publication of the *Watchtower* and *Awake!* magazines. The *Watchtower* is printed in 40 languages and had in 1955 a circulation of 50,000 copies; *Awake!* in 13 languages, had a circulation of 50,000.

BIBLIOGRAPHY.—Watch Tower Bible and Tract society, *Yearbook of Jehovah's Witnesses* (annual), *Qualified to be Ministers* (1955), *Let Your Word Be True* (rev. 1952), the *Watchtower* and *Awake!* magazines (semi-monthly). (N. H. K.)

Jet Propulsion. **Turbojets.**—For some time several companies had been working on development of the Mach 2 series of engines, superpowered jets designed to propel an aeroplane at more than twice the speed of sound. In 1955, three of these engines passed their type tests and manufacturers prepared to put them into production. Two of the engines were U.S.: Pratt and Whitney Aircraft's J-75 and General Electric company's J-79, slated to be the power plant for the U.S. air force's first supersonic bomber, the Convair F-108 Hustler.

Although internal features of these engines were still highly classified, both shared a common design feature—they were smaller and lighter than engines of lesser thrust, indicating some real internal design progress. Specific fuel consumption ratios were also lower than those of predecessor engines. Both engines were basically rated at 15,000-lb. thrust, with plans for further development up to the 20,000-lb. range.

In Britain, The de Havilland Engine Co. Ltd.'s axial flow turbojet, the Gyron, successfully passed a 150-hr. type test at 15,000-lb. static thrust. The engine was also flight tested in a Port Sperrin SA. 4 flying test bed. A number of engine tests were run at figures well above the 15,000-lb. type test requirement (up to 18,000 lb.) and the company hoped to top the 20,000-lb. mark with this power plant.

The major production engine in the U.S. was Pratt and Whitney's 10,000-lb. J-57, power plant for several military planes and the most likely engine for the commercial jet transports being built in the United States. Later versions of the J-57, in development during 1955, were expected to reach a 13,000-lb. rating. Pratt and Whitney was also turning out in limited quantity its 7,200-lb. thrust centrifugal flow J-48, as replacement engines for planes already in service.

General Electric was still producing various models of its J-47, power plant for the Boeing B-47 jet bomber, with power ratings up to 7,500 lb., and the 9,000-lb. J-73.

Allison division of General Motors corporation was turning out its relatively low-thrust J-33 and J-35 engines, with ratings from 4,600-lb. to 5,600-lb. basic thrust, as replacement power plants for early model aircraft or for subsonic missiles. The company was also producing the 10,000-lb. axial J-71.

Westinghouse (Aviation Gas Turbine division) completed a 50-hr. endurance run of its new PD-33 axial flow turbojet, rated at 6,000 lb. plus. This engine, which featured a low frontal drag area, was a private venture of the company, aimed at the medium-power market, either future business-type aircraft or specialized military planes which would not require high thrust.

Wright Aeronautical division of Curtiss-Wright corporation was working on its J-67, U.S. version of the Bristol Olympus, slated for eventual development to 15,000-lb. thrust, and producing in quantity the J-65 Sapphire, a 7,200-lb.—7,800-lb. axial.

Similarly, in Britain, Bristol Aeroplane Co. Ltd. continued development of the Olympus and reportedly ran a modified version on a test bed at 16,000-lb. thrust. Latest version was the Mark 106, designed for supersonic aircraft. The company was also working on a medium-power (no rating announced) engine, the Orpheus, designed for trainers or lightweight fighters.

Armstrong Siddeley Motors Ltd.'s production consisted of the Sapphire, now up to 10,000-lb. thrust in the latest version, and the 1,600-lb. thrust Viper.

Rolls-Royce Ltd. had in production three versions of the 5,000-lb. thrust Nene and several modifications of the Avon, variously rated at from 7,000 lb. to 10,000 lb. The company was working on a lightweight, 1,800-lb. thrust engine, the Soar, and the Conway, a by-pass engine in which one portion of the air stream by-passes the compressor and rejoins the main flow at a point aft of the turbine, making for lower fuel consumption. The Conway, designed as a power plant for the V. 1000 military transport, was type tested at 13,000-lb. thrust, a considerable increase over its original specifications.

The de Havilland Engine Co. Ltd. continued production of its 5,000-lb. thrust Ghost and started development of a new model, the Mark 104. The company also announced development and successful initial test of the Gyron Junior, based on the design of the powerful Gyron but with power scaled down for smaller aircraft. The Gyron Junior was to be in the 8,000-lb. thrust class.

In Canada, A. V. Roe Canada Ltd. (Avro) formed a new subsidiary company known as Orenda Engines Ltd. to handle its power plant development and production. The company continued production of the Orenda engine, basic thrust of which was about 8,000 lb., and started development of a new, very high-thrust engine known as the PS-13. Thrust specifications were not released, but the engine was slated to power the Avro CF-105, a new supersonic all-weather fighter.

In France, Société Nationale d'Etude et de Construction de Moteurs d'Aviation (SNECMA) was turning out its 6,600-lb. thrust Atar 101D axial and had developed its Vulcain, originally rated at 10,000 lb., to the 13,000-lb. level. Société Rateau had similarly developed its SRA-101 axial up to 8,800 lb., and Hispano-Suiza continued development of the Verdon R450, a 7,700-

"FLYING PLATFORM" in vertical ascent with test pilot at controls, as unique apparatus was put through flight trials in 1955 by the U.S. navy at Palo Alto, Calif.

lb. thrust axial developed from the Rolls-Royce Tay.

The Soviet union disclosed no new information on its engines, but official statements, based on studies of photos of new Russian aircraft, indicated that the U.S.S.R.'s progress in the jet field was at least as far advanced as that of the U.S. and Great Britain.

Turboprops.—New impetus was given development and production of turboprop engines (those in which turbine power is transmitted to a propeller) by several factors: the acceptance by the military of this type of power for use in large transport aircraft, commercial announcements of new turboprop transports, and a trend toward use of turbines in helicopters.

Allison division was in production with its 3,750-h.p. T-56 engine, power plant for the Lockheed C-130 heavy transport. The company was also developing a coupled version of the T-56, the 7,500-h.p. T-54.

Pratt and Whitney was turning out limited quantities of its 5,500-h.p. T-34. In addition, the company was developing a new turboprop known as the PT2G-3, a 6,000-h.p. unit. Of major interest was the new, high-powered T-57, still in early development stage. A 15,000-h.p. engine, it was destined to power a huge, new super-size air force transport, not expected to make its appearance until at least 1957. Curtiss-Wright was also developing a very high-powered turboprop, the T-49, but released no specifications.

In Britain, D. Napier & Son, Ltd. announced development of a new turboprop, the 1,260-h.p. Gazelle. Napier was also work-

ing on the Oryx, a 750-h.p. gas generator for a helicopter two versions of its higher powered Eland, the 3,000-h.p. E.152 and the 4,000-h.p. E.153.

Rolls-Royce continued development of its RB-109, originally rated at 4,400-h.p. but presumably higher in the current modification. Rolls-Royce also continued production of various versions of its Dart, rated at from 1,500 h.p. to 1,800 h.p. while Armstrong-Siddeley continued development and production of its Mamba (1,500 h.p.), Double Mamba (3,000 h.p.), Python Mark 3 (4,100 h.p.). Bristol also continued work on Proteus, in the same power category as the Python.

Miscellaneous.—Intensive development work continued on rocket engines of all types, and a number of such power plants were in production. Information was scanty, however, since practically all such units were involved in the secret guided missile programs.

Britain announced development of the Scarab, a 3,000-lb. thrust solid fuel rocket built by the Royal Aircraft Establishment. In the U.S., Curtiss-Wright's XLR-25, the first rocket engine capable of being throttled like a jet, reached flight status. The 12,000-lb. thrust XLR-25 was installed and flown in the Bell X-2, a supersonic research plane designed for flight at more than 2,000 m.p.h. The X-2 was slated to attempt high performance trials late in 1955.

Development of a nuclear reactor for aircraft propulsion remained hidden by a veil of official secrecy, although the Atomic Energy commission permitted itself a cautious announcement to the effect that encouraging progress was being made. No flight date was predicted, but it was reported that Convair division of General Dynamics corporation had readied a modified B-36 bomber for first altitude trials of a reactor late in 1955. The reactor, however, would not be the B-36 power source on the trials. (See also AIRCRAFT MANUFACTURE; AVIATION, CIVIL; AVIATION, MILITARY; MUNITIONS.) (J. J. HYMAN)

Jewels: see DIAMONDS; GEM STONES.

Jewish Literature. Hebrew Literature.—In spite of the decline in the number of Hebrew books published in Israel during 1955, there appeared a significant array of works of fiction and nonfiction.

S. Kadari's *Etz ha-Ahava* ("Tree of Love") is a novel distinguished by vivid descriptiveness, subtlety and an ingratiating style. It tells of the life of young artists in the new social milieu of Israel. *Rehov ha-Madregot* ("Street of the Stairs") by Yehuda Hendel is a novel which conveys with freshness and interest psychological overtones the effect of the war of liberation on various segments of Israeli youth. The volume *Harpatkaot u-Mitakot* ("Ahitam's Adventures") by a writer of the younger generation, David Shaham, is a caustic, witty story dealing like with the contemporary Israeli scene, as do A. Shaanan's *Hillel Korin* and D. Shahar's collection of tales *Al ha-Halom* ("On Dreams"). In contrast to these, the volume of stories *Me-Emesh* ("Out of Yesterday") by the dean of Hebrew writers, Deborah Baron, represents a lyrical recapturing of the past in a Jewish world that is now but a memory. The past, of Jewish pioneering in Palestine, is also recalled in the poem collection *Im Perida* ("At Parting") by Moshe Smilansky.

Arugot, a collection of impressionistic essays and of poems by the eminent writer Jacob Fichman, must be noted, as well as a book of keenly written essays by D. Shimoni, *ba-Hashai* ("In the Path"). A volume of historical writing, *be-Mifneh ha-Dorot* ("Between the Generation Turns") by Ben Zion Dinur, treats learnedly some social, political and cultural aspects of Jewish life in modern times, while the long, incisive essay, *Israel ba-Amim* ("Israel Among the Nations") by I. Ber, attempts to gauge the role

ry within the general scheme of history, with special refer-
e to the period of the second Temple and of the Mishna.
publication of the first volume of H. Shirman's annotated an-
logy *ha-Shira ha-Ivrit be-Sfarad u-Provence* ("Hebrew Po-
y in Spain and Provence") was an outstanding event. The
or displays wide erudition and literary taste of a high order.
orew creativity during the "golden age" in Spain (950-1150)
thus presented with authority and distinction. Another event
importance was the appearance of *Baalai ha-Tosafot* ("The
aphists") by E. E. Urbach. In this remarkably comprehen-
e work the commentators on the Talmud, their history, writ-
s and methods are closely examined, and their achieve-
nts evaluated, against the background of their place and
e, northern France and Germany between the 10th and 12th
turies.

During the year there appeared the final volume of an ency-
aedia on the historic topography of Israel as well as a
ame of collected political essays by David Ben-Gurion, *Me-
amad la-Am* ("From Class to Nationhood"); a trenchant
k analyzing some problems which nationhood brought about,
Shana Shel Atzmaut ("Test of Independence") by Eliezer
neh; and a volume of memoirs on celebrated personalities,
ong them the ideologists and shapers of Zionism, by Zalman
zar, *Or Ishim* ("Light of Men"), which interprets the spirit
e moves men to deeds. As if to counterbalance this, a modest
k of reminiscences by Hayim Toren, *Bait Abba* ("Father's
se"), offers flavourful vignettes of pre-World War I life in
ewish small-town setting of eastern Europe.

A volume entitled *Barak ba-Boker* ("Lightning in the Morn-
") by Leah Goldberg contains poems marked by lyricism, a
emplative, if somewhat tired, tone and grace of imagery.
Sim al Herev u-Maitar ("Poems on Swords and Strings") by
a Vered bears evidence of a promising, still growing talent.
ender volume of poems, *Moadai Erga* ("Time of Longing"),
David Rokeah should be noted for some subtle and deli-
lines.

Hebrew literary activity in the United States was on the
le rather quiescent, while the trend of American Hebrew
tors to have their works published in Israel continued. Thus
imes of verse by three poets appeared there: *Maalot u-Mora-*
("Uphill and Down") by E. E. Lisitzky, who sings of the
ageless order of things in accord with rather old poetic tradi-
s; *Goral u-Pitom* ("Fate and Suddenly") by Israel Efros,
rein on an occasionally wider scale, somberly and with fre-
ntly arresting imagery, some visions are revealed; and *Aderet*
Shanim ("Mantle of Time") by Hillel Bavli, poems unusual
their clarity of exposition, integrity and nobility of expres-
sion. The autobiography *Pirke Hayim* ("Chapters of a Life") by
noted scholar and essayist, Chaim Tchernowitz (Rav Tzair),
lly and with humour and sagacity recreates the era and
eu of 19th-century Jewish life and its colourful personalities.
book of thought-provoking essays and impressions on Hebrew
ers and the American scene by Menahem Ribalow, *Me-Olam*
Olam ("From World to World"), and S. L. Blank's volume
stories *be-Maarbolet ha-Hayim* complete the report on He-
w literary production for the period under review. (G. P.)

Yiddish Literature.—Yiddish literature of 1955 produced a
t variety of works which reflected the creative resources as
as the spiritual needs of the world-wide Jewish community.
he field of fiction there were new works by two outstanding
esentatives: *Grosman un zun* ("Grossmann and Son"), a
el of contemporary Jewish life in America, by Sholom Asch,
Joseph Opatoshu's last work, *Der letster oyfshtand—Bar*
hba ("The Last Revolt—Bar Kochba"), a historical novel
ing with the time of the Maccabees. An epic of traditional
ish life in a Polish town before World War I was B. Dem-

blin's *Erev Nakht* ("Before Nightfall"), intended as the first
volume of an autobiographical sequel. A specimen of a new genre
introduced by I. I. Trunk was his *Di velt is ful mit nisim* ("The
World is Full of Miracles"), a lengthy humorous tale based on
elements of Jewish folklore.

In the field of poetry there were new works by well-known
figures of the older generation, including *A blat oyf an eplboym*
("A Leaf on an Apple Tree"), by H. Leivick; *Lider fun a mid-
bernik* ("Poems of a Hermit"), by A. Esselin; and *Lider fun*
mayne lider ("The Poems of My Poems"), by Melech Ravitch.
The younger poets were represented by A. Sutskever, who pub-
lished *An ode tsu der toyb* ("An Ode to the Dove"), and A.
Vogler, whose collection *Friling oyfn tract* ("Springtime on the
Highway") was his first since 1939. A posthumous volume of
translations of American English poetry by M. Likht appeared
under the title *Moderne amerikaner poezye* ("Modern American
Poetry"). In connection with the American Jewish tercentenary,
two anthologies were published: M. Bassin's *Yidishe poezye oyf*
amerikaner motivn ("Yiddish Poetry on American Themes"),
and N. Mayzl's *Amerike in yidishn vort* ("America in Yiddish
Literature"). A notable event was the appearance of an exten-
sive autobiographical poem by a former communist, L. Fein-
berg's *Der farmishpeter dor* ("The Doomed Generation"). New
editions included works by M. L. Halpern and the popular "folk"
poet, M. Gebirtig.

Significant contributions were made in the fields of history
and social sciences. The new ten-volume edition of S. Dubnow's
Velt-geshikhte fun yidishn folk ("World History of the Jewish
People") neared completion. Various aspects of Jewish life in
Europe and America were treated in separate monographs; e.g.,
the history of a leading Yiddish New York daily *Der forverts*
("Forward"), written by its editor H. Rogoff. Several volumes
were devoted to the history of modern political ideologies
among the Jews. Noteworthy was P. Mints's *Geshikhte fun a*
falsher ilyzye ("History of a False Illusion"), expressing disillusion-
ment with communism. But by far the largest part of his-
torical literature was concerned with the history of the catas-
trophe which resulted from the German occupation of Europe.
The works in this category included collective monographs com-
memorating destroyed Jewish communities of Europe, biographi-
cal lexicons and personal narratives of surviving eyewitnesses.
The *Lerer-yizker-bukh* ("Teachers' Memorial Book"), edited by
C. S. Kazdan, is a biographical dictionary of several hundred
teachers of the Yiddish schools in Poland who perished during
the German occupation. A number of serious works were added
to the fields of literary criticism, biography and history of the
Jewish stage, including *Fun undzer friling* ("From Our Spring-
time"), a history of the literary group Di Yunge, active in Amer-
ica between 1905 and 1915, by one of its founders, R. Ayzland;
Zeks yidishe kritiker ("Six Yiddish Critics"), by N. B. Minkoff;
Shmuesn mit yidishe shrayber ("Conversations With Yiddish
Writers"), by J. Pat; and *Treyst mayn folk* ("Console My Peo-
ple"), the first exhaustive biography of I. L. Peretz, written by
his disciple, the poet M. Schweid. (D. Az.)

Johnson, Lyndon Baines (1908–), U.S. senator,
was born near Stonewall, Tex.,
on Aug. 27. He took a bachelor's degree from Southwest Texas
State Teachers college at San Marcos in 1930 and later (1935)

studied law at Georgetown university in Washington, D.C. From 1930 to 1932 he taught in public schools of Houston, Tex., and during the next three years was secretary to Texas Congressman R. M. Kleberg in Washington, D.C. He then was Texas state director of the National Youth administration (1935-37). Johnson was elected as a Democrat to fill a vacancy from the 10th Texas district in the 75th U.S. congress (1937-39) and was re-elected for five successive terms (1939-49), broken only by service as a U.S. naval officer during 1941 and 1942 in Australia and New Zealand. Elected senator from Texas on the Democratic ticket in 1948 for the term 1949-55, he was named chairman of the defense "watchdog" subcommittee of the senate armed services committee in 1950 and devoted most of his time during his first term to spurring the U.S. defense program. In Jan. 1951 he was elected majority whip of the senate. Re-elected senator in 1954 for the term 1955-61, Johnson continued as senate Democratic leader in the 84th congress until a heart attack suffered July 2, 1955, prevented him from attending the closing weeks of the session. After his re-election in 1954 Johnson pledged his party's co-operation with the Eisenhower administration's program in congress. On June 29, 1955, however, he declared that the Democrats would not "carry out instructions like a bunch of second lieutenants taking orders."

Joint Chiefs of Staff: see GOVERNMENT DEPARTMENTS AND BUREAUS, U.S.

Jordan. An Arab kingdom, Jordan is bounded west by Israel, north by Syria, east by Iraq and southeast by Saudi Arabia. Area (including Arab Palestine): about 37,264 sq.mi. Pop.: (1952 census) 1,329,174; (1954 est.) 1,500,000, including (1953 est.) 745,786 in west Jordan (Arab Palestine). Capital: Amman, pop. (1953 est.) 170,000. Language: mainly Arabic. Religion: Moslem (chiefly Sunni); Christian about 8% (mainly Arab-speaking Greek Orthodox). King, Hussein I. Prime ministers in 1955: Tewfik Abulhuda and (from May 30) Said el-Mufti.

History.—During King Hussein's visit to Great Britain in Dec. 1954 there had been exploratory talks in London on the revision of the Anglo-Jordan treaty and a British subsidy of £2,500,000 had been agreed on, partly to cover an expected deficit in the Jordan 1954-55 budget and partly to finance certain projects included in the Jordan five-year plan. Arrangements were also made for the release of dollars from sterling areas during 1956 for Jordan national purposes; and early in Feb. 1955 a further annual grant of £350,000 for two years was made available by the British treasury to meet the cost of the Jordan national guard. Frontier tension between Jordan and Israel persisted throughout 1955. However in April, as a result of an agreement between the two countries which was sponsored by the United Nations truce supervision organization, the situation in and around Jerusalem improved notably. By it both parties agreed to appoint special responsible officers to command the respective garrisons. They would be in telephonic communication with each other and no indiscriminate shooting would be permitted across no man's land. In May both countries also agreed to treat any soldiers or police captured by either side as prisoners of war according to the terms of the Geneva convention. But elsewhere along the frontier clashes, mostly insignificant, continued sporadically.

In the Iraqi-Egyptian dispute over the Turkish-Iraqi treaty during the first three months of the year (see IRAQ), Jordan did send a representative to Baghdad with the Arab league delegation to try and dissuade Iraq from its policy; but generally speaking Jordan maintained an aloof position in the matter. However in March King Hussein paid official visits not only to

Baghdad and Pakistan but also to Cairo; and when in June the tension first became acute between Egypt and Israel along the frontier, the Jordan government informed the British, French and U.S. governments that in the event of an outbreak of serious hostilities between Egypt and Israel, Jordan would not stand aside. In August the Egyptian government announced the construction of a new link road with a ferry service from Sinai to Aqaba which would give direct communication between the two countries.

But meanwhile, toward the Egyptian-Syrian military and economic pact to which Saudi-Arabia and the Yemen adhered, Jordan, like Lebanon, refused to be committed.

In September a country-wide strike was declared in sympathy with the Moroccans, and anti-French riots took place in Amman.

Also in September the government decided to nationalize the British Cable and Wireless organization which had been operating in the country under a concession.

During the year discussions continued about the plans for irrigating the Jordan valley which had been proposed by the Johnston (U.S. Pres. Dwight D. Eisenhower's envoy to the Middle East) and counterproposals suggested by Arab engineers. Decisions were reached.

In April King Hussein married his cousin, Princess Dina el-Hamid. In May Tewfik Abulhuda, who had been prime minister since May 1954, resigned. He was succeeded by Said el-Mufti who also became foreign minister. (O. M. T.)

See P. G. Phillips, *Hashemite Kingdom of Jordan: Prolegomena to a Technical Assistance Programme* (Chicago, 1954).

Education.—Schools (1952): primary 445, pupils 95,291, teachers 2,101; secondary 42, pupils 5,673, teachers 260; vocational 4 (including 2 teachers' training colleges), pupils (1950) 201, teachers 17.

Finance and Banking.—Monetary unit: Jordan dinar at par with pound sterling, and with an exchange rate of 0.35 to the U.S. dollar. Budget: (1953-54 est.) revenue 5,345,000,000 dinars, expenditure 7,000,000,000 dinars; (1954-55 est.) revenue 5,926,000,000 dinars, expenditure 7,822,000,000 dinars.

Foreign Trade.—(1954) Imports 19,840,468 dinars, exports 2,840,000 dinars (re-exports, 1953, 200,000 dinars). Main sources of imports: U.S.A. 15.4%; U.S.A. 9.6%; German Federal Republic 5.5%; France 4.2%; Syria 0.23%; Lebanon 0.1%. Main destinations of exports: Lebanon 42.5%; Syria 24%; Iraq 14%; Saudi Arabia 2.6%.

Transport and Communications.—All-weather roads (1952): 1,520 km. Motor vehicles in use (1951): cars 2,900; commercial vehicles 1,000. Railways (1954): 400 km. Air transport: Arab Airways and Air Jordan scheduled routes (1955) 9,222.4 km.

Agriculture.—Main crops (metric tons, 1953): wheat 105,000; sorghum 13,000; oats 2,000; chick-peas 3,000; lentils 1,000; figs (1954) 20,000; maize (1952) 12,000; *kersennah* (1950) 1,000; tobacco (1948) 400; dry beans (1948-50) 1,000. Livestock (1954): cattle 31,467; sheep 222,936; horses 2,576; mules 7,165; asses 5,000; poultry 887,115; goats 347,836; camels 13,805; pigs 37; buffaloes 1.

Judaism. A major problem facing world Jewry during the 1950s was the religious and cultural rehabilitation of European Jewish communities. During and immediately following World War II, the conditions of the smaller European Jewish communities seemed hopeless and the major activity of Jewish organizations were to assist as many as possible to emigrate to Israel. While most Jews coming from concentration camps availed themselves of the open doors to Israel, some emigrants settled in Germany, Austria, the Scandinavian and Balkan countries. These communities were too small to establish their former religious and cultural life. To find means of dealing with these problems, the American Jewish Committee, the Anglo-Jewish Association of Britain and the Alliance Israelite Universelle of France convened in London in 1955 to consider plans for the mobilization of support from established Jewish communities for the reconstruction of the religious and cultural life of the smaller European communities. Another problem that held the attention of Israel and the world Jewry was the plight of the Jews of Morocco following disturbances in North Africa. While the people of Israel were eager to accept Jews who sought asylum, they found themselves

ALLERY VIEW of the exhibition "Art of The Hebrew Tradition," opened at Metropolitan Museum of Art, New York city, Jan. 21, 1955. Ceremonial sets for the synagogue and home were displayed

greatly burdened with the problem of absorbing more than 800,000 Jews who had reached Israel since 1948. To help Moroccan Jews, Israel levied a special tax, and Jews of other countries were also expected to mobilize their resources to enable 45,000 Jews to leave Morocco during 1956.

After years of protracted negotiations by the Committee of Jewish Material Claims on Austria with the Austrian government, an agreement was reached which would benefit about 100,000 former Austrian Jews living abroad. Sums ranging between \$400 and \$2,000 were to be granted to Jews from Austria who were in need and who had been imprisoned by the nazis.

Clashes between Israel and Egypt in the Gaza area continued to command the attention of the political world. To cope with the situation and prevent further deterioration of the existing armistice, the United Nations Security council recommended a number of safeguards. A major step toward the establishment of peace in the middle east was taken by United States Secretary of State John Foster Dulles, who offered on behalf of the United States government to guarantee the safety of Arab-Israeli refugees and to participate in an international loan for compensation to displaced Arabs. However, these proposals were contingent upon the reaching of an understanding between Israel and the Arabs in regard to boundaries and related issues.

On Feb. 13 the Israeli government announced that four of the Dead Sea Scrolls discovered by Bedouin shepherds near the northern end of the Dead Sea in 1947 had been acquired and brought to Jerusalem. The acquired scrolls consisted of: Isaiah; Manuscript A, the earliest known complete manuscript of the book of Isaiah; a commentary on the book of Habakkuk; "The Manual of Discipline" of a Jewish religious sect or community; an Aramaic "Lemech Apocalypse," referred to in several ancient texts, no copy of which was previously known. The other three scrolls were acquired by the Hebrew university in 1947.

Jewish religious circles in America were concerned with issues relating to marital problems and the place of women in Jewish religious leadership. The Rabbinical assembly, representing Conservative Judaism in America, resolved to use a revised formula for the Jewish religious marriage contract known as Ketubah. Among other things the new formula provides that should the husband arise for divorce the parties concerned must undertake to seek the counsel of the Beth Din (rabbinical court) of the Rabbinical assembly and failure to respond to the summons of such Beth Din would entail penalties. The purpose of this new Ketubah was to meet abuses of the Jewish law by those who would use to issue a Get (bill of divorcement) after the civil decree had been granted.

At the annual meeting of the Central Conference of American Rabbis, representing the Reform groups, it was proposed that women become eligible to hold the position of rabbi, but no formal action was taken. However, for the first time, a Reform congregation engaged a woman to serve as cantor for the high holidays.

Among the significant writings in the field of Judaica and Hebraica was the publication of a new edition of the Tosefta, edited by Saul Lieberman of the Jewish Theological seminary, New York city, which was considered one of the outstanding contributions to rabbinic literature. The Tosefta is an ancient code of Talmudic law.

Another significant volume was the *Anthology of Jewish Music*, edited by Chemjo Vinaver, sponsored by the department of education and culture of the Jewish agency. The *Anthology* contains biblical cantillations, prayer chants, psalms, Sabbath hymns and Hassidic songs and recitatives of old cantorial masters.

To meet the needs of adult Jewish education, the B'nai B'rith undertook to publish a series of "Great Jewish Books."

The problem of teaching religion in public schools continued to be a subject of concern to Jewish organizations and institutions. The American Jewish congress was in the forefront opposing any project or activity that would undermine the "high wall of separation" between church and state.

Juvenile Delinquency. The United States senate subcommittee on juvenile delinquency, consisting of chairman Robert C. Hendrickson of New Jersey, Sen. William Langer of North Dakota, Sen. Estes Kefauver of Tennessee and Sen. Thomas C. Hennings, Jr. of Missouri, conducted hearings and investigations throughout the nation. Hundreds of witnesses with professional competence in the field of juvenile delinquency were summoned and lay opinion was tapped in a cross section of the public. Many states set up conferences to study the subject.

Typical of the findings of these investigations were the following recommendations of the State Conference on Youth and Delinquency which met in Albany, N.Y., Oct. 3-5, 1955: (1) that a permanent state youth commission should be set up, consisting of lay members as well as state officials, and employing an expert staff to handle the prevention and treatment of delinquency; (2) that jails for juvenile delinquents should be ruled out in favour of special regional detention homes; (3) that probation and parole personnel should receive better training and higher salaries; (4) that the state should finance day-care centres for children of ages three to twelve in communities that need them; (5) that more psychological services should be provided in schools, for the early detection of potential delinquency; (6) that the state labour department should make a study of assisting teen-agers who are subject to the draft but who need jobs; (7) that more housing should be made available for middle-income groups and for large families; (8) that the facilities of public and private welfare agencies should be expanded to help sustain and strengthen the vulnerable family.

The senate committee warned against misdirected publicity and professional isolationism. It charged that by headlining juvenile delinquency, negative and punitive attitudes had been

aroused rather than the stimulus to scientific social action. The cleavage between the professions of law and psychiatry, sociologists and practical workers, had prevented, in part, the harmonious teamwork of all citizens, lay and professional, necessary to effective treatment. It recommended that the services of the U.S. office of education, the National Institute of Mental Health and the department of justice should be made effective parts of a united front.

The interpretation of the Uniform Crime reports of the federal bureau of investigation seemed to indicate a small per capita decrease in delinquency. Reported urban offenses increased 19.4%, but urban population increased 19.5%.

It is worthy of note that in communities with a Youth Board program, such as was operating in Wisconsin and Massachusetts, the rate of juvenile delinquency was decreasing. (See also CHILD LABOUR; CHILD WELFARE; EDUCATION.) (M. V. W.)

Kansas. Located in the geographical centre of the continental United States. Kansas was admitted to the union as the 34th state on Jan. 29, 1861. It is frequently referred to as the "Sunflower state," but it is known also as the "Jayhawker state," a name of mysterious source. The total area of the state is 82,276 sq.mi., of which 82,113 sq.mi. is land. Kansas is the geodetic centre of the North American continent from which point all geodetic surveys are made. Population of the state: (1950 federal census) 1,905,299; (July 1, 1955, est.) 2,021,000. For the three largest cities (Topeka being the state capital) the 1955 population was: Topeka, 82,921; Wichita, 224,700; Kansas City, 128,666 (1955 state census). According to the 1950 federal census, Kansas population was 50.3% rural and 49.7% urban.

History.—The principal state officials in 1955 were: Fred Hall, governor; John McCuish, lieutenant governor; Paul R. Shanahan, secretary of state; George Robb, auditor; Adel Throckmorton, superintendent of public instruction; Frank Sullivan, commissioner of insurance; Harold R. Fatzner, attorney general; Ferdinand Voiland, state printer; Richard Fadely, treasurer.

Continuing the state's mental health program, the 1955 legislature authorized a 50% increase in the state ad valorem tax levy to be used as a building fund for mental hospitals, such increase being from one-half to three-fourths of a mill.

State aid for Kansas high schools finally won legislative approval in the 1955 session after suffering defeat in each session since 1949.

Following a two-year study of the need for a revised labour-management relations law, the legislature enacted a law which requires election procedures supervised by the state labour commissioner to be held in connection with determining collective bargaining units, calling of strikes and negotiating for union shop agreements. The act further outlaws jurisdictional strikes and secondary boycotts.

As an industrial development incentive, development credit corporations were authorized in 1955, the main purpose of which is to permit banks and insurance companies to provide funds for loan to businesses contemplating locating or expanding in Kansas when such loans are not available through regular banking channels.

The legislature repealed a 20-year-old ton-mile tax on trucks, effective Jan. 1, 1956, and imposed in lieu thereof increased licence and registration fees and other tax adjustments to ensure no loss of revenue to the state. Repeal of the ton-mile law was

expected to greatly facilitate interstate co-operation and reciprocity agreements with other states.

Education.—In Sept. 1955 there were about 410,620 primary and secondary pupils enrolled in Kansas schools. There were 21 four-year colleges and 22 two-year colleges which had a combined enrolment of 10,000 students. The combined enrolment of the four state colleges and university was 20,482. The populations of the other state institutions are as follows: school for the blind, 103; school for the deaf, 240.

Social Insurance and Assistance, Public Welfare and Related Programs.—The populations of the state's institutions in Aug. 1955 were as follows: state training schools, 1,917; hospitals for tuberculars, 320; child homes, 104; industrial school for girls, 82; industrial farm for boys, 65; hospitals for insane, 4,420; state penitentiary, 1,555; reformatory for boys, 417; industrial school for boys, 130.

As of June 1955 there were 63,246 persons receiving public assistance: old-age assistance, 35,722 persons with an average monthly payment of \$56.88; aid to dependent children, 17,009 at an average of \$26.37; general assistance, 5,972, average \$75.99; aid to blind, 724, average \$54.56; aid to disabled, 3,819, average \$54.56.

Communications.—As of June 30, 1955, the total length of primary and secondary roads in the state of Kansas was 137,000 mi., of which 528 mi. were state-maintained. There were 528 mi. of urban state highways. The remainder of the highways were controlled by the respective municipalities. Highway maintenance and construction contracts in 1954 to \$41,082,280. Highway building and maintenance contracts let during first six months of 1955 amounted to \$23,503,518.

Kansas had 8,732 mi. of railroads and there were (according to

Kefauver, Estes (1903—), U.S. senator, was born on July 26 in Madisonville, Tenn. He stud- at the University of Tennessee, Knoxville (B.A., 1924), and the Yale university law school (LL.B., 1927), was admitted he Tennessee bar and practised at Chattanooga before his ointment in 1939 as Tennessee state commissioner of finance axation. A few months later he was elected to fill an un- red term in the U.S. house of representatives. He was re- ed several times and served until 1949, when he took office .S. senator from Tennessee. In the senate Kefauver gained onal attention during 1951 as chairman of the upper house's e investigation committee, whose televised hearings drew audiences of viewers. The committee's reports provided eiled evidence of political-criminal alliances reaching into icipal, state and even federal offices.

efauver was a prominent candidate for the Democratic e nomination at the 1952 convention at Chicago, Ill., e he led on the first and second ballots before yielding to i E. Stevenson. Re-elected to the senate in Nov. 1954 for econd term, Kefauver again became a potential Democratic eidential nominee for 1956. On both domestic and foreign s he was one of the most vocal Democratic critics of the hower administration.

uring 1955, as chairman of a senate subcommittee on ju- e delinquency, Kefauver conducted hearings around the try on the relationship between juvenile delinquency and e commercial traffic in pornographic materials. In September

HE A LITTLE OLD FOR THAT?" a 1955 cartoon by Fischetti of . Service, Inc.

he spent several weeks in the U.S.S.R. during the course of a world tour.

Kellogg Foundation: see SOCIETIES AND ASSOCIATIONS, U.S.

Kelly, Grace (Patricia) (1929—), U.S. actress, was born at Philadelphia, Pa., Nov. 12, 1929, the daughter of a wealthy builder and the niece of George Kelly, dramatist, and of Walter C. Kelly, vaudeville star. From 1947 to 1949 she studied at the American Academy of Dramatic Arts in New York city, meanwhile acting in television productions. She made her first Broadway appearance in Johan August Strindberg's *The Father* in 1949 and her motion-picture debut two years later, in *Fourteen Hours*. Movie stardom followed the next year when she costarred with Gary Cooper in *High Noon*. Later featured roles of Miss Kelly included those in *Mogambo* (1953), *Dial M for Murder* (1954), *Rear Window* (1954), *The Country Girl* (1954), *Green Fire* (1954) and *The Bridges at Toko-ri* (1955). For her performance in *The Country Girl* she was named winner of the 1954 Academy of Motion Pictures Arts and Sciences award as the best starring actress of that year. The award was announced March 30, 1955.

Kentucky. An east south-central state of the United States, admitted to the union on June 1, 1792, Kentucky is popularly called the "Blue Grass state." Area: 40,395 sq.mi., of which 531 sq.mi. are water. The population by the 1950 official census was 2,944,806. The foreign-born population was 16,068, of whom 11,022 were in the cities. The capital, Frankfort, had a population of 11,916. The three largest cities were Louisville (369,129), Covington (64,452) and Lexington (55,534). The U.S. bureau of the census estimated the population of Kentucky as 2,948,000 on July 1, 1955.

History.—The chief events of the year to Nov. 1955, related to school support, desegregation, the high court's ruling that Bell county was totally dry, A. W. Barkley's defeat of J. S. Cooper for the United States senate, and the success of A. B. Chandler over B. T. Combs in the race for the Democratic gubernatorial nomination, followed by his election to that office.

The state officers in 1955 were: governor, Lawrence W. Wetherby; lieutenant governor, Emerson Beauchamp; secretary of state, Charles K. O'Connell; auditor, T. Herbert Tinsley; attorney general, J. D. Buckman, Jr.; treasurer, Pearl Frances Runyan; superintendent of public instruction, Wendell P. Butler; commissioner of agriculture, Ben S. Adams; and clerk, court of appeals, Acree Austin.

Education.—Public schools in 1954-55 included 3,729 elementary schools, 135 high schools and 277 combined elementary and high schools. Total public-school pupils, grades 1-12, numbered 598,729, and full-time teachers, exclusive of principals, supervisors, helping teachers, etc., numbered 19,368. The state per capita fund was \$26,212,500 and the equalization fund was \$8,573,000. Fifty-eight public Negro high schools, grades 8-12, had 9,394 pupils enrolled. The per capita average daily attendance pupil cost for 1954-55 was \$147.53 for current expenses. In 1954-55 the average annual salary of all 20,799 classroom teachers, principals, supervisors and vocational teachers was \$2,600.33. The state's per capita contribution had declined steadily since 1950. In 1951-52 it was \$54.34; the next year \$52.99; in 1953-54 it was \$51.13; and in 1954-55 it was \$49.06. The equalization fund, because of a decrease of \$6,000,000 in the assessment of real property and the increase of 12,675 children 6 to 18 to a total of 711,434, permitted only 67.3% of the foundation program legalized by the 1954 legislature.

Social Insurance and Assistance, Public Welfare and Related Programs.—During fiscal 1955 the department of economic security paid out \$41,229,796 to an average weekly 36,373 beneficiaries, including 2,850 veterans and 938 federal employees. Old-age assistance to the amount of \$23,533,421 went to a monthly average of 55,757 persons. Aid to dependent children amounted to \$13,940,425 to an average of 18,634 families with 49,153 children. Aid to the needy blind amounted to \$1,274,290 for a monthly average of 2,868. On Aug. 31, 1955, the state's tuberculosis hospitals held 743 patients.

The population of the correctional institutions on June 30, 1955, was: reformatory, 2,472; penitentiary, 962; women's prison, 67; houses of reform, boys 350, girls, 149.

Communication.—As of June 30, 1955, the Kentucky department of highways had under maintenance 18,027 mi. of road. One public toll and

two private toll bridges over the Ohio river then served traffic. Road fund receipts for the fiscal year amounted to \$73,637,396; expenditures amounted to \$68,955,399. On the same date the state had registered 718,574 passenger cars, 107,611 commercial trucks, 76,673 farm trucks and 4,357 motorcycles. Airport facilities in 1955 represented an investment of about \$110,000,000. Nineteen railroad companies on Dec. 31, 1953, owned 3,713.12 mi. of line; six switching companies increased the mileage to 3,824.26.

Banking and Finance.—National banks in Kentucky, on June 30, 1955, numbered 89 and had total assets of \$757,199,000. On the same date state banks and trust companies numbered 282 and had resources amounting to \$1,211,811,536.25. The state's total income set a new high of about \$233,639,566.61 for the fiscal year of 1955, according to preliminary returns. General fund revenue amounted to about \$95,130,187. Switching to pay-as-you-go on July 1, 1954, for personal income taxes explains most of the increase. The record collections left a balance of about \$30,000 after the \$84,600,000 allowed in the budget for recurring expenses, \$7,000,000 for capital outlay at state institutions, \$3,000,000 for the governor's emergency fund and \$500,000 for miscellaneous appro-

of the year new plans and expansions numbered 68, the estimated new jobs 8,915, the estimated new payroll \$33,431,250 and total plant investments \$124,677,000. On the whole, there was a considerable increase in number of workers from the slump of 1954. The most notable increases were 30.3% in primary metals, 18.9% in machinery and metal products and 8.9% in clothing and textiles. Total employees in June 1955 numbered 160,800. Yet, according to the *Blue Book of Southern Progress*,

job placements for fiscal 1955 in nonfarm industry numbered 60,139, an increase of 73.9% over 1954. Placements in manufacturing numbered 18,951: in construction, 5,656; in trade, 9,780; in service, 7,864; in private household, 12,691; and other, 5,197.

In June 1955 about 124,800 people were employed in wholesale and retail trade, a slight decrease from June 1954. In the same period workers in the retail trade declined from 96,800 to 95,400 but they increased in the wholesale trade from 28,300 to 29,400. (W. W. Js.)

Mineral Production.—Table III shows the tonnage and value of mineral commodities produced in Kentucky in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953 Kentucky was among the states in output of coal and fluorspar and ranked tenth in value of mineral output, with 2.66% of the U.S. total.

Khrushchev, Nikita S. (1894—), Soviet politician. He was born at Kalinovka, Kursk province, April 17, the son of a coal miner. He joined the Russian Communist party in 1918 and by 1925 held a party appointment at Yuzovka (Stalino) and later at Kiev. In 1929 he was sent to study for two years at the Industrial academy in Moscow, and in 1932 was a secretary of the Moscow city committee of the party. In 1934 he was elected to the central committee of the All-Union Communist party and the following year succeeded L. M. Kaganovich as first secretary of the Moscow regional and city committee. At the beginning of 1938 he was sent to Kharkov as secretary general of the Ukrainian Communist party, with the task of eradicating all Nationalist Ukrainian tendencies. He was so successful that on March 23, 1939, Stalin promoted him full member of the Politburo. During the German occupation of the Ukraine he co-ordinated, as lieutenant general, the guerrilla movement there. After the return of the Soviet army in 1943 he also became chairman of the Ukrainian committee of people's commissars in Kiev. In 1949 he was made responsible for enlarging the collective farms (*kolkhozy*) by amalgamation. Shortly after Stalin's death (March 5, 1953) Khrushchev succeeded G. M. Malenkov as the party's first secretary and he turned his attention to the declining agricultural production. In Feb. 1954 he proposed an entirely new remedy, namely that the main source of additional supplies of grain should be new state farms to be set up in Kazakhstan and western Siberia. In Sept.-Oct. 1954 Khrushchev began a series of foreign visits when he led a delegation to Peking, with N. A. Bulganin as a member. In May 1955 he visited Belgrade, in July he was present at the meeting of the Big Four heads of state at Geneva. In November-December he visited India, Burma and Afghanistan, always in company with Bulganin.

Kimpton, Lawrence Alpheus (1910—), chemist. He was born in Chicago, was born on Oct. 7 in Kansas City, Mo., where he attended public schools. He graduated from Stanford university, Stanford, Calif., in 1931 and took his Ph.D. degree at Cornell university, Ithaca, N.Y., in 1935. That year he was appointed teacher at Deep Springs school and in 1936 was named assistant and director. In the autumn of 1942 Kimpton became dean of the college of liberal arts and professor of mathematics and philosophy at the University of Kansas City. He joined the metallurgical laboratory, atomic bomb project, at The University of Chicago, as associate chief administrative officer in 1943, shortly thereafter became chief. In 1944 he became dean of professor of philosophy and education at The University of Chicago, and on July 1, 1946, was elected vice-president and dean of faculties. He accepted an appointment as dean of students at Stanford university in 1947, returning to The University of Chicago in 1950 as vice-president in charge of development position he held when elected chancellor on April 12, 1951.

In 1954 Kimpton began the second phase of his administrative program, including a campaign for \$32,700,000 to be used over the next ten years, and a series of important appointments to the faculty. Conservation of the university neighbourhood was pressed with the Chicago Land Clearance commission acquiring property for demolition. Relocation of the bachelor's degree reorganization of the undergraduate curriculum was in its first year of operation, with an increase of 40% in the enrollment of the class. (W. V. Js.)

Knowland, William Fife (1908–), U.S. senator, was born on June 26 at Alameda, Calif. After taking his bachelor's degree at the University of California, Berkeley, in 1929, he entered the newspaper business, becoming assistant publisher of the *Oakland* (Calif.) *Tribune* in 1933. He was a member of the California state assembly from 1933 to 1935 and of the state senate from 1935 to 1939; in 1941–42 he was chairman of the executive committee of the Republican national committee. In 1945 Gov. Earl Warren of California appointed him to the U.S. senate to fill the unexpired term of Hiram W. Johnson. He was elected on the Republican ticket in 1946 for the full term 1947–53 and was re-elected in 1952 for the term 1953–59. He became perhaps the foremost U.S. champion of Chiang Kai-shek and the Chinese Nationalists. On Jan. 2, 1953, Knowland was elected Republican policy committee chairman of the U.S. senate. On Aug. 4, 1953, after the death of Robert A. Taft, he became majority leader of the senate.

Knowland's strong views on foreign policy led him into disagreement with the administration and Secretary of State John Dulles as, for example, on April 14, 1954, when he criticized Dulles' plan for a southeast Asia security alliance as "weak" and "unrealistic" without the participation of both Nationalist China and South Korea. On July 1, 1954, he declared flatly that if Red China were granted admission to the United Nations he would resign his majority leadership and devote full time to bringing about U.S. withdrawal from the UN.

Following the Democratic victory in the congressional elections of Nov. 1954 Knowland became senate minority leader in the 84th congress when it convened Jan. 5, 1955. He continued to criticize the Eisenhower administration's foreign policy on various issues, warning against the potential dangers of U.S. participation in the Geneva conference of the heads of the Big Four Powers and against direct talks with Communist China. On the other hand, he supported the administration's domestic legislative program almost without reservation.

Korea is a peninsula extending southward from Manchuria and the U.S.S.R., 525 mi. long and from 125 to 200 mi. wide. It is bounded north by the Yalu and Tumen rivers, south by the Straits of Korea, west by the Yellow sea and east by the Sea of Japan. Area: 85,266 sq.mi. Total pop.: (1944 census) 25,120,174; (1955 est.) 28,600,000. Religions: Buddhism, Confucianism, shamanism and a unique eclectic religion, Chondokyo. In 1939 there were about 500,000 Korean Christians.

The country is divided into two parts. In the south is the Republic of Korea, area about 36,152 sq.mi. Pop. (1955 est.) 16,000,000. Chief cities (pop., 1955 est.): Seoul (cap.) 1,300,000 (1,640,000 in 1949); Pusan 840,000 (473,600 in 1949); Taegu (1949 est.) 313,700. President of the republic in 1955, Syngman Rhee.

In the north is the Democratic People's Republic of Korea, area about 49,114 sq.mi. Pop. (1955 est.) 8,000,000. Chief city, Pyongyang, pop. (1949 est.) 450,000. Prime minister in 1955, Marshal Kim Il Sung.

History.—It became apparent in 1954 and 1955 that the communist command in North Korea was violating the provisions of the Korean armistice agreement. The UN command repeatedly protested these violations, among which were those relating to the illegal build-up of combat forces, particularly air forces. Meanwhile the Republic of Korea protested the continued

presence of Polish and Czech members on the Neutral Nations' Supervisory commission in its territory on the grounds that the communists had obstructed the commission's activities in the north and thereby had forfeited their right to have inspections in the south. Beginning in Aug. 1955 mass demonstrations and riots protesting the presence and activities of the Poles and Czechs took place in many cities in the Republic of Korea. Following agreement between the communist and UN commands on Aug. 29, the number of members of each of the stationary inspection teams of the supervisory commission was reduced by one-half and the number of ports of entry and the total number of stationary inspection teams for the commission was reduced from ten to six. However, Korean demonstrations against the presence of the Czech and Polish members continued.

The Republic of Korea announced in Aug. 1955 that agreement had been reached with the U.S. government concerning a 1955–56 assistance program. The program totalled \$628,000,000, of which \$280,000,000 would be in economic aid, \$180,000,000 in direct military aid and \$168,000,000 in mutual defense support.

In Sept. 1955 a reorganized opposition party, the Democratic party, was formed. Pyun Yung Tai, who had been minister of foreign affairs since April 1951 and prime minister during part of 1954, resigned in 1955. Cho Chung Hwan was designated acting minister of foreign affairs as of Aug. 1, 1955. (See also UNITED NATIONS.)

Education.—In 1954 there were 3,954 elementary schools in the Republic of Korea with 2,342,065 pupils and 36,353 teachers; 621 middle schools with 324,114 pupils and 6,785 teachers; 398 high schools with 160,266 pupils and 4,401 teachers; 48 colleges with 40,520 pupils and 3,685 teachers; and 18 normal schools with 12,190 pupils and 305 teachers. In 1952, 65% of the population of the Republic of Korea was believed to be literate. The North Korean regime claimed in 1955 to have 4,800 elementary and junior high schools, 72 technical and other vocational schools and 16 colleges and universities.

Finance.—The budget of the Republic of Korea for the 15 months ending June 30, 1955, amounted to receipts of 175,355,000,000 hwan and expenditures of 297,717,000,000 hwan. (The 1954–55 budget ran for 15 months because of a changed fiscal year.)

The official exchange rate, which had been 180 hwan to \$1 since Dec. 1953, was changed to 500 hwan to \$1 in Aug. 1955. The free-market rate at the end of June 1955 was 760 hwan to U.S. \$1. By the end of July 1955 the currency in circulation totalled 44,217,000,000 hwan. The retail price index (1947=100) in the Republic of Korea rose to a peak of 16,480 in May 1955.

The balance sheet of the Bank of Korea, the central bank of the Republic of Korea, showed assets and liabilities of 143,438,636,000 hwan at the end of June 1955.

Trade.—The Republic of Korea's imports, excluding U.S.-UN-financed imports, totalled \$93,900,000 in 1954, and exports \$24,300,000. In the first four months of 1955 imports totalled \$22,400,000 and exports \$4,600,000. During the 1954–55 fiscal year U.S.- and UN-sponsored economic

U.S. GUARDS SPRAYING KOREAN DEMONSTRATORS attempting to storm the compound housing members of the neutral nations truce teams on the causeway to Wolmi Island, Kor., Aug. 10, 1955

aid programs amounted to \$280,000,000 and \$27,400,000, respectively. Japan, the U.S. and Hong Kong were the major trading partners.

North Korea's trade continued to be chiefly with communist China and the Soviet Union. Communist China claimed to have undertaken to contribute about 8,000,000,000 Yuan (about \$320,000,000) and the Soviet Union 1,000,000,000 roubles (about \$250,000,000) in economic assistance for four-year and three-year periods, respectively, beginning in 1954.

Transportation and Communications.—As of June 1955 there were 517 locomotives, 11,912 freight cars and 971 passenger cars in the Republic of Korea. The railroads handled 1,896,000,000 ton-kilometres of freight and 3,978,000,000 passenger-kilometres during the year ending June 30, 1955. There were 2,823 km. of railroad track and 39.6 km. of streetcar track in operation in South Korea in Aug. 1954; an estimated 1,000 km. of railroad track were located in North Korea.

There are about 21,000 mi. of roads in Korea. In March 1954 the Republic of Korea had 7,256 trucks, 1,909 buses and 3,964 automobiles. Korean National Airlines, Northwest Airlines and Civil Air Transport, a Nationalist China air line, provided domestic and international air service for the Republic of Korea in 1955. In 1955 Korea had a merchant fleet of 54 vessels with a gross tonnage of 94,434 tons. In the year ending June 30, 1955, these vessels carried 720,000 tons of cargo.

Agriculture, Fishing and Forestry.—Agricultural production in the Republic of Korea in 1954-55 included, in metric tons: rice, 2,143,000 and other grains, 783,000. In 1954 the Republic of Korea had 763,000 cattle; 269 milk cows; 16,000 horses; 600 sheep; 27,000 goats; 168,000 rabbits; 938,000 pigs; 5,500,000 chickens; and 345,000 ducks. Marine landings in the year ending April 30, 1955, totalled 234,400 metric tons. Lumber production in the Republic of Korea in 1953 totalled 301,000 cu.m.; firewood production 148,215 metric tons; and charcoal production 15,337 tons.

Manufacturing.—Industrial production in the Republic of Korea in the year ending April 30, 1955, included: cotton yarn 54,600,000 lb.; cotton cloth 77,200,000 yd.; woollen textiles 780,800 yd.; rubber shoes 19,000,000 pairs; paper 72,216 metric tons; cement 60,250 tons; bicycles 32,720; coke 1,091 tons; salt 174,191 metric tons; cigarettes 11,900 metric tons; and cut tobacco 4,578 metric tons. Electric power production in the year ending June 30, 1955, totalled 941,000,000 kw.hr.

The North Korean regime announced that it had embarked upon a three-year economic plan (Three-Year People's Economic Rehabilitation and Construction plan) in Jan. 1954. The announcement indicated that by the end of 1956 North Korea hoped to be producing 4,000,000 metric tons of coal annually, as compared with 700,000 tons in 1953. Rehabilitation of a 600,000-kw. hydroelectric plant was expected to be completed in 1956. In Aug. 1954 the North Korean regime claimed that since the beginning of the program 290 new factories had been established, electric power production had increased 3.4 times, coal production 6 times, cotton cloth 2 times and silk cloth 4 times. The five-year People's Economic plan was reported to be scheduled to begin in 1957.

Mining.—Most of the major mineral resources of Korea are in the northern area held by the communists, with important iron-ore, copper, lead, zinc, pyrites, coal and magnesite deposits. Mineral production in the Republic of Korea in the year ending April 30, 1955, included (in metric tons): copper ore 8,323; tungsten 1,776; amorphous graphite 47,059; kaolin 10,222; fluorspar 11,146; anthracite coal 990,776; gold 1.7; silver 2.0; iron ore 25,686; manganese 1,902; talc 7,557; lead ore 599; and nickel ore 140.

Kusch, Polykarp (1911-), U.S. physicist and Nobel prize winner, was born at Blankenburg, Ger., on Jan. 26, and emigrated with his family to the United States in 1912, becoming a naturalized citizen ten years later. He graduated from Case Institute of Technology, Cleveland, O., in 1931 and took his master's degree (1933) and Ph.D. (1936) from the University of Illinois, Urbana. He taught physics successively at Illinois (1931-36), the University of Minnesota, Minneapolis (1936-37), and at Columbia university, where he remained except during World War II when he was engaged in special research on the military applications of vacuum tubes. He was appointed full professor at Columbia in 1949, specializing in nuclear and molecular physics.

With Willis E. Lamb (q.v.), Kusch on Nov. 2, 1955, was named corecipient of the 1955 Nobel prize in physics for his research into new and more accurate methods of atomic calculations—specifically, according to the citation, "precision determination of the magnetic moment of the electron."

Labour Unions. United States.—The merger of the country's two leading federations of trade unions, after a split of 20 years, under the combined name of American Federation of Labor and the Congress of Industrial Organizations, was the most prominent event in U.S. labor affairs during the year. The merger in Dec. 1955 provided each union affiliated with either the A.F. of L. or C.I.O. retain its charter and, by virtue of the merger, became part of a new organization.

Under the merger, the supreme governing body of the A.F. of L. and C.I.O. is the biennial convention. The voting strength of the delegates to these conventions is determined by the paid per capita membership of their respective unions. In addition, state and local central bodies are entitled to one vote each. Other executive and administrative organs of the A.F. of L. and C.I.O. are the executive council consisting of the president, secretary-treasurer and 27 vice-presidents, elected by the convention, and the general board which is composed of the members of the executive council and the president or other principal officer of each of the national or international affiliates. The general board meets at least once a year to determine policy questions referred to it by the executive council. The day-to-day policy and administrative decisions of the organization are determined by an executive committee consisting of the two executive officers and six vice-presidents.

George Meany was elected the first president and William

"HEARTS AND FLOWERS," a comment on the merger agreement reached in 1955 by the two large U.S. labour bodies by Fitzpatrick of the *St. Post-Dispatch*

nitzler the secretary-treasurer of the merged organization. They held similar positions in the A.F. of L. The other six members of the executive committee were drawn in equal numbers from unions which had been in the A.F. of L. and C.I.O. Seventeen of the 27 vice-presidents elected at the first convention were from the A.F. of L. Several independent unions, including the Brotherhood of Railroad Trainmen and the Brotherhood of Locomotive Firemen and Engineers, indicated that they were considering affiliation with the merged organization. But the United Mine Workers, the largest independent union, was reported as opposed to affiliation.

The combined membership of the A.F. of L. and C.I.O. before the merger took place was 16,100,000, 15,300,000 in the United States and 800,000 in Canada. These figures included 184,000 members of federal labour unions directly affiliated with the A.F. of L. and 15,000 members of local industrial unions affiliated with the C.I.O. Unaffiliated unions had an estimated membership of 1,700,000.

The year was marked by sharp increases in economic activity following the recession of 1954. By midyear civilian employment reached record heights, surpassing the 65,000,000 mark, and unemployment declined below 4% of the total labour force. The rising economic activity was reflected in labour-management contracts in most sectors of the economy. At the beginning of the year, four to seven cents hourly wage increases were most common in collective bargaining settlements. By summer, after negotiations were concluded in the automobile and steel industries, the typical hourly raises ranged between 7 and 12 cents. As in previous years, wage increases accounted for only part of the adjustments in labour-management agreements. Many of the new contracts contained increased pension, insurance, medical vacation, holiday and other fringe benefits. In the case of the major automobile producers, the total cost of the settlements was estimated at 20 cents per hour, only 8 cents of which was accounted for by the direct wage increase.

Major interest was centred around the introduction of supplementary unemployment compensation (popularly referred to as guaranteed annual wage) provided for in automobile, farm equipment, major can manufacturing companies and other industries. In the automobile industry the companies agreed to contribute to a fund five cents for every man-hour worked until a predetermined maximum was reached, averaging about \$400 per worker. The fund was to be used to pay laid-off employees supplements to state unemployment compensation, ranging from \$25 a week for a maximum period of 26 weeks. Payments

LABOUR UNION MEMBERSHIP, a comparison of the U.S. and selected European countries

were scheduled to begin in 1956. The combined state unemployment and supplementary benefits were to be 65% of the worker's pay (after taxes) for a 40-hour week during the initial 4 weeks to which the employee was entitled to unemployment compensation, and to 60% of his basic pay for 22 additional weeks. Steps were taken by both the A.F. of L. and C.I.O. to develop standards to be observed by unions to ensure honest administration of pension and welfare funds.

The number of work stoppages during the first nine months of 1955 was the second lowest in the last six years. Major strikes (involving more than 10,000 workers) affected a variety of industries and involved the Southern Bell system, a southern railroad, New England textile mills, a rubber company, west coast trucking, east coast longshoremen and nonferrous metal mining. The federal government confined its activities in these disputes to mediation. A number of state governors and other officials requested federal intervention on several occasions. The White House refused to intervene in any of these situations on the ground that they did not truly threaten national health and welfare. None of the above strikes were considered in that category.

The major federal labour legislation was an increase in the minimum wage required by the Fair Labor Standards act. The minimum hourly wage rate was increased by congress from 75 cents to \$1. The measure was a compromise between the president's recommendation of 90 cents and union urging of \$1.25. The new minimum wage was scheduled to become effective March 1, 1956. The U.S. department of labour estimated that about 2,000,000 workers, out of about 24,000,000 covered by the law, would be directly affected by the increased minimum wage.

In the sphere of political action, the Wisconsin legislature enacted a law designed to bar labour unions from making contributions for any political purpose. The law was modelled after the Federal Corrupt Practices act. In a test case of the federal law the United Automobile Workers (C.I.O.) was indicted on a charge of using union funds for radio and television time in support of a candidate for the U.S. senate. The U.A.W. contended that the expenditure was legal and that any provision barring it is unconstitutional. Labour leaders claimed that the indictment of the U.A.W. was politically inspired. They attacked the Republican record as being biased against unions. Most observers agreed that a major objective of the A.F. of L.-C.I.O. merger was the expansion of political activities by labour unions. (S. A. LN.)

Canada.—During 1955, notable progress was made toward a merger of the two national labour centres, the Trades and Labor Congress of Canada and the Canadian Congress of Labour. Closer co-operation had begun with the naming of a unity committee, consisting of four representatives of each congress. It began its meetings in Jan. 1954, and one of the first fruits was the drafting of a no-raiding agreement, as a step toward

United Mine Workers, the United Electrical Workers and the Packinghouse Workers report their membership data to the bureau of labour statistics. An estimate of their membership was included in the totals, but not released by the bureau of labour statistics. Membership of each of these unions was in excess of 100,000. Source: "Directory of National and International Labor Unions in the United States," Department of Labor, Bureau of Labor Statistics Bulletin No. 1185 (Washington, 1955).

unity. This agreement was approved at the 1954 conventions of the congresses, and was signed on Nov. 18, 1954.

Early in 1955 the committee drafted a set of recommendations and principles upon which a merger of the congresses might be based, and this was approved at the Trades and Labor congress convention at Windsor, Ont., in May 1955, as well as at the Canadian Congress of Labour convention at Toronto, Ont., in Oct. 1955. The next step was the drafting of a constitution for the new national labour body, which would be formed at a joint convention in 1956 and would be known as the Canadian Labour congress.

The annual legislative submissions of the labour groups were made to the federal government by the two national congresses, the Canadian and Catholic Confederation of Labour and the international railway brotherhoods in Nov. 1954. The briefs all dealt with substantially the same questions. The outstanding subject was unemployment, with which each group was deeply concerned. Each of the national congresses made proposals for action on various levels of government by which employment might be provided and consumer purchasing power increased. Other subjects on which recommendations were made included housing, unemployment insurance, national health insurance, immigration, taxation, family allowances and old-age pensions. Increased income-tax exemptions were requested, and provisions for the voluntary checkoff of union dues.

In May 1955 the congresses submitted briefs to the industrial relations committee of the house of commons on proposed amendments to the Unemployment Insurance act. One important new feature was the deletion of a section which would have made it impossible to collect unemployment insurance and payment under a guaranteed annual wage plan. Benefit rates were raised and some other improvements were made in the legislation.

The total membership of labour organizations in Canada at Jan. 1, 1954, was reported by the federal department of labour at 1,267,911, or 4% above the corresponding figure for 1953.

(N. S. D.)

International Movement.—On June 1, 1955, the International Confederation of Free Trade Unions had a total membership of 54,500,000 in 108 organizations in 75 countries. The fourth congress of the I.C.F.T.U. was held in Vienna in May 1955. Seventy-two organizations from 56 countries were represented by 189 delegates and observers. J. H. Oldenbroek was re-elected general secretary and Omar Bécú president of the I.C.F.T.U. The congress considered a wide range of topics, but was especially concerned about the violations of fundamental human liberties in different parts of the world. Racial discrimination in South Africa and elsewhere was condemned and full trade-union rights were demanded for workers in Morocco, Argentina and Venezuela.

Great Britain.—The affiliated membership of the British Trades Union congress reached the record level of 8,106,958 at the end of 1954, while total trade-union membership was 9,495,000, as compared with 9,459,000 at the end of 1954, an increase of 0.4%.

During 1955 three major disputes occurred, all involving a serious stoppage of work. In each case one of the principal factors causing the dispute was interunion conflict.

On March 25 and 26 London evening and national daily newspapers ceased publication following the strike of maintenance engineers and electricians employed by member firms of the Newspaper Proprietors' association. Work was not resumed until the afternoon of April 20. On May 23 a strike called by the National Amalgamated Stevedores and Dockers' union began in various ports. It was resolved on July 6. The Associated Society of Locomotive Engineers and Firemen informed the general

council of the T.U.C. on April 22 that the society would withdraw its members from work from midnight on May 1. Efforts were made to avert the stoppage and the strike was postponed but the deadlock was not broken and the strike eventually commenced on May 28. A settlement was achieved on June 14.

The general council of the T.U.C. played a vital part in settlement of all three disputes. Not since the general strike of 1926 had the T.U.C. exercised such a direct influence in industrial conflicts. In the light of the issue raised by the stoppage and of the experience gained in dealing with them the general council began an examination of its powers and functions in relation to industrial disputes. The council made clear that it would resist any attempt to impose legal restrictions on the right to strike, whether by means of compulsory ballots or compulsory arbitration, but it decided to seek powers from the annual congress to intervene at an earlier stage than existing law permitted in any dispute involving an affiliated member. Amendment to the rule was carried by the congress only after a vigorous debate and by a relatively narrow majority. The opposition to the general council came in the main from the Communist-dominated unions, the National Union of Railwaymen and a number of smaller unions which traditionally resented any attempt by the T.U.C. to limit their autonomy.

The development of the general council's authority progressed only as fast as the unions would permit. The advance made during 1955 was, however, significant and was thought by many trade-union leaders to precede a further extension of functions and powers of the council in the next few years.

A special meeting of representatives of the executive of those unions affiliated to the Labour party was held before the opening of the Trades Union congress, at Southport, to consider a request from the treasurer of the party to raise their affiliation fee from 6d. to 9d. a member. Though no final decision could be taken, such a step involving changes in rules, it was generally agreed that the unions would be prepared to assist the Labour party to overcome its financial difficulties in this way. The annual report of the Labour party for 1955 showed that 1,200 unions, with a total membership of 5,529,760, were affiliated at the end of 1954. Affiliated fees paid by these unions to the central funds of the Labour party amounted to £138,669 in 1954. In addition, the unions made other substantial financial contributions, both nationally and locally, to support the activities of the Labour party. Taking all factors into account the unions probably provided 40%–50% of the total income received by the Labour party. Lacrosse. During 1955 the University of Maryland, College Park, ten swept through an 11-game schedule unbeaten and untied to win the Wingate trophy, symbol of United States intercollegiate supremacy in the Indian game of lacrosse. The U.S. Naval academy, 1954 title winner, was runner-up. The Middies bowed to the Maryland team, 9–8, before 13,000 spectators at Annapolis, Md., on April 30, and then back marked their first in 19 games over a two-year period. Maryland also led the Cy Miller division and won the trophy as Navy, Yale and Princeton followed in that order in the ratings. Rutgers university and Hofstra college, Hempstead, N.Y., tied for the championship in the Laurie Cox division. The University of New Hampshire, Durham, captured the title in the Roy Taylor group. Kenyon college, Gambier, Ohio, won laurels in the Midwest association.

The following players were named to the All-America first team: goal—Clement Malin, Dartmouth; defense—John Raster, Maryland; John Simmons, Maryland; Carl Orent, Hofstra; midfield—Al Ulcickas, Navy; Robert Kelley, Rutgers; James Keating, Maryland; attack—Charles Wicker, Maryland; Percy Williams, Maryland; and John Griffiths, Rensselaer Polytechnic Institute.

The annual north-south contest between senior stars was held at the Homewood stadium in Baltimore, Md., on June 10, with the south winning, 12-11.

Percy Williams won the Jack Turnbull memorial award as outstanding college player while Jim Kappler of Maryland won the C. Markland Kelly trophy as top goalie in the state of Maryland. Mt. Washington of Baltimore carried off national club laurels. Sewanhaka high school repeated as Long Island champion and established a scholastic record by extending its all-winning streak through 74 games.

The 23rd annual tournament of the United States Women's Crossed association was held on the grounds of the Rye (N.Y.) high school May 28-30 and Philadelphia teams again were outstanding. Seven players from the Philadelphia group gained places on the all-United States first team. They were Betty King, Mrs. Alice Willetts, Jean Slaymaker, Ann Capolino, Jane Wald, Mary Fetter and Gayle Meacham. Others chosen were Marguerite Cunningham, Boston; Roberta Brennan, Boston; Elizabeth Swett, Boston; Lee Chadbourne, Baltimore; and Judy Martin, Baltimore. (T. V. H.)

Lamb, Willis E., Jr. (1913-), U.S. physicist and 1955 Nobel prize winner, was born July 12 at Los Angeles, Calif. He studied at the University of California, Berkeley, specializing first in chemistry, but changing to physics for his graduate work. After receiving his Ph.D. in 1938, he became a physics instructor and 10 years later full professor of physics at Columbia university, New York city, where he remained until he was appointed professor of physics in 1951 at Stanford university in California. In 1947 he published an article demonstrating that previous methods of measuring certain types of atomic energy were inaccurate. For this research, developed later into "discoveries regarding the hyperfine structure of the hydrogen spectrum," as mentioned in his Nobel citation made public Nov. 2, 1955, Lamb was named recipient of the 1955 Nobel prize in physics with Polykarp Kusch (q.v.).

Laos. A landlocked kingdom, a member of the French union, situated in the Indochinese peninsula, Laos is bounded north by China, northeast by the Democratic Republic of Vietnam, east by the National Republic of Vietnam and south by Cambodia. Area: 91,500 sq.mi. Pop. (1953 est.): 1,260,000. The Laotians are Thais and they speak a Thai dialect. Religion: Buddhist. Chief towns (pop., 1953 est.): Luang-Prabang (royal capital) 15,000; Vientiane (administrative capital) 20,000. King Sisavang Vong; premier in 1955, Katay Sasorith; high commissioner, Jean Risterucci.

History.—During 1955 the order of things was still troubled by the existence, in the two northeastern provinces, of the separatist communist state of Pathet Lao. There was fighting on the frontier during the summer, but on Oct. 10 a cease-fire was initiated by a conference in Bangkok. Loans from the French treasury and U.S. aid made it possible to install new equipment to repair the damage done in the war zones. The heir to the throne, Prince Savang, paid a visit to the Indian government. The Laotian unit of currency had its name changed from piastre to kip, without any effect on its purchasing power. (Hu. DE.)

Latin-American Literature. Literary Events.—Prizes.

celebrations and commemorative events of 1955, too numerous to be recorded, attested once again to the self-consciousness of Latin America's literary life. The prizes for literature of the Unión de Universidades Latinoamericanas went to the Chilean Lautaro Yankas for *El Vado de la noche* and to the Guatemalan Monteforte Toledo for his volume *Los Muros increíbles*. In Argentina the Emecé award was shared by Beatriz Guido for her novel *La Casa del ángel* and María Angélica Bosco for her story *La Muerte baja en el ascensor*. The Brazilian Academy gave the Machado de Assis prize to Dinah Silveira de Queiroz, author of *Floradas na serra*. Other recipients of national literary prizes were the novelist Germán Beltrán (Colombia), Gabriel García Márquez (Colombia's Association of Writers), Carlos Sabat Ercasty (Uruguay), Manuel Felipe Rugeles (Venezuela), the dramatist Luis Castellanos (Venezuela), Salvador Tío and María Teresa Babín (Puerto Rico). The Instituto de Cultura Hispánica (Madrid) granted prizes of 150,000 pesetas to the Uruguayan poetess Juana de Ibarbourou and the Spanish novelist José Luis Castillo Puche, although the awards were openly criticized as arbitrary. UNESCO (the United Nations Educational, Scientific and Cultural organization) chose the novel *El Moro*, by José Manuel Marroquín, as the representative novel of Colombia. Stalin prizes brought their special type of kudos to the essayist Baldomero Sanín Cano and the poet Nicolás Guillén. The year marked the launching of several important literary journals: *Ciclón* (Havana), devoted to creative works and unpublished translations, *Cuadernos de Arte y Poesía* (Quito), now published independently of the Central university, and *Metáfora* (Mexico), newly formed out of the four "little magazines" *Dintel*, *Espiral*, *Fuentsanta* and *Hierba Vieja y raro* (Caracas) was initiated for bibliophiles and *Recent Books in Mexico* contained short essays and selected bibliographies.

Anniversary celebrations were held in 1955 for the Brazilian Mario de Andrade, the Colombian Marco Fidel Suárez and the Colombian Francisco de Paula Rendón, but the most active of these events was the centenary of Almafuerte, marked by the appearance of studies, biographies and articles in his native Argentina. A *libro jubilar* appeared in Mexico hailing Alfonso Reyes's half century of literary activity.

Poetry.—The growing international reputation of the Venezuelan Juan Liscano was attested by a bilingual (French and Spanish) edition of his selected works published in Paris by Pierre Seghers. Carlos Brandy's *Los Viejos muros* (Montevideo) treated with melancholy but not bitterness the traditional stuff of poetry: man's loneliness, the mysteries of the universe, the fugacity of love. Juvenal Ortiz Saralegui's *Poesía fiel* (Montevideo) showed the varying allegiances of the poet, from praises of Juan Ramón Jiménez to a "triptych to Garcilaso and his muse." The Cuban Cipriano Vitié collected in *Vísperas, 1938-1953* his entire production of humanitarian and everyday verse, fleeing rhetoric and lyrical alembications. Similarly, *Veinte años después* (Buenos Aires) offered a copious sampling of César Fernández Moreno's poetry. In the same town appeared Ramiro de Casabellas' *Doble fondo*, rich in euphony. The young Venezuelan José Ramón Medina received critical acclaim for his *Como la vida*.

Important poetic anthologies were Rodrigo Miro's *Cien años*

de poesía en Panamá, covering the best lyrics from Romanticism to the present, and "de intención histórica más que crítica," and Agustín del Saz's *Nueva poesía panameña* (Madrid, Instituto de Cultura Hispánica), presenting 36 poets. An important landmark was Fernando Alegría's *La poesía chilena*, published at Berkeley, Calif., a sound and objective examination of the solid foundations which assured Chile's greatness in the lyric from Ercilla and Oña to the present. Indeed, the forthcoming second volume, covering the rich contemporary output, would complete a splendid vision of the organic growth of Chilean poetry. Many poets of the Antilles and South America appeared in the new German edition of the *Antología de la poesía negra moderna* (Munich).

Prose.—Angel Speroni, in his novel *Las Arenas*, claimed (like Sartre) to "sink to his knees in his epoch" and presented a novel polemically national. After the fall of Argentina's dictator, Juan de Perón, Speroni's novel became an interesting document presenting the Perón regime as a struggle in all the arenas. The sixth novel of the Mexican Alberto Quiroz, *El Profesor Mentocatum*, dealt amusingly and even satirically with two pupils and their professor involved in a secret society. The Cuban Raúl Roa's *Viento sur* was an impassioned plea against dictators such as Machado and against the "sterile, hirsute, exasperating, and dirty wind that blows across the world," the gusts of injustice, whether at a national or a personal level. The Venezuelan Mariano Picón-Salás published a new novel, *Los Tratos de la noche*, just as a collection of his selected works was published by Edime in Madrid and Caracas. Another novel of sociopolitical tendency was *El Papa verde* of Miguel Angel Asturias, second of a trilogy on life in Central America. His titular protagonist was a Chicagoan whose fruit company exploited the orchard country of Guatemala. Asturias probed the effects of U.S. economic manoeuvrings on the Guatemalans, from the foremost politicians to the humblest peasants. Juan Carlos Onetti's *Los Adioses* told the sordid tale of a triangle which terminated in destruction and death. After the reader has been repelled by the sexuality and motivations of the characters, Onetti, like a Pirandello, confides that the reader has been reading hypotheses and not truths and must therefore revise the moral judgments he has been forming.

From Argentina came *Chaves*, a brief character study of an inarticulate and pitiful figure deprived of his only chance of salvation by the death of his wife and daughter. With this incapacitated central character Mallea pushed to the extreme his interest in inner monologue. A rich collection of 50 diversified sketches, *El Viento en el rostro*, appeared in Bogotá from the pen of Jesús Zarate Moreno. Two outstanding books of essays came from Spanish-Americans well known to the United States: the Mexican Ermilo Abreu Gómez conversed in *La Del alba sería* of people and daily events during his boyhood days in Lérica; José Antonio Portuondo of Cuba treated of intellectual courage in his *El Heroísmo intelectual*, consisting largely of studies in contemporary literature which had already appeared in print. Two Brazilian essayists followed the vein of national relationships when Alceu Amoroso Lima published his *A Realidade americana* and Gilberto Freyre his *Um Brasileiro em terras portuguesas*.

In the uneventful area of Latin-American theatre, Madrid honoured the Puerto Rican Francisco Arriví by publishing two plays: *Una Sombra menos* and *Club de solteros*. The first was a conventional human drama centred on a married woman loved by several men. The second was more extravagant, concerning a group of frustrated males who banded together against women and matrimony. The Premio Ateneo awarded to Luis Castellanos honoured his play *El Velo sobre el agua*. A dramatization of *Cumandá*, the romantic novel by the Ecuadorian Juan León

Mera, was presented at the Escuela de Ballet of the Casa Cultura Ecuatoriana.

Anthologies, Literary History.—Slow to become available and known was Salvador Bueno's important *Antología del cuento en Cuba*, representing 42 writers. His excellent prologue explained that the short story had become Cuba's outstanding prose genre. Emecé of Buenos Aires brought out the first volume (*Historia de la eternidad*) of the complete works of Jorge Luis Borges, containing essays running from Platonic and Platinian thought down to his own speculations. An attack on Borges and Martínez Estrada was contained in Jorge Abelardo Ramos' *Crisis y resurrección de la literatura argentina*, weighing the various national influences on Argentinian letters. Eduardo Crema's *Creación de una leyenda* was a brief analysis of Antonio Arráiz' *Dámaso Velásquez* as a typical national heroic oral epic. In literary history, Enrique Anderson Imbert continued his prolific studies, among them *Estudios sobre escritores de América* (Buenos Aires). Of equal importance were M. Henríquez-Ureña's *Breve historia del modernismo* and C. Aubrun's *Histoire des lettres hispano-américaines* (Paris). Worthy of notice, if less immediately relevant, was Stanley Williams' *Spanish Background of American Literature*, whose subject extended to Latin America and the southwest of the United States. (O. Br.; R. J. Cs.)

Latter Day Saints: see MORMONS.

Latvia. A Soviet Socialist republic, Latvia is bounded north by Estonia, east by the Russian S.F.S.R., southeast by Byelorussia, south by Lithuania and west by the Baltic Sea. Area: 24,600 sq.mi. Pop.: (1935 census) 1,950,502; (1954 est.) 2,100,000. Religions: Lutheran, Roman Catholic and Greek Orthodox. Chief towns (pop., 1935 census; 1954 est. in parentheses): Riga (cap.) 385,100 (640,000); Liepaja 57,100 (80,000); Daugavpils 45,200 (55,000). First secretary of the Latvian Communist party in 1955, Janis Kalnberzins; chairman of the presidium of the supreme soviet, Karlis Ozolins; chairman of the council of ministers, Vilis Lacis.

History.—The industrial production of the republic was reported to be 15.5% higher in 1954 than in 1953 and 74% higher than in 1950. Livestock on collective farms increased during the year as follows: milch cows 15%, pigs 13% and sheep 12%. There was still not enough fodder, but it was planned to produce 100,000 ha. of land under maize.

From June 14 to 16 an agricultural conference of Baltic republics was held in Riga and attended by N. S. Khrushchov, first secretary of the Communist party of the Soviet Union, and about 1,100 delegates from Estonia, Latvia and Lithuania.

On Feb. 27 a new supreme soviet of the Latvian S.S.R. was elected by 1,438,167 votes (99.97% of the electorate), of whom 1,437,221 (99.94%) voted for the bloc of communists and non-party men. Among the 200 deputies was Col. Gen. Aleksandr Gorbátov, the new commander of the Baltic military area. The new 27-member council of ministers included five Russians.

In March Archbishop Gustav Turs, head of the Latvian Lutheran Church, published an appeal against the preparation for atomic war.

In September a Finnish newspaper reported that Kaarlo Ulmanis, 78-year-old former president of Latvia, who had been deported to Russia in 1940, had been allowed to return to Latvia.

See A. Spekke, *Latvia and the Baltic Problem* (London, 1954). Also ESTONIA; LITHUANIA. (K. SM.)

Education.—Schools (1950): primary 1,598, pupils 232,000; secondary 96, pupils 30,000. The Riga university in 1939 had 7,281 students and a teaching staff of 446. In 1953 Latvia had ten institutions of higher education with a total of about 15,000 students.

Finance.—Budget: (1954 est.) balanced at 1,653,961,000 roubles (1955 est.) balanced at 1,656,421,000 roubles.

education with a total of about 15,000 students.
 Finance.—Budget: (1954 est.) balanced at 1,653,961,000 roubles;
 (1955 est.) balanced at 1,656,421,000 roubles.

The long-awaited ruling of the United States supreme court implementing the decision in the school segregation cases was handed down on May 31, 1955. The court sent the cases back to the lower courts with instructions "to require the defendants to make a prompt and reasonable start toward complying with its 1954 decision outlawing segregation of Negroes and whites in the public schools." The court placed the primary responsibility for solving the problem on school authorities.

The supreme court also extended the application of its anti-segregation decision to cover public parks, swimming pools and golf courses. It ruled against the separation of whites and Negroes in the use of such facilities.

In November, the Interstate Commerce commission ruled against discrimination in accommodations furnished by common carriers.

Congress enacted no spectacular legislation during the year. New laws of general interest included the raising of the minimum wage from 75 cents to \$1 an hour for workers under the age-hour law, the continuation of 52% corporate and existing estate tax rates, the extension of the reciprocal trade program on June 30, 1958, and continuance of the farm price support program. Congress also provided legislation making available to young men between the ages of 17 and 18½ a number of choices which they might fulfil their military obligations. (See SELECTIVE SERVICE, U.S.; UNITED STATES.)

John Marshall Harlan was appointed March 17, 1955, to fill the vacancy left by the death in Oct. 1954 of Associate Justice Robert Houghwout Jackson. (See SUPREME COURT, U.S.)

Only the more important legal developments of general interest are reported in this article.

Aliens and Citizenship.—In a series of cases, the supreme court settled some phases of the Immigration and Nationality act of 1952. Section 405 consists of two clauses. The first is a saving clause providing that nothing contained in the act shall be construed to affect the validity of any declaration of intention or other document or other proceeding which shall be valid at the time the act goes into effect. The second paragraph provides that any petition where naturalization heretofore filed may be pending at the time the act takes effect shall be determined in accordance with the requirements of the laws in effect at the time the petition was filed.

An alien named Menasche had filed his declaration of intention to become a United States citizen before the effective date of the 1952 act. In April 1955 he filed a petition for naturalization. The court held that he complied with all requirements of the Naturalization act of 1940, but had not been physically present in the United States for at least one-half of the period constituting five years. This last requirement had been added by 1952 legislation. The lower courts held that Menasche enjoyed a status, condition and right in process of acquisition reserved by section 405a. The court leaned heavily on the saving clause in the prior Nationality act and approved his petition. "The whole development of this general savings clause manifests a well-established Congressional policy of not stripping aliens of advantages gained under prior laws" (*U.S. v. Menasche*, 348 U.S. 528).

The saving clause, however, should not be pressed too far. Shomberg filed a naturalization petition two days before the effective date of the 1952 act. On June 22, 1953, he was arrested under a warrant initiating "proceedings under section 405a of the 1952 act subjecting aliens to deportation upon conviction of two crimes involving moral turpitude." Section 318

of the act provides that "No petition for naturalization shall be filed . . . if there is pending against the petitioner a deportation proceeding." Section 318 begins with the phrase "notwithstanding the provisions of Section 405B." The court said, "The congressional purpose must have been to have Section 318 supersede rights stemming from such [naturalization] petitions, for under any other interpretation . . . the 'notwithstanding' clause is rendered meaningless" (*Shomberg v. U.S.*, 348 U.S. 540).

For the second time the alien Accardi appeared before the supreme court with a writ of habeas corpus to escape deportation. The board of immigration appeals had decided against Accardi's petition for suspending his deportation, but it appeared that the attorney general had blacklisted him by including his name in a list of "unsavory characters." The list had been circulated among the board members. This was improper, and required a rehearing (*Accardi v. U.S.*, 349 U.S. 280).

Business Regulation.—The state of Oklahoma passed laws putting the optical business under drastic control of state authorities without interference from the federal government. Provisions of the state law barring any person who is not a licensed optometrist or ophthalmologist from fitting lenses to a face or duplicating lenses or replacing in a frame lenses or other optical appliances except on written prescription of an Oklahoma licensed optometrist or ophthalmologist do not violate the due process clause of the 14th amendment. Clauses in the law prohibiting the advertisement for sale of eyeglasses, lenses and other optical goods and forbidding operators of retail store space to rent or sublease such space to any person purporting to do eye examinations or visual care do not violate the due process clause of the 14th amendment. The supreme court held that other sweeping provisions were also legal.

"An ophthalmologist is a duly licensed medical officer who specializes in the care of the eyes," the court explained. "An optometrist examines eyes for refractive error, recognizes (but does not treat) diseases of the eye, and fills prescriptions for eyeglasses. The optician is an artisan qualified to grind lenses, fill prescriptions, and fit frames.

"We see no constitutional reason why a State may not treat all who deal with the human eye as members of a profession who should use no merchandising methods for obtaining customers."

The biggest antitrust case in history, involving E. I. du Pont de Nemours company and General Motors corporation, whose combined assets exceed \$5,000,000,000, was given new life when the supreme court agreed to review the record.

Civil Rights.—In an opinion by Chief Justice Earl Warren, the high court granted the petition of John P. Peters to expunge the aspersions made against his reputation by the loyalty review board. He had twice been cleared from disloyalty charges by the loyalty board of his employing agency, the United States public health service. In a "post audit" of the agency board proceedings, the loyalty review board made the gratuitous finding that there was a reasonable doubt as to Peters' loyalty. This finding was based on evidence which would never have been considered in a court of law. The information was supplied by informants whose identity was not disclosed to Peters. The identity of some of the informants was not even known to the board.

Peters petitioned the court to declare that his removal and debarment from federal employment were invalid. He said that the action taken by the loyalty review board was a violation of the executive order which created the board and also was a violation of the U.S. constitution in denying him the opportunity to confront and cross-examine his secret accusers.

The supreme court held that the loyalty review board had exceeded its powers and the court ordered the Civil Service commission to expunge from its records the loyalty review board's

finding that there was a reasonable doubt as to Peter's loyalty and any other matter that would bar him from federal employment. In a concurring opinion Justice William O. Douglas said,

"Dr. Peters was condemned by faceless informers, some of whom were not known even to the Board that condemned him. Some of these informers were not even under oath. None of them had to submit to cross-examination. None had to face Dr. Peters. So far as we or the Board know they may be psychopaths or venal people, like Titus Oates, who revel in being informers. They may bear old grudges. Under cross-examination their stories might disappear like bubbles. Their whispered confidences might turn out to be yarns conceived by twisted minds or by people who, though sincere, have poor faculties of observation and memory." (*Peters v. Hobby*, 99 L. Ed. 677.)

Civilians no longer need fear that the long arm of military law will follow them after their discharge from military service. The supreme court ordered Robert W. Toth freed from air force custody.

Five months after he was honourably discharged from the United States air force, Robert Toth had been arrested by military authorities and taken to Korea to stand trial before a court-martial on a charge of murder and conspiracy to commit murder while serving as an airman in Korea.

The section of the 1950 Uniform Code of Military Justice under which he was to be tried was declared unconstitutional by the high court. Justice Hugo L. Black said, "... Any expansion of court-martial jurisdiction like that in the 1950 Act necessarily encroaches on the jurisdiction of federal courts set up under Article 3 of the Constitution where persons on trial are surrounded with more constitutional safeguards than in military tribunals.

"... There is a great difference between trial by jury and trial by selected members of the military forces... whether right or wrong, the premise underlying the constitutional method for determining guilt or innocence in federal courts is that laymen are better than specialists to perform this task. This idea is inherent in the institution of trial by jury.

"... On many occasions, fully known to the Founders of this Country, jurors—plain people—have manfully stood up in defense of liberty against the importunities of judges and despite prevailing hysteria and prejudices. The acquittal of William Penn is an illustrious example.

"... It is conceded that it was wholly within the power of Congress to... provide for federal district court trials of discharged soldiers accused of offenses committed while in the armed services... Congress has not seen fit to subject them to trial in federal district courts... We hold that Congress cannot subject civilians like Toth to trial by court-martial. They, like other civilians, are entitled to have the benefit of safeguards afforded those tried in regular courts authorized by Article 3 of the Constitution." (*Toth v. U.S.*, 100 L. Ed. 4.)

Contempt of Congress.—The court reversed convictions for contempt of congress in three cases. The contempt charges were based on refusal to answer questions asked by the house committee on un-American activities. An officer of the United Electrical, Radio and Machine Workers of America who was called to the stand refused to answer questions about his associates in the union. He relied on the 1st and 5th amendments against self-incrimination. The defendant Quinn did not state his grounds for objection to the questions except that he declined to answer the questions by adopting the grounds of the two other defendants in the case. The court said that no ritualistic formula or talismanic phrase was necessary if the court understood what the defendant meant, which was obvious in this case. (*Quinn v. U.S.*, 349 U.S. 155.)

In the second contempt case, Emspak, another officer of the

United Electrical Workers union, answered all but 68 out of 239 questions put to him by a subcommittee of the un-American activities committee. The 68 questions concerned Emspak's associates and affiliations. Eight of these were later related to the Communist party. Emspak refused to answer relying "primarily on the 1st amendment, supplemented by the 5th." In reversing the conviction for contempt, the chief justice adopted the same reasoning as was applied in the Quinn case. The court also brushed aside the government's contention that Emspak had waived his privilege of raising the self-incrimination defense because he had evaded a clear answer on the subject. "Waiver of constitutional rights is not lightly to be inferred." (*Emspak v. U.S.*, 349 U.S. 190.)

Criminal Law.—The Michigan one-man grand jury ran into trouble before the supreme court which set aside contempt court rulings against two witnesses. One witness refused to answer questions asked by the judge on the grounds that he was not represented by counsel. The other witness was held in contempt for evidence which the judge believed was perjury. The supreme court held that the conviction for contempt violated the due process clause of the constitution. "No man can be tried by a judge in his own case and no man is permitted to try cases where he has an interest in the outcome." (*In re Murchison*, 349 U.S. 133.)

A device by which an all-white jury could be selected was held to be a violation of the due process clause in a Georgia murder case. The names of white veniremen were written on white slips of paper and the names of Negroes on yellow. Only four yellow slips were drawn. Three of them were excused for cause and the state exercised a peremptory challenge for the fourth. The defendant was convicted and the Georgia supreme court affirmed the conviction. Attempts to secure a new trial because of the manner in which the jury was selected failed until the supreme court of the U.S. remanded the case in view of the state's acknowledgement that as a matter of substantive law the petitioner had been deprived of his constitutional rights (*Williams v. Georgia*, 349 U.S. 375).

A former city policeman was convicted of criminal contempt of court for refusing to testify before a grand jury concerning an investigation he had taken part in when he was on the police force. He was asked whether he ever accepted bribes when he was a policeman but he refused to answer, setting aside the constitutional privilege against self-incrimination under state and federal constitutions.

It appeared that he was required by state law and a charter to waive his immunity or forfeit his job, so he signed an immunity waiver. In the investigation of police bribery activities, which took place long after he had quit his job, he was sentenced to a year in jail for contempt of court in refusing to answer questions. His conviction for contempt was affirmed by the supreme court which held that he was bound by his immunity waiver. Whether the waiver was valid or not was immaterial. If the waiver was valid he was simply in the position of anyone who waives immunity; if the waiver was invalid, the statutory immunity would have persisted and his testimony could not possibly be self-incriminatory (*Regan v. N.Y.*, 349 U.S. 58).

Divorce.—Entrepreneurs of the divorce business in the Virgin Islands were told by the supreme court that the Virgin Islands' divorce law was no good as far as the residence requirements were concerned. The clause in the law permitting "quickie" divorces on a six-weeks' residence was beyond the power conferred on the territorial government. The plaintiff in this case lived 42 days in the Virgin Islands and on the 43rd day filed suit for her divorce. The defendant obligingly entered his appearance and filed a "waiver and consent" to the hearing.

the cause as if by default. The district court dismissed the case for want of jurisdiction over the petitioner.

The Virgin Islands' Organic act, which specified the authority of the legislative to make laws, limited that power to laws pertaining to local applications only. The divorce law was in excess of the power conferred. It was designed for people living outside of the Virgin Islands and not concerned with the interests of the local population.

One of the legislative proponents of the law publicly admitted that only 2% of the divorces heard affected the residents of the Virgin Islands. Another said, "I have heard that there is anticipated a half a million dollars divorce business in this current year which will be distributed among lawyers, hotel bills, taxi cabs and other business ventures in the Community." *Granville-Smith v. Granville-Smith*, 349 U.S. 1.)

Indian Affairs.—In a five-to-three decision (Justices Douglas and Frankfurter with the chief justice dissenting) the supreme court denied the claim of an Alaskan Indian clan to compensation for the taking by the United States of certain timber from Alaskan lands allegedly belonging to the group.

The Tee-Hit-Tons, a clan of the Tlingit tribe, contended that their "tribal predecessors had continually claimed, occupied and used the land from time immemorial; that when Russia took Alaska, the Tlingits had a well-developed social order which included a concept of property ownership; that Russia while it possessed Alaska in no manner interfered with their claim to the land; that Congress has by subsequent acts confirmed and recognized petitioner's right to occupy the land permanently and therefore the sale of timber off such lands constitutes a taking pro-tanto of its asserted rights in the area."

Before rendering its decision, the court reviewed the cases involving Indian title not only in Alaska but in many states and many tribes, as well as a Philippine Islands case in which tribal custom and tribal recognition played a part.

However, in the opinion of the court Justice Stanley Reed declared:

"We have carefully examined these statutes and the pertinent legislative history and find nothing to indicate any intention of Congress to grant to the Indians any permanent rights in the lands of Alaska occupied by them by permission of Congress. . . . After conquest they were permitted to occupy portions of territory over which they had previously exercised sovereignty' as we use the term. This is not a property right but amounts to a right of occupancy which the sovereign grants and protects against intrusion by third parties but which right of occupancy may be terminated and such lands fully disposed of . . . without any legally enforceable obligation to compensate the Indians.

" . . . The American people have compassion for the descendants of those Indians who were deprived of their homes and hunting grounds by the drive of civilization. They seek to have the Indians share the benefits of our society as citizens of this nation. Generous provision has been willingly made to allow them to recover from wrongs, as a matter of grace, not because of legal liability.

" . . . The Court of Claims . . . had no evidence that the Russian handling of the Indian land problem differed from ours.

" . . . In the light of the history of Indian relations in this nation, no other course would meet the problem of the growth of the United States except to make Congressional contributions for Indian lands rather than to subject the government to the obligation to pay the value when taken with interest to the Indians of payment. Our conclusion does not uphold harshness as against tenderness toward the Indians, but it leaves with Congress, where it belongs, the policy of Indian gratuities for the termination of Indian occupancy of Government-owned land

rather than making compensation for its value a rigid constitutional principle."

The dissenting opinion stated that the first Organic act for Alaska reserved for future congressional determination the exact nature of Indian rights in these Alaskan lands and that inasmuch as congress had never taken such action the case should be remanded so that a decision could be made as to what actual rights the "title" conveyed (*Tee-Hit-Ton Indians v. U.S.*, 99 L. Ed. 249).

Selective Service.—A draft registrant claimed draft exemption as a conscientious objector. He was tried and found guilty of violating the Selective Service act, although it was an undisputed fact that he was a member of Jehovah's Witnesses, also that he was honest in claiming to be a conscientious objector. But, although he opposed "war in any form," he believed in the use of force in defending his ministry, and said, "I am already in the Army of Christ Jesus, serving as Jesus Christ's appointed commander." The majority of the court ruled that the defendant's willingness to fight and take part in religious conflict did not betray insincerity (*Sicurella v. U.S.*, 348 U.S. 385).

A conscientious objector contended that the failure of the department of justice to furnish him with a full résumé of all the adverse information in his case in the FBI files resulted in invalidating his 1A classification. The supreme court held that he was right, that the department's failure to furnish a résumé invalidated his 1A classification and his conviction for refusing to submit to induction (*Simmons v. U.S.*, 348 U.S. 397).

Another conscientious objector refused to report to the draft authorities after the hearing of his friend where exemption was disposed of adversely. He claimed that his 1A classification was invalid because the appeal board had failed to present him with a copy of the recommendations made by the department. The court held that he was right, although the statute did not provide such defense as was required by implication, that the defendant should receive a copy of the department's recommendation and be given a reasonable opportunity to reply (*Gonzales v. U.S.*, 99 L. Ed. 349).

Wages and Hours.—A sugar producing enterprise in Hawaii which had achieved a high degree of automation, was advised by the supreme court that its employees were covered by the agricultural exemption provisions of the Wages and Hours law. The plantation grew sugar cane and processed it into sugar and molasses. It owned and operated what Justice Tom C. Clark said might be called "the agricultural analogue of the modern industrial assembly line." It employed more than 1,000 persons, almost all at specialized tasks: soil preparation, fertilizing, planting, irrigation and harvesting. It had its own narrow-gauge railroad. It also had a processing plant with modern machinery. Some workers were entirely employed in the farm process; others had no agricultural employment but confined their work to mechanics, electricity and plumbing.

The supreme court held that railroad workers who hauled sugar cane from the fields to the processing plant and moved farm implements and field labourers from place to place were subject to the agricultural exemption. Employees who repaired mechanical equipment used in farming were also covered. Under the terms of the Fair Labor Standards act, employees in the sugar processing plant were not within the exemption, but they were specifically exempted from the overtime provisions of the act. (*Maneja v. Waialua Agricultural Company*, 349 U.S. 254.)

(M. DN.)

United Kingdom Legislation.—During 1955 less legislation of importance was undertaken than in any session since 1945, the general election being held in May, before there was time for the bulk of the legislation before parliament to have taken its course through both houses. The National Insurance act,

OPENING SESSION of the International Court of Justice, The Hague, Neth., Feb. 1955

1954, and the Children and Young Persons (Harmful Publications) act, 1955, were the most noteworthy of the bills to receive the royal assent before the dissolution in May. The former raised the rates of contribution to the national insurance scheme. The latter gave effect to widespread anxiety about a class of publication designed for children and young people and commonly known as "horror comics." The title of the act was "An Act to prevent the dissemination of certain pictorial publications harmful to children and young persons"; and section 1 stated that it applies to any book, magazine or other like work which is of a kind likely to fall into the hands of children or young persons and consists wholly or mainly of stories told in pictures (with or without the addition of written matter), being stories portraying (1) the commission of crimes; or (2) acts of violence or cruelty; or (3) incidents of a horrible or repulsive nature; in such a way that the work as a whole would tend to corrupt a child or young person into whose hands it might fall.

Section 2 rendered liable to imprisonment for a term not exceeding four months, or to a fine not exceeding £100, or to both, "a person who prints, publishes, sells or lets on hire a work to which this act applies, or has any such work in his possession for the purpose of selling or letting it on hire," subject to the defense that he had not examined the work and had no reasonable cause to suspect that it was one to which the act applied. Section 3 empowered a justice to issue a search warrant if satisfied by written information substantiated on oath that any person had in his possession or under his control copies of a work to which the act applied or plates for the purpose of reproducing such a work.

The County Courts act enacted since the opening of the new parliament in June had two main effects: (1) to increase the jurisdiction of county courts; and (2) to provide a right of appeal against findings of fact in county courts in the more important cases. As for the increase of jurisdiction, a financial limit of £400 in actions of contract or tort, or for money recoverable by statute, replaced a limit of £100 which could be raised to £200 if none of the parties objected. This was £100 more than the figure suggested by the committee on the practice and procedure of the supreme court, and it reflected in part the fall in the value of money since the previous limit was fixed in 1938, but also the increased confidence felt in the county court as a tribunal; and it embodied an effort to ensure that the costs of recovering and defending the smaller claims

before reserved for the high court should be proportionate to the issues involved, by means of the less complicated and expensive machinery of the county court. There were proportional extensions of the jurisdiction in other types of proceedings and the most controversial aspect was the extent to which parties bringing actions in the high court that were within the jurisdiction of the county court should be penalized in costs for so doing. Section 1(2) provided that where a party suing in the high court recovered less than £300, he should, with certain exceptions, recover costs only on the county court scale, and if he recovered less than £75 he should not be entitled to any costs of the action. The act also authorized the appointment of up to 20 additional judges to deal with the extended jurisdiction, and extended the powers of registrars.

Commonwealth Legislation.—*Canada.*—The Diplomatic Immunities (Commonwealth Countries) act, 1954 conferred on Commonwealth high commissioners, their official and domestic staffs, and their families, the same immunity from suit and legal process as foreign ambassadors, thus bringing Canada into line with other Commonwealth countries, which, except for Ceylon and Pakistan, had made similar provision. The Export and Import Permits act continued controls over exports and imports, especially in regard to strategic materials.

Australia.—Legislation was in progress, under the title of the South East Asia Collective Defence Treaty act, for the purpose of ratifying the Manila treaty. A measure of constitutional importance was the Australian Antarctic Territory act to provide for an adequate system of law in the Australian Antarctic territory. Previously it had been difficult to state with any precision what laws obtained. Henceforth, the laws from time to time in force in the Australian capital territory were to be applicable, though acts of the Commonwealth parliament were not to apply unless expressly stated to do so.

The Stevedoring Industry bill aroused bitter political controversy. First, it authorized the minister of labour and national service to appoint a committee of inquiry to examine the organization and operation of the waterfront industry. Secondly, it sought to vary the procedure by which men entered the stevedoring industry for employment on the waterfront—i.e., through the Waterside Workers federation.

The Nationality and Citizenship bill sought to simplify and expedite naturalization procedures; there had been more than 1,000,000 immigrants since the end of World War II. The Courts Martial Appeals bill was similar to the U.K. legislation constituting the Courts Martial Appeals court, though in A

lia the court, composed of civilian judges, is essentially part the same system as the courts-martial themselves.

In Queensland the Workers Compensation Amendment acts increased benefits, provided compensation for severe facial injuries, and enabled an injured worker to recover damages at common law and to receive compensation until the court made an award of damages, the compensation to be a first charge against the damages awarded. The Landlord and Tenant Acts Amendment act was passed to protect tenants being exploited by payment of rent charges and from being evicted from premises without an order of the court, by widening the definition of a lease. The Law Reform (Legitimacy of Children of Voidable Marriages) act provided that, where a voidable marriage had been annulled, any child who would have been legitimate had the marriage been dissolved (as distinct from annulled) should be deemed to be legitimate.

The chief feature of contemporary Australian legislation was the gradual freeing of rent controls. In western Australia the Landlord and Tenancies Emergency Provisions Act Amendment prevented control of rents and security from eviction from coming to an end in 1954 and was to remain in force until the end of 1955.

In New South Wales the Landlord and Tenant (Amendment) act freed all new construction of dwellings from rent control and from the control over evictions imposed by the Landlord and Tenant act; it provided that premises previously in existence but not hitherto let were also excluded from control.

The Landlord and Tenant (Control of Rents) Amendment act in South Australia provided that: "(1) business premises within this state are free of control both of rents and evictions; (2) where there is a written lease of a dwellinghouse for a period of two years or more, there is to be freedom of control over both rents and evictions." In Victoria and Tasmania similar legislation was introduced.

The Inquiry Agents Licensing act passed in western Australia dealt with persons who undertake to obtain evidence for reparation for the purposes of divorce or married women's protection cases. Of wider general interest was the Crimes (Amendment) act, which abolished the death penalty for murder and treason, though not for treason, passed in New South Wales.

South Africa.—The main interest of legislative developments in South Africa still turned on giving effect to the government's policy as to the proper relationship between Europeans and non-Europeans. The main effect of the South-West Africa Native Affairs Administration act was to transfer to the minister of native affairs full control over native affairs in this territory. The government spokesmen had to claim: (1) that they had no intention of depriving the territory of native labour for the benefit of the union; (2) that the measure would not enlarge the rights of the union government over land or mineral rights in native areas; and (3) that it had been proposed on the initiative of the representatives of South-West Africa themselves. This measure was criticized as "piecemeal integration" of the territory with the union.

The latest phase in the political battle by which the government was seeking the necessary majority to give effect to the policy of *apartheid* was embodied in the senate bill, which provided three major changes in the constitution of the senate: (1) the alteration of the ratio of seats in the assembly to those in the senate from three to one to two to one; (2) the election of members of the senate by direct vote instead of transferable vote; (3) the abolition of equal representation of the provinces in the senate and the substitution of a system of moral representation of the voters throughout the union.

New Zealand.—The Child Welfare Amendment act (no. 2) supplemented with the Indecent Publications Amendment act and the

Police Offences Amendment act (dealing with the sale of contraceptives to children under 16), reflected public anxiety about the moral education and welfare of the young. The Social Security Amendment act enacted certain increases in benefit consequent upon the Court of Arbitration's award and increased orphans' benefit.

India.—The Hindu Marriage bill was a somewhat revolutionary measure, the main objects of which were: (1) to fix the minimum age of marriage for girls at 15 and for boys at 18; (2) to prohibit polygamy, the wives of polygamous Hindu marriages solemnized before the commencement of the bill being given the choice of divorce; (3) to make new provisions for divorce, judicial separation and alimony. The Constitution (Fourth Amendment) bill (in article 31) further defined the state's power to require and requisition private property.

Pakistan.—Some important constitutional legislation included the Validation of Laws bill, designed to validate 35 out of 44 acts passed at a time when the federal court had held that there was no lawful legislature; the Representation of States and Tribal Areas bill, providing for such representation in the constituent assembly; and the Establishment of West Pakistan bill, including in that province East Bengal and certain other territories. The latter provided for the allocation of seats as between the different communities in each provincial legislature, the Moslems being predominant in both.

Ceylon.—The Hospital Lotteries bill set up a state lottery for the benefit of the hospital services, and the Imports and Exports Control bill made permanent provision for certain economic controls previously set up under defense regulations.

Federation of Rhodesia and Nyasaland.—Two measures for the benefit of children, the Children's Protection and Adoption Amendment act and the Births and Deaths Registration Amendment act, were passed. Of greater importance was the Federal Supreme Court act which set up a federal supreme court despite the fact that Southern Rhodesia has a Roman Dutch system of law, whereas Northern Rhodesia and Nyasaland have English law modified by local statutes. The English law of evidence as at July 1, 1955, was to apply throughout the federation. The Defence act, in part a consolidating measure, was based on legislation in force in Southern and Northern Rhodesia and Nyasaland and on the U.K. Army and Air Force acts. It made six months' peacetime training obligatory on resident Europeans between the ages of 18 and 30, leaving Africans free to volunteer for service as regular soldiers only.

United Kingdom Case Law.—In *Richard Thomas & Baldwins Ltd. v. Cummings* (1955 2 Weekly Law Reports 293) employers were held not to be liable for injuries caused to a workman in helping adjust a machine which should have been fenced if in motion and use, where the machine had been halted for purposes of repair. In *Martell v. Consett Iron Co.* (1955 2 W.L.R. 463) the court of appeal held that the law of maintenance did not prevent an association for the protection of the rights of owners and occupiers of fisheries from supporting an action by members of the association claiming that their fishery was being polluted by effluents from the defendants' ironworks. In *Carmarthenshire County Council v. Lewis* (1955 2 W.L.R. 517) the house of lords held the council to be responsible for an accident caused by a child at a nursery school conducted by the council. The child was left unattended in an emergency and strayed onto a highway, where the plaintiff's husband met his death in trying to avoid hitting him with his truck. In *Morelle Ltd. v. Wakeling* (1955 2 W.L.R. 672) the court of appeal held that transfer of leasehold interests in land to a foreign corporation automatically forfeited those interests to the crown and that the crown was liable on the covenants to the lessees. In *Prince Ernest of Hanover v. Attorney-General* (1955 3

W.L.R. 613) Justice Vaisey refused a declaration that the plaintiff was a British subject by virtue of a statute of 1705 for the naturalization of Princess Sophia "and the issue of her body, and all persons lineally descending from her, born or hereafter to be born." This decision was reversed unanimously by the court of appeal (1955 3 *W.L.R.*) and the crown was granted leave to appeal to the house of lords. In *Attorney-General for New South Wales v. Perpetual Trustee Co.* (1955 2 *W.L.R.* 707) the privy council held that the government of New South Wales, unlike the employer of a domestic servant, could not sue for the loss of the services of a police constable caused by the tortious act of a wrongdoer. In *Bonsor v. Musicians Union* (1955 3 *W.L.R.*) the house of lords, overruling the court of appeal in *Kelly v. National Society of Operative Printers and Assistants* (1915 31 *Times Law Report* 632), held that a trade union, though not an incorporated body, was capable of entering into contracts and of being sued as a legal entity, distinct from its individual members.

The court of criminal appeal ruled in *R. v. Dent* (1955 3 *W.L.R.* 297) that a promise as to future conduct not intended to be kept was not by itself a false pretense. (W. T. WE.)

Lawn Bowling. The annual national tournament of the American Lawn Bowling association was, for the first time, held on nongrass courts, having been played on "marl" courts at Orlando, Fla., Feb. 28–March 5, 1955.

Trebles (Three-Man Teams).—The Rettie Memorial trophy was won by Alex L. Ripley (skip), John Chisholm and Isaac Balmain of the New York Lawn Bowling club. Winners of the Chicago cup were Weston Krupp (skip), Stewart Tulloch and Hugh Burgess of St. Petersburg, Fla. The Wisconsin cup went to Frank C. Wilson (skip), John W. Stewart and J. E. Smith of the London, Ont., Elmwood club.

Doubles.—The California trophy also went to Frank C. Wilson and J. E. Smith of London, Ont. The Lakeside trophy was taken by R. W. Sendker and Jack Stewart from the St. Petersburg, Fla., Lawn Bowling club. The Western New York trophy was carried off by James Candelet and Robert Smart of the Smithfield Ave. Lawn Bowling club, Pawtucket, R.I.

Singles.—Harry Hope of the St. Petersburg, Fla., Lawn Bowling club won the National Open Singles trophy, while the Metropolitan trophy was taken by Frank C. Wilson of the Elmwood club, London, Ont.

The annual meeting of the A.L.B.A.'s national council was held at Orlando prior to the national tournament, when it was decided that the 1956 event should be at Hartford, Conn., Aug. 6–11.

In Canada, for the first time in history, an all-Canadian Championships tournament was played at Hamilton, Ont., Aug. 29–31, with champions in rinks, doubles and singles participating from each Canadian province under round-robin play. The 16th International Match between six selected rinks each from the Ontario association and the A.L.B.A. eastern division was held on Aug. 6, on the green of the Royal Canadian Yacht club at its island home in Lake Ontario, off the city of Toronto. The Canadians won 129–124. (L. PR.)

Laxness, Halldór Kiljan (1902–), Icelandic writer, was born at Reykjavik. April 23. He was awarded the 1955 Nobel prize for literature for

"his vivid epic writing, which has renewed the great narrative art of Iceland." He wrote his first book, a romantic peasant novel, at the age of 17, but his style was still quite impersonal. His youth was spent in a restless searching, a roving life in postwar Europe which led to a monastery in Luxembourg and baptism in the Roman Catholic Church. He remained abroad, in France and America, and during this time the religious commandment to love one's neighbour took on political significance for him when he made the acquaintance of Communism, whose ideas formed a recurrent pattern in his subsequent work. In 1930 he settled down on his native island, where, in quick succession, he completed the mature and important works which laid the foundation of his position as Iceland's leading author: *Salka Valka*, which describes, in vigorous and realistic strokes, life in an Icelandic fishing village with a woman's tragedy as the main theme; *Free Men*, a moving epic about the Icelandic small holder's struggle against nature and the community for his right to exist as a free human being; *The History of Iceland*, which, in graphic scenes, deals with a dark phase of the island's history under Danish rule in the 18th century; *Gerpla*, his most recent work up to 1955, is set in the Viking age and may be regarded as an ironic pastiche on the Icelandic sagas. A regenerator of language, Laxness restored his Icelandic mother tongue as a sensitive instrument for great story telling. (A. L. BR.)

Lead. Data on world smelter production and on the lead industry in the United States, shown in Tables I and II, are based on reports by the U.S. bureau of mines. World output of lead in 1954 increased slightly from that of 1953.

United States.—Lead production in the United States was less in 1954 than in 1953, and supplies continued to be more than ample for demand.

In 1955, subsequent to the strikes at refineries in July, pro-

*Preliminary.

1955 totalled 223,499 short tons and imports were about 285,000 tons.

Canada.—Production of refined lead in the first half of 1955 totalled 78,265 short tons.

Mexico.—Output of lead (metal content) in the first half

55 totalled 111,195 short tons. In March 1955, the Angangued, silver and zinc mine in Michoacan resumed operations after two years' idleness. (See also MINERAL AND METAL PRODUCTION AND PRICES.) (F. E. H.; B. B. M.)

League of Women Voters of the United States: see SOCIETIES AND ASSOCIATIONS, U.S.

Lebanon. Lebanon is an Arab republic bounded west by the Mediterranean, north and east by Syria and south and southeast by Israel. Area: 4,015 sq.mi. Pop. (1954 est.): 83,000 (Lebanese nationals only). Language: Arabic 90%; French, Armenian, Greek, etc. also spoken. Religion: Christian (more than half are Maronites, in communion with the pope); Moslem 44%. Chief towns (pop. 1953 est.): Beirut (p.) 400,000; Tripoli 140,000; Saida 60,000; Zahle 30,000. President of the republic, Camille Shamun. Prime ministers in 1955: Sami Solh and (from Sept. 19) Rashid Karamah.

History.—In Jan. 1955 the Turkish prime minister, Adnan Menderes, visited Beirut and invited Lebanon to join the Turco-Iraqi pact. He stressed that Israel was excluded and that he hoped to conclude trade agreements with all Arab states. Lebanon, however, refused to contemplate independent action outside the Arab league and offered its mediation between Egypt and Iraq. But when Egypt later invited Lebanon to join the new Arab Security treaty and the proposed Egyptian-Syrian agreement, the Lebanese government only gave assurances that it would conclude no separate peace with Israel. It stated that it preferred to remain neutral between the Egyptians and the Syrians. Nevertheless, after the official visit of the Lebanese president, Camille Shamur, to Turkey in April, the Saudi Arabian government threatened reprisals if Lebanon continued to try to draw Syria and Jordan into the Turco-Iraqi treaty.

In August there was a country-wide strike in protest against French action in Morocco.

In September the prime minister, Sami Solh, resigned following a cabinet crisis over his domestic policy. He was succeeded by Rashid Karamah.

In August the International Bank for Reconstruction and Development sanctioned a loan of \$27,000,000 for the Litani river project; but later Lebanon rejected Eric Johnston's plans for joint Syrian, Jordan, Lebanese and Israeli exploitation of the river water. In September the government decided that modifications to meet its demand for the reservation of Lebanese power within the country must be referred to the Arab league. See A. H. Hourani, *Syria and Lebanon: a Political Essay* (London, 1954; O. M. T.).

Education.—(1952) Government schools: primary 1,017, pupils 92,764; secondary 3, pupils 250; vocational 8, pupils 1,200; 1 teachers' training college, students 29. Private schools, all grades: 818, pupils 55,000; foreign schools 230, pupils 30,000. Institutions of higher education 6, including 3 universities with 3,537 students in 1953 (about 850 students in remaining institutions).

Finance and Banking.—Monetary unit: Lebanese pound, with a free exchange rate of L.L. 3.23 to the U.S. \$1. Budget (1954 est.): balanced at \$123,400,000. Currency circulation (Feb. 1955) L.L. 247,000,000; in 1954, L.L. 223,000,000. Bank deposits (Dec. 1954) L.L. 366,000,000. (June 1954, L.L. 334,000,000). Gold and foreign exchange (July 1954) \$75,380,000, (July 1955, \$83,410,000).

Foreign Trade.—(1954) Imports L.L. 484,400,000; exports L.L. 105,000,000. Main sources of imports: Syria 22%; U.K. 18%; other continental E.P.U. (European Payments union countries) 19%; U.S. and Canada 15%; France 8%; main destinations of exports: Syria 14%; U.S. and Canada 6%; U.K. 4%; France 4%; other continental E.P.U. 1%; Saudi Arabia (11% in 1953); Egypt (7% in 1953). Main exports (1954): citrus fruit, apples and bananas 15.8%; pulses 9.7%; onions 9%; textiles (1953) 9%.

Transport and Communications.—Roads (1949) 2,464 km. Motor vehicles in use (Dec. 1953): cars 16,658, commercial vehicles 4,186. Railways: (1954) Syria-Lebanon routes 774 km., of which 191 km. owned by the Lebanese government. Telephones (Jan. 1954): 24,368. Radio receivers (1954): 52,021.

Agriculture.—Main crops (metric tons, 1954): wheat 60,000; lentils 10,000; olive oil 6,000; grapes 80,000; figs 20,000; onions (exports) 28,000; bananas (exports) 6,275, (production, 1952) 17,000; (1953), oranges, etc. 65,000; lemons, etc. 35,000; (1952), broad beans 7,000;

chick-peas 2,000; dry beans 5,000; raisins (1951) 1,000. Livestock: (1954 est.) cattle 25,000; sheep 20,000; horses, mules and asses 40,000; goats 500,000.

Industry.—Production (metric tons, 1953): cotton yarn 3,000; cotton fabrics 1,700; rayon fabrics 2,200,000 metres; woollen fabrics 350,000 metres; electricity 164,000,000 kw.hr.; cement (1954) 325,800 metric tons.

Leeward Islands. This British colony is composed of four presidencies, a group of islands forming the northern part of the Lesser Antilles in the Caribbean. Their areas, populations and capital cities are:

Presidency	Area (sq.mi.)	Population (1946 census)	Population (1954 est.)	Capital (pop., 1954 est.)
Antigua	170*	41,757	50,908	St. John's† 12,500
St. Kitts-Nevis-Anguilla	153‡	46,243	53,598	Basseterre 14,000
Montserrat	32	14,333	14,145	Plymouth 2,500
British Virgin Islands	67	6,505	7,630	Road Town 1,000
	422	108,838	126,281	

*Incl. Barbuda (62 sq.mi.), Redonda (0.5 sq.mi.), dependencies. †Seat of governor. ‡Properly St. Christopher. §Incl. Sombrero, dependency.

Population, mainly Negro. Language: English. Religion: Christian. Governor in 1955, Sir Kenneth Blackburne; administrators, Lieut. Col. A. Lovelace (Antigua), H. Burrowes (St. Kitts); commissioners, C. Ross (Montserrat), Lieut. Col. Hon. H. A. C. Howard (Virgin Islands).

History.—Princess Margaret visited Antigua and St. Kitts in Feb. 1955.

In Antigua drought conditions persisted to some extent until midyear and sugar output totalled only 19,725 tons. In St. Kitts-Nevis production rose to 49,356 tons. Nevertheless, in Antigua a record sea-island cotton crop was reaped totalling 1,208,814 lb. clean lint, and about 462,500 lb. clean lint were produced in Nevis. The cotton crop in Montserrat fell to 254,600 lb., weather and other conditions precluding the picking of a second crop. Exports of cattle from the Virgin Islands increased during 1955 but exports of small stock decreased.

It was announced late in 1954 that the federation of the Lee-

L. J. ALFONSO, police captain, Antigua, leading cheers as Princess Margaret Rose of Great Britain was welcomed to a children's rally on the island Feb. 14, 1955

ward Islands constituted in 1871 would be brought to an end (probably in 1956) and that the ministerial system of government would be introduced in Antigua and St. Kitts-Nevis-Anguilla. General elections were held in Montserrat in March, all five constituencies returning Labour members.

Hurricane "Alice" struck Anguilla in January, causing much damage to shipping and housing. There was a steady stream of emigrants to the United Kingdom during 1955. (P. D. Md.)

Education.—Schools (1953); pupils in parentheses:

	Primary	Secondary
Antigua	37 (10,574)	5 (2,496)
St. Kitts-Nevis-Anguilla	33 (10,339)	4 (805)
Montserrat	14* (3,296)	1* (144)
Virgin Islands	13* (1,826)	1* (119)

*1952.

A teachers' training college for women at Antigua (33 students in 1953) and the University college of the West Indies, Jamaica, serve all the Leeward Islands.

Finance and Trade.—Monetary unit: British West Indian dollar, valued in 1955 at 58.33 cents U.S.

	Budget (1953 actual)		Foreign trade 1954
	Revenue	Expenditure	
Antigua	£1,173,000	£1,173,000	Imports
St. Kitts-Nevis-Anguilla	£904,000	£925,000	£3,260,000
Montserrat	£177,097	£175,507	Exports
Virgin Islands	£118,000	£119,000	£2,600,000

Antigua, Montserrat and the Virgin Is. received in 1953 from the U.K. government grants-in-aid of administration, which are included under revenue.

Principal exports (1954): sugar (Antigua) 11,100 long tons, (St. Kitts) 47,000 long tons (production, all islands 73,815 long tons); sea island cotton 1,170,000 lb. Other products: molasses, tomatoes, salt, limes and fruits. Main destination of exports: U.K.; main source of imports: U.K. and other Commonwealth countries.

Lemons: see FRUIT.

Leukemia: see BLOOD, DISEASES OF THE.

Liberia. Liberia lies on the southwest coast of Africa and is bounded by Sierra Leone (British) and the French overseas territories of the Ivory Coast and Guinea. It is one of the continent's five independent countries and its only republic. It has an area of approximately 43,000 sq.mi. and a population estimated at about 1,250,000 in 1954. The capital and largest city, Monrovia (pop. 45,000 estimated in 1955), has a modern port and an international airport about 50 mi. away.

English is the official language, but most of the tribes continue to speak their own languages and dialects of which there are about 25. Although paganism still exists, many of the tribesmen are Christians as a result of the extensive missionary efforts. Islam is reputedly making inroads, particularly in the north.

President in 1955: William V. S. Tubman.

History.—In May 1955 Pres. William V. S. Tubman, as the candidate for the True Whig party, was re-elected for a third term by a majority of 99.5% of the vote; his opponent was Edwin Barclay, a former president, who ran as a candidate of a newly organized Independent True Whig party. The opposition to President Tubman was critical of his "open door" policy with regard to foreign investments and his internal "unification" policy. On June 22 an unsuccessful attempt on the president's life was made at an official reception and, subsequently, leaders of the Independent True Whig party, but not Barclay, were arrested. Barclay unsuccessfully contested the re-election of President Tubman by an appeal to the legislature, which met in extraordinary session.

In Jan. 1955 the government obtained a \$15,000,000 loan from the Export-Import Bank of Washington, D.C., for continued development of its highway network.

In addition to the Liberian government's economic development plan, foreign investors continued to show interest in Liberia and development work by several significant concession-

aires started during 1955. Although private investment in United States firms remained paramount, private Swedish, German and Swiss investments were also made. (A. J. Dr.)

Education.—On Dec. 31, 1953, Liberia had 484 schools, of which 24 were government elementary schools, 150 mission elementary schools, philanthropic and private schools, 14 schools maintained by Firestone Plantations company, 5 government and 10 mission high schools. There were also two colleges and one university. School enrolment totalled about 43,000 in 1954.

Finance.—The monetary unit is the U.S. dollar supplemented by Liberian fractional coins. Actual revenue in 1954 was \$11,923,585; expenditure, \$14,006,150. The 1955 budget estimated expenditure at \$12,796,400. The public debt, external and internal, totalled \$6,342,483 on Dec. 31, 1954.

Trade and Communications.—Exports in 1954 totalled \$26,378,100; imports, \$22,723,500. Leading exports were rubber (71%), iron ore (17%), palm kernels (4%) and cacao (2%). Leading customers were the U.S. (84%), the Netherlands (7%), the U.K. (3%) and western Germany (3%); leading suppliers, the U.S. (67%), the U.K. (10%), the Netherlands (7%) and western Germany (7%).

There are 39 mi. of private railway and about 720 mi. of roads. Jan. 1, 1955, there were 1,418 automobiles and 1,349 trucks and Jan. 1, 1954, 487 telephones, all in Monrovia. According to *Lloyd's Register of Shipping*, 245 vessels (100 tons and more) aggregating 2,381,000 gross tons were registered under the Liberian flag on June 30, 1954.

Production.—Agricultural exports in 1954 included rubber 80,947 lb.; palm kernels 24,725,300 lb.; cacao 1,164,200 lb.; coffee 601,400 lb. piassava 3,639,100 lb. In that year 1,238,521 long tons of iron ore were exported. (J. W. Mw.)

Libraries. In the most spectacular library event of the year in the United States, 98 bookmobiles set out to carry library service to the rural areas of Kentucky. This campaign climaxed an 18-month campaign to raise funds for trucks and to collect books, characterized by generous offers of volunteer help and donations of 600,000 volumes. Begun with such enthusiasm, the project promised some library service to 40% of Kentuckians who had been without libraries.

Elsewhere librarians gathered political allies in traditional attempts to secure state and federal appropriations for extending public library service to unserved areas. On the third day of the 84th congress, Sen. Lister Hill of Alabama again presented his Library Services bill, with the joint sponsorship of 12 other senators. Shortly thereafter 27 representatives introduced identical bills in the house.

The bill aimed to make \$7,500,000 of federal funds available yearly for five years to state library extension agencies on a basic and matched grant basis for extending public library service to unserved or inadequately served rural areas. It featured a new definition of a rural area as being an incorporated or unincorporated place of 10,000 or less population. Any state extension agency could qualify for a grant upon the submission of an acceptable plan to the U.S. commissioner of education if it had not currently reduced its own extension budget. Hearings before the house labour and education committee resulted in a 20 to 9 vote to report out of committee H.R. 2840 sponsored by Rep. Edith Green of Oregon. This was the first time a library services bill had reached the floor of congress since 1950 when the house rejected a similar bill by three votes.

Adult education forces organized to act on the reports and discussions of 1954. The American Library association received a grant of \$200,000 from the Fund for Adult Education to pilot long-term education programs in libraries. State library agencies in Kansas, Maryland, Michigan and Tennessee were awarded two-year grants from the fund to help them develop long-term adult education programs based on analysis of community needs. The Brooklyn Public library, Brooklyn, N.Y., received an \$80,000 grant from the Carnegie corporation to conduct a five-year program for the improvement of adult reading.

Acquisitions of Materials.—The microfilm duplication of the Vatican library holdings for the library of St. Louis university, St. Louis, Mo., proceeded and the university began a campaign for \$4,500,000 to erect a new library building to house the collection. Another microphotographic effort at the Uni-

of Rochester, N.Y., aimed to make a comprehensive micro-collection of Canadiana.

collections of the private and official papers of noted Americans continued to make news. The papers of four generations of the Adams family at Quincy, Mass., were placed at the disposal of scholars to be edited and published and microfilmed in research libraries. Ground was broken for the Harry S. Truman library to house the papers of the former president. The papers of Franklin D. Roosevelt as governor of New York were turned over to the New York State library which in return microfilm copies placed them on permanent loan at the Roosevelt library at Hyde Park, N.Y. Among the notable additions to the collections of the Library of Congress were 27,000 papers of Clara Barton. The University of California at Berkeley added to its leading Mark Twain collection the recently discovered Anita Moffit papers.

Libraries throughout the country reported the acquisition of important single items and of whole collections. The purchase by the University of Kansas, Lawrence, of several thousand books on economics and sociology and by the University of Miami, Coral Gables, Fla., of the 20,000-volume library of the Society of Western Engineers from the John Crerar library, Chicago, Ill., were not only important additions to those libraries but also illustrated the narrowed collecting policies of Crerar. Other reported acquisitions worthy of mention were: the Sigurd Romberg collection of 4,000 vocal scores, University of California, Berkeley; the Charles Driscoll collection of 1,200 books on piracy, Wichita (Kan.) City library; 130,000 photographs of Spanish and British documents about Florida, University of Florida, Gainesville; 11,000 Spanish plays, Northwestern University, Evanston, Ill.; the Felix H. Kuntz collection on Louisiana, Tulane university, New Orleans, La.; and the Chauncey H. Griffith typographical collection, University of Kentucky, Lexington.

Attention was turned to the collections of liberal arts collections by an award of \$30,000 made by the United States Steel Foundation to the Association of College and Research Libraries. Subgrants to college libraries to strengthen their collections. The Old Dominion foundation donated 1,600 of the 54-volume set of *Great Books of the Western World* to be awarded by A.L.A. to qualified libraries.

Appointments.—America's largest public library acquired a new head during the year. Appointed director of the New York Public library was Edward Freehafer (succeeded as chief, reference department, by Rutherford D. Rogers). Raymond C. Quist was appointed director at Cleveland, O. Other new appointments were: Ernest I. Miller, Cincinnati and Hamilton counties, Ohio; James D. Meeks, Dallas, Tex.; C. Lamar Willis, Richmond, Va.; and Robert D. Franklin, Toledo, O.

Kenneth M. Setton became the director of the University of Pennsylvania (Philadelphia) libraries. Other university libraries reporting new heads were: Baylor, Waco, Tex., Roscoe Rouse; Louisiana State, Baton Rouge, Sidney B. Smith; North Carolina State, Grand Forks, J. R. Ashton; Pittsburgh, Pa., Lorena A. Koch; Richmond, Va., Ray Frantz; Southern Illinois, Carbondale, Ralph McCoy; and Vermont, Burlington, Morrison C. Giland. Foster Mohrhardt became librarian of the U.S. department of agriculture. James T. Dunn went to the Minnesota Historical Society library.

Luiz Borba Alvaes de Moraes assumed directorship of the United Nations library.

Awards and Citations.—Award winners indicate the qualifications and achievements valued in American librarianship in 1955.

\$500 Lippincott award for distinguished service went to William Greenaway, director, Philadelphia (Pa.) Free library, for his achievements in reorganizing, building the staff and

MODERN BRICK AND GLASS library opened in Cincinnati, O., in 1955

improving the services of his institution. The Melvil Dewey medal for creative professional achievement was awarded to Maurice F. Tauber, Melvil Dewey professor at the Columbia university school of library service, with special citation to his book on *Technical Services in Libraries* and to his editorship of *College and Research Libraries*. The Kentucky library extension division won the \$100 Letter Library award for humanitarian achievement for its bookmobile project. Helen Margaret Harris, librarian of the Lawson McGhee library, Knoxville, Tenn., received the \$100 Letter Librarian award for the warm, outgoing and courageous manner in which she had served the profession in a wide variety of library positions and in important library association activities.

Restricted awards were as follows: \$500 Grolier society award, Mrs. Charlemae Rollins, children's librarian, Chicago (Ill.) Public library, who, according to her citation, "has led thousands of children to read good books" and "has inspired and encouraged many authors to write better books for children"; the Margaret Mann citation for outstanding achievement in cataloging, Seymour Lubetzky, consultant on bibliographic and cataloging policy, Library of Congress, for his revision of cataloging rules; the Oberley Memorial fund award, biennially for the best bibliography of agriculture and related sciences, Arthur and Elizabeth Roe, Pennsylvania State university, University Park, for their *Distillation Literature, Index and Abstracts 1946-52*; the \$1,000 E. P. Dutton-John Macrae award, for advanced study in the field of library work for children and young people, Mrs. Barbara Davis Widem for her proposal to study at the graduate library school, The University of Chicago, focusing research on the role of the children's library consultant in the state library agency; Trustee citations, Ralph D. Remley, Montgomery county library board, Rockville, Md., with special reference to his share in framing the Maryland county library law and his work on library personnel classification, and Mrs. George Rodney Wallace, Fitchburg, Mass., library board, with special mention of her leadership in giving Fitchburg a nationally famous youth library.

The Newbery medal for the outstanding children's book of the year went to Meindert DeJong for *The Wheel on the School*. Marcia Brown received the Caldecott medal awarded to the best illustrated children's book for her *Cinderella*. The Association of Young People's Librarians received the annual Norman Bassett foundation award of \$1,000.

Intellectual Freedom.—Attention turned to censorship in school libraries when a national television program, "See It Now," produced by Edward R. Murrow, shed light on the circumstances surrounding the withdrawal of books from school

libraries in Los Angeles, Calif., and revealed the pressures put on school librarians. At the Philadelphia conference the Association of School Librarians adopted a statement of a "School Library Bill of Rights." The school librarians expressed their concern with the development of responsible citizens in the great American tradition and asserted their responsibility for providing materials for enriching the curriculum, stimulating intellectual growth, supplying background information, shedding light on controversial issues and interpreting the diverse cultural backgrounds of Americans, all without prejudice and according to high principles. The A.L.A. council endorsed the stand.

The Committee on Intellectual Freedom received a grant from the Fund for the Republic to permit it to widen its scope in battling the still considerable forces attacking libraries' freedom of book selection.

Postal authorities replied to complaints from research libraries about the censoring, delaying and withholding of foreign purchases that they were operating under the authority of the 1940 Foreign Agents Registration act and invited research libraries to apply for the privilege of exemption from the censorship of foreign propaganda.

Library Education.—American libraries and library schools were selected by the U.S. department of state to carry out a project in international education. Twenty-seven experienced foreign librarians were brought to the United States for a five-month program of study and observation lasting from February to July. The program, planned jointly by the international educational exchange service of the department of state and the International Relations board of the A.L.A., included a week of orientation in Washington, D.C., a three-week seminar at a library school, a three-month internship in a selected library and a month for touring American libraries. Fifteen public librarians, mostly from European countries, participated in the preliminary seminar at the library school of Simmons college, Boston, Mass. Twelve university librarians from India participated in the seminar at the graduate library school, The University of Chicago. The Indian librarians were the first educational beneficiaries of the India Wheat Loan act and their program of studies was being carefully studied by the department of state.

On the domestic scene the library schools continued their efforts to supply qualified candidates for the positions opening in rapidly expanding libraries. Although there was a slight increase of enrolment in the schools, the best efforts of the educators still were not able to meet the demands for librarians, in some schools the requests for candidates running as high as 15 times the number of graduates available. This continuing crucial situation had resulted in some increase in average beginning salaries for librarians, but had not brought forth any radical new plans of library education, training or job classification.

Some significant developments occurred in the programs of instruction in library schools. Western Reserve university, Cleveland, O., announced the establishment of a centre for documentation research with a manifold program of conducting research, offering contract service to organizations, publicizing developments, offering workshops and conducting classes and seminars.

(See also AMERICAN LIBRARY ASSOCIATION; SOCIETIES AND ASSOCIATIONS, U.S.) (H. W. WR.)

International.—The event of 1955 was the International Congress of Libraries and Documentation Centres, which, with a number of allied meetings held at the same period, brought together more than 1,200 librarians and documentalists in Brussels, Belg., during the second and third weeks of September. The congress gave a positive impetus to the co-ordination

of the specialized work of the various international bodies, urged that there should be constant consultation at all levels between public and other kinds of libraries and passed a resolution emphasizing the responsibility of public authorities to organize national library services systematically. In bibliography, the congress recommended that the United Nations and its specialized agencies should assume leadership in the co-ordination of subject bibliography within their respective sub-fields.

The third International Congress of Libraries was organized by the International Federation of Library Associations. Among the subjects treated were: the international exchange of publications, with special reference to the proposal of the United Nations Educational, Scientific and Cultural Organization (UNESCO) to organize in 1956 a meeting of experts to consider the possible revision of the Brussels convention of 1886; the special problems of large national and research libraries; public library questions, including work with reading the use of audiovisual materials and libraries for children, hospitals and the blind.

The 22nd International Conference on Documentation, organized by the International Federation for Documentation, discussed among other things the exchange of information, professional training and the influence of documentation on productivity. Revision of the universal decimal classification was continued. The development was urged of specialized courses for training in documentation methods in all countries.

A new association, the International Association of Agricultural Librarians and Documentalists, was constituted and medical librarians decided to form their own association on similar lines.

The fourth International Congress of Music Libraries studied the training and status of music librarians and a number of special problems connected with libraries of recorded music and the music libraries of broadcasting organizations.

At the conclusion of this series of meetings at Brussels a meeting was held of the bibliographical group of the documentation committee of the International Organization for Standardization.

The program of UNESCO for the period 1955-56 developed and extended the work of previous years. The system of "associated projects," by which a small number of important public libraries and library schools doing pioneer work in their fields received support from UNESCO, was enlarged to include national and academic libraries and bibliographical and exchange centres. This system was designed to collect and make generally available the results of significant experimental work which UNESCO might be able to assist by small grants or advice; among more important institutions already in the scheme in 1955 were the Delhi (Ind.) Public library and the International Youth library at Munich, Ger.

The International Advisory Committee on Bibliography, at a meeting in UNESCO house, Paris, Fr., on June 13-17, discussed major questions of policy relating to the whole of UNESCO's future bibliographical programs. It recommended increased co-operation to member states in the establishment of national bibliographical services, the co-ordination of national services and the provision where practicable of regional ones and the holding in 1957-1958 of a seminar to study national library organization and work. Reaffirming its conviction that UNESCO should commission and publish bibliographies itself only when no other means existed, the committee put forward criteria to guide UNESCO in its choice of publications or organizations to be supported. The steadily developing system of granting contracts or conventions wherever possible to compilers or associations for subject bibliographies would leave only such work as involved

cial factors of international or regional co-operation, together with bibliographical publications necessary for UNESCO's own work, to be done by UNESCO. The committee also suggested methods of improving the international character of specialized bibliographies published with UNESCO support and recommended the preparation of a special study on the principles and techniques governing the preparation of international specialized bibliographies.

UNESCO organized a seminar on public library development in Asia at the Delhi Public library, Oct. 6–26, to which representatives of 19 countries and territories in Asia and the Pacific were invited.

Important changes were made in the arrangements for the international exchange of publications. From January, national exchange centres in 16 countries took over from UNESCO the "main responsibility" for supplying information on international exchanges within the countries concerned, and further countries were to be added as soon as their national centres were ready to undertake this work. Moreover, the World Health Organization (WHO) in Geneva, Switz., relieved UNESCO of the task of providing a central information service on exchanges for medical libraries. Toward the end of the year preparations were being made in co-operation with the Organization of American States for a conference to be held at Havana, Cuba, in 1956 on problems of international exchange in Latin America and between that region and other parts of the world.

With a view to the ultimate establishment of bibliographical machinery for the location of educational documentation in all countries, UNESCO carried out a survey of national centres of educational documentation, including pedagogical museums as well as libraries. It concluded an agreement with Egypt for the establishment with UNESCO's assistance of an archaeological documentation centre in Cairo. UNESCO and WHO jointly entered a contract to the Council for International Organizations of Medical Sciences for the preparation of a bibliography of international medical congresses. In both natural and social sciences, particular attention was devoted by UNESCO to questions of terminology and translation. The first volume (*National Standards*) appeared of Eugen Wüster's *Bibliography of Monolingual Scientific and Technical Glossaries* (Paris, UNESCO). (F. L. K.)

The study of the revision of cataloguing practices was carried a step further by the formation by the International Federation of Library Associations of an international committee to study the standardization of cataloguing rules. Committees had already been at work for some years in Austria, the German Democratic Republic, the German Federal Republic, Japan, Poland and elsewhere—as well as in the United States—and the *UNESCO Bulletin for Libraries* published accounts of the work of these bodies from time to time during 1955. A preliminary report was in preparation by the I.F.L.A. committee for issue at the end of the year.

Libya. A federal kingdom in North Africa, Libya is bounded north by the Mediterranean, west by Tunisia and Algeria, south by French West Africa and French Equatorial Africa and east by Egypt and Sudan. Area: 679,358 sq.mi. Pop. (54 census): 1,091,830, Berbers, with Arab admixture. Language: Arabic. Religion: mainly Moslem. Capitals (pop., 1950): Tripoli 144,616; Benghazi 59,087. King, Idris I. Prime Minister in 1955, Mustafa ben Halim.

History.—Ahmed Muhiddin el-Senussi, a 20-year-old nephew of Queen Fatima, who on Oct. 5, 1954, shot dead Ibrahim Ned el-Shalhi, minister for palace affairs, was tried and hanged on Feb. 7, 1955, at the Benghazi central prison. It was Shalhi who arranged Idris' marriage with Aliya Abdel-Lamun, daughter of a Libyan chief, long domiciled in

Egypt. Idris had married Fatima in 1935. A son born to them died in infancy. When in Dec. 1950 Idris became king of Libya he was childless. In 1953 he appointed heir presumptive his younger brother, Amir Mohammed Rida el-Mahdi el-Senussi, until such time as a son should be born to him. On June 5, 1955, in Cairo, Idris married Aliya. In September both his wives, Fatima and Aliya, told the king within days of each other that they were to be mothers. Mohammed Rida died at Tripoli on July 29, aged 65.

A Franco-Libyan treaty of friendship was signed at Tripoli on Aug. 10. Under the treaty France retained aircraft landing rights in the Fezzan at Ghatt, Ghadamès and Sebha, as well as transit facilities for its ground forces, but the French garrisons totalling 400 men were to be withdrawn by the end of the year.

On Sept. 24, in Cairo, the Soviet and Libyan ambassadors to Egypt signed a protocol in view of establishing diplomatic relations between the two countries of ambassadorial rank.

Education.—Schools (1954–55). *Tripolitania*: primary 196, pupils 34,142, teachers 1,172; secondary 4, pupils 1,756, teachers 135; vocational 2, pupils 348, teachers 38; teachers' training colleges 2, students 798, teachers 35. *Cyrenaica*: primary 94, pupils 20,232, teachers 573; secondary 3, pupils 427, teachers 49; vocational 3, pupils 134, teachers 26; teachers' training colleges 2, students 71, teachers 14. *Fezzan*: primary 27, pupils 2,008, teachers 57.

Finance.—Monetary unit: Libyan pound, at par with sterling, divided into 100 piastres. Budget (1954–55; 1955–56 est. in parentheses): balanced at £6,214,545 (£9,816,405). Currency circulation (1954): £4,375,000. Bank deposits (1954 est.) £7,000,000.

Foreign Trade.—(1953; 1954 in parentheses): imports £13,207,030 (£11,250,671); exports £3,482,870 (£3,856,791). Main imports: foodstuffs and tobacco £2,792,463 (£3,246,168), textiles, petroleum products, agricultural machinery, motor vehicles. Main exports: esparto £455,723 (£610,383), scrap metal, peanuts, tunny, livestock, wool.

Liechtenstein. Liechtenstein is an independent principality lying between Switzerland and Austria, united with Switzerland by customs union. Area: 61 sq.mi. Pop.: (Dec. 1950 census) 13,735; (1954 est.) 14,000. Language: German. Religion: Roman Catholic. Capital, Vaduz, pop. (Dec. 1950) 2,735. Sovereign prince, Franz-Josef II; minister president in 1955, Alexander Frick.

History.—Prince Aloys von und zu Liechtenstein, father of the present ruler, died at Vaduz on March 16, 1955. Born on June 17, 1869, he married on April 20, 1903, Archduchess Elizabeth-Amelia, a niece of Emperor Francis-Joseph.

Education.—Schools (1954–55): primary 14, pupils 1,918, teachers 55; secondary 4, pupils 408, teachers 29.

Finance.—Included since Jan. 1924 in the Swiss customs union, Liechtenstein uses Swiss currency. In 1955 the franc was valued at 23.3 cents U.S. Budget (1954 actual; 1955 est. in parentheses): revenue 5,515,374.80 Fr. (6,878,450 Fr.); expenditure 5,612,662.88 Fr. (7,749,740 Fr.). Public debt (Dec. 31, 1954): 9,472,920.75 Fr.

Agriculture.—Chief products: corn, potatoes, fruit, wine, vegetables. Livestock (1955): cattle 5,548; sheep 804; horses 295; pigs 3,635; goats 770; chickens 33,002.

Industry.—Cotton weaving and spinning, artificial teeth, pottery, hardware, machinery, sausage cases.

Life Statistics: see BIRTH STATISTICS; CENSUS DATA, U.S.; DEATH STATISTICS; INFANT MORTALITY; SUICIDE STATISTICS.

Limes: see FRUIT.

Linen and Flax. There was a slight increase in world flax acreage and flax production in 1954, reversing a long decline. The over-all increase was about 3% over 1953, although there was a sharp decline in both Northern Ireland and the Republic of Ireland. Belgium continued to be the principal source of flax for other markets, exporting in 1954 a total of 68,137,000 kg. or 16% more than in 1953.

Following the wide fluctuations of previous years, prices of flax and linen were more stable and, in fact, were firming up.

Table I, prepared from data supplied by the ministry of commerce of Northern Ireland, reflects this situation.

Table I.—Index of Flax and Linen Prices,
Northern Ireland

Year	Index of average price of flax imported into Northern Ireland	Index of average price of linen goods exported from Northern Ireland
1948	100.0	100.0
1949	88.8	100.1
1950	100.0	94.2
1951	148.0	114.1
1952	113.0	122.5
1953	96.3	103.7
1954	99.6	102.9

It should be noted however, that labour costs entering into linen production had risen continuously.

United States.—Flax production in the United States continued to be almost entirely for seed (oil) purposes and there was no linen manufacture except for some relatively minor weaving of imported linen yarn.

Imports of all types of linen goods into the United States in 1954 totalled \$31,779,000. Of this, the United Kingdom, principally Northern Ireland, accounted for more than two-thirds. It should be noted that a substantial portion of the handkerchiefs and embroidered linens received from Madeira, the Philippines and other countries were hemmed and embroidered on Irish linen.

The U.S. is the most important market for Irish linen, taking an average of almost 40% of Irish linen exports. In specific items such as damask tablecloths, piece goods and handkerchiefs, the U.S. takes more than 60% of the total value of Irish linen exports.

Belgium ranked second in supplying the United States market, although most of its volume was concentrated in the woven dress and piece-goods category. After a careful study of the position of Belgian linen in the U.S. market, the Belgian linen trade concluded that the advertising and promotional activities of the Irish Linen guild, which had been carried on for several years, were a major reason for the pre-eminent reputation of Irish linen in the United States. Accordingly they announced in 1955 the inauguration of a similar campaign on behalf of Belgian linen.

It was also announced that a concerted effort would be made to improve and maintain quality standards of Belgian linen exported to the United States.

Of particular significance in the United States market during 1955 was the increased activity of Japanese textile manufacturers, not only in flax and ramie products, but also in other fabrics competitive with linen.

Linen consumption in the United States in 1954, although less than in 1951, equalled that of 1953. It was expected that the 1955 volume would be at least as great as that of 1954. Linen for apparel uses was increasing; household linens maintained their position, while damask table linens were recovering after a period of decline; handkerchiefs declined.

During 1955 there was a small beginning in experimental blending of linen with other fibres.

(J. R.L.)

Liquors, Alcoholic. The distilled beverage industry of the United States experienced during the year 1955 a further aggravation of two problems which had been developing over a number of years.

Sales and distribution of illegal whisky and other spirits have been increasing to the detriment of the legal trade. While the number of illegal stills seized by the authorities during 1955 was officially given at about 12,500, an increase of nearly 100% over 1954, competent observers believed that more than double this number were actually in operation. The belief within the industry was that an efficient remedy for the situation could be obtained by a reduction in the excise tax which stood at \$10.50 per proof gallon. Automatic reduction of

tax to \$9, under an existing law, was cancelled by congress in April 1955, and an extension of the higher tax was voted in April 1956.

The other problem situation was that large quantities of U.S. whisky produced during the years of 1948 to 1950 would be "forced out of bond" during 1956 and the years following through the requirement of the law that the tax on U.S. whisky reaching the age of 8 years must be paid irrespective of whether or not any of it has been sold. Many units of the industry, especially smaller ones, found themselves unable to raise the capital required for such payments.

By 1955 all but 2 of the 48 states (Mississippi and Oklahoma) had legalized the sale of distilled spirits. Certain of

46 legal-sale states, however, permit individual localities to prohibit liquor sale where voters of the community elect. Thus, about 16.2% of the U.S. population lives in areas.

In 1955 the 206 distilling plants, 55 rectifying plants, 1,500 wholesaling plants, and nearly 200,000 retail outlets in the U.S. provided employment for an estimated 100,000 persons with annual

is estimated at about \$1,900,000,000.

During fiscal 1955 the federal government realized more than \$1,800,000,000 in spirits revenues. In addition, state and local governments collected more than \$560,000,000 from the manufacture and sale of distilled spirits.

During fiscal 1955, 182,190,281 gal. of distilled spirits were produced in beverage distilleries, a decrease of 1.5% from the output in fiscal 1954. Included were 103,900,000 gal. of whisky and 53,300,000 gal. of neutral spirits, marking an increase of 1% in whisky production and a drop of 11.7% in neutral spirits output from 1954.

Total domestic bottled output in fiscal 1955 amounted to 138,999,660 gal., of which whiskies accounted for 138,999,660 gal. This was a drop in total spirits bottlings of 0.3% from fiscal 1954, and a drop in whisky bottlings of 1.6%. Bottled output of vodka, gin, and rum rose between 42% and 92%. The output of vodka rose even more sharply, the 4,600,000 gal. bottled in fiscal 1955 being 43.8% greater than in fiscal 1954 and more than four times the output in 1951, the first year in which the item was reported separately from other types of spirits.

Consumer preferences had undergone a marked change insofar as types of whisky were concerned. In the early years after Prohibition in 1933, straight and bonded whiskies accounted for 60% to 70% of all whiskies bottled. This trend later reversed itself, and during the three-year period preceding the Korean war, blends and straights represented only about 16.5% of all whisky bottled. By 1955, however, blends and straights had gained so much that they constituted 41% of whisky bottlings while the blends alone declined to 59%.

During fiscal 1955 total bottled imports amounted to 23,106,060 gal., marking a slight increase (0.5%) over fiscal 1954. Scotch and Canadian whiskies accounted for 88.2% of total bottled imports, they constituted the bulk of United States rum consumption. During fiscal 1955, 1,584,817 gal. were imported, of which 1,554,440 gal. came from Puerto Rico. Brandy, cordials, liqueurs and gins accounted for an additional 1,138,502 gal.

Table IV.—Bottled Imports
(in gallons)

Fiscal year ending June 30	Grand total	Whisky				Other whisky	Other spirits*
		Total	Scotch	Canadian			
1948-50	13,602,792	11,675,026	7,205,830	4,445,002	24,194	1,927,766	
1951	19,877,646	16,769,635	10,376,713	6,355,674	37,248	3,108,011

1955	23,102,060	20,378,741	11,642,128	8,729,356	7,257	2,723,319	

* Includes rum, gin, brandy, cordials and liqueurs.
Source: Data of the Distilled Spirits Institute.

In addition to the bottled imports, there were 1,184,027 gal. of bulk distilled spirits, including 311,526 gal. of whisky, 500,000 gal. of rum and 372,341 gal. of brandy, imported for bottling in the United States.

The per capita consumption of spirits in the United States during the calendar year 1954 was 1.18 wine gallons. (See also *ALCOHOL AND BEER; INTOXICATION, ALCOHOLIC; WINES.*)

(A. J. LI.)

Literary Prizes.

The following is a selected list of literary prizes awarded during the year 1955 and the latter months of 1954.

United States.—ACADEMY OF AMERICAN POETS.—Lamont Poetry selection, to Donald Hall for *Exiles and Marriages*.

AMERICAN ACADEMY OF ARTS AND LETTERS AND NATIONAL INSTITUTE.

—William D. Howells' medal to Eudora Welty for her novel *The Ponder Heart*. Gold medal to Edmund Wilson. Award of merit to Jorge Guillén. Prix de Rome fellowship to Ralph Ellison.

AMERICAN PHILOSOPHICAL SOCIETY.—Phillips prize of \$2,000 to Edmund Cahn for *Supreme Court and Supreme Law*.

AMERICAN POLITICAL SCIENCE ASSOCIATION.—Woodrow Wilson Foundation award of \$1,000 for the best book on government and democracy to Jacobus tenBroek, Edward N. Barnhart and Floyd W. Matson for *Prejudice, War and the Constitution*.

ANISFIELD-WOLF AWARDS.—Two awards of \$2,000 each for books in the field of race relations, administered by the *Saturday Review*, to Oden Meeker for *Report on Africa* and Lyle Saunders for *Cultural Difference and Medical Care*.

ATLANTIC MONTHLY-LITTLE BROWN NOVEL CONTEST.—\$5,000 for a novel *The Last Hurrah* by Edwin O'Connor.

BANCROFT PRIZES.—\$2,000 each annually for the two best books on American history, American diplomacy or American international relations, to Leonard D. White for *The Jacksonians*, and Paul Horgan for *Great River, the Rio Grande in North American History*.

BOLLINGEN PRIZE IN POETRY.—\$1,000 shared by Louise Bogan for *Collected Poems, 1922-53* and Leonie Adams for *Poems: A Selection*.

JOHN BURROUGHS MEDAL.—To Wallace Byron Grange, for *Those of the Forest*.

CATHOLIC BOOK CLUB.—Campion award to honour long-standing and eminent service in the cause of Catholic letters, to Jacques Maritain.

CHRISTOPHER AWARDS.—Bronze medallions, awarded semiannually, to Frances Gray Patton for *Good Morning, Miss Dove*; Phyllis McGinley for *The Love Letters of Phyllis McGinley*; to Karl Stern for *The Third Revolution*; to Barbara Ward for *Faith and Freedom*; to Anne Morrow Lindbergh for *Gift from the Sea*; to Carlos Romulo for *Crusade in Asia*; to John A. Schindler for *How to Live 365 Days a Year*; and to Marion T. Sheehan for *The Spiritual Woman; Trustee of the Future*.

COMMONWEALTH CLUB OF CALIFORNIA.—Gold medal to Everett Carter for *Howells and the Age of Realism* (nonfiction) and Louise A. Stinetor for *Beyond the Hungry Country* (fiction). Silver medals to Wallace Stegner, for *Beyond the 100th Meridian*; Paul I. Wellman for *Glory, God and Gold*; and C. S. Forester for *The Nightmare*.

FOLGER LIBRARY PRIZE.—To Conyers Read for *Mr. Secretary Cecil and Queen Elizabeth*.

FRIENDS OF AMERICAN WRITERS.—\$1,000 annual award to a midwestern writer, to Harriette Arnow for *The Dollmaker*.

GUGGENHEIM FELLOWSHIPS.—Among those awarded fellowships were Saul Bellow, Hortense Calisher and Jean Evans, for creative writing.

HARPER'S EUGENE F. SAXTON FELLOWSHIPS.—To George Harold McMurry, for the completion of a novel; to John Edward Kaltenbach, for the completion of a novel about Moses; to Perry D. Westbrook, for the completion of a historical novel based on the life of James Swan; to Robert Elvin Hazel for the completion of a novel *Going to the Fair*; to Mrs. Lois Crisler for the completion of a book of personal experiences covering a year and a half of life in the arctic circle; and to Richard M. Huber to complete a history of the idea of success in America.

HUNTINGTON HARTFORD FOUNDATION AWARDS.—\$500 and an invitation to live six months at the foundation estate, to Ralph Vaughn Williams, composer; Max Eastman, author; and Andrew Wyeth, painter.

SIDNEY HILLMAN FOUNDATION PRIZE AWARD.—To Henry Steel Commager for *Freedom, Loyalty, Dissent*.

HOUGHTON MIFFLIN LITERARY FELLOWSHIP.—To Eugene Burdick for *Michael Freesmith*.

INSTITUTE OF EARLY AMERICAN HISTORY AND CULTURE AWARD.—\$500 to Gerald Stourzh for *Benjamin Franklin and American Foreign Policy*.

JEWISH BOOK COUNCIL AWARDS.—Harry and Ethel Daroff Memorial Fiction award of \$250 to Louis Zara for *Blessed Is the Land*. Harry Kovner Memorial awards of \$100 each to Alter Esselin for a book of Yiddish poetry and to Gabriel Prell for a book of Hebrew poetry.

MEDIEVAL ACADEMY OF AMERICA.—Haskins medal to George H. Forsyth, Jr., for *The Church of St. Martin at Angers*.

HARRIET MONROE POETRY AWARD.—To Richard Eberhardt.

MYSTERY WRITERS OF AMERICA AWARD.—Honorary "Edgars" busts of Edgar Allan Poe, awarded for mystery writing: for best mystery novel, to Raymond Chandler for *The Long Goodbye*; best first mystery novel, to Jean Potts for *Go, Lovely Rose*; best short story to Stanley Ellin for *The House Party*; best fact-crime to Charles Boswell and Lewis Thompson for *The Girl with the Scarlet Brand*; and best criticism, to Drexel Drake of the *Chicago Tribune*.

NATIONAL BOOK AWARDS.—Gold medals awarded by the entire book industry: for distinguished fiction, to William Faulkner for *A Fable*; for nonfiction, to Joseph Wood Krutch for *The Measure of Man*; for poetry, to Wallace Stevens for *Collected Poems*; special citation, to e. e. cummings for *Poems: 1923-54*.

NATIONAL BROTHERHOOD AWARD.—To Pearl Buck, for *My Several Worlds*.

NATIONAL INSTITUTE OF ARTS AND LETTERS.—\$1,000 grants to six nonmember authors, to Richard Eberhardt, Robert Horan, Chester Kallman, William Krasner, Milton Lott and Morton Dauwen Zabel.

NEW YORK DRAMA CRITICS CIRCLE AWARD.—For best play, to Tennessee Williams for *Cat on a Hot Tin Roof*; best foreign play, to Agatha Christie for *Witness for the Prosecution*; best musical, to Gian-Carlo Menotti, for *The Saint of Bleeker Street*.

PHI BETA KAPPA.—\$1,000 Christian Gauss prize for a book of literary scholarship or criticism to Meyer Howard Abrams for *The Mirror and the Lamp: Romantic Theory and the Critical Tradition*.

POETRY MAGAZINE AWARDS.—Levinson prize to Thom Gunn; Blumenthal prize to William Carlos Williams; Tietjens prize to James Wright; Harriett Monroe prize to John Ciardi; Bess Hokin prize to Philip Booth; Union League prize to Anne Ridler; and Vachel Lindsay prize to V. R. Lang.

POETRY SOCIETY OF AMERICA AWARDS.—Gold medals to Leonora Speyer, John Malcolm Brinnin; silver medal to George N. Shuster. Annual award of \$100 to Constance Carrier; second prize of \$50 to Edna L. S. Barker. Arthur Davison Ficke Memorial award of \$200 to Ulrich Toubetzky; Emily S. Hamblen Memorial award of \$100 to David V. Erdman; Reynolds Lyric award of \$200 to Lois Smith Hiers; Edna St. Vincent Millay Memorial award of \$100 to Phyllis McGinley; William Rose Benet Memorial award of \$100 to Delmar T. Israel; Ridgely Torrence Memorial award of \$100 to Archibald MacLeish; Poetry Chap-Book award of \$100 to Elder Olson; Shelley Memorial award to Robert Fitzgerald. Also Borestone Mountain Poetry awards: \$1,250 to Robinson Jeffers; \$625 each to David Morton and Eric Barker.

TAMMINGTON INSTITUTE BOOK AWARD.—\$500 for best American biography, to Gay Wilson Allen for *The Solitary Singer*.

TEXAS INSTITUTE OF LETTERS AWARDS.—Carl P. Rollins award of \$1,000 for best Texas book of the year, to Paul Horgan for *Great River, the Rio Grande in North American History*; Summerfield G. Roberts award of \$1,000 for the best book about the Republic of Texas, to Llerena Friend for *Sam Houston, the Great Designer*; McMurray Personal Bookshop award for best first novel, to William Owens for *Walking on Borrowed Land*; for biography to Ernest Campbell Mossner, co-editor of *New Letters of David Hume*; A. Harris Poetry award to William Burford for *Man Now*.

UNIVERSITY OF KENTUCKY PRESS FELLOWSHIP.—\$5,000 grant to Marie Campbell for study of folk culture of Kentucky.

WESTERN WRITERS OF AMERICA AWARDS.—Silver Spurs for best novel, to Wayne D. Overholser for *The Violent Land*; best western historical novel to John Prescott for *Journey by the River*; best western nonfiction, to David Lavender for *Bent's Fort*; best western short story, to Thomas Thompson for *Blood on the Sun*.

YALE SERIES OF YOUNGER POETS AWARD.—To John L. Ashberry for *Some Trees*.

ZONDERVAN INTERNATIONAL CHRISTIAN FICTION CONTEST.—\$5,000 to Rev. Lon Woodrum for *Eternity in Their Heart*.

NOBEL PRIZE FOR LITERATURE.—(See article NOBEL PRIZES.)

PULITZER PRIZES.—(See article PULITZER PRIZES.)

U.S. Children's Books.—JANE ADDAMS CHILDREN'S BOOK AWARD.—For a book which embodies the spirit of world understanding and friendship, to Elizabeth Yates for *Rainbow Round the World*, a story of UNICEF.

BOYS' CLUBS OF AMERICA JUNIOR BOOK AWARDS.—To Natalie Savage Carlson for *Alphonse, That Bearded One*; William Corbin for *High Road Home*; Walter D. Edmonds for *Hound Dog Moses and the Promised Land*; Graham Greene for *The Little Horse Bus*; Ivo Duka and Helena Kolda for *The Secret of the Two Feathers*; Clyde Robert Bulla for *Squanto, Friend of the White Man*; special certificate of award to Random House for the Allabout Books series.

CALDECOTT MEDAL.—For the year's most distinguished American picture book for children, to Marcia Brown for *Cinderella*.

CHICAGO CHILDREN'S READING ROUND TABLE AWARD.—For distinguished service in the field of children's reading, to Adah F. Whitcomb.

CHILD STUDY ASSOCIATION OF AMERICA CHILDREN'S BOOK AWARD.—To Jonreed Lauritzen for *The Ordeal of the Young Hunter* and William Corbin for *High Road Home*.

COMMONWEALTH CLUB OF CALIFORNIA.—Silver medal for best juvenile, to Leonard Wibberley for *Epics of Everest*.

DODD MEAD-BOYS' LIFE AWARD.—\$2,000 plus royalty, to W. G. Crisp for *White Gold in the Cassiar*.

DODD MEAD-COMPACT AWARD.—To Beverly Butler for *Song of the Voyageur*.

HELEN DEAN FISH AWARD.—\$500 for best first book, to Dorothy Marino for *Little Angela and Her Puppy*.

CHARLES W. FOLLETT AWARD.—\$3,000 to Tom (Alfred T.) Cluff for *Minutemen of the Sea*.

JEWISH BOOK COUNCIL.—Isaac Siegel Memorial award of \$250 to Nora Benjamin Kubie for *King Solomon's Navy*.

NEWBURY MEDAL.—For the year's most distinguished contribution to American literature for children, to Meindert DeJong for *The Wheel on the School*.

NEW YORK HERALD-TRIBUNE CHILDREN'S SPRING BOOK FESTIVAL AWARDS.—Three prizes of \$200 each: for a picture book, to John Langstaff and Feodor Rojankovsky for *Frog Went A-Courtin'*; for middle-age group, to Belle Dorman Rugh for *Crystal Mountain*; and for older children, to Virginia S. Eifert for *The Buffalo Trace*.

OHIOANA AWARD.—For best juvenile, to William E. Scheele for *Prehistoric Animals*.

SECONDARY EDUCATION BOARD AWARDS.—For ten best adult titles suitable for precollege readers, Pierre Boulle for *The Bridge Over the River Kwai*; Elmer Davis for *But We Were Born Free*; Sir John Hunt for *The Conquest of Everest*; R. B. Robertson for *Of Whales and Men*; Lord David Cecil for *Melbourne*; Paul Brickhill for *Reach for the Sky*; E. B. White for *The Second Tree from the Corner*; Heinrich Harrer for *Seven Years in Tibet*; Jacqueline Cochran for *The Stars at Noon*; and Grantland Rice for *The Tumult and the Shouting*.

TEXAS INSTITUTE OF ARTS AND LETTERS.—Cokesbury Book Store award for best Texas juvenile, to Irmengarde Eberle for *Lone Star Flight*.

WESTERN WRITERS OF AMERICA.—Juvenile award to Stephen Payne for *Young Hero of the Range*.

WILLIAM ALLEN WHITE AWARD.—To Jean Bailey for *Cherokee Bill: Oklahoma Pacer*.

Canada.—GOVERNOR GENERAL'S AWARDS.—Fiction, to Igor Gouzenko for *Fall of a Titan*; academic nonfiction, to A. R. M. Lower for *The Most Famous Stream*; creative nonfiction, to Hugh MacLennan, *Thirty and Three*; poetry, to P. K. Page for *The Metal and the Flow*; juvenile, to Marjorie W. Campbell for *The Nor'westers*.

LEACOCK MEDAL FOR HUMOUR.—To Robertson Davies for *Leviathan*.

LORNE PIERCE MEDAL OF THE ROYAL SOCIETY OF CANADA.—For contribution to the development of Canadian literature, to Bruce Hudson.

PRESIDENT'S MEDALS.—Short story, to P. D. Hughes for *Catherine*; *Winter Wheat* (*Maclean's Magazine*); single poem, to James Beane for *The Horn* (*Queen's Quarterly*); scholarly article, to Emil K. Fackenthal for *Kant and Radical Evil* (*University of Toronto Quarterly*); general article, to Bill Stephenson for *There'll Never Be Another Model T.* (*Maclean's Magazine*).

TYRRELL MEDAL OF THE ROYAL SOCIETY OF CANADA.—For excellence in historical writing, to Col. C. P. Stacey.

UNIVERSITY OF BRITISH COLUMBIA MEDAL.—For popular biography, to Robert Tyre for *Saddlebag Surgeon*.

Great Britain.—Among awards made in 1955 were: JAMES TAIT BLACK MEMORIAL PRIZES (about £250 each) to Keith Feiling for *Waverley* (fiction); the CARNegie MEDAL (awarded by the Library Association) to an outstanding book for children) to Ronald Welch for *Knight Crusade*; the ROSE MARY CRAWSHAY PRIZE (£100, for a critical or historical work on English literature by a woman) to Evelyn M. Simpson for *John Donne* (in progress); the FOYLE PRIZE for poetry (£250) to John Betjeman for *A Few Late Chrysanthemums*; W. H. HEINEMANN FOUNDATION AWARD for literature (up to £200) to Robert Gittings for *John Keats: The Living Year*; the SOMEY MAUGHAM AWARD (about £250, to a British writer under 30, to be used mainly for foreign travel) to Kingsley Amis for *Lucky Jim*; the JO LLEWELYN RHYS MEMORIAL PRIZE to John Wiles for *The Moon to the Moon*; the SUNDAY TIMES £1,000 prize to Richard Church for *Over the Bridge*; and the QUEEN'S GOLD MEDAL for poetry to Ruth Pitter.

France.—Among the many prizes awarded during 1955 the following should be mentioned: the GRAND PRIX LITTÉRAIRE DE LA VILLE DE PARIS to Jean Guehenha for his work as a whole; the PRIX DE LA SOCIÉTÉ GENS DE LETTRES to Jean Bonnerot for the *Correspondance de Saint-Beuve* and to J. C. Pichon for his novel *Les Clefs de la prison*; the PRIX LITTÉRAIRE PRINCE RAINIER DE MONACO to Louise de Vilmorin for her work as a whole; the GRAND PRIX NATIONAL DES LETTRES to J. Schlumberger for his work as a whole; the PRIX DE ROMAN POPULAIRE to Georges Godefroy for his novel *Les Naufrageurs*; the PRIX CRITIQUES to Alain Robbe-Grillet for his novel *Le Voyeur*; the PRIX ECRIVAINS DE LA MER ET DE L'OUTREMER to François Boujean for his work as a whole; the PRIX DE LA CHRONIQUE PARISIENNE to P. Macaigne, contributor to *Figaro*.

Several of the most outstanding prizes were announced late in the year: the PRIX GONCOURT was awarded to Roger Ikor for his book *Les Émigrés*, the second volume of a larger novel called *Les Fils d'Avrom*; the PRIX RENAUDOT to Georges Gomy for his novel *Le Moissonneur d'épaves*; and the PRIX FEMINA to André Dhôtel for his novel *Le Pays où n'arrive jamais*.

Lithuania. A Soviet Socialist republic, Lithuania is bounded north by Latvia, east and southeast by Byelorussia, south by Poland and the Russian Kalinin oblast (province) and west by the Baltic sea. Area: 31,200 sq.mi. Pop. (1954 est.): 3,000,000. Language (1954 est.): Lithuanian 73%; Russian and other Soviet 17%; Polish 10%. Religion (1954 est.): Roman Catholic 81%; Protestant 2.5%; Orthodox 2.5%; other and no religion 14%. Chief towns (pop., 1939 est.): Vilnius 47,200; Kaunas 152,400; Klaipėda 47,200; Šiauliai 31,300. First secretary of the Lithuanian Communist party in 1955, Antanas Snieckus; chairman of the presidium of the supreme soviet, Justas Paleckis; chairman of the council of ministers, Mėcislovas Gedvilas.

History.—During 1954 the total value of the republic's industrial production rose by 21% and was more than double output in 1950. The area of sown land had also increased, while the number of livestock on the collective farms rose as follows: cattle 10.3% (milk cows 15.2%), sheep 21.8%, pigs 3.4%. There were still many unsolved problems; e.g., the inadequate fodder crop. In 1955 there were 1,795 collective farms and machine and tractor stations.

The republic in 1955 had 166 hospitals as compared with 22 before World War II.

In October plans were adopted for a hydroelectric power station at Petrasunai, 8 mi. from Kaunas, on the Niemen river. A new supreme soviet of the Lithuanian S.S.R. was elected on Oct. 27. In the council of ministers there were at least four Russians, the most important being Aleksey Chistyakov, deputy premier, and Aleksandr Yefremov, minister of state control; the procurator-general of the republic, Gheorghy Bakharov, was also Russian.

In March Mgr. Kazys Paltarokas, Canon Juozas Stankevicius of Kaunas and Canon Piatras Mazialis of Telsiai published a declaration against the preparation of atomic war. According to Moscow radio Mgr. Paltarokas, 80-year-old ordinary of Radviliskis, on Sept. 11 consecrated two new bishops, Canon Mazialis and Fr. Julionas Stefanavicius. It was understood that the two had in fact been nominated bishops some time earlier in Rome.

In June Vilnius (Wilno) university, founded in 1579 by King John Bathory, was renamed Vincas Mickiavicius-Kapsukas University in honour of the Lithuanian Communist leader (1883-1935). (See also ESTONIA; LATVIA.) (K. SM.)

Education.—Schools (1955): primary 3,200, pupils 430,000; secondary 1,200, pupils 35,000; vocational 230, pupils 215,000; institutions of higher education 14, students about 15,000.

Finance.—Budget: (1954 est.) balanced at 1,740,762,000 roubles; (1955 est.) balanced at 1,644,514,000 roubles.

Livestock. Livestock and poultry on U.S. farms at the beginning of 1955 were 3% more numerous than a year earlier, but 7% below the record level of Jan. 1, 1944. Meat animals were up 3%; poultry up 1%; milk cattle down 1%; workstock down 9%. The livestock inventory (five species) declined in value to \$10,880,762,000 as compared with \$11,236,600,000 in 1954 and \$12,552,198,000 average for 1944-53. Poultry also declined in value.

The record number of cattle and calves on farms Jan. 1, 1955, represented the sixth successive annual increase from 76,800,000 head on Jan. 1, 1949. It included a record high 1954 calf crop of 12,210,000 head, 3% larger than in 1953. Commercial slaughter was nearly 40,000,000 head of cattle as compared with 30,000,000 in 1954 and only 35,000,000 head in 1953.

Prices, though relatively stable, sagged; the choice and prime grades, in particular, were lower with a top of less than \$24 hundredweight in the autumn as compared with nearly \$30 hundredweight in 1954. Prices for feeder and stocker types were firm, the spread with fat cattle narrowed and profits from the feeding were reduced.

The 55,002,000 hogs on U.S. farms at the beginning of the year, as compared with 48,560,000 head a year earlier, included 12,000 sows and gilts six months and more of age. They farmed 60,543,000 head of spring pigs, 9% more than the 55,667,000 head of 1954; the average spring pig crop for 1944-53 was 57,100,000 head. The indicated fall pig crop of 1955 was 40,500,000 head, 10% larger than that of 1954. Abundant marketings put pressure on hog prices; from a January high of about \$17 per hundredweight to producers, as compared with about \$25 a year earlier, there was a spring decline, an early summer rise to 40 per hundredweight, then a further decline to the lowest price levels since 1942, and a top of less than \$13 per hundredweight. Because of a sharp decline in the price of corn, the corn price ratio continued somewhat favourable and a further expansion of the spring crop of pigs for 1956 appeared likely.

The 30,931,000 head of all sheep (mostly stock sheep) on U.S. farms at the beginning of 1955 were 1% fewer than in 1954 and below the average 36,685,000 head for 1944-53. This was

the third successive year of decline, but an increase of 9% in the number of ewe lambs retained suggested the beginning of flock rebuilding, encouraged perhaps by the official decision that the Commodity Credit corporation would dispose of its wool inventory in an orderly fashion and that the 1955 and 1956

Table 1.—Livestock on U.S. Farms

Animals	(In 000 head)		
	Jan. 1, 1955	Jan. 1, 1954	Average, 1944-53
Horses	3,106	3,401	6,480
Mules	1,445	1,599	2,542
Cattle (including calves)	95,433	94,787	82,917
Milk cows	24,408	24,675	25,135
Sheep	30,931	31,218	36,685
Hogs	55,002	48,560	61,166
Chickens	447,310	442,813	474,852
Turkeys	5,448	5,315	5,804

wool clip prices would be supported, by payments, at approximately 62 cents per pound.

Horses and mules continued their long, long decline. Poultry were somewhat more numerous on farms on Jan. 1 than a year earlier; however, farm production of poultry in 1955 was reduced to about 524,000,000 head, 15% fewer than in 1954. The 5,448,000 turkeys on farms represented a slight increase over 1954; the hatching season was late and only 63,294,000 poult were produced as compared with 68,267,000 in 1954. Turkey prices were higher, averaging 31.5 cents per pound to producers in October as compared with 27.1 cents per pound a year earlier.

Efforts to improve world livestock production were numerous and widespread during 1955. There was particular emphasis on importation of breeding stock and selective crossing of breeds to obtain hybrid vigour and special characteristics in beef cattle, meat hogs and milk cows. There was also more efficient use

CHAMPION HEREFORD BULL, Edg-Clif Resolute Heir, sold for \$10,200 at an auction at Potosi, Mo., in 1955. The bull was grand champion of the Missouri state fair in 1954

of outstanding individuals through the use of artificial insemination and storage banks of frozen semen. Health and rate of growth were improved by feeding antibiotics and stilbestrol.

World wool production was estimated at 4,475,000,000 lb.

Table II.—Number of Livestock in Specified Areas
(In 000 head at beginning of year)

Areas	Cattle		Hogs		Sheep	
	1955	1954	1955	1954	1955	1954
North America . . .	132,300	130,500	74,000	66,600	38,700	38,800
Europe	105,000	104,000	93,200	87,300	118,300	118,300
Asia	319,100	317,500	99,700	99,600	165,200	163,100
South America . . .	144,300	140,800	46,100	42,800	126,600	125,900
Africa	96,600	95,300	3,800	3,800	125,400	123,500
Oceania	22,000	21,700	2,100	2,100	167,000	164,900
Estimated world total.	877,300	866,800	348,900	332,200	883,200	824,500

grease basis, as compared with 4,390,000,000 lb. in 1954, Australia producing, it was anticipated, 1,315,000,000 lb. as against 1,280,000,000 lb. in the previous year.

Horse numbers increased slightly in eastern Europe and the U.S.S.R., but declined in most other areas; the indicated world total was 74,500,000 head as compared with 75,200,000 head in 1954 and 95,500,000 prewar.

By-products of livestock husbandry or slaughter generally declined in value in 1955, hides from about 15 cents per pound to 11 cents, and wool by 10% to 20% on domestic and world markets. (See also AGRICULTURE; MEAT; WOOL.) (J. K. R.)

Local Government: see MUNICIPAL GOVERNMENT.

Lodge, Henry Cabot, Jr. (1902—), U.S. delegate to the United Nations, was born on July 5 at Nahant, Mass., the grandson of Sen. Henry Cabot Lodge who led the opposition to U.S. entry into the League of Nations. He was graduated from Harvard university in 1924 and worked first with the *Boston Evening Transcript* and later with the *New York Herald Tribune* until 1932. He was a representative to the Massachusetts general court from 1933 to 1936 and in the latter year was elected U.S. senator from Massachusetts on the Republican ticket. Re-elected in 1942, he resigned in Feb. 1944 to go on active duty with the U.S. army, and saw combat in North Africa and Italy. He was again elected to the senate in 1946.

In Nov. 1951 Lodge was picked by a group of Republican leaders to lead the Eisenhower-for-President drive. He directed the strategy that resulted in Dwight D. Eisenhower's nomination at the Republican national convention in July 1952. Lodge himself was defeated in the election for the senate, but Pres. Eisenhower named him as U.S. representative to the United Nations, to succeed Warren R. Austin, and he took office on Jan. 23, 1953.

Lodge's principal tasks in the UN during 1953 and 1954 were to counter soviet propaganda and attempts to split the western powers, and to combat the continued efforts of the soviet bloc to secure admission of Red China to the UN. Much of his time during 1955 was spent on efforts to secure release of 11 U.S. airmen imprisoned by China as "spies," to persuade the U.S.S.R. to participate in a world atomic energy pool for peaceful purposes, and to present the U.S. view on disarmament before the UN subcommittee on disarmament, meeting at New York city.

London. London is the capital of the United Kingdom of Great Britain and Northern Ireland and centre of the Commonwealth of Nations. The term "London" is used here to describe three areas: (i) the City, the ancient heart of London, which for some purposes functions as a county; (ii) the administrative county, comprising the City and the county proper (which consists of 28 metropolitan boroughs); and (iii) Greater

London, embracing the City, the county proper and the suburbs as far as the borders of the Metropolitan police authority, including Middlesex and parts of Essex, Kent, Surrey and Hertfordshire. *City.* Area 1.05 sq.mi.; night pop. (1951 census) 5,268. Lord Mayors in 1955: Sir H. Seymour Howard and (from Nov. 8) C. L. Ackroyd. *County.* Area (including City) 116 sq.mi.; pop. (1951) 3,348,336. Lord lieutenant, Field Marshal Viscount Alanbrooke; chairman of London County council, N. Prichard. *Greater London.* Area about 722 sq.mi.; pop. (1951) 8,346,137.

No progress was made or real improvement promised during 1955 in designing or replanning the streets to take the increased traffic. Traffic reached a climax during the railway strike in May and June when every car that could be made to work, twice the usual number of heavy trucks, flowed into central London. The metropolitan police were driven to emergency action. Parking was forbidden absolutely in parts of central London; parking areas were set up just outside the centre and in parks; mobile radio-controlled traffic patrols dealt with general congestion. After the strike some of these measures in modified form were continued—for example, Londoners grew used to seeing a double row of parked cars on the outer drives of Hyde park where they contributed nothing to the view but helped to ease congestion in the surrounding streets. The strike was nationally but was felt to be a special scourge in London because of the long distances that people travelled daily to their work.

London was also more grievously affected than any other city by the newspaper strike in March and April. The three evening newspapers and all the morning press disappeared for 26 days. London had few alternatives to fall back on though the demand for dailies published in the provinces was high and a few ephemeral newsheets appeared on the streets.

The suburban skyline in south London was changed by the building of a television aerial tower more than 600 ft. high to serve the new transmitter being built by the B.B.C. in the grounds of the Crystal palace. There appeared not far away from it at Croydon, a smaller but more significant aerial, the first commercial television transmitter in Britain. The independent television service which opened on Sept. 22 served the London area only.

Two suburban theatres became TV studios and proposals were made to convert the St. James's theatre into offices and the Adelphi into a shop. The Stoll (the only alternative open house to Covent Garden) was to be demolished. The London County council used its powers as town planning authority to forbid changes in the use of the St. James's and the Adelphi and to insist that if the Stoll were rebuilt the premises would have to contain a theatre. (G. Fyfe)

Los Angeles. Los Angeles (comprising Los Angeles and Orange counties), the third-ranking metropolitan area in the United States, continued to grow in population and commerce in 1955. The populations of the county and metropolitan area were estimated by the chamber of commerce as of April 1 respectively as 2,160,000, 5,000,000 and 5,340,000. These represented 12-month increases respectively of 1.6%, 3.6% and 4.2%.

Although Los Angeles is known as the nation's major centre of aeroplane manufacturing, with about 25% of the industrial employment, a study by the Security-First National bank indicated that the metropolitan area had exceptional economic diversification and "balance." With 3.94% of the nonagricultural wage and salary workers in the nation, it was found to account for commensurate proportions, ranging from 3.06% to 5.09% of the national payrolls in standard employment categories. Aeroplane manufacturing accounted for only 8.3% of total employment.

nt.

A study of industrial development since 1950 showed the following gains: ordnance and accessories (representing largely missiles and electronic equipment), 4,133.3%; aircraft parts, 186%; electrical machinery, equipment and supplies, 11.1%; instruments and related products, 123.9%; nonelectrical machinery, 77.7%; motor vehicles and equipment, 59.3%; fabricated metal products, 56.7%.

Total civilian employment reached an all-time high in August 1955, 2,299,400, 6% above a year before. Aircraft employment reached a post-World War II peak of about 191,200, 6.3% above the year before.

Capital investments in new industrial enterprises and expansion of existing ones totalled \$126,703,000 for the first eight months of the year, compared with \$138,081,000 for the same 8-month period.

Building construction, both residential and commercial, through August totalled \$925,001,000 in Los Angeles county, a 10% increase over the same 1954 period.

Cargo tonnage through the port of Los Angeles in the fiscal year ending in June dropped from 26,513,998 to 24,819,837, largely because of international factors which altered the routing of oil shipments; tonnage in other categories increased. The port's municipally operated foreign trade zone, one of five in the country where goods in transit could be stored in bonded duty free, was closed after six years' operation entailing a loss of \$440,000.

Smog—periodic atmospheric pollution—became a matter of major community concern. Authorities said it was worse than in 1954, despite expanding control efforts, because of the city's rapid growth. It was traced primarily to automobile exhausts, industry and home incinerators. Two warning systems, one anticipatory and one remedial, were instituted, involving limitation of pollution-producing activities in various degrees, to avert hazardous concentrations of contamination.

From the smog problem stemmed the community's major environmental *cause célèbre* of the year—the proposed replacement of home incineration with rubbish collection. A scandal breaking on the private trash collection industry developed, involving allegations of bribery and corruption which were still under litigation as the year neared its end.

The elimination of the last officially espoused racial segregation in the city administration, through the integration of Negroes and whites in the city's fire-fighting units, was started in 1954 and more than a year's controversy. (G. Hr.)

Louisiana. One of the west south central states of the United States, admitted to the union in 1812 as the 18th state, Louisiana is popularly known as the "Pelican state," "Creole state" or "Bayou state." Area 48,523 sq.mi., of which 45,162 sq.mi. is land. Pop. (1950 census): 2,683,516, of which 1,796,548 or 67% were white and 886,968 nonwhite; 1,196 or 54.8% urban and 1,211,820 or 45.2% rural. The estimated population on July 1, 1955, was 2,902,000. Capital (p. 1950), Baton Rouge, 125,629. Other important cities (with pop.): New Orleans 570,445, Shreveport 127,206, Lake Charles 41,272, Monroe 38,572, Alexandria 34,913, Lafayette 34,141.

History.—The legislature met twice in 1955. A proposed constitutional amendment authorizing a \$50,000,000 bond issue for improved highways was rejected at the Nov. 1954 election, which left the highway department without adequate funds for the 1954-56 biennium. To remedy this situation, the governor called a 12-day special session on Jan. 3, 1955, which appropriated \$30,000,000 from the surplus revenues for improvement of all roads up to June 30, 1955, and an additional \$20,000,000

from the anticipated tidelands royalties to match federal grants for arterial highways during the fiscal year 1955-56.

At the Nov. 1954 election the voters approved a constitutional amendment providing for 30-day fiscal sessions in odd-numbered years, midway between the regular 60-day biennial sessions. The first such fiscal session convened on May 9, 1955. Its purpose was to review the biennial budgets for the various state departments and agencies, and to make necessary adjustments; but many of the departments requested large additional appropriations from the available or anticipated surplus revenue during the remainder of the 1954-56 biennium. Bills calling for appropriations of more than \$200,000,000 were introduced, while the available surplus revenue was estimated at only about \$50,000,000. With an election approaching, the legislature was inclined to pass a majority of the bills, and to leave it to the governor—who was ineligible to succeed himself—to veto enough of them to reduce the total appropriations to the sum estimated to be available from the surplus revenues. The legislature passed 167 bills, carrying appropriations of about \$120,000,000. The governor approved 142 bills for a total of \$54,000,000 and vetoed 25 others for a total of \$66,000,000. Of the appropriations approved \$20,000,000 were for education and \$15,000,000 for highways.

An intensive program of widening and resurfacing the older paved highways, to make them safer for modern traffic, was in progress in 1955, and more than 100 mi. of new pavement was completed. Construction of a new highway bridge over the Mississippi at New Orleans was begun, and plans and surveys were completed for the state's first privately owned toll road, designed to shorten by 50 mi. the distance between New Orleans and points in southwestern Louisiana, and to cost an estimated \$100,000,000.

The federal supreme court issued its decree, ordering integration of the races in the public schools as speedily as possible, while the fiscal session of the legislature was in progress; and the legislature reaffirmed its plan to maintain segregation, but to provide equal educational facilities for the two races. The dispute over ownership of the tidelands in the Gulf of Mexico hinged upon the question of the state's "historic boundaries," Louisiana claiming three leagues (about 10½ mi.) and the federal government contending that the boundary extended only 3 mi. from the shore line.

State officers in 1955 were: Robert F. Kennon, governor; C. E. Barham, lieutenant governor; Wade O. Martin, Jr., secretary of state; A. P. Tugwell, treasurer; Allison Kolb, auditor; Fred S. LeBlanc, attorney general; Shelby M. Jackson, superintendent of education; Ellen Bryan Moore, register of land office; Dave Pearce, commissioner of agriculture and immigration.

Education.—In the 1954-55 session the 800 public schools for whites enrolled 250,294 elementary and 93,875 high school pupils and employed 13,555 teachers; the 841 public schools for Negroes enrolled 169,468 elementary and 39,501 high school pupils and employed 6,532 teachers. The 205 private schools for whites enrolled 67,408 elementary and 13,902 high school pupils and employed 2,435 teachers; the 82 private schools for Negroes enrolled 20,424 elementary and 2,527 high school pupils and employed 523 teachers. The 7 state-approved nursery schools and kindergartens enrolled 151 pupils and employed 16 teachers and assistants. The state operated 25 public trade schools in 1954-55. There were 7 state-supported colleges and universities for whites and 2 for Negroes, 11 private and endowed colleges and universities for whites and 3 for Negroes.

The total state budget for public education at all levels for the fiscal year 1954-55 was about \$144,000,000, of which \$18,000,000 consisted of bond issues authorized for new buildings and improvements at all the state-supported colleges and universities.

Social Insurance and Assistance, Public Welfare and Related Programs.—Total benefit payments under the Louisiana unemployment compensation law were \$18,626,016 for the fiscal year 1954-55, compared with \$15,188,442 for the fiscal year 1953-54. Louisiana expended nearly \$108,000,000, in grants and operating costs, on public welfare in the fiscal year 1954-55, which was about the same as for the fiscal year 1953-54.

In 1955 the state maintained eight charity hospitals; three hospitals for mental patients; three tuberculosis sanatoriums; a school for white blind, a school for white deaf and a school for Negro blind and deaf;

a training school for spastic children; and a training school for the feeble-minded.

The state maintained a large prison farm for 3,000 adult offenders, separate training schools for about 200 delinquent white boys and girls and a training institute for about 200 delinquent Negro boys.

Table I.—Louisiana Public Welfare Programs, 1954–55

Type of assistance	Average number on rolls	Cost for the fiscal year
Old-age pensions	119,718	\$73,108,756
Needy blind	2,543	1,192,057
Dependent children	70,352	13,680,959
Disability assistance	14,211	6,188,759
General assistance	7,968	3,426,974
Foster children	2,142	1,411,663
Totals	216,934	\$99,009,168
Administrative expenses		8,941,798
Total cost of program		\$107,950,966

Source: Louisiana Department of Public Welfare Reports.

Total state expenditures for maintenance, expansion and improvement of charitable and correctional institutions were about \$45,000,000 for the fiscal year 1954–55.

Communications.—An exhaustive survey completed in 1955 as the basis for a long-range highway improvement program revealed that Louisiana had 47,472 mi. of rural highways and urban streets. Of this total 15,069 mi. constituted the state-maintained highway system, 5,000 mi. of which was paved with concrete or blacktop and the remainder gravelled. Total state expenditures for public highways, exclusive of federal grants-in-aid, were about \$60,000,000 for the fiscal year 1954–55, compared with \$50,000,000 for the fiscal year 1953–54. There were about 4,400 mi. of railways and 4,800 mi. of navigable waterways. About 100 land airports and 10 seaplane bases were in operation in 1955. There were 678,338 telephones in service on Sept. 1, 1955. The three Louisiana ports for ocean-going vessels handled a total tonnage of 69,417,303 in 1954, compared with 70,211,400 in 1953.

Banking and Finance.—On Jan. 1, 1955, Louisiana had 40 national banks, with total deposits of \$1,647,560,000 and resources of \$1,756,186,000; and 132 state banks, with total deposits of \$769,489,299 and resources of \$822,057,267. There were 63 savings and loan associations, with total assets of \$373,475,136 on June 30, 1955; 294 small loan

Table II.—Principal Crops of Louisiana

Crop	Indicated 1955	1954	Average, 1944–53
Cotton (bales)	575,000	572,000	591,000
Cottonseed (tons)	235,000	236,000	239,000
Corn (bu.)	17,545,000	12,957,000	15,230,000
Rice (100-lb. bags)	12,528,000	14,996,000	10,968,000
Sugar cane (short tons)	5,865,000	6,200,000	5,407,000
Sweet potatoes (bu.)	9,800,000	8,835,000	9,319,000
Irish potatoes (bu.)	499,000	927,000	1,418,000
Hay (tons)	393,000	324,000	381,000
Oats (bu.)	4,964,000	3,744,000	2,334,000
Pecans (lb.)	15,500,000	10,500,000	13,725,000
Peaches (bu.)	70,000	149,000
Pears (bu.)	79,000	148,000
Citrus fruits (boxes)	215,000	175,000	257,000

Source: U.S. Department of Agriculture.

companies, with total assets of more than \$40,000,000; and 110 credit unions, with total assets of more than \$6,000,000. Total state income for the fiscal year 1954–55 was nearly \$400,000,000, exclusive of federal grants-in-aid; and most of it was appropriated for current expenses. State bonded debt on July 1, 1955, was approximately \$225,000,000.

Agriculture.—The total value of agricultural and truck crops was estimated at \$270,000,000 in 1955, compared with \$283,103,000 in 1954; total acreage harvested was 2,750,000, compared with 2,800,000 in 1954. Total income from crops, livestock and poultry and their products was estimated at \$400,000,000 in 1955, compared with \$421,251,000 in 1954; from government payments \$11,000,000, compared with \$11,306,000 in 1954. A late spring freeze destroyed peaches and pears and severely damaged some of the early truck crops; and prices for most farm products were slightly lower in 1955 than in 1954.

Table III.—Principal Industries of Louisiana

	All employees, 1953	Salaries and wages, 1953 (in 000s)	Value added by manufacture, 1953 (in 000s)	Value added by manufacture, 1952 (in 000s)

Manufacturing.—About 2,400 industrial establishments, employing 170,000 workers and paying about \$550,000,000 in wages and salaries, produced finished products worth \$1,750,000,000 in 1955, compared with \$1,700,000,000 in 1954. Under the state law exempting new industrial installations from taxation for ten years, capital investments in new industrial plants and expansions of existing ones amounted to \$150,000,-

000 in 1954, compared with \$267,000,000 in 1953; these provided 4,500 new jobs in 1954, compared with 5,000 in 1953.

Forest Products, Furs, Fisheries.—Louisiana forests produced 818,600 bd.ft. of lumber and 1,486,871 cords of pulpwood in 1954, compared with 879,571,579 bd.ft. and 1,355,666 cords in 1953.

The Louisiana fur harvest for the 1954–55 season was valued at \$3,418,730, compared with \$1,835,983 for the 1953–54 season. Net income of \$1,000,000 of the increase was from muskrat, a fur-bearing animal introduced into the state a decade ago.

The total catch of Louisiana commercial fisheries—fish, oysters, shrimp, crabs, frogs and menhaden—was valued at more than \$1,000,000 in 1953, compared with \$35,000,000 in 1952. The industry furnished a livelihood to 65,782 persons in 1953. (W. Pr.)

Mineral Production.—Table IV shows the tonnage and value of mineral commodities produced in Louisiana in 1952 and 1953 (preliminary). In 1953, Louisiana was second among the states in output of natural gas and sulphur, and third in petroleum and salt; and fourth in the value of its mineral output, with 6.71% of the U.S. total.

Table IV.—Mineral Production of Louisiana

Mineral	1952		1953	
	Quantity	Value	Quantity	Value
(Short tons, except as noted)				
Clays	390,136	\$434,000	624,000	\$ 952,000
Natural gas (000 cu.ft.)	1,237,143,000	82,889,000	1,293,644,000	106,079,000
Natural gasoline (000 gal.)	672,042	48,579,000	665,532	55,421,000
Petroleum (bbl.)	243,929,000	645,090,000	256,632,000	721,150,000
Petroleum gases (000 gal.)	297,444	14,890,000	287,280	12,654,000
Salt	2,553,000	7,808,000	3,061,000	9,190,000
Sand and gravel	6,005,000	6,737,000	4,538,000	5,162,000
Sulphur	1,624,000	32,015,000	1,802,000	43,453,000
Other minerals	10,059,000	...	11,176,000
Total		\$848,401,000		\$965,237,000

Low, Solon Earl (1900–), Canadian political leader. He was born Jan. 8 at Cardston, Alta. He was educated at Calgary Normal college and at the universities of Alberta and Southern California. He entered provincial politics in Alberta as a Social Credit party candidate in 1935 and was a member of the legislature until 1945; provincial treasurer for Alberta, 1937–44; minister of education, 1943–44; minister without portfolio, Alberta government, Oct. 1944 to May 1945. Elected president and national leader of the Social Credit Association of Canada at the national conventions, Toronto, 1945, and Regina, 1946, he resigned his provincial seat in 1945 and on June 11 of that year was elected to the house of commons for Peace River, Alta.

Following a lengthy visit to Israel, Low returned to Canada in the fall of 1954 and subsequently delivered a score of lectures on his visit to audiences in the U.S. and Canada. In June 1955 he conducted a campaign in Alberta on behalf of the Social Credit party which was returned to power again under Premier E. C. Manning. Low was instrumental in helping to end opposition filibuster in the house of commons over the Defective Production act, since it was his proposal, with slight changes, which finally broke the unprecedented deadlock between the government and the official opposition, which sought a time limit on the act and won its point on this principle. (M. L. S.)

Lumber. A preliminary estimate by the National Lumber Manufacturers association placed the total production of lumber in the United States in 1954 at 37,329,000,000 bd.ft. The total included 29,296,000,000 bd.ft. of softwood (

Table I.—Lumber Production in the U.S., Selected Years

(in 000,000 bd.ft.)			
Year	Softwoods	Hardwoods	Total
1910	34,000	10,500	44,500
1920	26,810	6,989	33,800
1930	21,323	4,729	26,052
1940	24,903	4,031	28,934
1950	30,633	7,374	38,007
1951	29,493	7,711	37,204
1952	30,234	7,228	37,462
1953	29,562	7,180	36,742

niferous) lumber and 8,033,000,000 bd.ft. of hardwood lumber (broadleaved species). Production for 1953 and for selected earlier years, as reported by the bureau of the census, U.S. department of commerce, are given in Table I.

The production figures by species for 1953, according to the Bureau of the census reports, are shown in Tables II and III. Of the total lumber output in the United States in 1953, the Pacific states produced 47%, nearly all softwoods. Oregon, California and Washington were the three leading producers, in the

Table II.—Softwood Lumber Production in the U.S. by Species*

(in 000,000 bd. ft.)	1953 production
all softwood	10,367
Douglas fir	7,581
Western yellow pines	3,783
Western white pine	1,577
Redwood	1,441
Jack pine (including western [Idaho] and eastern white pines)	1,354
Other softwood	969

*Lumber in smaller quantities also was produced from sugar pine, Englemann and other species, cedars, larch, cypress and other softwoods.

order named. Other important producing states were Georgia, North Carolina, Alabama, Virginia, Idaho, Arkansas, Mississippi, Louisiana, Montana and Texas.

Exports of lumber from the United States in 1953 amounted to 543,900,000 bd.ft., according to department of commerce reports. The total included 472,300,000 bd.ft. of softwood lumber, 500,000 bd.ft. of hardwood lumber, 500,000 bd.ft. of box

Table III.—Hardwood Lumber Production in the U.S. by Species*

(in 000,000 bd. ft.)	1953 production
all hardwood	3,339
White oak	709
Black and tupelo gum	551
Beech	530
Elm	406
Birch	331
Other hardwood	236

*Other hardwood species included ash, sycamore, alder, basswood, hickory and walnut.

shooks and 74,500,000 bd.ft. of sawed railroad ties. Imports of lumber amounted to 2,770,400,000 bd.ft., including 2,526,700,000 bd.ft. of softwood lumber, 232,600,000 bd.ft. of hardwood lumber, 3,400,000 bd.ft. of box shooks and 7,700,000 bd.ft. of sawed railroad ties.

The wholesale lumber price index in 1954 dropped slightly below the 1953 figure. It was also below the high point reached in 1951. Table IV shows average wholesale price indexes for lumber for selected years, from statistics published by the Bureau of labour statistics, U.S. department of labour.

An estimate of world production of sawn wood for 1953 by the forestry division of the U.N. Food and Agriculture organization placed the total at 266,850,000 cu.m., an increase of 3% over the 1952 estimate (1 cu.m.=424 bd.ft.). Approximately one-fifths of the total 1953 production was softwood.

Table IV.—Wholesale Lumber Price Index in the U.S.

(1947-49=100)	Year	Index
1950	114.5	33.2
1951	123.6	23.1
1952	120.5	28.9
1953	119.4	40.7
1954	117.3	59.3
		107.3

In a regional breakdown of the estimated total world production, North America (the U.S. and Canada) accounted for 111,000,000 cu.m.; the Soviet Union for 64,000,000 cu.m.; Europe, 20,000,000 cu.m.; Asia, 25,620,000 cu.m.; Latin America, 9,680,000 cu.m.; the Pacific area, 4,400,000 cu.m.; and Africa, 2,520,000 cu.m.

The United States ranked first in production both of softwood and hardwood lumber. Its total output of approximately 92,500,000 cu.m. was more than one-third of the world production of sawn wood. The U.S.S.R.'s 64,000,000 cu.m. ranked second. Canada reported 18,153,000 cu.m.; Japan, 17,255,000 cu.m.; West Germany, 7,104,000 cu.m.; Sweden, 6,900,000 cu.m.;

Brazil, 4,304,000 cu.m.; Finland, 4,115,000 cu.m.; France, 4,100,000 cu.m.; Austria, 3,282,000 cu.m.; Australia, 3,007,000 cu.m.; Yugoslavia, 2,196,000 cu.m. Other countries producing more than 1,000,000 cu.m. in 1953 were Italy, Norway, United Kingdom, New Zealand and Switzerland.

A new wood-fibre building board that filters poison bases, disease-laden particles and radioactive fall-out was announced by the U.S. department of agriculture and the U.S. army. The new material, called diffusion board, was developed by the department of agriculture's Forest Products laboratory at Madison, Wis., with the co-operation of the army chemical corps. The laboratory reported that the material could be manufactured with much the same equipment used to make ordinary building fibreboard and that any species of wood could be pulped to make it.

Standards for establishment of basic stress and higher allowable working stresses for timbers were revised by the Forest Products laboratory. The new standards were adopted by the American Society for Testing Materials.

Forest Products laboratory tests showed that low-grade lumber can be used to produce high-grade material for house siding and for interior use by overlaying it with resin-impregnated paper. The laboratory also developed a low-cost, easily installed flooring material made from hardwood veneer with a special drying process that makes it flexible and gives it good dimensional stability.

A South Carolina insurance company announced that it was completing arrangements to write fire insurance on merchantable timber, young growing timber and forest plantations in the 11 southern states from Virginia and Tennessee to Arkansas and Texas. This was the first forest insurance to become commercially available in the United States. (See also FORESTS.)

(C. E. R.)

WOLMANIZED LUMBER emerging from pressure cylinder. Announced in 1955, the use of Wolman salts makes lumber resistant to termites, decay, mould and leach, and partially fireproofs the lumber as well. The solution of salts is raised to 140° F. and impregnated in the lumber by vacuum and pressure in the chamber shown in the photograph

Lutherans. In 1955, Lutheran church membership in North America passed the 7,000,000 mark. The total was 7,117,906, including 6,906,331 in the U.S. and 211,575 in Canada, according to the National Lutheran council.

The 16 Lutheran church bodies had a total of 17,239 congregations and 15,881 ministers; combined property valuation was \$1,238,843,998; debts \$156,766,470; total expenditures \$272,511,767, including \$218,214,297 for local expenses and \$54,297,470 for church work at large.

Lutheran missionary efforts, at a new peak since 1946, were carried on at an expense of more than \$4,500,000 by 1,687 American Lutheran missionaries, serving 5,265 mission congregations with 865,000 native members in 18 foreign countries.

Merger talks between Lutheran bodies continued. The 2,200,000-member United Lutheran Church in America, largest single body, and the 516,000-member Augustana Lutheran Church jointly invited all Lutherans to talks "looking toward organic unity." Meanwhile, a proposed affiliation of the small (22,000-member) American Evangelical Lutheran Church with the United Lutheran Church in America was postponed because it failed to achieve the required two-thirds majority vote in the smaller body.

Jan. 1, 1960, was declared target date for merger of four other bodies: the Evangelical Lutheran Church (960,000 members), American Lutheran Church (862,000), Lutheran Free Church (67,000) and United Evangelical Lutheran Church (57,000).

Preparations were begun for the 1957 assembly at Minneapolis, Minn., of the Lutheran World Federation which, during 1955, increased its membership to 56 churches in 28 countries and embraced nearly two-thirds of the world's estimated 77,000,000 Lutherans.

The National Lutheran council, U.S. national committee for the Lutheran World federation and agency for eight U.S. church bodies (largest non-member in the U.S.: the Missouri Synod), announced that contributions in cash and goods to world-wide relief projects had reached nearly \$82,000,000 from 1939 through 1954, including cash gifts to Lutheran World Action and food, clothing and medicines donated to Lutheran World Relief. The combined relief effort was described as the most extensive undertaken by any Protestant denomination.

In 1955, the National Lutheran council launched a \$1,000,000 refugee program in co-operation with the Missouri Synod, aiming at the resettlement of 15,000 refugees under the U.S. Refugee Relief act. The 1955 goal of the All-Lutheran Food Appeal, also in co-operation with the Missouri Synod, was envisioned as \$1,000,000 worth of food products for overseas relief.

"Martin Luther," widely acclaimed U.S. Lutheran-financed feature film, wound up its commercial runs with a gross of more than \$2,000,000. Tentative plans were announced for a Lutheran feature film on composer Johann Sebastian Bach.

Much publicized in 1955 were Lutheran "heresy trials" against three young pastors in the Milwaukee, Wis., area, the first such trials in the United Lutheran Church in America since the 1920s. Pastor George P. Crist of Durham, Wis., was suspended for denial of the virgin birth and physical resurrection of Jesus Christ as well as deviation from other doctrines. Investigations against two other pastors were continued. (See also CHRISTIAN UNITY; CHURCH MEMBERSHIP.) (A. LA.)

Luxembourg. An independent grand duchy in western Europe, Luxembourg is bounded south by France, northwest by Belgium and northeast by Germany. Area: 999 sq.mi. Pop.: (Dec. 31, 1947, census) 290,992; (1954 est.) 308,000. Languages: *Letzeburgesch*, a German dialect, and French (official). Religion: Roman Catholic 98%. Capital, Luxembourg, pop. (1953 est.) 66,382. Sovereign, Grand Duchess

Charlotte. Prime minister in 1955, Joseph Bech.

History.—On April 16, 1955, by 48 votes to 3, the chamber of deputies ratified the Paris agreements on the rearmament of the German Federal Republic and its access to the North Atlantic Treaty organization. On April 19–21, Joseph Bech, the premier, paid an official visit to Vienna. On Sept. 9 the United States and Luxembourg each raised its legation in the other country to embassy status. In October a Luxembourg parliamentary delegation visited the U.S.S.R.

On April 16 Princess Josephine-Charlotte, wife of Prince Jean, the heir to the grand ducal throne, gave birth to a son who was baptized Henri. (See also EUROPEAN UNITY.)

Luxembourg Industrial Production

(In thousand metric tons except as noted)

Product	1954	1953	1952	1945	1937–44
Iron ore (metal content 30%)	5,892	7,164	7,248	1,404	6,224
Pig iron	2,796	2,724	3,076	318	1,964
Crude steel	2,832	2,664	3,000	264	1,900
Gas (million cu.m.)	20.16	19.08	18.5	11.6	1.2
Electricity (million kw.hr.)	990.0	879.6	831.6	177.6	50.0

Education.—Schools (1953–54): primary 1,045, pupils 28,597, teachers 1,063; secondary 7, pupils 3,253, teachers 280; vocational 7, pupils 3,313, teachers 170. Institutions of higher education 2, students 683.

Finance.—Monetary unit: Luxembourg franc, at par with the Belgian franc. Budget (1954 est., 1955 est. in parentheses): revenue 3,867,000,000 fr. (4,039,000,000 fr.); expenditure 4,379,000,000 fr. (4,790,000,000 fr.).

Transport and Communications.—Roads (1952): 4,300 km. Railways (1954) 505 km. Licensed motor vehicles (Jan. 1955): cars (including taxis) 18,532, commercial vehicles 5,844. Telephones (Jan. 1954) 28,000.

Agriculture.—Main crops: wheat, oats, potatoes. Livestock (1954): cattle 131,000; sheep 3,000; poultry 443,000; horses 11,544; swine 86,161.

Machinery and Machine Tools.

The year 1955 was notable in the machine-tool industry of the U.S. for two reasons: builders held their first national show in eight years, at Chicago, Ill., and automation emerged as an important factor in machine-tool design and performance. The industry booked orders totaling around \$800,000,000, thus setting a new record for a peacetime year. Shipments did not exceed \$675,000,000, compared with \$900,000,000 the previous year. The result was that the industry ended the year with a backlog considerably larger than at the start. This situation applied to metal-forming machines as well as to metal-cutting machines.

The machine-tool show, which was attended by 103,000 people, bore out the contention of qualified observers that machine-tool design had made a greater advance within 8 years (figure the previous show in 1947) than in the previous 80 years.

In machine-tool circles, automation originally meant less than the feeding and ejecting of work into and out of machines mechanically, and the transfer of the work from one machine to another by mechanical means. Then it was broadened to include the mechanization and automatic control of manufacturing processes.

Automation had long been used in mass-production plants, especially in the automobile industry. In 1955 it was applied to assembly as well as processing operations. Final assembly of V-eight engines at Plymouth's new plant in Detroit, Mich., completed during the summer of 1955, was done automatically by mechanized lines with subassemblies manually positioned and then automatically fastened by air-operated runners and other units. More than 560 ft. long, the line was by overhead conveyors bringing colour-coded plastic trays to an area where devices automatically loaded compartments with the exact number of parts needed. Trays were routed to va-

tions of the lines according to need.

A survey made by the editors of *American Machinist* of 1,574 metalworking plants showed that 1 out of 5 of them had installed some form of automation. Even in shops with 50 employees or less, 1 out of 10 had some kind of automation. To qualify as possessing any form of automation, a company had to have one or more of these units: transfer machines, transfer cranes, automatic loading or automatic assemblies.

Preselection of feeds and speeds for machine tools so that they could be applied at the touch of a button or automatically on completion of the previous operation was a growing development during the year. Methods for doing this ranged from a simple card placed over the change-gear lever (which merely indicated the next setting but was numbered for the operation) to a fully automatic tape-controlled machine that produced different parts alternately from a single loop of tape that determined speed, feed, length of cut and operations sequences. The builder had a numerical-sequence programmer that used punched cards (which could be punched in the shop or made in direct decimal numbers) placed over a panel of buttons. The pushing of a pin through the holes set the buttons, or a master pin plate accomplished the same thing. This panel could sequence 25 functions and select from 8 different combinations of feeds and speeds, preset on dials. Numerically controlled table positioning came into considerable use. One was a turret punch using a system newly developed by the builder of the press builders.

At least three lathes and two hobbing machines first built during 1955 were equipped with self-resetting or feed back devices. Grinding machines showed the influence of the automotive industry in automatic cycling, automatic loading, clamping, wheel dressing and other devices. Several cylindrical and centreless grinders were equipped with electromechanical controls for automatic compensation for wheel wear as a result of redressing. Automatic threading control on a standard turret lathe was provided with a hydraulic unit which powered the automatic feed infeed to the proper graduation cutting depth for each pass. One grinder manufacturer worked on a project for eliminating mechanical and electrical wheel positioning controls. He substituted an electric eye beamed across flanges on the work to position the wheel.

Tracer control came into greater use during the year. A vertical boring and turning mill with an automatic tracer-controlled movement was unveiled by one builder. The system on this machine included a tracer head with a stylus and motors providing individual drives for each motion. A prominent builder displayed at the show a roll-contouring lathe of 50-in. capacity with a two-direction tracer that handled steep-angle contours. For heavy-duty work, another company brought out an automatic tracing lathe which removed up to one-half inch of material on one, two, three and four automatically controlled tracing passes.

Three developments were noteworthy in threading equipment: continuous automatic threading operations, thread broaching and chip-screw tapping. Infinitely adjustable speeds, hydraulic feeds, air-powered unit drill heads and minimizing of noncutting time were stressed in new designs of radial drills. More capacity in the same machine size was provided in certain radials, which were equipped with double right-angle bases to permit one job to be set up while another was working. Fully automatic gear grinding came into its own during the year. The machine for this purpose could be fed by hopper or magazine and had an automatic work release at the end of its cycle. Milling machines, like other types of machine tools, were redesigned to improve accuracy and convenience of operation and to make them more powerful and rigid for effective use of carbide milling cutters at

HIGH-SPEED LATHE installed at the Carboly department of General Electric Co., in 1955. Weighing 12 tons, the machine is 32 in. long and is capable of variable speeds from 4 to 1,400 r.p.m. It was to be used in testing materials machinability with various grades of cemented carbide tools, and to determine carbide life under all conditions

optimum cutting speeds and feeds. In broaching, manufacturers revealed many new features: higher speeds, substitution of electromechanical for hydraulic drives, easier control of the machine by redesign, reduction of time lost between cutting strokes and automatic loading and removal of the work.

"Packaged presses" began to come into prominence in 1955. These presses are ready to run after they are set down on the shop floor and are plugged into air and electric lines. For mass-production users, these presses save the cost of setting up. Also, the builder engineers the controls—for air, electricity and automation—puts them into substantial cabinets and properly labels their elements and functions. The electrical devices are also prewired.

Electrical-discharge machines assumed increased importance during the year. One such machine was suitable for tool sharpening, surfacing, forming, piercing, diemaking or polishing. A four-station machine of this type pierced 32 elliptical holes in stainless steel in 110 minutes, using extruded tubular brass electrodes. The contour was held to 0.005 in., and alignment to 0.001 in.

No innovation created more excitement during 1955 than ceramic (cemented-oxide) cutting tools. When applied properly, they increased steel-finishing speeds four to five times. These tools cut at 600 to 3,000 ft. per minute with depth of cut ranging from 0.110 to 0.250 in. and feed rate from 0.008 to 0.016 in. per revolution. When designed right, adequately supported and used in a machine with enough power, ceramic tools could remove metal at least four times faster than tungsten-carbide tools could cut it. Tool bits lasted 26 to 30 minutes; they remained cool if properly designed. Power required for ceramic tools was about the same as for carbide tools. Most of the bits were composed of aluminum oxide with varying percentages of other oxides, processed by powder metallurgy. Ceramic tools were being made experimentally during the year and were not available commercially. (B. Fy.)

McKay, Douglas (1893-), U.S. government official, was born on June 24 at Portland, Ore., and received his bachelor's degree in agriculture at Oregon State college, Corvallis, in 1917. He served overseas as an infantry officer in World War I. He was an automobile salesman at Portland, Ore., from 1920 to 1927, then set up his own automobile dealership at Salem, Ore. Mayor of Salem for one term (1933-34), he was later Oregon state senator for four separate terms (1935-37, 1939-41, 1943-45 and 1947-49). In 1948 he was elected governor of Oregon on the Republican ticket; he was reelected in 1950.

Although a staunch opponent of such vast public power developments as the projected Columbia Valley authority and the Missouri Valley authority, McKay became known in the west as a supporter of local governmental development of natural resources. He was named secretary of the interior in Pres. Dwight D. Eisenhower's cabinet and was sworn into office Jan. 21, 1953. The following April 17 McKay announced that he had cut the department of the interior's budget from the \$607,251,400 asked by former Pres. Harry S. Truman to \$484,363,000.

During 1955 McKay opposed federal building of the controversial Hell's Canyon dam on the Oregon-Idaho border. In testimony before the senate's interior subcommittee in Feb. 1955, he advocated admission of both Alaska and Hawaii to the union.

Madagascar. An island (fourth largest in the world) off the southeast coast of Africa, Madagascar is an overseas territory of the French Union. Comoro archipelago is administered as a separate territory. Areas and populations are:

	Area (sq.mi.)	Population 1936 est.	1954 est.
Madagascar (with dependencies)	230,165	3,669,328	4,540,400*
Comoro archipelago	849	128,608	170,046

*1953 estimate.

Population: many indigenous racial and tribal groups, the Merina being the most numerous (about 900,000); 66,423 Europeans (1952) including 47,274 French; small Hindu, Chinese and Arab minorities. Language: Malagasy, related to the Malayo-Polynesian group. Religion: Madagascar, Christian and pagan; Comoro archipelago, Moslem. Chief town (pop., 1951 census): Antananarivo or Tananarive (cap.) 182,982; Tamatave 36,133; Majunga 38,042. High commissioner in 1955, André Soucdaux. Comores: administrator, Pierre Coudert.

History.—Madagascar's economy was going through a critical period in 1955, mainly because of the fall in coffee prices, coffee being the country's principal export. The coffee crop rose nonetheless, reaching 40,000 metric tons. The former nationalist deputy, Raseta, who had been sentenced to death after the rebellion of 1947, was released from prison on condition that he should reside in France. In September conversations between the deposed sultan of Morocco and the delegates of the French government and of the Moroccan political parties took place at Antsirabe. Two dams were started to the east of Tananarive, to provide additional electricity.

By a law of Aug. 6 the administration of the French Austral and Antarctic territories was detached from that of Madagascar: henceforth they were to constitute a distinct overseas territory. Reindeer, ponies and some sheep were landed on Kerguelen island.

The governor-general of the Union of South Africa, E. G. Jansen, paid an official visit to Madagascar in July. (Hu. DE.)

Education.—(1953) *Madagascar*: Schools: primary 1,856, pupils 255,855; secondary (including teacher training) 146, pupils 11,385; vocational 135, pupils 6,194. Higher institutions 4, students 378. *Comores*: pupils 2,700.

Foreign Trade.—Monetary unit: franc C. F. A. (Colonies Françaises d'Afrique)=2 metropolitan francs. In 1955, U.S. \$1=350 metropolitan francs. *Madagascar*: imports (1954) 24,040,000,000 fr. C. F. A., includ-

ing 18,000,000,000 fr. C. F. A. from France; exports 16,026,000,000 fr. C. F. A., including 11,000,000,000 fr. C. F. A. to France (coffee 41.2 metric tons, rice 16,000 metric tons, tobacco). *Comores*: imports 55,000,000 fr. C. F. A.; exports 558,000,000 fr. C. F. A. (mainly vanilla and essential oils).

Agriculture.—*Madagascar* (metric tons, 1953): rice 1,025,000; coffee 43,500; potatoes 80,000; peanuts 22,000; maize 72,500; manioc 856,000; Cape peas 12,000; sisal 8,700; raffia fibre 5,100; castor oil 2,700; tobacco 4,400; vanilla 350; pepper 350; dry beans (1952) 32,000.

Maine. The extreme northeastern state of the United States. Maine was admitted as the 23rd state in 1820, and is popularly known as the "Pine Tree state." Land area 31,000 sq.mi.; water area 2,175 sq.mi.; pop. (July 1, 1955, est.) 890,000; (1950 census) 913,774. The largest cities and their 1950 populations are: Portland 77,634; Lewiston 40,974; Bangor 31,558; Auburn 23,134; South Portland 21,866; Augusta (cap.) 20,913; Biddeford 20,836; Waterville 18,287.

History.—Gov. Edmund S. Muskie took office Jan. 5, 1955. The Republican controlled legislature met in regular session on Jan. 5, 1955, and adjourned on May 21. The first in 20 years to deal with a Democratic governor, it passed many of his recommendations, creating a department of industry and commerce, authorizing a survey of state government, and providing money for state institutions and aid to education. It also reappointed the house of representatives for the first time since 1931. The constitution provides for decennial reapportionment. On the other hand, the legislature also passed a one cent per gallon increase in the state gasoline tax (from 6 to 7 cents over the gubernatorial veto, turned down a proposed income tax (or a sales tax increase alternative) refused to set up a building reserve fund and frowned on a highway bond issue. A budget supplement of \$10,000,000 was cut in half and various tax increases provided to finance the remaining \$5,000,000 appropriation.

Governor Muskie allowed the supplementary tax and appropriation bill to become law without his signature. A new state office building and a state liquor warehouse were pushed toward completion at the state capital.

At a special September election voters approved four minor amendments to the state constitution and approved a bridge bond issue. Maine Indians on state reservations were privileged to vote at this election, their first chance in Maine history. An amendment approved in 1954 gives "Indians not taxed" the right denied by the 1820 constitution.

Favourable weather and a prosperous national economy pushed Maine's vacation industry to a new high point, and other features of the state's economic picture were sound, with unemployment lower than in 1954. The Maine turnpike extension begun in 1954 was completed in 1955.

The chief officers of Maine during 1955 were: governor (or elected state official in Maine), Edmund S. Muskie; secretary of state, Harold I. Goss; attorney general, Frank F. Hardin; treasurer, Frank S. Carpenter; auditor, Fred M. Berry; commissioner of agriculture, Fred J. Nutter.

Education.—The net enrolment in the public schools April 1, 1955 was 173,147, compared with 168,225 in 1954 and 167,024 in 1953. The state general fund appropriation for the department of education for the year 1954-55 was \$9,254,357, compared with \$8,694,076 in 1953-54. Expenditure per pupil based on average daily attendance 1953-54 was \$148.54 for elementary schools, \$333.18 for secondary schools; in 1952-53 it was \$136.19 and \$293.50, respectively. Public school teaching positions in the state (elementary and secondary) numbered 6,916 in 1953-54 compared with 6,603 in 1952-53. The commissioner of education in 1955 was Herbert G. Espy.

Social Insurance and Assistance, Public Welfare and Related Programs

of Dec. 31, 1955, there was a balance (Oct. 1 est.) of \$42,500,000 the unemployment compensation benefit funds of the Maine employment security commission, compared with \$42,649,892 a year earlier. Total benefit payments for 1955 (Oct. 1 est.) were \$8,700,000, compared with \$9,837,344 the previous year. The state expended for health, care and charities for the fiscal years ending June 30, 1955, and June 30, 1954, \$16,903,738 and \$16,663,764 respectively. Ten state institutions (correctional, mental, etc.) as of Sept. 30, 1955, had a total state population of 5,416 and 1,370 employees, and three tuberculosis sanatoria had 274 inmates and 264 employees. These sanatoria were transferred from the department of institutional service to the department of health and welfare as of Aug. 20, 1955. The total expended on 13 institutions for the fiscal years 1955 and 1954 was \$7,150,717 and \$6,826,933, respectively.

communications.—Highways of the state in 1955 were: state highway 3,163 mi.; state aid system, 7,297 mi.; local system, 9,293 mi.; total, 19,753 mi. In the year ended June 30, 1955, the state expended \$1,195,531 and federal funds for highway and bridge purposes, exclusive of interest charges, \$31,758,806, compared with \$31,217,212 in 1954. Total expenditures of the highway department for the same years were \$35,385,043 and \$34,467,872. Steam railway mileage on 8 railroads was 1,832 line miles (Dec. 31, 1953). As of Aug. 1955 there were an estimated 230,024 telephone instruments in Maine, compared with 222,000 as of July 1954. Maine had 23 licensed commercial airports as of July 1955, and one regularly scheduled commercial airline. There were 4 commercial A.M. radio stations, 4 commercial TV stations operating in Maine as of Oct. 1955. There were 338,519 motor vehicles, including cars, registered in 1954 and 357,330 (est.) for 1955, with 377,516 drivers' licences issued in 1954 and 391,000 estimated for 1955.

Banking and Finance.—During 1955 the Maine banking department revised 32 savings banks, with one branch; 28 trust companies, with branches; and 29 loan and building, and savings and loan associations. The following figures are for June 30, 1955: deposits of savings banks, \$305,903,134; total assets, \$349,912,445; trust company deposits, \$1,479,589; total assets, \$311,638,855; building and loan and savings loan associations, total resources, \$50,296,544. There were 31 national banks in the state with combined assets on June 30, 1955, of \$1,034,000, and total deposits of \$259,934,000. Receipts, expenditures, and bonded debt of the state government for the year ending June 30, 1955, were respectively: \$85,366,180; \$87,798,624; \$37,300,000. For year ending June 30, 1954, these were respectively: \$81,721,240; \$82,894; \$39,141,500.

Agriculture.—Except for a high potato yield, 1955 was a normal year for Maine agriculture.

Table I.—Principal Crops of Maine

Crop	Indicated 1955	1954	Average, 1944-53
Barley, bu.	468,000	312,000	474,000
Buckwheat, bu.	2,880,000	3,003,000	3,344,000
Corn, bu.	108,000	100,000	132,000
Oats, bu.	768,000	712,000	772,000
Peas, bu.	68,200,000	48,960,000	61,758,000
Potatoes, bu.	1,530,000	740,000	927,000
Wheat (dry), 100-lb. bags	69,000	32,000	66,000

Source: U.S. Department of Agriculture.

Fisheries.—During 1954 there were 283,905,900 lb. of fish landed in the ports, valued at \$16,855,600 to the fishermen. Corresponding figures for 1953 were 241,558,713 lb. and \$16,754,164 respectively. This represented an increase in quantity of 18%, and an increase in value of 1% for 1954 compared with landings of 1953. The value of the principal species (1954) with weight in pounds in parentheses, was: lobster \$8,087,165 (21,667,713); rosefish or ocean perch \$5,500 (79,670,711); clams \$1,460,351 (4,013,568); herring \$1,516 (123,602,099).

Manufacturing.—The average weekly hours worked in manufacturing by production workers (Aug. 1955) was 40.3 and average hourly earnings \$1.446 compared with 39.9 and \$1.399 for the same period in 1954.

Table II.—Principal Industries of Maine, 1954

Type of Industry	Value of Product	Gross Wages Paid	Employees
Manufacturing	\$1,138,778,168	\$317,258,713	110,675
Food and kindred products	153,350,041	23,709,067	14,117
Textile mill products	219,803,904	57,898,193	19,594
Chemical and other finished products made in fabrics and similar materials	18,494,520	4,187,062	2,201
Paper and wood products (except furniture)	109,989,863	31,973,326	14,726
Stone and fixtures	5,256,338	1,634,828	659

Nonagricultural labour force of the state employed in mid-August, 1955, was estimated at 280,300, or 1.1% above the figures of 277,200 in mid-August, 1954. Production of Maine industries in 1954 was valued at \$1,138,778,168, or 2.6% less than the previous year and there were

110,675 employees of whom 34,762 were women. Comparable figures for 1953 were: \$1,169,170,378; 120,134; and 37,071. Average annual earnings were: \$2,866 (1954); \$2,864 (1953). (E. F. D.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Maine in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953, Maine was fourth in the production of feldspar and ranked 44th among the states in the value of its mineral output, with 0.07% of the U.S. total.

Table III.—Mineral Production of Maine

Mineral	1952		1953	
	Quantity	Value	Quantity	Value
Cement (in bbl.)	1,457,000	\$3,750,000	2,001,000	\$5,422,000
Feldspar	19,000	147,000	18,000	117,000
Sand and gravel	7,078,000	2,188,000	8,072,000	2,608,000
Stone	317,000	1,796,000	249,000	1,215,000
Other minerals	1,098,000	...	1,141,000
Total		\$8,979,000		\$10,503,000

Malaya, Federation of. The Federation of Malaya consists of the British settlements of Malacca and Penang and the protected states of Johore, Kedah, Kelantan, Negri Sembilan, Pahang, Perak, Selangor, Trengganu (sultanates) and Perlis (rajaship). Area 50,690 sq.mi. Pop.: (1947 census) 4,908,086, including 2,427,834 Malays (49.5%), 1,884,534 Chinese (38.4%), 530,638 Indians and Pakistanis (10.8%); (mid-1954 est.) 5,888,578. Religion: Malays are Moslem; Indians mainly Hindu; Chinese Buddhist, Confucian and Taoist. Chief towns (pop. 1947 census): Kuala Lumpur (Selangor; federal cap.) 175,961; Penang or George Town 189,068; Ipoh (Perak) 80,894; Malacca 54,507; Taiping (Perak) 41,361; Johore Bahru 38,826; Seremban (Negri Sembilan) 35,274. High commissioner in 1955, Sir Donald MacGillivray; chief minister Tengku Abdurrahman.

History.—For the Federation of Malaya the year 1955 was by far the most momentous year since the defeat of the Japanese. The country's first general elections were held on July 27. The overwhelming victory of the U.M.N.O.-M.C.A.-M.I.C.* alliance enabled the new chief minister, Tengku Abdurrahman, to offer an amnesty to the communist terrorists. In the closing months of the year hopes rose high that after more than seven years the emergency might be ended.

The elections were notable in two respects. Despite the poor communications, which meant that in some areas ballot boxes had to be transported from village to village in motor launches or by helicopter, more than 80% of the electors on the register went to the polls. And these voters, in 51 out of 52 constituencies, voted for the alliance, the party which had laid most emphasis on the blending of the races to form a Malayan nation. Dato Sir Onn bin Ja'afar, the federation's elder statesman (who had founded the United Malays' National organization, but had subsequently left it to help form the rival party Negara), was himself defeated. Partly because of the difficulties experienced by the Chinese in obtaining the right to vote under the existing laws, and partly because of their own lethargy in tackling these difficulties, only 11% of the electorate were Chinese although they formed about 40% of the total population. Nevertheless, Tengku Abdurrahman, the U.M.N.O. leader, insisted that 15 candidates out of the 52 sponsored by the alliance should be Chinese. The president of M.C.A., Col. H. S. Lee, one of the country's leading tin magnates, re-entered the legislative council and the government as one of the 43 members nominated by the high commissioner to represent the states and settlements and such "scheduled interests" as the rubber and tin industries, trade unions and chambers of commerce. The final composition of the legislative council was 50 Malays, 26 Chinese, 7 Indians,

*United Malays' Nationalist organization—Malayan Chinese association—Malayan Indian congress.

: Ceylonese, 1 Eurasian, 5 European officials and 7 European nonofficials.

Within a few weeks of the elections, A. T. Lennox-Boyd, U.K. secretary of state for the colonies, paid a visit to Malaya and was able to hold satisfactory talks on constitutional changes needed to meet the overwhelming success of one political party. Tengku Abdurrahman was to head a delegation to London early in 1956 to carry these discussions further. Before the elections he had promised his followers self-government in two years and complete independence in four; with so nearly unanimous a mandate from the electorate, the leisurely development envisaged on the British side during his 1954 visit to London was clearly insufficient.

A compromise between these two views had, of course, to depend upon the emergency. There were two important reasons why the British authorities fell in with Tengku Abdurrahman's desire to bring the emergency to an end by the offer of an amnesty. First, the world-wide communist campaign in favour of "co-existence" tended to reduce the campaign in Malaya to an absurdity. Secondly, the alliance victory in the elections destroyed the last pretense of the communists that they represented public opinion and greatly increased their desire to claim some share in the campaign for national independence. Doubtlessly a third factor also influenced Chin Peng, the communist leader, in asking for a meeting at which the chief minister could discuss the amnesty—the very high rate of surrenders in 1955, even before the amnesty offer had been made. This communist desire to transfer activities from the jungle to the towns and villages was, however, paralleled by a dangerously indiscriminating desire on the part of the public to finish with the emergency at any cost—a desire which more responsible persons in the country feared might gravely increase the power of the communists, once they had returned to civilian life.

In other respects the year was a very favourable one for the federation, mainly because of the high market price of rubber. There was a satisfactory rise in the country's foreign trade, and it was expected that an estimated deficit of Mal. \$148,000,000 would be converted into a small surplus. (See also SINGAPORE.) (V. BT.)

Education.—Schools (1953): Malay 2,038, teachers 11,843, primary pupils 338,100, secondary pupils 4,060; Chinese 1,210, teachers 7,572,

primary pupils 236,100, secondary pupils 14,840; Indian 869, teachers 1,565, primary pupils 43,200, secondary pupils 180; English 319, teachers 4,751, primary pupils 97,800, secondary pupils 42,400; junior technical 5, pupils 723. Teachers' training colleges 3, students 942. Institution of higher technical education 2, students 309, teaching staff 24. University of Malaya (Oct. 1954) students 1,043, teaching staff 161.

Finance.—Monetary unit: Malayan dollar (equal to 2s. 4d. sterling) and valued in 1955 at 32.66 cents U.S. Budget (1953 actual, 1956 estimates): revenue Mal. \$713,195,987 (\$744,000,000); expenditure Mal. \$883,352,435 (\$794,000,000).

Foreign Trade.—(Including Singapore, 1954): imports Mal. \$3,139,000,000; exports Mal. \$3,109,000,000. Principal exports (metric tons, 1954): rubber 598,987; tin 71,735; coconut oil 80,400; copra 41,600; palm 51,200.

Transport and Communications.—Roads (1953) about 9,980 km. Registered motor vehicles (1953): cars 44,552, commercial vehicles 29,400. Railways (including Singapore, 1954) 1,700 km.; freight 379,200,000 ton-km. Air transport (1953): 143,000 passengers arrived or departed from federation airports. Shipping (see SINGAPORE).

Agriculture.—Main crops (metric tons, 1954): rubber 594,000; rice 700,000; copra 166,800; palm kernels (estates) 14,700; palm (estates) 54,800; tea (estates, 1953) 1,900; pineapples (1953) 17,000. Livestock (1953): sheep 26,300; horses 600; pigs 306,000; goats 281,700; buffaloes 242,800; cattle (Sept. 1955) 278,000.

Industry.—Production (metric tons, 1954): tin concentrates (metal content) 61,680; coal 229,590; iron ore 1,238; bauxite 169,500; cement 86,400; gold 21,000 fine troy ounces. Electricity 873,600,000 kw. hr.

Malta. This British internally self-governing colony and strategic base consists of a group of three Mediterranean islands and three uninhabited islets, about 60 mi. south of Sicily. Area of main islands: Malta 95 sq. mi.; Gozo 26 sq. mi.; Comino 1 sq. mi. Total pop.: (1948 census) 305,991; (1955 estimates) 315,000. Language: Maltese (possibly of Punic [Phoenician] origin with heavy Arabic and some Italian overlay) and English; Italian is also spoken. Religion: Roman Catholic. Principal towns (pop., 1953 est.): Valletta (cap.) 19,145, excluding suburbs; Sliema 24,839; Pawla with Tarxien 20,471; Hamrun 13,995; Birkirkara 17,774. Governor in 1955, Sir Robert Laycock. Prime ministers, G. Borg Oliver and (from March 10) Dominic Mintoff.

History.—General elections held in March 1955 resulted in a win for Dominic Mintoff's Labour party by 23 seats to G. Borg Oliver's Nationalist party's 17. Mabel Strickland's Progressive Constitutional party won no seats. The Duke of Edinburgh attended the first session of the new legislature. In June the party leaders had talks in London on the long standing question of independence.

RESCUE IN VALLETTA HARBOUR, Malta, in Aug. 1955. The ferry boat, principal means of communication between the island and Sicily, struck a reef during a fog.

Malta's future status and in September a round-table conference gave an opportunity for all shades of political opinion to discuss the matter. Mintoff's proposal for Malta's integration with Great Britain, with Maltese representatives in parliament at Westminster, was opposed by G. Borg Olivier whose original aim for administration under the home office had now been replaced by a wish for self-government within the commonwealth. Miss Strickland proposed, *inter alia*, that there should be a minister of state for Maltese affairs in London. Malta's need for assistance with long-term social and economic planning was recognized by all those taking part in the political discussions.

(J. J. Ty.)

Education.—(1953-54) Government schools: primary 112, pupils 45,500; secondary 6, pupils 1,837; vocational 3, pupils 347. Private schools: pupils about 15,738. Royal University of Malta (Oct. 1954): students 411, teaching staff 52.

Finance and Trade.—Currency: sterling. Budget (1953-54 actual, 1955-56 est. in parentheses): revenue £7,695,000 (£8,968,000); expenditure £20,000 (£11,160,000). Foreign trade (1954): imports £20,300,000; exports £2,880,000.

Manchuria: see CHINA.

Mandated Pacific Islands: see TRUST TERRITORIES.

Mandates: see TRUST TERRITORIES.

Manganese. World production of manganese based on data supplied by the U.S. bureau of mines appears in Table I. The total for 1954 reflected a slump from 1953, but in 1955 an increase was indicated in other data. In British Guiana, Northwest Guiana, an associate company of the Union Carbide and Carbide Co., acquired a 33-yr. lease to develop deposits of manganese and associated minerals in a 60-sq.-mi. area. Inadnam Corp. of America exercised its option on a large manganese deposit in Northern Rhodesia, late in 1955.

United States.—Vast deposits of low-grade manganese are found in the U.S. which under present conditions cannot be mined profitably. Small high-grade deposits supply a very small part of consumption requirements. Therefore most requirements are imported. Table II, which shows salient statistics of the manganese industry in the U.S., lists the chief countries supplying the imports.

All U.S. government contracts for manganese were cancelled in Sept. 1954.

Table II.—Data of Manganese Industry in the U.S.

In the first eight months of 1955, based on preliminary monthly reports of the U.S. bureau of mines, manganese shipments aggregated 188,490 short tons of metallurgical grade and

10,055 tons of battery grade. The Wenden, Ariz., purchasing depot closed in May 1955, having filled its quota according to plans. (F. E. H.; B. B. M.)

Manitoba. A central province of Canada, Manitoba was established as a province on July 15, 1870. Area 246,512 sq. mi. (26,789 sq. mi. water). Pop.: (1951 census) 776,541; (1954 est.) 828,000; approximately 60% urban. Capital: Winnipeg, pop. (1951) 235,710. Other cities (1951): St. Boniface, 26,342; Brandon, 20,598; Portage la Prairie, 8,511; Flin Flon, 9,899.

History.—During 1955 J. S. McDiarmid represented the crown as lieutenant governor for the province; D. L. Campbell was premier; Dufferin Roblin was re-elected leader of the opposition (Progressive-Conservative) in June. There were 57 seats in the provincial legislature with the following distribution: 35 Liberal Progressives (government), 12 Progressive-Conservatives (official opposition), 5 Co-operative Commonwealth federation, 2 Social Credit, 1 Labour Progressive, 2 Independent. Manitoba has six representatives in the senate and 14 members in the house of commons at Ottawa. William Wall, the first Ukrainian senator in Canada, was appointed from Manitoba in July 1955.

The government royal commission under the chairmanship of John Bracken, after an 18-month survey of liquor laws at home and abroad, advised a liberalization of Manitoba's liquor laws. When passed by the legislature each district would have the right to vote to adopt or reject the recommendations.

In 1955 about 55,000 children were given two doses of Salk vaccine. Polio cases to Sept. 15 numbered 21; in 1954, 3,000 children received the vaccine and there were 117 polio cases reported.

The redistribution of electoral seats was passed after the special legislative committee's report, and it was to come into effect after the census of 1956.

Nearly 1,000,000 tourists visited Manitoba in 1955.

Education.—In the school year 1954-55 there were 1,722 school districts, of which 1,500 were rural; 145,222 pupils were taught by 5,562 teachers, of whom 567 were permit teachers. The University of Manitoba is situated at Ft. Garry and has six affiliated colleges. There is one normal school and one technical vocational high school.

Public Health and Welfare.—Under the Manitoba Health Services act there were 13 local health units in 1955 serving a total population of more than 293,430; three laboratory and X-ray units were operating with headquarters at Selkirk, Virden and Dauphin. Hospitals for mental diseases at Brandon and Selkirk had 3,539 patients under treatment during 1954-55. There were 12 general hospitals with more than 60 beds; 61 with fewer than 60 beds; 2 contagious diseases hospitals; 1 for chronic diseases and 6 sanatoriums. Old-age assistance was given (to those between ages 65-70) to 4,833 persons as at Dec. 31, 1954. There is one Manitoba school for mental defectives.

Communications.—The estimated length of all-weather roads at April 1, 1955, was: gravelled 3,024 mi., bituminous 950 mi., concrete 105 mi. There are seven radio stations and two short-wave stations in Manitoba and one television station. As of Dec. 31, 1954, there were 199,338 subscriber stations in the government-owned telephone system. There was a total of 5,048 mi. of railway exclusive of yard tracks and sidings. In 1954 there were 151,049 licensed passenger cars, 12,176 snowmobiles and snowplanes and 49,648 trucks. There were three air lines operating daily from Winnipeg, as well as a biweekly flight to Churchill, triweekly flights from Flin Flon to Lynn Lake and flights from Flin Flon to Sheridan and Snow Lake.

Finance.—At March 31, 1954, surplus over expenditure was \$218,438 from a revenue of \$55,727,948. For 1955-56 the anticipated revenue was \$58,475,000 and anticipated expenditures were \$58,318,564.

Agriculture.—Production for 1954: field crops \$109,621,000 (initial payments only for wheat, oats, barley); livestock \$48,313,000; dairy \$27,694,000; garden products \$7,680,000; poultry products \$18,613,000; fur farming \$1,500,000; honey \$616,000. Shipment of grain through Churchill Port amounted to 12,484,893 bu.

Fishing and Fur.—Production of fish for the year 1954-55 amounted to 28,441,500 lb. The value as marketed was \$5,435,305; value to fishermen, \$3,087,959. In 1954-55 the estimated value of raw furs exported was \$9,869,174.26; the estimated value of processed furs was \$1,276,828.49.

Mineral Production.—The estimated value of mineral production in 1954 was \$34,952,541, of which \$19,906,022 represented metals; the total included about 2,090,000 bbl. of crude oil, valued at \$5,663,900. Manitoba had ten established oil fields. In the new tenth field southeast of Virden, called the Maples field, there were 11 producing wells with 2 more nearing completion.

Manufacturing.—There were 1,596 manufacturing firms, giving employment in 1954 to 50,000 persons. Payrolls for production workers alone reached a total of \$119,000,000. A total of 48 new industries were established in 1954. (O. Kx.)

Mao Tse-tung (1893–), chairman of the Chinese Communist party and of the Chinese People's Republic, was born in Shao Shan, Hunan province, and educated in Changsha. He helped found the Chinese Communist party in Shanghai in 1921; became political commissar of the 4th Red army in 1931; and in 1934 at the second All-China Soviet congress became the unchallenged leader of the Chinese Communists. He led his forces into northwest China to escape the Chiang Kai-shek "annihilation campaigns" in 1934–35. Between 1937 and 1943 he led his forces against the invading Japanese, but after the Japanese surrender in 1945 supervised the Communist armies that drove Chiang's Nationalists back until, by the autumn of 1949, the Communists were strong enough to launch their People's regime.

Mao, with Chou En-lai (q.v.), shaped the foreign and domestic destinies of Red China in its early years, drawing it closer to the soviet union through military and commercial pacts, and adopting at the same time a completely hostile front to the United States. But in 1954 and 1955 Mao seemed to have retired into the backstage of Chinese politics, letting Chou take the initiative in foreign affairs—at least publicly.

At a Communist party convention in March 1955 Mao was reported to have approved a revised five-year economic plan for China.

Marine Biology. **Distribution of Planktonic Animals.**—Methods for sampling the animal fraction of the plankton population are unsatisfactory, chiefly because the organisms are so sparsely distributed. Nets for the capture of the zooplankton are usually towed for a considerable period of time over a distance of several miles and at one or more subsurface levels. The precise level of towing cannot be controlled or even computed with any great accuracy, and consequently information on the distribution of the zooplankton population is based chiefly on its average density within a large volume of water from various subsurface depths.

Yet it had long been known to fishermen that "krill" or "red feed" appear in dense swarms more or less limited in extent. More recently, dense clouds, the scattering layer, had been located acoustically. Now, by a system of telemetering (W. Dow, 1955), it became possible to determine whether a net is fishing within this layer, just above it or just below it, the trace being recorded on the same roll as that for the scattering layer itself. This made it possible to obtain more accurate information on the depths where zooplankton swarm.

The inadequacies of sampling methods became more obvious as more and more direct visual observations were made. For example, divers (C. Limbaugh and A. B. Rechnitzer, 1955) using an aqualung reported that a thermocline, or the boundary between two water masses, may be very sharply located by an abrupt change from murky to clear water. Accumulations of planktonic organisms, as well as particles suspended in the water, may be responsible for such turbidity. Yet sharp boundaries of this sort are not detected when studying plankton in more conservative ways.

From depths below those explored by free divers came re-

ports of observations from the bathyscaphe F.N.R.S.3 of the French navy. Comparison of the abundance of plankton seen with the naked eye and that actually caught by a plankton net made the deficiencies of the latter even more obvious (G. 9 Houot, 1955). The plankton was observed to be quite dense from the surface down to a level just above the bottom, where in the last two or three metres the density decreased. The organisms were clearly visible with reflected light from the bathyscaphe. The movement of the animals together with the movement of the bathyscaphe prevented any precise identification of the smaller organisms except such slow-moving ones as medusae, heteropods, etc., at least in the vicinity of Dakar (T. Monod, 1954).

In the Mediterranean, much the same density of organisms was observed even with the same decrease in numbers when approaching the bottom, a decrease which may possibly be correlated with the decrease in amount of available oxygen (Fagnon and Brouardel, 1954) just above the bottom (J. M. Pérès and J. Picard, 1955). At the lower levels of the bathyscaphe's descent (i.e., 350 to 380 m. and 450 to 550 m.) medusae, salpae, ctenophores, siphonophores and *Gnathophausia* were also observed, in contrast with the upper layers where solitary radiolarians with large spines and some arrow worms were reported (Pérès and Picard, 1955).

Productivity.—In recent years, advances in the understanding of the productivity of the oceans had chiefly been concerned with the plant fraction of the plankton (H. W. Harvey, 1955) but a milestone was reached in the study of the animal portion with the publication of the monograph *Biology of a Marine Copepod* by S. M. Marshall and A. P. Orr of the marine station of Millport, Scot.

Existing knowledge of *Calanus finmarchicus*, the species under consideration, had been scattered in numerous scientific papers written within the past 25 to 50 years. Now within the covers of one book there were summarized the details of its life cycle and its part in the economy of the sea. It had been studied more intensively than any other species in the group because of its abundance in boreal waters and hence its importance in the food chain, feeding as it does on the phytoplankton and, in turn, being preyed upon by various pelagic fish, especially herring, and by whales.

Rough estimates for the maximal efficiency for the conversion of organic matter to animal tissue of the organic matter synthesized by the phytoplankton indicate that much of the material is lost as it passes along the food chain. Thus, 100 g. of the organic matter in phytoplankton may yield, in turn, about 70 g. when digested by zooplankton organisms, about 4–7 g. when the latter is ingested by plankton-feeding fish (such as herring) and about 0.3 g. when the latter are eaten by other carnivores, such as man (Harvey, 1955).

To test the efficiency of the first step in this conversion, cultures of diatoms and flagellates labelled with radioactive phosphorus (P^{32}) were fed to the copepod *Calanus finmarchicus*. By measuring the initial concentration of the P^{32} in the culture and the amount present in the *Calanus* body, faeces and eggs discharged, it was possible to show that a *Calanus* may filter from 1 to 40 ml. of fluid a day and ingest between 60% and 90% of its food (Marshall and Orr). Although there were certain disadvantages to using radioactive carbon (C^{14}) for such experiments, it was used for comparison with the P^{32} experiments and a fairly good agreement was obtained (Marshall and Orr).

Harvesting Plankton.—Serious consideration was given to harvesting marine plankton as one of the more abundant products of the sea. This was partly because organic matter is roughly decimated as it passes through each step in the food

in, partly because of the success of growing fresh-water unicellular algae in mass cultures, partly because of the publicity given to plankton as a survival food for persons adrift on rafts and partly because of the search for new resources in the sea. Most of the computations and experimental evidence were encouraging. Nevertheless, the idea persisted, and a number of persons had given serious thought to harvesting plankton on a commercial scale. This optimism was possibly based on the fact that in Asian countries, such as Thailand, plankton had been harvested for perhaps 100 years or more (S. W. Ling and K. Suriyong, 1954).

However, many factors militate against harvesting the plankton crop economically in any extensive way (P. Jackson, 1954). There are few, if any, localities along the shore where plankton is sufficiently abundant at all times to justify the operation of fixed equipment, and it is expensive to operate a vessel to reach out areas rich in plankton. Predictions cannot yet be made that it will be abundant at a particular depth, at a particular time or in a particular place. To make the harvest profitable the average plankton density should perhaps be twice that which it is reasonable to estimate for a rich area (Jackson, 1954). Thus the cost per dry ton of plankton might range from about \$5,000 by towing from a small vessel to \$12,600 for a fixed installation (Jackson, 1954). If it is assumed that roughly 60% of the plankton is in the form of protein, the cost would be about 20 times greater than for an equivalent amount of fish protein (Jackson, 1954).

Living Fossils.—Of the eight specimens of the coelacanth *Latimeria* that had been captured since 1928, the last was taken in 1953. The fish did not live more than a few hours after its capture and confinement in a submerged lifeboat. Since it had presumably been living at a depth of 140 fathoms, it was thought that its death was caused by decompression, by a sharp drop (of 26° C.) in temperature and by a high degree of photophobia (J. Millot, 1955). Indeed, the eye of *Latimeria* has a maximal development of light-sensitive elements, and this may account for the extreme photophobia noted when the fish was released (Millot and N. Carasso, 1955).

There appeared to be some disagreement, however, as to the cause of death, because the first specimen seemed to be quite healthy; it had survived for three hours lying on the deck in hot sun (J. L. B. Smith, 1955).

Marine Corps, U.S.

In May 1955 marines participated in atomic operations at Desert Rock, Nev., where helicopter-borne troops of a marine air-

LIGHTER COMBAT PACK for marine troops demonstrated in 1955. At left is 58 lb. pack carried by World War II forces; at right is new 18 lb. pack

ground experimental force carried out an assault exercise on an objective that had been hit by an actual atomic explosion. This unit, formed to test tactics and techniques of vertical envelopment, applied newly developed principles of offense and defense in atomic warfare. Large-scale amphibious exercises were staged during the year in North Carolina, California and the far east.

The average strength of the marine corps in 1955 was approximately 207,000 officers and enlisted personnel, including about 2,200 women marines. The corps was commanded by Gen. Lemuel C. Shepherd, Jr., the commandant, who assumed office on Jan. 1, 1952. Lieut. Gen. Randolph McCall Pate was appointed by the president to assume four-star rank and the office of commandant on Jan. 1, 1956.

The first marine corps trainees under the Reserve Forces act of 1955 were enlisted in September. Men so recruited would serve with the regular establishment for six months with an additional seven and a half years in the marine corps reserve.

The 1st marine division was redeployed to the United States in March after nearly five years' service in Korea—three of them in front-line combat.

Although the size of the corps diminished somewhat in 1955, the authorized strength remained at three combat divisions and three aircraft wings. One division and one aircraft wing remained in the far east.

A new armoured antitank vehicle called "Ontos" was displayed in 1955. Relying on speed and fire power, it carries six 106-mm. recoilless rifles. An all-weather air support system was also unveiled. The system, using radar guidance, enables planes flying blind and releasing bombs automatically to hit targets with excellent accuracy. Tested in Korean combat, this method had been described as the most practical of its kind yet devised.

The marine corps continued its experimental work with, and field-testing of, lightweight geodesic domes—igloo-shaped hemispheric frames covered by plastic-coated synthetic fabric almost as strong as steel and, except for the largest sizes, fully transportable by helicopter even when fully assembled. These domes, far cheaper and much more quickly assembled than other types of shelter, were expected to solve many problems of military shelter in the field.

A new inflatable rubberized nylon reconnaissance boat, to hold nine men, was made available to the operating forces while experiments continued with a larger type.

Logistically, the corps pioneered in the development of a

bulk fuel supply system for amphibious assaults, using nonrigid rubberized tanks.

When hurricanes caused disastrous floods in the northeastern United States and on the Gulf coast of Mexico in late summer of 1955, marines participated with other armed services and federal agencies in aiding the stricken areas.

Major marine bases in the U.S. are at Quantico, Va.; Cherry Point and Camp Lejeune, N.C.; Parris Island, S.C.; Miami, Fla.; El Toro, Camp Pendleton and San Diego, Calif. In Hawaii, marines are stationed at Kaneohe bay on the island of Oahu. They also serve in Japan, on Okinawa, with the various fleets and naval bases, with U.S. embassies, and at North Atlantic Treaty organization (NATO) and United Nations installations.

Maritime Administration, U.S.: see MERCHANT MARINE.

Marriage and Divorce. Although world-wide marriage and divorce rates generally continued the slight declines noted in 1954, birth rates varied considerably. In contrast to births in 1953, the rates in 1954 for 36 countries showed increases in 14, decreases in 19, and no change in three. In 1955, further declines were expected in Europe, Asia, and Africa, as well as in nearly all English-speaking countries. The latest available data (1953) indicated that Ceylon's rate of 28.5 of natural increase per 1,000 population was the highest in the world. Other high rates included 19.2 in Canada, 15.1 in the U.S., 13.8 in Australia, 12.6 in Japan, 12.1 in Portugal and 11.7 in India. Among the lowest rates were 6.8 in Switzerland, 5.8 in France and 4.0 in England.

United States.—Reflecting a marriage rate of 8.9 per 1,000 population during the first half of the year, a total of 1,470,000 marriages was estimated for 1955, possibly approximating the provisional total of 1,476,000 marriages for 1954, which represented a loss of 3.7% from the revised total of 1,533,000 marriages for 1953. The marriage rate in 1954 of 9.2 per 1,000 population was the lowest experienced since 1933. This was largely because of the combination of low birth rates in the 1930s, the record-breaking marriage rates of 1946 and 1947, and the reduction in age at first marriage in recent years. Including annulments, the number of divorces forecast for 1955 was 370,000, a slight decrease from the possible 375,000 divorces in 1954, but a drop of nearly 5% from the revised final total of 390,000 in 1953.

Table I.—Median Age of Bride and Groom by Specified Age of Spouse at First Marriage of Both: 21 Reporting U.S. States, 1953

FIRST COUPLE to be married in the nondenominational chapel at the Massachusetts Institute of Technology, Cambridge, Mass., June 1955. The building is circular and windowless, illumination coming from the skylight above the altar as shown in the photograph

The U.S. supreme court declared invalid the 1953 territorial law of the Virgin Islands that permitted divorces to be granted to persons without requiring them to swear that they would make their permanent homes in the territory.

From various studies it was learned that, among married students in college, the greatest source of dissatisfaction was sexual nature, with one in three husbands declaring that the wife was not sufficiently responsive and one in four wives stating that the husband was too passionate, and one-third of each sex had already felt a need for marriage counselling; since 1890, the divorce rate had increased more than 500%; of persons presently marrying, nearly one-fourth had been previously married; the median duration of marriages ended by divorce was about 6.1 years; in contrast to persons who waited 3.5 years after widowhood before remarrying, divorced individuals waited on average 2.7 years.

Great Britain.—The registrar general provisionally reported 340,619 marriages and 673,212 births, with estimated respective rates about 7.7 and 15.2 per 1,000 population, for England and Wales in 1954; the number of absolute divorce decrees was 2,027. In expectation of a continuing downward trend, not more than 335,000 marriages, 670,000 births and less than 28,000 divorces, were forecast for 1955. Of persons receiving divorces, two-thirds to three-fourths were believed to remarry. The greatest proportion of divorces comes within the period of five to ten years after marriage with one-third of divorces going to childless couples.

Because of the postwar record-breaking marriage rates, particularly of women of younger ages, the number of unmarried men at ages 25-34 years exceeded that of unmarried women one-third. If present trends were to continue, it was feared that by 1983, more than 400,000 men would be unable to find wives among their own countrywomen.

The 9th conference of the National Marriage Guidance Council was held in Ilkley, Eng., in May, 1955. The conference theme was "Marriage Counselling as Social Service." The need

ore and better reconciliation facilities, as well as for education and preparation for marriage, was emphasized. Although five local marriage councils were in process of formation, several had to be discontinued because of their inability to meet the requirements of having at least two trained counsellors (one of each sex).

Canada.—Although the 416,825 births recorded in 1954, a rate of 38.5 per 1,000 population, had represented the highest birth rate since 1947, slight declines in both birth and marriage rates were anticipated. One reason for the falling marriage rate was the shortage of women, with the excess of men thought to be more than 190,000. It was estimated that the number of deserted spouses in the country approached 50,000. To the question "How successful would you say your own marriage is?" asked by the Canadian Institute of Public Opinion, 67% and 6% of the respondents respectively answered "very successful" and "moderately successful," 3% said "not very successful" and 24% did not know. British Columbia, faced with the lowest birth rate in the dominion and a divorce rate triple that of any other province, opened a marriage counselling centre with the aid of the Canadian Mental Health association.

Other Countries.—In Belgium, the Association of Catholic parishes voted to establish a marriage counselling education centre in Brussels. Denmark restricted the right of fathers of illegitimate children to vote, and to contract a legal marriage with another woman, until adequate provision was made for the maintenance and education of such children. Because of the low birth rate, the French government was hoping to treble its production of new housing, and was exploring the possibility of increasing family income by finding part-time work for married women. In East Germany, the Communist party continued to promote equality for women; in West Germany, where less than three-fifths of children resided with both parents and, further, spurred on by the low birth rate, the government was sponsoring a program for earlier marriages, happier homes and larger families.

In Jaunswar Bawar, where there were four times as many women as men, the official Indian government gave encouragement to the increasing pressure among wives to replace polygamy with monogamy. The All-Pakistan Women's association demanded its revolt against polygamy and further extended its general boycott of women who became plural wives.

Of divorces granted in Northern Ireland, a ratio of one to every 50 marriages, it was estimated that 6% and 38% were obtained respectively by the upper and middle classes, and 56% by the lower class, and that the biggest single cause of marital dissolution appeared to be migration for work; in Ulster, only one person in 20 eventually does not marry. In Spain, a survey indicated that urban women believed the most desirable marriage age for women was 24 and, for men, 30 years, ages about 10 years younger than present estimated median ages at marriage. Although both Sweden's marriage and divorce rates remained relatively high, the birth rate continued to decline. In the U.S.S.R., co-education, re-established in 1954-1955, and the Moscow University for Parents, where training is given in many aspects of family life, were directed more firmly toward greater family solidarity and the prevention of juvenile delinquency. Because of the shortage of unmarried males and the broadness of grounds for divorce, a sharp rise in unregistered and common-law marriages was noted in Yugoslavia.

With the exception of Venezuela, both marriage and birth rates were declining in most countries in South America. Divorce was legalized in Argentina.

ment of Health, Education and Welfare, *Monthly Vital Statistics Report*, and *Vital Statistics-National Summaries* (1955). (C. R. A.)

Marshall, Caroline and Mariana Islands.

The Marshall, Caroline and Mariana Islands, stretching from about 1° to 20° N. lat. and from 130° to 170° E. long., constitute, with the exception of Guam (*q.v.*) in the Marianas, the Trust Territory of the Pacific Islands. The territory contains about 2,130 islands in 96 distinct island units of which 64 are inhabited, with a combined area of about 687 sq.mi. Truk in the centre of the territory is 4,931 mi. W. of San Francisco and 1,832 mi. E. of Yokohama. The population on June 30, 1954 totalled 61,102, exclusive of administrative and military personnel. Three-fifths of the population live on the six principal island units: Saipan, the Palaus, Yap, Truk, Ponape, and Majuro. Eleven different languages are spoken in the territory, including English and Japanese. The majority of the population is Christian.

History.—The territory, which the United States has administered under United Nations trusteeship since 1947, is under the administration of the U.S. navy. Frank E. Midkiff, high commissioner since March 1953, resigned on Sept. 1, 1954. He was succeeded by Delmas H. Nucker who remained as acting high commissioner in 1955. Headquarters of the trust territory were moved from Honolulu, T.H. to Guam in Sept. 1954.

In March 1955 a seventh administrative district, Rota, was added to the territory's original six administrative districts. The other districts in 1955 were Saipan (under navy administration except for the island of Rota), Palau, Truk, Ponape, Yap and Marshall Islands.

Natives of the territory have the status of "citizens of the Trust Territory of the Pacific Islands."

In 1954, inhabitants of the atolls of Rongelab and Uterik had been affected by falling radioactive materials resulting from thermonuclear tests conducted by the U.S. government in the Marshall Islands. In 1955 the United States paid out \$6,870 in property claims to the Uterikese and the Rongelapese in addition to compensation for loss of copra production and replacement of their livestock and fowl.

Education.—On June 30, 1954, there were 156 public schools, of which 149 were elementary, 6 were intermediate, and one (the Pacific Islands Central school at Truk) advanced, technical and normal school. These schools had 7,386 pupils and 343 teachers. There were also 23 elementary and intermediate mission schools with 1,833 pupils and 109 teachers. Instruction is in English except in the first three grades where the native dialect is used. Educational expenditures represented 5.2% of total expenditures during the fiscal year 1953-54.

Finance.—During the fiscal year ending June 30, 1955, local revenues were estimated at \$1,422,000 and U.S. appropriated funds \$5,000,000. Expenditures were estimated at \$7,249,500.

A branch of the Bank of America operates on Saipan. In addition the Island Trading company of Micronesia, a Trust Territory government corporation, had provided banking services in areas other than Saipan until it was liquidated Dec. 31, 1954.

Production and Trade.—About 30,000 ac. (47 sq.mi.), or 7% of the total land area, is under cultivation. In 1955 the economy of the territory was based upon three commodities: copra, which utilized about two-thirds of the cultivated land of the territory and whose production rose 20% over the preceding year to an estimated 12,120 short tons in the year ending June 30, 1955; trochus, the production of which increased fourfold in the same period to 449 tons; and handicrafts, the production of which doubled in the same period to \$40,000. Experimental production of cacao with more than 100,000 trees continued in 1955. Other principal crops were maize, sorghum, taro, sweet potatoes, cassava, breadfruit, bananas, papaya, and citrus fruit. The production of phosphate rock on Angaur in the western Caroline Islands terminated on June 30, 1955, since the limit to which productive agricultural land could safely be mined had been reached. As of June 30, 1954, the territory had 22,975 cattle, 121 carabao, 11,623 swine, 75,000 chickens, 1,500 ducks, and 467 goats. The territory also had a small soap factory, a sawmill, and a boatyard.

In the fiscal year ending June 30, 1954, the value of exports totalled \$3,342,789, of which phosphate rock represented \$2,050,000, copra \$1,070,000, and trochus \$185,200. Imports were valued at \$2,258,326; the most important imports were food, clothing and tobacco. The U.S. and Japan were the major sources and destinations of the territory's imports and exports.

Transportation and Communications.—Air transportation in the territory, except in the Saipan district, was maintained by Transocean Airlines; 4,140 passengers were carried in the year ending June 30, 1954. The Military Air Transport service provides air service in the Saipan district.

There are three civil airfields in the territory. Majuro in the Marshall Islands was developed into a world port for the entire territory in 1954 and 1955. There were somewhat more than 200 mi. of roads in the territory in 1954. Only Saipan had paved roads. There were two privately owned broadcasting stations (one at Majuro and one at Truk), five U.S. postoffices, and 188 telephones. A monthly newspaper was published by the trust territory government for distribution throughout the territory. (S. Nr.)

Marshall Plan: see FOREIGN AID PROGRAMS, U.S.

Martinique. This French overseas island *département* in the Lesser Antilles has an area of 425 sq.mi. Pop.: (1946 census) 261,595; (1954 census) 239,130, mainly coloured (Negro or mixed). Language: French and creole French. Religion: Roman Catholic. Capital: Fort-de-France, pop. (1953 est.) 80,000. Prefect in 1955, Gaston Villegier.

History.—Eleven of the previous councillors were re-elected to the general council in April 1955; three communists were elected. In the elections to the senate, held in June, the two previous senators, a Radical and a Socialist, retained their seats. (Hu. De.)

Foreign Trade.—(1954) Monetary unit: metropolitan franc, valued at 350 fr. to the U.S. dollar. Imports 12,600,000,000 fr., including 9,700,000,000 fr. from France. Exports 8,200,000,000 fr., including 7,500,000,000 fr. to France (1953, sugar 49,603 metric tons, bananas 51,509 metric tons, rum 76,683 hectolitres).

Maryland. One of the original states of the United States, long known as the "Old Line state" and, in later years, as the "Free state," Maryland is bounded on the north by Pennsylvania and Delaware, on the east by Delaware and the Atlantic ocean and on the south and west by Virginia and West Virginia. The total area is 10,577 sq.mi., of which 696 sq.mi. are water. Pop. (1950 census) 2,343,001; (July 1, 1955 est.) 2,593,000. Urban population in 1950 was 69% of the total. Annapolis (1950 pop., 10,047) is the capital. Other cities in the state, with 1950 population figures, are Baltimore (949,708), Cumberland (37,679), Hagerstown (36,260), Frederick (18,142) and Salisbury (15,141).

History.—During 1955, the state continued a large-scale program of public works, much of which was devoted to the roads system. The so-called 12-year road program was well under way, involving a total expenditure of approximately \$568,000,000, in addition to normal expenditures on the road system. Ground was broken for a vehicular tunnel under Baltimore city harbour, to be completed by Dec. 1957. Also, the legislature authorized the construction of a new toll expressway running northeasterly from Baltimore city toward the Delaware Memorial bridge.

The state budget enacted in 1955 totalled approximately \$269,000,000 and was the largest in the history of the state. A prospective need for new revenue at the 1956 session of the legislature, in an amount estimated as possibly in excess of \$35,000,000, was the cause of intensive searches for new sources of revenue during the year.

Another subject of wide study was that of a concerted state-wide effort to improve the facilities of the port of Baltimore.

The principal state officers in 1955 were as follows: governor, Theodore R. McKeldin (Rep.); comptroller, J. Millard Tawes (Dem.); attorney general, C. Ferdinand Sybert (Dem.).

Education.—In 1954-55 there were 791 public elementary and occupational schools in the state (including Baltimore city), with a total fall enrolment of 293,278 and a teaching staff of 9,493. There were 217 secondary and vocational schools, with an enrolment of 161,597 and a teaching staff of 7,250. The enrolment in Catholic schools for the entire state was 78,450. The enrolment in non-Catholic private schools was 16,373. Thomas G. Pullen, Jr., was state superintendent of schools.

Social Insurance and Assistance, Public Welfare and Related Programs.—As of June 30, 1955, old-age assistance was being given to 10,542 persons, with a total cost of \$5,728,452 for the fiscal year ended June 30, 1955; public assistance was being given to 478 needy blind persons, with a total cost of \$289,453 for the fiscal year; aid to dependent children was being given to 6,375 families, with a total cost of \$7,044,520 for the fiscal year; and 4,453 persons were receiving aid to the permanently and totally disabled, with a total cost of \$2,699,169 for the fiscal year.

As of June 30, 1955, there was 1,961 white inmates and 2,914 Negro inmates, or a total of 4,875 inmates, in the five penal institutions (under the jurisdiction of the department of correction). Of these, 60 were white females and 105 were Negro females.

Communications.—The state roads commission expended \$140,470,452 for the fiscal year ended June 30, 1955. The total road mileage in the state highway system, as of June 30, 1955, was 4,803, in the county system 12,619 and in the municipalities 1,322. As of June 30, 1955, there were 1,320 line miles and 2,800 track miles of steam railroads and 22 line miles and 28.4 track miles of electric interurban railways. As of June 30, 1955, there were 901,906 telephone instruments in service in the state, of which 361,703 were in Baltimore city. There were 3,638,390 mi. of wire, of which 1,776,849 were in underground cable as of June 30, 1955.

Banking and Finance.—On June 30, 1955, there were 95 state banks and trust companies doing business in Maryland, with total deposits, of that date, of \$1,075,214,922.75 and total resources of \$1,177,381,172.15. There were 8 mutual savings banks doing business in Maryland, with deposits of \$480,046,821.91 and total resources of \$533,514,513.77. There were 57 national banks in the state with deposits of \$887,999,000 and total resources of \$963,762,000. Total resources of all state and national banks were \$2,674,657,685.87.

As of Dec. 31, 1954, savings and loan and building and loan associations were computed to have assets of \$767,325,467.

State appropriations for the year ended June 30, 1955, were \$241,810,800.24 and expenditures were \$386,080,567.71. Estimated appropriation for the year ending June 30, 1956, were \$274,933,111. The general surplus as of June 30, 1955 was \$4,431,358.96 and the outstanding bonded indebtedness \$160,268,000.

Total	\$26,847,000	...	\$27,085,000

*Values for processed materials are not included in the totals.

AST GUARD HELICOPTER bringing food to Smith Island in Feb. 1955
er heavy ice conditions in Chesapeake bay prevented supply vessels from
ssing from the mainland

ceived in 1953. Total cash receipts from farm marketings in 1954
ounted to \$245,411,000. Cash receipts in 1953 totalled \$265,709,000.
Manufacturing.—The Maryland Employment Security board estimated
number of manufacturing establishments covered by unemployment
mpensation as of Dec. 31, 1954, to be 3,178 employing 246,003 per-
s, as compared with 3,231 employing 259,582 in Dec. 1953; and the
nmanufacturing establishments to be 39,122 employing 385,918 per-
s as compared with 38,096 employing 380,475 in Dec. 1953. The total
roll for the year 1954 was \$991,280,595 in manufacturing and \$1,161,-
3,210 in nonmanufacturing, making total payrolls for the year \$2,152,-
8,805 as compared with \$2,166,783,621 for the year 1953. The amount
unemployment compensation benefits paid during the benefit year end-
March 31, 1955, was \$32,271,505, as compared with \$16,698,655 in
benefit year ending March 31, 1954. (C. N. E.)

Mineral Production.—Table III shows the tonnage and value of those
neral commodities produced in Maryland in 1952 and 1953 (prelimi-
y) whose value exceeded \$100,000. In 1953, Maryland ranked 38th
ong the states in the value of its mineral output, with 0.19% of the
s. total.

emasonry.

Massachusetts. A north Atlantic state of the United
States. Massachusetts was the sixth state
ratify the federal constitution. It was admitted to the union
Feb. 6, 1788. Its popular name is the "Bay state," derived
m its earliest title "the Colony of Massachusetts-Bay" (1629-
). Area: 8,257 sq.mi., including 350 sq.mi. of water. Popula-
n: (1950 census) 4,690,514 of which 84.4% was urban; (July
55 est.) 4,972,000. The capital is Boston (1950 pop.) 801,444;
er important cities are Worcester 203,486; Springfield 162,-
; Cambridge 120,740; Fall River 111,963; New Bedford
189; Somerville 102,351; Lynn 99,738; Lowell 97,249;
ncy 83,835; Newton 81,994; Lawrence 80,536.

History.—The 162nd session of the legislature adjourned on
pt. 16, 1955 (the third longest session), after it had enacted
e acts and 149 resolves. Seven acts were vetoed by the gov-
or and two acts and one resolve became law without his sig-
ure. The total appropriation for general purposes amounted
\$324,148,311, an increase of \$40,306,478 over the preceding
r. In addition to this total a capital outlay, covered by
nds of \$30,000,000, was provided to cover new buildings at
e state university, \$3,611,000; Salem Teachers college, \$1,-
0,000; civil defense underground building in Natick, \$1,452,-
0; and mental hospitals, \$2,187,000.

The temporary decrease of 20.5% in the income tax was
opped and a new income tax equal to the state rate was im-

posed on nonresidents working in Massachusetts. Temporary
taxes amounting to \$78,000,000 were extended for one year.
State bond issues totalling \$90,000,000 included \$30,000,000 to
reimburse cities and towns for flood damage caused by the
August rain and hurricane and \$25,000,000 for the repair of
highways and bridges washed out by the same storm. The Boston
artery, for which a state appropriation of \$100,000,000 was
made, was opened for traffic from the Mystic Bridge to Fort Hill
Square in the fall. The second half of this highway was under
construction.

Following the prison riot at the old state prison in Charles-
town in January when four armed convicts held five guards as
hostages for 84 hours, a sweeping reorganization of the penal
system was enacted. The act increased the power of the com-
missioner of corrections, provided for a new classification system
for prisoners, set up a training school for prison officers, liber-
alized credits for good behaviour thus shortening the time which
must be served and modernized the prison industries program.

The Youth Service board was reorganized and empowered to
develop programs for the prevention of juvenile delinquency.
The new law provided for the appointment by local school de-
partments of school adjustment counselors whose duty it would
be to help children who showed evidences of becoming juvenile
delinquents. The state was to reimburse the local communities
for the expense involved in limited amounts.

Other new legislation included a minimum wage increase from
75 to 90 cents an hour, stiffer penalties for sex criminals, and a
system of life and health insurance on the group plan for all
state employees, the state paying half the premium. Cities and
towns were empowered to adopt similar plans for their em-
ployees.

Hurricane "Connie" kept Massachusetts on the alert during
the second week in August. The area suffered only a heavy rain-
fall which ended a six-week period of drought which began in
the middle of June. The real deluge came as a by-product of
Hurricane "Diane" which occurred on Aug. 18 and 19. The dis-
astrous floods which resulted were of such magnitude that travel
out of the state by either railroad or highway was impossible
for more than a week. Thousands of families were homeless
and destitute.

State officials for 1955-56 were: governor, Christian A. Herter
(Rep.); lieutenant governor, Sumner Whittier (Rep.); secretary
of the commonwealth, Edward J. Cronin (Dem.); treasurer,
John F. Kennedy (Dem.); attorney general, George Fingold

(Rep.); auditor, Thomas J. Buckley (Dem.).

Education.—In 1954 there were 1,692 public elementary schools with 478,040 pupils; 104 junior high schools with 88,932 pupils; 216 senior high schools with 127,913 pupils. The public schools of the state employed a total of 27,764 full-time teachers, principals and supervisors. Salaries for this group totalled \$113,312,683. The total expenditure of the public schools for support and outlay was \$206,155,852.92. John J. Desmond, Jr., was the state commissioner of education.

Social Insurance and Assistance, Public Welfare and Related Programs.—During the fiscal year ending June 30, 1955, old-age assistance was extended to an average monthly number of 90,998 persons at an annual cost of \$83,152,886; an average monthly number of 12,722 families received assistance for the care of 18,489 dependent children at an average expenditure of \$19,298,228; general relief was extended to an average monthly number of 13,885 persons at an annual cost of \$10,641,297. Payments for unemployment insurance for 1953-54 totalled \$75,112,117, an increase of 81.87% over 1953.

For the year ending June 30, 1955, the commonwealth appropriated \$6,826,613.15 to maintain correctional institutions including the state prison (566 inmates), prison colony (767 inmates), reformatory for men (565 inmates), reformatory for women (208 inmates and 22 babies) and the state farm (1,541 inmates) including the criminally insane.

Banking and Finance.—Revenue receipts of the commonwealth for the year ending June 30, 1955, were \$479,541,041.92, including the sale of bonds amounting to \$108,450,000. Expenditures for state government amounted to \$481,317,022.25. The direct gross debt was \$432,774,500. less a sinking fund of \$6,688,774.36 for a net debt of \$426,085,725.64. The assessed valuation of the state as of Jan. 1, 1955, was \$8,322,200,618.

As of June 30, 1955, bank deposits in the savings banks amounted to \$4,317,637,075; total assets of commercial departments of trust companies \$1,431,612,000; bank deposits in savings departments of trust companies \$228,202,000; total assets of credit unions \$129,121,325; and total assets of co-operative banks \$831,305,965.

Agriculture.—Preliminary figures of cash receipts from the marketing of farm products in 1954 totalled \$192,300,000. This included total crop

Table I.—Principal Crops of Massachusetts

Crops	Indicated 1955	1954	Average, 1944-53
Corn, bu.	1,702,000	1,656,000	1,656,000
Apples, bu.	3,300,000	2,180,000	2,436,000
Hay, all, tons	512,000	524,000	532,000

cash receipts of \$64,200,000 and total livestock products of \$128,100,000.

Manufacturing.—In 1955 there were 2,082 labour unions in Massachusetts; the total membership was 564,938, a decrease of 24,145 from 1954 when there were 589,083 members. In 1953 the total valuation of

Lime	132,000	2,000,000	135,000	2,156,000
Sand and gravel	7,646,000	6,129,000	7,308,000	5,931,000
Stone	3,356,000	9,332,000	3,458,000	8,821,000
Other minerals	191,000	...	787,000
Total	\$17,812,000	...	\$17,891,000

*Values for processed materials are not included in the totals.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Massachusetts in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953, Massachusetts ranked 42nd among the states in the value of its mineral output, with 0.12% of the U.S. total.

Massey, Vincent (1887—), governor general of Canada, was born in Toronto, Ont., Feb. 2

He was educated at St. Andrew's college, Toronto, University of Toronto, and Balliol college, Oxford. He was sworn in the privy council and appointed minister without portfolio in Sept. 1924. He was appointed the first Canadian minister to the United States in 1926 and held that post until 1930. He was high commissioner for Canada in the United Kingdom, 1935-46, and chairman of the royal commission investigating national development in the arts, letters and sciences, 1949-51. He became Canada's first Canadian-born governor general on Feb. 28, 1959.

During 1955, Massey made official visits to many areas of Canada. He also visited the United Kingdom in June and July. Upon his return from overseas at the end of July, he unveiled the naval memorial at Halifax, N.S., paying tribute to the seafarers and sailors who died at sea in World War II. As Chairman of the Scout of Canada, he formally opened the International Boy Scout Jamboree at Niagara-on-the-Lake, where more than 10,000 scouts from every continent gathered for a 10-day camp in the latter part of August. Late in the same month, he made a tour of Newfoundland outport communities for the first time, calling on more than a dozen towns and villages around the coast.

(M. L. S.)

Mathematics. In contrast to the major advances in mathematics recorded in the two preceding years, 1955 was largely devoted to consolidating ground already gained. In the fields of point set topology and algebraic groups the process of consolidation was particularly visible.

The study of point set topology had begun about the turn of the century and had undergone three decades of hectic development. In the 1930s the subject had become a standard tool of applied mathematics as well as in other branches of mathematics. By 1940 most mathematicians had been ready to concede that point set topology was embalmed for all time. A sudden revival had occurred in 1944 with the invention by Dieudonné (France, now in U.S.A.) of *paracompactness*. Stimulated by the proof by A. H. Stone (England) that any metric space is paracompact, in 1951 Nagata (Japan) and Smirnov (U.S.S.R.) had independently discovered a neat characterization of metrisable spaces, thus solving a problem earlier considered to be hopeless. Technically, the Nagata-Smirnov theorem states that a regular space is metrizable if and only if it has an open base expressible as a countable union of locally finite subsets. The American Mathematical society recognized this lively rebirth by devoting to point set topology its 1955 summer seminar (held at the University of Wisconsin, Madison). Many simply stated problems remained to challenge the point set topologist of 1955; for example, it was not known whether the product of a paracompact space and a metric space was necessarily paracompact.

With the appearance of the third volume of Chevalley's series on Lie groups, the subject of algebraic matrix groups took on a definitive shape. In the case of characteristic *O* the same level of perfection was attained as that enjoyed by the much older field of Lie groups. The case of characteristic *p* (where addition of sufficiently many 1's yields *O*) awaited new methods. Some of the people actively at work on algebraic groups in 1955 were I. Barsotti, A. Borel, C. Chevalley, W. Chow, J. Dieudonné, A. Kolchin, S. Lang, T. Matsusaka, G. Mostow and A. Weil.

Progress was reported on the fourteenth of Hilbert's famous list of problems. Concerning this problem Hilbert enthusiastically remarked that the formulation was so simple that it could be explained to the man in the street. Here is the precise statement: if *K* is a field, *R* the polynomial ring over *K* in *r* variables, *M* the quotient field of *R*, and *L* a field between *K* and *M* is the intersection of *L* and *R* finitely generated over *K*?

case $r=1$ is easy and had been answered affirmatively many years ago. O. Zariski (U.S.A.) found the answer to be again affirmative for $r=2$ and characteristic O . He also showed that the question is equivalent to asking whether a certain subset of a Riemann surface is closed.

In the field of high speed computing, the most notable event of the year concerned finite projective planes. A projective plane is a geometric system resembling Euclid's geometry; but it is more general in that, for instance, it may have only a finite number of points. In that event the number of points on each line is the same, and that number diminished by one is called the order. As of 1955, all known planes had prime power order, and it was an outstanding problem to determine whether this was always true. The lowest order for which the question was open was 10. A second problem was to find all planes of a given prime power order, and in particular to determine whether there are any other than the standard Desarguan one. There is a known non-Desarguan plane of order 9. It was found that all planes of lower order are Desarguan. This was accomplished by a computational scheme devised by M. Hall and carried out on a WAC (the computer on the campus of the University of California at Los Angeles).

The American Mathematical society's Cole prize in algebra was awarded to Harish-Chandra (India, now in U.S.A.) for his outstanding series of memoirs on the representations of Lie groups. (See also STANDARDS, NATIONAL BUREAU OF.) (I. K.)

Mauritania: see FRENCH UNION; FRENCH WEST AFRICA.

Mauritius. British colony in the Indian ocean with island dependencies, of which the largest is Rodrigues. Area: Mauritius 720 sq.mi.; Rodrigues 40 sq.mi.; other dependencies (Chagos archipelago including Diego Garcia, Agalega and Carriacou Carajos or St. Brandon groups) 45 sq.mi. Pop. (June 1952 census): Mauritius 501,415 including 65% Indo-Mauritians (Indian immigrants and their descendants); Rodrigues 13,133, mostly of African descent; Diego Garcia 619; other dependencies 1,133; (1955 est.) 545,000. Languages: English and French (official); creole French and Hindi widely used. Religion: Indo-Mauritians mainly Hindu; others mainly Roman Catholic. Chief towns (pop. 1952): Port Louis 69,693; Beau Bassin and Rose Hill 28,690; Curepipe 22,026. Governor in 1955 Sir Robert Scott.

History.—Mauritius government expenditures for 1955–56 were estimated at £2,000,000 more than for 1954–55. The main crop, sugar, was expected to give a high yield and proposals were made for expansion in the important tea trade. A survey was made during 1955 of road requirements.

Overpopulation continued to cause anxiety. Representative committees were appointed to examine this problem and to review the colony's fiscal system. In July 1955 Governor Scott, accompanied by eight members of the legislature, visited London for talks on constitutional reform. A court of criminal appeal was established on Jan. 1.

(J. J. Ty.)

Education.—(1953) Schools: primary 241, pupils 79,400; secondary 4 (including 3 government and 9 grant-aided), pupils 7,770. One teachers' training college, students 190. College of agriculture, students 1952) 80.

Finance and Trade.—Monetary unit: Mauritius rupee, valued at 21 cents U.S. and 1s. 6d. sterling. Budget (1953–54 approved estimate; 1954–55 estimate in parentheses): revenue Rs. 96,968,903 (Rs. 129,18,873); expenditure Rs. 94,542,827 (Rs. 128,772,303). Foreign trade (1954): imports £16,100,000; exports £19,600,000. Principal exports: sugar, molasses, rum (97% of all exports); fibre. Production (metric tons): sugar (1954, *tel quel*) 499,000; molasses (1953) 40,537; rum 9,625 hectolitres; aloe fibre (1953) 506 metric tons.

Meany, George (1894–), U.S. labour leader, was born on Aug. 16 at New York city and was educated in the public schools of the Bronx in Manhattan. In 1910 he began plumbing apprenticeship and in 1922 entered labour organizational affairs as business representative of a plumbers' local union in New York city. From 1934 to 1939 Meany was head of the New York state federation of labour and then secretary-treasurer of the American Federation of Labor, of which he was named president Nov. 25, 1952, by the federation's executive council after the death of William Green (1873–1952). Meany was confirmed as president at the union's national convention in Sept. 1953 and was re-elected to the office in 1954. Frequently critical of the Eisenhower administration, particularly after the resignation of Martin P. Durkin as secretary of labour in Sept. 1953, Meany soon was the acknowledged "first man" of the A.F. of L. Meanwhile negotiations had been under way for a merger of the A.F. of L. and its long-time rival, the Congress of Industrial Organizations. The merger was accomplished in Dec. 1955, and Meany was elected president of the combined organization.

Meany was recipient of the 1955 Laetere medal of Notre Dame university as outstanding U.S. Roman Catholic layman in that year.

Meat. Supplies of red meat in the United States in 1955 totalled about 26,875,000,000 lb., 6% more than the previous record high of 1954. On a per capita basis this was 161 lb., up 8 lb. from 1954 and exceeded only by the 163 lb. of 1908.

Beef consumption reached about 81 lb. per person, exceeding the record attained in 1954. Pork was superabundant, at 66 lb. per person, up from slightly less than 60 lb. in 1954. Veal declined very slightly to 9.6 lb. per capita and lamb and mutton continued at about 4.5 lb. per capita. Poultry declined in availability because of unsatisfactory prices to producers in 1954 and early 1955. Chicken on a ready-to-cook basis was indicated at 23.4 lb. per person as compared with 23.8 lb. in 1954, but only 13.2 lb. average per capita before World War II. Turkey meat declined to 4.3 lb. per person from the record high level of 4.9 lb. in 1954; prewar use was only 2.1 lb. per capita. Fish consumption was stable at 11.1 lb. per capita.

Meat prices in 1955 declined below those of 1954 in spite of full employment and rising wage levels. Declines in the price of live animals, especially of hogs which accounted for much of the decline in farm income as compared with 1954, were in part transmitted to the retail meat counter, especially for the less sought after cuts. In May, composite retail prices for all meat

‡Chickens, including commercial broilers and turkey, ready-to-cook basis.

stood at 246 as compared with 273 a year earlier. In September, choice steer meat at wholesale was about \$1 per hundredweight lower than one year previously, but fresh pork loins were \$48.75 per hundredweight as compared with \$52.50 per hundredweight in Sept. 1954; hams showed a decline of about the same magnitude.

Meats to the value of \$43,547,000 were exported in 1954–55, almost the same as in 1953–54. Imports, however, were valued at \$146,623,000 as compared with \$172,495,000 in the previous year. Canned cooked hams and shoulders accounted for approxi-

mately half the imports by value. U.S. imports of frozen whale meat increased sharply to more than 2,000,000 lb. as compared with 700,000 lb. in the previous year.

Wilson and Co., major meat packer, announced in August that it would cease to slaughter hogs and cattle in the Chicago area.

Meat production in principal producing countries in 1954 set a new record, 3% above the 1953 record and 20% above prewar levels, with further moderate increases indicated for 1955. Supplies, and in some cases stocks of frozen and cured meat, were

sufficiently abundant to put moderate pressure on prices.

Pork production increased in 1955 in almost every producing country, with a further increase anticipated in 1956, particularly in the U.S. and Canada and in much of western Europe. However, a decrease was anticipated in the U.K., the Netherlands and Denmark (because of lower prices), and in Argentina because of a small corn crop. A new Anglo-Danish bacon agreement concluded in Copenhagen in October called for a minimum payment of 240 shillings (\$33.60) per hundredweight for a maximum of 208,000 tons, with sharing of proceeds obtained from wholesale prices above a specified level. In general, western Europe was well supplied, with some surplus for export to deficit countries including those east of the "iron curtain."

Australia and the U.K. completed review of the 15-yr. meat agreement under which producers were guaranteed a minimum price for beef, lamb and mutton. New Zealand searched dili-

gently for new export meat markets, and in late 1954 and early 1955 sent 33,000,000 lb. to 20 countries, including the U.S.S.R. while shipping 319,000,000 lb. to the U.K.

Livestock slaughter in Argentina was the largest in recent years. Chilled beef moved in volume for export for the first time since before World War II, and refrigerator space was filled. South Africa on the other hand was reported as suffering a beef shortage. More than 5,000,000,000 lb. of meat were exported from 44 countries in 1954 as compared with 4,600,000,000 lb. in 1953. About 70% of the exports originated in Denmark, Argentina, New Zealand and Australia. The United Kingdom was the largest importer with 2,900,000,000 lb. of about 70% of the world total. The U.S. was second (412,000,000 lb.) and the U.S.S.R. third (185,000,000 lb. from the free world). (See also LIVESTOCK.) (J. K. R.)

Medical Rehabilitation of the Disabled.

The major factor affecting medical rehabilitation of the disabled in 1955 was the success of the Salk vaccine in the prevention of poliomyelitis. In those nations using antipoliomyelitis vaccination on a large scale, polio incidence rates were substantially decreased during the year, thus reducing the number of persons disabled by polio and requiring rehabilitation services.

Throughout the world there was increased recognition of the social and economic benefits of medical rehabilitation services for the disabled and of the need for establishing additional patient service and programs for the training of professional personnel. In the United States, for example, the number of rehabilitation centres had grown to more than 96. These 96 centres, however, were located in 26 states, thus leaving 22 states in which comprehensive rehabilitation services were not available.

Similar advances were made in expanding services in other nations. In Canada, in the past five years, four new rehabilitation centres and seven new cerebral palsy treatment-training centres had been established and a national plan to encourage the development of rehabilitation services had been initiated through a federal co-ordinator of rehabilitation in the department of labour, with provincial co-ordinators in the ten provinces. The department of national health and welfare had also instituted a grants-in-aid program for training personnel, providing equipment and constructing facilities for rehabilitation.

Steps which might lead to a similar scheme were taken in South Africa by the formation within the ministry of labour of a South African Rehabilitation board to study and promote rehabilitation and selective placement of the disabled in the country.

Emphasis in Great Britain was on the continuing expansion of sheltered workshop facilities for the severely disabled. It was reported that 40 such workshops were being operated in Great Britain in 1955 under the auspices of 32 voluntary organizations.

During the year the International Labour organization adopted a statement of basic principles on vocational rehabilitation which was to be submitted to the 70 member nations for ratification. This document was confined to vocational guidance, training and placement of the handicapped since medical and social rehabilitation were not the responsibility of the organization. The document itself, however, emphasized the broad concepts of rehabilitation including emphasis on medical rehabilitation.

Increased emphasis in the United States on the education of medical students and graduate physicians in the basic concepts of medical rehabilitation of the disabled had resulted from financial grants to 13 medical schools for this purpose from the National Foundation for Infantile Paralysis. In addition to the nearly \$2,000,000 given in these grants, the National foundation had given scholarships and traineeships for advance study

25,000 LB. OF HAMBURGER, part of the 880,000 lb. U.S. navy surplus, which was brought to public attention in 1955 as a result of a report of the Hoover commission

650 physicians, therapists, social workers, scientists and other health workers. This aid to advanced education on medical rehabilitation of the disabled was increased in 1955 by the office of vocational rehabilitation, which made grants of \$80,000 to extend the teaching of rehabilitation in five medical schools and to provide 11,074 traineeships at a cost of \$536,000 for rehabilitation personnel.

Other significant federal action in the U.S. included increased appropriations for direct services, research, special projects and professional training in vocational rehabilitation; the maximum appropriation authorized by law was made for state crippled children's services, under the children's bureau; and substantial increased appropriations were voted for research and study of the problems of mental retardation.

During 1955, the United Nations assisted 11 countries in Latin America, the middle east and southeast Asia in the development of rehabilitation services. Survey and advisory missions by 6 experts were provided to 8 countries; 14 experts for the training of personnel were assigned to 6 countries on a long-term basis; a pilot rehabilitation scheme was initiated in India; rehabilitation seminars and conferences were organized in Austria, Italy and Sweden; and 14 scholarships and fellowships were granted for the training of personnel.

Medicine. The Salk vaccine against poliomyelitis, the development of the ataractic agents which produce peace of mind and freedom from confusion, the appearance of several new antibiotics with remarkable properties, and the report from Germany of a new substance to be taken by mouth for control of blood sugar were outstanding developments in medicine in 1955.

Prednisone was developed as a product preferable to cortisone for most conditions. All four valves of the heart had been approached surgically. Scabies was gradually disappearing as a disease. New anticonvulsants and antispasmodics were offering benefit in Parkinson's disease and epilepsy. The location of tumours of the brain through the use of radioactive substances reached an efficiency of about 75%.

Salk Vaccine.—On April 12, 1955, Thomas Francis, Jr., announced the results of the greatest controlled experiment ever performed in the history of medicine, involving inoculation of 50,000 children in 1954 with the Salk vaccine and a similar number with an inert substance. This demonstrated the effectiveness of the Salk vaccine against poliomyelitis. The U.S. public health service released the vaccine for general use as prepared by six manufacturers. The National Foundation for Infantile Paralysis prepared to inoculate all children in the first and second grades of school with two doses of the vaccine given ten days apart with the understanding that the third dose would follow after ten months as a booster dose, to give the greatest possible and longest lasting immunity. Some unfortunate accidental contaminations with live virus led to a change in the system of inspection in manufacturing, leading toward maximum safety. As the year ended, the U.S. public health service announced that even one dose of the vaccine might yield high immunity, and that inoculation was safe and effective.

Ataractic Agents.—People live at a speeded-up rate and multiple tensions bear constantly on the human being. Tranquillizing substances had begun to appear in several forms. Most notable among those previously known were rauwolfia and chlorpromazine. By 1955 these drugs were being widely used in the treatment of various mental disorders and they had revolution-

STAIR-CLIMBING WHEEL CHAIR shown operating in a multiple exposure photograph. Devised by a Danish engineering company, the chair is electrically driven, requiring only guidance and balance by one person other than occupant

ized the conduct of institutions for the mentally disturbed. Many different preparations of rauwolfia and of reserpine were offered by the manufacturers. The mechanism of action of these products had not been established or fully understood. Apparently they are concerned in the development of serotonin in the brain. Among the other drugs which depress the action of the nervous system were Miltown® which was known also as Equanil®, the longer established Mephenesin®, Flaxedil® which was gallamine triethiodide and Mephenesin® which was sold under a great variety of names. These were all in the general group of relaxants of the skeletal muscles. They provide more complete muscular relaxation during such procedures as anaesthesia, manipulations, the use of the gastroscope and the application of intubation. Another skeletal muscle relaxant was succinylcholine chloride, a blocking agent that acts at the nerve muscle junction. Miltown® or meprobamate was relatively nontoxic and seemed to be chiefly of use in anxiety syndromes and in tension states.

Various combinations of these preparations had been used widely in the treatment of hypertension, particularly of the type associated with anxiety and stress. For instance, Miltown®, which was named for the place in New Jersey where it was discovered, proved effective as a tranquillizing agent in anxiety and tension states, for inducing natural sleep, as a muscle relaxant, for relief of muscle spasm, for control of spasticity, for alcoholism and for certain convulsive disorders. The drug does not knock out patients but calms them by blocking conductivity in the interneuronal circuit.

As the tranquillizers gained popularity, a decreasing emphasis occurred in the use of electric shock and of insulin coma therapy in the treatment of various emotional disturbances.

Two drugs, mescaline and LSD (d-lysergic acid) were used extensively in experimentation to determine the mechanisms of such conditions as schizophrenia. Many experiments were done on persons with these hallucinogenic agents. Glutamic acid inter-

HEAT TEST SUBJECT at the school of medicine, St. Louis (Mo.) university, where in 1955 research into body temperature reactions was conducted. In the experiment shown, the subject was placed in temperature and humidity conditions such as would be experienced in supersonic flight. Thermocouples attached to his body recorded reactions, while the tube in his mouth measured metabolic changes

rupts or retards the effects of LSD. In acute schizophrenics the symptoms caused by LSD are an exaggeration of symptoms that already exist. Chronic schizophrenics exhibit behaviour like that in acute episodes. Schizoid patients with depression complain of an intensification of anxiety, depression and physical symptoms. Investigators in the National Institute of Mental Health concluded that LSD makes it impossible for the ego to integrate the evidence of its senses and to co-ordinate its activities.

Epilepsy, Myasthenia Gravis, Parkinsonism.—Two new preparations were available in the treatment of epilepsy and seemed to be having general acceptance. These were Mysoline®, which was used preferably in *grand mal*, and Milontin® for *petit mal*.

In *Myasthenia gravis* a new drug was Mysuran chloride®; the clinical reports seemed to give it advantages over other drugs previously used, such as neostigmine.

Two new drugs were developed for the treatment of Parkinsonism. These were Kemadrin® and Parasiodol®. Clinical studies showed that these have greater effectiveness and perhaps somewhat less toxicity than the previously used drugs, Artane® and Pagitan®. Both drugs apparently decrease tremor and rigidity.

B-Z-55 for Diabetes.—German investigators made available in Oct. 1955 the results of research with a new sulfonamide substance that lowers blood sugar through action on the pancreas. The substance was thus far called B-Z-55. It is rapidly absorbed when taken by mouth and apparently acts to stimulate certain cells of the pancreas in such a manner that they interfere with

the glucagon produced by the A cells of the pancreas and known to be antagonistic to insulin. When this interference is ended more insulin is produced and as a result the sugar is lowered. The substance was still in an experimental stage.

Rheumatic Fever.—Reduction in the incidence and the number of relapses in rheumatic fever was being accomplished by proper and effective treatment of streptococcal infections of the throat. The drugs used included the newer antibiotics such as erythromycin, and chief reliance was placed on penicillin and sulfadiazine. Other preparations used included oxytetracycline (terramycin), also Bicillin® and aureomycin. A single injection dosage of a repository preparation, benzathine penicillin, was also reported to be extremely effective. It was considered especially important that streptococcal sore throat should be promptly diagnosed.

Prednisone and Prednisolone.—Among the most significant developments of 1955 was the introduction of prednisone and prednisolone, also known under a variety of names such as Metacorten®, Metandrasen®, Meticortandrolone®, Deltacortril®, Deltatone®, Delta-Cortif®, Deltra® and Hydreltra®. The advantages over cortisone and hydrocortisone consist in the increased potency of these preparations and in the fact that they do not interfere with the salt and water metabolism. Patients who seemed to cease to benefit after prolonged treatment with cortisone and hydrocortisone developed favourable reactions with the new drugs. One difficulty was the increased hydrochloric acid that sometimes developed in the stomach in connection with the use of these preparations, and in the increased incidence of ulcers. The drugs were given extended trial in rheumatoid arthritis, cases of intractable bronchial asthma, and in most of the other conditions for which cortisone and hydrocortisone had been

und useful. In the treatment of rheumatic fever and in various food dyscrasias, the new preparations served equally well or better than the older ones.

Cortisone had been found by some investigators to yield favorable effects in cerebral haemorrhage. Its use in ulcerative colitis was being extended. In Great Britain a report of the British Medical Research Council concluded that patients with acquired haemolytic anaemia and those with idiopathic thrombocytopenic purpura developed remissions under treatment with ACTH or cortisone. The reports stressed the necessity of adequate dosage. Dameshek indicated his belief that this method of treatment had definitely reduced the necessity for splenectomy in the vast majority of cases, and he recommended the careful and repeated trial of the hormones in such cases before resorting to splenectomy.

Antibiotics.—A report from the Upjohn company indicated that a new antibiotic, Albamycin®, had been found in soil samples collected in Queens Village, N.Y. This substance is derived from *Streptomyces niveus* and the drug was given the name of streptonivcin as a generic term. The special claims made for the product were that it may take over when other longer used antibiotics have failed and that it may establish high blood levels. Stylomycin® was a new antibiotic developed by Lederle and apparently tried with some success in 15 cases of trepanosomiasis. This drug was formerly called puromycin. Bristol Laboratories had a preparation called Amphomycin® for the same purpose; Merck had one called Cathomycin® and Squibb one called diostepton®.

New in the use of antibiotics was the employment of a combination of Nystatin®, a new antifungal antibiotic, with tetracycline in the treatment of a number of conditions. The advantage of such a mixture was said to be its ability to prevent the invasion of various fungi following elimination of bacteria by antibiotics. Investigators reported that a combination of oxytetracycline and neomycin antibiotics did not prevent fungal overgrowth but that the combination was effective in eradicating *Coccidioides* organisms as an invader. Studies were made on the combination of Nystatin® and tetracycline under the name of Nystecclin® and found effective in a variety of bacterial infections.

APC Infection.—Outbreaks occurred in many portions of the United States and also in other countries of a condition involving inflammation of the adenoids, the pharynx and the conjunctiva. In studies of this condition, nine different viruses were found, all of them respiratory viruses. Type III APC virus causes a five-day illness with fever, sore throat and conjunctivitis. This was the form most prevalent in children's summer camps. Investigators of the National Institutes of Health of the U.S. public health service prepared a vaccine which was used on 45 persons who were shown by tests to have little or no antibodies in their blood against type III APC virus. Further epidemiologic studies were necessary to determine the effectiveness of a multistrain vaccine. This work was considered to be still in an experimental stage. Merchant Marine. The United States merchant marine on Sept. 1, 1955, consisted of 1,172 active ocean-going vessels of 1,000 gross tons and over. Private companies owned 1,050 and the government owned 122. The fleet was composed of 49 combination passenger-cargo vessels, 775 freighters, and 348 tankers. The government also had 2,101 ships immobilized in eight national defense reserve fleets. Another 51 ships were temporarily inactive while undergoing repairs or awaiting cargo.

The active and temporarily inactive fleet was 68 ships less than the similar fleet one year before. Privately-owned fleets had decreased by 116 ships. The government fleet was 48 ships larger, but most of the increase was in vessels being employed for storage of surplus grain. Eighteen government-owned vessels were under bareboat charter to private steamship companies for use in their own services. Another 39 vessels were operated in Military Sea Transportation service by private companies acting as general agents for the government.

Of the vessels in operation, 292 ships operated by 16 lines were receiving operating-differential subsidies, paid by the government to cover the excess of costs of crew wages and subsistence, maintenance, repairs and insurance of U.S. flag vessels over similar costs of foreign competitors.

In the 12-month period preceding Sept. 1, 1955, United States shipyards built 11 large ocean-going merchant vessels. At the end of the period there were 30 ships being built or converted, of which 10 were for the government and the other 20 were for private owners. This was twice as many vessels as were under construction at the same time a year before.

A number of new shipbuilding contracts were in prospect. Bids had been received for four large passenger-cargo ships for two lines operating in the Caribbean and South American trades. Eight tankers were to be built by a private company for charter to the navy department. A new prototype tanker, of the "Pipeline" class, was to be built by the Maritime administration.

Two major steamship companies had signed agreements to replace their present fleets over the next 10 to 20 years, projects that would result in the building of more than 50 new ships worth about \$500,000,000. Applications for federal ship mortgage insurance on 35 new "roll-on, roll-off" type ships had been received by the government, and proposals had been made seeking government help in the building of six large ore-oil carriers and six vessels that would operate from Great Lakes ports to foreign countries via the new St. Lawrence seaway.

In addition to encouraging new shipbuilding by private firms, the government also placed a number of contracts on its own account, in order to keep the merchant fleet up-to-date and to retain the vital shipbuilding skills in the shipyards that would be required as a nucleus for expansion in any future emergency. A number of merchant type ships were ordered for operation by the navy department. In addition to two refrigerated ships and a "Mariner" class conversion to an AKA (attack cargo ship) which were completed or nearing completion, orders were

placed for four large tankers, two small ice-strengthened tankers and three small ice-strengthened cargo ships, a landing ship dock, and a vehicle carrier.

The Maritime administration withdrew four Liberty ships from its reserve fleets for installation of better types of propulsion and cargo handling equipment. This program was designed to determine whether it would be possible to convert the outmoded Liberty ship to a faster and more efficient carrier for emergency use. It was also an experimental program for testing new types of engines such as the gas turbine, and improved cargo handling gear for possible use on other vessels of the active fleet.

Designs for seven new prototype vessels were worked out by the Maritime administration in conjunction with naval architects and shipping companies. These were intended to serve as future replacements for the present standard cargo ships as they became obsolete. They included four cargo ship types to replace the C-type vessels, a tanker (the "Pipeline" class), a bulk carrier, and a roll-on, roll-off ship (the "Turnpike" class). Also in prospect was an experimental ship powered by nuclear energy, funds for which had been requested by the president and were under consideration by congress.

The Maritime administration was also engaged in repairing and placing in operating condition the best of the military auxiliaries in the reserve fleet so that they would be ready for immediate use in an emergency. (See also SHIPBUILDING.)

(C. G. M.)

Table I.—Tramp Shipping Freight Index, 1955
(1952=100)

Month	Voyage rates	Time charter rates	Month	Voyage rates	Time charter rates

International.—The world-wide demand for shipping space, of which the first signs became apparent at the end of 1954 when freight rates began to rise above earlier levels, was maintained throughout 1955. In fact the normal seasonal fluctuations in freight rates were scarcely apparent, so persistent was the rise in freight rates generally. The Chamber of Shipping of the United Kingdom indices of tramp shipping freight rates shown in Table I indicate the general strength of the demand for shipping, and liner freight rates were able to show comparable increases. In almost every liner trade route in the world, liner conference tariff rates were advanced during the year.

The biggest single factor underlying the strength of the tramp shipping market was undoubtedly the demand for tonnage to ship U.S. coal to western Europe and the United Kingdom, arising from the declining coal production and increasing industrial

Table II.—Merchant Fleets of the World, Dec. 31, 1954*

Country	No. of vessels	Gross tons (in 000s)	Country	No. of vessels	Gross tons (in 000s)
United States	3,346	25,483	Panama	519	3,935
United Kingdom	2,538	17,422	Commonwealth	508	2,105

*Excluding specialized ships and Great Lakes vessels; excluding 83 lend-lease vessels of 518,000 tons included in U.S. total.

Source: U.S. Department of Commerce (Maritime Administration).

consumption there. The growing dependence of the U.S. steel industry on supplies of imported ore also helped to create a demand for bulk-cargo tonnage. Although seaborne movements of other bulk commodities such as grain, sugar, fertilizers, timber and esparto grass were not on a significantly greater scale

FISHING TRAWLERS for South Korean fleet being readied at Kowloon, Hong Kong, for the voyage to Korea. The vessels were to be used for fishing in the Bering sea and for all types of bottom fishing in the China seas.

than in 1954, the high rate of shipments of coal, ores and scrap created a shortage of tonnage for other trades.

Tanker freight rates remained at a fairly consistent and not particularly profitable level. The demand for seaborne oil transportation remained well below the capacity of the tonnage available, but this situation was being rapidly adjusted toward the end of the year. Although more than 3,000,000 tons deadweight of new tankers were delivered from the world's shipyards during 1955, the tonnage of laid-up tankers in the world declined to less than 1,000,000 tons deadweight for the first time for two years. Many more old tankers were disposed of for scrap than in the previous year, and the demand for dry-cargo tonnage became so great as to persuade owners of numerous tankers to have their vessels converted for the carriage of grain, ore and coal.

Ship operating costs, however, also showed substantial increases, somewhat offsetting the advantages to shipowners of higher freight rates. Toward the middle of the year British and European coal prices were advanced by about 12s. 6d. a ton for ships' bunkers, and oil bunker prices were shortly afterwards increased by about 7s. 6d. a ton. Seafarers' wages in many countries, including the United Kingdom, were increased by 7½% to 12½%.

A wave of strikes in the United Kingdom, particularly of railway and dock workers, seriously interfered with the normal flow of shipping in the first half of the year, the chief ports affected being London and the Humber and Mersey ports. A strike of catering staff in North Atlantic passenger liners also interrupted normal services for a time, but despite this a record number of passengers crossed the Atlantic by sea, as well as by air. In other parts of the world increasing traffic and the disruption of sailing schedules caused by dock strikes created port congestion which became particularly serious in West Africa, Ceylon, India and Pakistan, and to a lesser extent in East African ports. (P. DE.)

Mercury: see MINERAL AND METAL PRODUCTION AND PRICES

Metallurgy. Significant happenings in metallurgical research and applied practice in 1955 are mentioned in the following.

Aluminum.—Aluminum was gaining ground as a substitute for other metals, especially copper. In 1955 one of the foremost producers of copper began aluminum production. Aluminum was replacing copper almost entirely in the installation of new long transmission lines.

Casting.—Continuous casting of metals, especially brass and

aluminum, was being improved. This method was also being adapted to steel with some success.

Copper.—Melting refined copper in the vacuum furnace and the grade of copper known as OFHC (oxygen-free high-conductivity) received wider recognition and application. International Nickel company was successfully treating copper concentrates by the oxygen-flash-smelting process. Leach-precipitation-flotation methods on mixed oxide-sulphide ores received new impetus.

Experiments.—The U.S. bureau of mines was starting studies in making metals in a pure state in large enough quantities for further experiments.

Extrusion of Metals.—Attention was being given to applying the extrusion method to iron and steel. The process consists mostly of heating the metal and forcing it with pressure through a die. The extrusion can be cut off at desired lengths.

Iron and Steel.—Significant progress was being made in Minnesota in the low-grade iron ores known as taconites. The ore is ground very fine, concentrated by magnetic methods and then entered into pellets which are shipped to smelters. New plants were installed, notably near Duluth, to handle taconite on a large scale. Many metallurgists foresaw the end of open-hearth furnace practice because the electric furnace was gaining so rapidly in use. However, at the blast-furnace there was significant improvement in fuel efficiency. Data released in 1955 stated that in 1954 blast furnaces producing pig iron used 67 lb. less coke per ton of pig iron produced than in 1953.

Nickel.—Recovery of nickel and cobalt from the enormous lateritic iron ore deposits of Cuba (chromium also present but not being recovered) was receiving attention.

Rare Metals.—It had been found that some metals formerly called rare (such as scandium, yttrium, lanthanum and others known as rare earths) are not so rare in occurrence. Attempts were being made to find uses for them and to explore their properties as minor alloying elements. Rhenium is another metal for which further uses might be found. It is hard and non-corrosive.

Silicon.—Like germanium, silicon was being used as transistor metal in place of the electrical vacuum tubes. Pure silicon was also being used in the new solar battery by which the energy of the sun was being converted to electrical power. The main element of the batteries consists of small silicon wafers.

Titanium.—The quality of titanium metal was improved tremendously in 1955, and the outlook was for still better metal. Improvements in methods of melting and casting titanium in a low-pressure arc furnace were developed. Much trouble in working titanium had come from hydrogen, and this was now removed by vacuum processing and melting. Commercial output of ductile titanium metal, begun in 1954, was continued in 1955. Titanium sponge, or scrap, was consolidated by melting in an induction or an electric-arc furnace.

Uranium.—A description of the metallurgy of uranium was released at the Geneva Conference on Peaceful Uses of Atomic Energy in Aug. 1955. The process used at U.S. Atomic Energy commission plants at Fernald, O., and St. Louis, Mo., is as follows: The material is digested from the raw material with nitric acid and the uranium is extracted from the solution with tributyl phosphate in ether or kerosene—ether in the St. Louis plant and kerosene in the Fernald plant. The third step is the re-extraction of uranium into water, producing a highly purified aqueous solution. This dilute aqueous solution is evaporated to molten uranyl-nitrate hexahydrate, which is thermally decomposed to form an orange uranium trioxide. This trioxide is reduced with hydrogen to form a brown uranium dioxide. The final step is contacting the brown dioxide with hydrogen fluoride gas to produce uranium tetrafluoride (UF_4). Part of the tetrafluoride is shipped to A.E.C. gaseous diffusion plants where

a gaseous uranium hexafluoride, UF_6 , is made by the oxidation of the UF_4 by the fluorine. This UF_6 gas is required to manufacture uranium 235 by the gaseous diffusion process. To make uranium metal the UF_4 is mixed with high-purity magnesium metal. The resulting mixture is placed in containers and heated to the point where a reduction reaction takes place producing uranium metal and a magnesium fluoride slag. The container is then unsealed and the contents separated mechanically. Upon remelting the metal into various shapes, ingots, etc., it is ready for reactor use.

Zirconium.—This metal had gained prominence, since it was produced mainly for use in atomic power reactors. The power plant on the submarine "Nautilus" was the first instance of the metal's being so used in construction. About 17 tons of zirconium was also used in the first ten months of 1955 for other than atomic uses. It is possible to prepare it in pure form, and it is resistant to corrosion, being comparable with tantalum in this respect. (F. E. H.)

Metal Prices and Production: see MINERAL AND METAL PRODUCTION AND PRICES.

Meteorology. Destructive hurricanes and tornadoes in 1954 had aroused public demands for someone "to do something about the weather" and had led the United States congress to take the unprecedented step of increasing by several million dollars the appropriations to the U.S. weather bureau for research and development in severe storm warning services. As if to confirm the need for action, nature paraded a tropical cyclone in the eastern Caribbean on New Year's Day, 1955, the first time in the history of recorded synoptic meteorology that a storm of this type ("hurricane") had been reported in mid-winter. This storm, although mild and short-lived, was harbinger of the several intense hurricanes that came during the following summer and also foreshadowed a year of almost feverish activity among meteorologists seeking to find keys to progress in weather analysis, forecasting, weather modification by artificial means (rain making) and other cogent features of the science of the atmosphere and its varied and valued applications.

Progress in Meteorology During 1955.—Like most sciences, meteorology has several aspects or branches: climatology, descriptive meteorology, dynamic, physical and synoptic meteorology, aeronautical meteorology and others. For many years there was such lack of basic weather data that the subject could be treated only in a descriptive or empirical way. With the advent of telecommunications, aircraft, upper air soundings and extension of outpost weather stations into polar regions and over much of the vast expanses of oceans, it became possible for meteorologists to analyze the general circulation and its secondary weather patterns and get closer to fundamentals and better understanding of the mechanics of the atmosphere and the many varieties of disturbances or storms that it generates. In recent years emphasis has been on dynamic and physical meteorology. During 1955 there were many noteworthy studies in these branches in particular. The results were published in research papers in the *Journal of the American Meteorological Society* (Boston, Mass.), in *Tellus* (Stockholm, Swed.), in the *Quarterly Journal of the Royal Meteorological Society* (London, Eng.) and in other meteorological periodicals. Among papers of special interest for their bearing on progress in applied meteorology for general public use were those on atmospheric turbulence and air pollution, cloud physics and relation to condensation, precipitation, etc., and the jet stream.

Atomic Energy and the Weather.—In July a volume on meteorology and industrial production of atomic energy was published jointly by the Atomic Energy commission and the

weather bureau. It described principal factors in air pollution from atomic fission effluents and suggested the things to be taken into consideration in choosing industrial sites for atomic reactor plants, together with the principles of air pollution safeguards. The relationships between temperature lapse rates and turbulent mixing under various typical meteorological situations were examined and the theories of diffusion applicable to industrial effluents were outlined. In this treatise the results of extensive experiments at Brookhaven laboratory, Long Island, N.Y., were reviewed and the behaviour of debris from clouds produced during large scale tests of atomic bursts was summarized. An important aspect of this subject is the influence of rain or snow occurring either at the time of the burst or later as the air-borne debris dust is carried thousands of miles by the upper winds. Rain or snow greatly modifies the fall-out of debris and introduces so-called wash-out and rain-out from radioactive clouds. Practical methods for calculating radioactive cloud dosage and solving diffusion problems were given and also a check list of meteorological factors relating to hazards from commercial nuclear reactors. Standard meteorological equipment and records useful in industrial production of atomic energy were described. These subjects were of importance not only for industry but for guidance in military planning and in civil defense studies.

Artificial Cloud Nucleation.—As in previous years since discovery in 1946 of the effects of cloud seeding by dry ice or silver iodide, the possibilities of artificial inducement of precipitation (rain making) were still in the forefront of meteorological speculation during 1955. In general there were fewer claims to spectacular success, and conclusions from a majority of scientifically controlled experiments by the military services and other agencies left doubt that rainfall or snowfall had been greatly increased by seeding. A few reports indicated that precipitation may even have been decreased through overseeding by artificial nuclei, but it appeared that most meteorologists were not yet convinced that the large scale effects, if any, were measurable. These conclusions did not cast doubt on the well-established fact that seeding of supercooled clouds by dry ice or silver iodide converts the droplets into snowflakes which may fall as a shower of snow or melt and give light rain, but the amounts of precipitation produced in this way were usually too small to be measurable. A few experimenters continued firm in their claims that in some cases heavy showers had been induced. Unfortunately these tests were not conducted under controlled experimental conditions which excluded natural factors. At the close of the year justifiable questions about the quantity of precipitation induced artificially still remained. Field tests so far had not yielded quantities as great as theoretically expected in meteorological situations which produce warm front or orographical (up-slope) clouds, or in incipient cumulonimbus almost developed to the shower stage which should be "triggered" into precipitation by some small additional factor.

Conclusions of impartial investigators reached more or less independently came closer to the findings of the U.S. weather bureau after its extensive field tests in 1948-49. Briefly, these conclusions were:

(1) Evidence so far does not show that local cloud seeding has large scale effects either in producing widespread rains or in deflection, dissipation or intensification of major storm systems such as hurricanes and extratropical cyclones. Seeding can be used successfully to convert supercooled cloud droplets into ice crystals but the amounts of precipitation produced by a static cloud system even if all of the droplets are coalesced into rain or snow are too small to be of much value. A "dynamic" system or relatively large scale inflow of warm moist

air for several hours is usually necessary to produce heavy precipitation and there appears to be no evidence or scientific reason to expect seeding alone to set up such an inflow of great masses of air if it has not developed naturally. In general nature appears to provide sufficient nuclei for precipitation when the required system of air flow exists, thus limiting the utility of artificially introduced nuclei. However, there are doubtless exceptions to this general condition and much more extensive research is needed to find how frequently such exceptions occur and under what specific conditions of temperature, humidity, nuclei count and other factors.

(2) Presumably supercooled crest clouds on mountain tops could be made to deposit some of their moisture as snow for irrigation purposes. These clouds usually form in winds that bring an inflow of moist air for hours or more and thus resemble a natural rain or snow producing system. How much of an increase in snow pack can be obtained in this way depends upon many factors which can be determined only by extensive field tests. Another situation that might yield precipitation by cloud seeding is that in which incipient shower clouds are brought to active precipitation more quickly by artificially introduced nuclei but these instances appear to be relatively infrequent.

Subsequently, extensive field tests in Utah, Washington, Hawaii and other widely separated regions confirmed these conclusions.

During 1955 only in a relatively few cases where commercial interests were concerned were claims of spectacular increases in precipitation by artificial means reported. Field tests of cloud seeding used several different chemical agents and methods. In some, dry ice or silver iodide particles or pellets were discharged into the clouds from aircraft flying above or through the selected clouds. In a few cases common salt or water droplets were used as the seeding agents. In other tests silver iodide or salt were discharged into the air from generators on the ground with the assumption that natural turbulence in the air would carry the nuclei into the clouds they were designed to seed. Their effectiveness was always in doubt. The great need for fundamental research to obtain the facts in this potentially important field of weather modification and to find ways to distinguish artificially induced precipitation from that which comes naturally was recognized by meteorologists and water resources authorities everywhere.

Cloud Physics.—The mechanics of condensation and coalescence of droplets into falling precipitation were the subject of many research studies and a few noteworthy papers of special interest, not only because of their significance in the theory of artificial cloud nucleation but also for their practical value in improving the techniques for forecasting the amounts of rain or snowfall. Quantitative forecasts of precipitation had been carried on experimentally by many meteorological offices for several years, and while the results showed some degree of skill they were not adequate for practical needs. Too many of the factors that determine the amounts of precipitation were still unknown and some that were known were difficult or impracticable to measure; for example, the rate of ascent of warm air in a warm front situation or the degree of convergence in a cyclonic system.

The Jet Stream.—Before discovery by high altitude bombs during World War II of the fast moving streams of air sometimes found about 30,000 ft. above sea level with wind speeds of 100 m.p.h. or more, meteorologists thought that when gale winds occurred aloft they were naturally widespread and persistent. Often when pilot balloon soundings or radiosonde showed very strong winds over a single station the observations were thought to be in error. Jet streams near the tropopause—the phenomenon to which the term was originally applied

eteorology, are now recognized as major elements in the general circulation and in synoptic analysis and forecasting. Unfortunately, practising meteorologists have come to use the term "jet stream" rather loosely to denote almost any swift current in the upper air with isotachs markedly closer together than on either side. Among the many technical papers published during 1955 about tropopause jet streams was one in the April issue of the *Journal of Meteorology*. It gave a cross section of the mean zonal flow and temperatures along the 80th meridian, west. A few years earlier the jet stream was thought to be a rather simple and definite entity, but later research showed that it is not constant nor clearly defined like a river, but is transitory and complex in structure. It usually develops on or near the tropopause where horizontal temperature gradients are large. The network of upper air sounding stations and the reports available through aircraft reconnaissance flights were not at that time in sufficient number to determine the precise structure at any one time, but jet streams are usually found at heights between 25,000 and 40,000 feet above sea level and between latitudes 30 and 60, although occasionally at other altitudes and latitudes. Sometimes they develop two or more cores of maximum winds within the same general stream and apparently there are often several fingers or cores of higher wind speeds associated with a major jet stream. Meteorologists have observed that the wind accelerations across the boundary of a jet stream or perhaps through a "filament" may account for cases of very severe turbulence in clear air sometimes encountered by high-altitude aircraft.

Of interest and practical importance to the general public is the fact that sudden shifts in jet streams and acceleration of its flow may affect the speed and direction of movement of hurricanes. A jet stream may also affect the generation and rapid development of a secondary cyclone. Streams of accelerated winds somewhat lower altitudes also called jet streams by some meteorologists seem to be one factor in the formation of tornadoes. The dynamics of this phenomenon were not yet fully understood although intensive research was in progress during 1955 because of its obvious importance in forecasting.

Numerical Weather Prediction.—Among the most revolutionary of modern meteorological developments is use of the digital computer or "electronic brain" for predicting the weather by numerical process. In May 1955 after several years of experimentation, first at the School for Advanced Study in Princeton, N. J., and later at the weather centre in Suitland, Md., a service of regular daily prognostic charts for a 36-hr. period was inaugurated through a joint project of the air force, navy and weather bureau. From the beginning of this service the prog-

EYE OF A HURRICANE shown in a photograph made from 20,000 ft. off the Florida coast Aug. 9, 1955. The eye is at the lower right portion of the picture

by standard methods of expert analysis. This improvement was particularly noteworthy in instances where cyclonic patterns change rapidly or develop unexpectedly. These developments in prediction of sudden cyclogenesis in which severe general storms generate within a few hours and move rapidly were regarded as milestones in meteorological progress. Specialists in long-range predictions began adopting the techniques of numerical process to the mean charts which serve as basis for weekly and monthly outlooks. A paper on the preparation of long-range forecasts by numerical methods was presented at the Kansas City meeting of the American Meteorological society in June. Meantime, in England and Sweden other schools in numerical weather prediction were busy with the development of their own models of the atmosphere designed for electronic computer processing. In general their models were simpler and barotropic rather than baroclinic. In Stockholm the method was in use for preparation of 72-hr. weather forecasts with fair success.

Other research studies in meteorology during 1955 embraced a large variety of subjects. Solar radiation received more attention because it is the ultimate source of energy to drive the general circulation which for the most part determines weather and climate. The undetermined fluctuations in intensity and spectrum of insolation were re-examined as a cause of changes in climate. Regarding climatic changes, there were also studies of the effects of volcanic dust both as a primary factor in the earth's albedo and as an indication of the probable effects on climate of repeated additions of large quantities of debris dust from atomic bursts. In efforts to extend the time range of forecasts into seasonal outlooks, there were further studies of the zonal index of atmospheric circulation and the phenomena of the planetary wave—concepts which had been important in long range forecasting as practised during the past decade or

nostic charts compared favourably with charts produced by older methods of synoptic analysis. As experience was gained in use of the computer and as the basic baroclinic models were improved, the results in some crucial cases were superior to those

CLOUD FORMATION over Marseilles, Fr. The curious photograph, taken in Nov. 1954, was released without explanation July 1, 1955, by the U.S. navy

two. Another subject, the chemistry of the atmosphere with particular reference to the changing quantities of nitrogen and carbon dioxide, received more attention because of the possible roles of these molecules in absorption of radiation and longer term changes in climate. Radar meteorology, a rapidly growing field of specialization, attracted many students and technicians who saw in its application to tornado and local severe storm forecasting a growing opportunity for professional advancement. In radar observations of tornadoes at Udall, Kan., and Omaha, Neb., a "hook" or loop in the picture seemed to identify the place of the funnel cloud. Of obvious importance in detecting distant tornadoes and issuing advance warnings, this feature called for more research to discover just how frequently it appears and what significance it has.

World Meteorology.—In Geneva, Switz., in April 1955, the World Meteorological organization, a specialized agency of the United Nations, met for its second congress. During the four-week session 86 member countries were represented and some of the weather reporting and service programs of common interest throughout the world were debated. The technical program for the next four-year period was considerably increased over that for the past four, and the budget was expanded accordingly. The congress elected A. Viaut, director of the Service Météorologique of France, Paris, as president to succeed the chief of the U.S. weather bureau, who had just completed the four-year term as first president of the WMO.

In Paris during July the international committee in charge of planning and co-operation for the International Geophysical year, 1957-58, met to complete working arrangements. This program was by far the most ambitious organization for world-wide observations and basic data collection ever attempted in the geophysical sciences—meteorology, oceanography, seismology, terrestrial magnetism, glaciology, auroral and ionosphere studies and others. (See also INTERNATIONAL GEOPHYSICAL YEAR, 1957-58.)

Hurricanes and Floods.—No two hurricanes are alike. Some reach their mature stage and continue at approximately the same size and intensity until they pass off to sea, having followed a relatively smooth parabolic track fairly easy to predict; others are erratic, changing in size, intensity and showing irregularities in path that make them extremely difficult to forecast. A study of Hurricane "Hazel" published in June 1955 after

careful analysis illustrates some of the "unpredictable" developments in tropical cyclones after they move into higher latitude. "Hazel" reached the Carolina coast on Oct. 15, 1954, and after moving northward toward Pennsylvania appeared to be dissipating. It surprised meteorologists by appearing to "rejuvenate" during the night of Oct. 15-16 and thence moving rapidly into Quebec province; disastrous flooding and loss of life in Toronto and environs occurred. Weather maps at the time showed rapid intensification of the storm as it crossed Pennsylvania, but the analysis gave no satisfactory explanation of the causes. More detailed subsequent study showed that the original "Hazel" did not rejuvenate and move into Canada but that it was a new storm whose development in connection with a frontal system over Pennsylvania and western New York when Hurricane "Hazel" arrived in that area was related in some way to the dying out of the hurricane. The jet stream was probably a factor in the genesis of the new storm but there were still many questions about the kinematics and thermodynamics of the atmospheric situation before a complete and satisfactory explanation of the unusual but not unprecedented development could be given.

The most intense tropical cyclone of the 1955 season and probably the worst of the century was Hurricane "Janet" which moved across the Caribbean and over Yucatan peninsula and eventually entered the Mexican mainland near Veracruz on Sept. 29, 1955. A U.S. navy reconnaissance plane with a crew of nine and two Canadian newspaper men was lost in probing the hurricane when it was south of Cuba on Sept. 27. The storm increased in intensity as it crossed the Caribbean, causing severe damage and loss of life in Barbados and the Grenadines and devastating Swan Island, eventually reaching velocities near the Mexican coast of 150 to 175 m.p.h. More than 500 deaths resulted from the storm and more than 100,000 were made homeless.

In some respects Hurricanes "Diane" and "Ione" were the most erratic of the season. After a somewhat uncertain course during its first two days south of Bermuda, "Diane" moved in a fairly predictable path until it reached the Carolina coast on Aug. 17 and moved northeastward across Virginia and Maryland into eastern Pennsylvania on Aug. 18. It gave indications of dying out over Pennsylvania or New York state. During the night of Aug. 18-19 the remaining cyclonic circulation brought convergence of warm moist winds from the south and produced record-breaking rains in parts of Pennsylvania, New York state and Connecticut. A combination of factors, some still not fully understood, led to catastrophic floods in the Pocono mountains and in several river valleys in Connecticut. One factor was that the ground in these places had been saturated with water from rainfall from Hurricane "Connie" just a few days before and the torrential rains from "Diane" contributed directly to excessive runoff into the streams and rivers. Near Hartford, Conn. more than 18 in. of rain fell in some localities during the 36-hour period when the remnants of Hurricane "Diane" dominated the weather situation there. Total rainfall for many places during the five to six days embracing the passage of "Connie" and "Diane" exceeded 20 in.—almost one-half of the normal rainfall there for an entire year!

"Ione" was reported as an extremely severe and unusual large hurricane as it approached the Carolina coast on Sept. 1. It apparently lost intensity rapidly after it moved inland. Studies of wind circulation, katallobars and radar observations showed that the storm centre went through several gyrations and changes in intensity while it recurved and passed northeastward into the Atlantic where it again intensified and produced severe gales over the ocean south of the Canadian maritime provinces and Newfoundland.

In recent years heavy damage from hurricanes on the east coast of the U.S. had given rise to the belief that there had been a permanent change in storm tracks and east coast hurricane liabilities. Unquestionably, these storms had visited the

Table II.—Hurricanes, 1955

No.	Name	Dates	Place of greatest damage	Remarks
I	Alice	Jan. 1-4	At sea (slight)	First winter "hurricane" for many decades
II	Brenda	July 31-Aug. 2	Louisiana (slight)	A small, weak tropical cyclone
II	Connie	Aug. 4-11	N. C. & Chesapeake bay, etc.	Winds exceeded 75 m.p.h. in N. C., and lowest barometer 28.40, Fort Macon, N. C.
V	Diane	Aug. 11-18	N. C., Pa. and Conn.	Gale winds in N. C., but maximum damage in Pa. and Conn. from floods
V	Edith	Aug. 24-31	At sea	Hurricane threatened Bermuda but recurved northward and remained at sea
VI	Flora	Sept. 3-9	At sea	More or less paralleled "Edith's" path few hundred mi. eastward, remaining entirely at sea
II	Gladys	Sept. 4-6	Near Tampico, Mex. and Texas coast	Storm formed in Gulf east of Tampico. Weak and short-lived; turned southward
II	Hilda	Sept. 12-19	Tampico	A severe storm—maximum wind est. 150 m.p.h., lowest barometer Tampico, 28.11 in.
X	Ione	Sept. 14-21	Eastern N.C.	A severe storm at sea, diminished rapidly over N.C. Maximum wind—107 m.p.h. at Cherry Point, N.C.
X	Janet	Sept. 22-29	Swan I., Br. Honduras and Veracruz, Mex.	Probably the most intense hurricane of the century. Maximum winds est. 200 m.p.h.

coastal states from North Carolina northward more frequently since 1953 while the southeastern states, especially Florida where hurricanes had not been unusual, escaped most of them. But there was no reason to believe that this was a permanent shift in hurricane frequency. Incomplete records indicated that there had been periods in the past when tropical cyclones traveled westward and northward of usual paths. In Aug. 1635 the Plymouth Colony saw a terrific storm with hurricane characteristics perhaps even more intense than those which struck New England in 1938 and 1954. In Sept. 1821 a hurricane brought high tides to New York city, the water having risen 13 ft. in one hour, according to reports, bringing it to levels which flooded all harbors in the harbour and did great damage.

Some Special Features of Weather During 1955.—Except for the almost unprecedented New Year's Day hurricane, the month of January brought for North America, the north Atlantic and western Europe as a whole, not unusual alternating patterns of mild weather with clouds and rain in some regions and cold, clear weather in others. Along the west coast of North America, weather during the early part of January was several degrees colder than normal, while east of the Rockies it was unusually warm. In Europe the first two or three weeks were very cold with a few days bringing heavy snowfall in the British Isles and western Europe. During the last ten days of January, conditions were reversed. Weather turned warmer in most regions west of the Rocky mountains and much colder in eastern North America, the average for the week ending Jan. 30 being 15° to 18° below normal in the upper Mississippi valley. Over the eastern Atlantic and western Europe and the British Isles during the last half of January temperatures turned much higher and the heavy snows that had covered the ground earlier in the month were melted, causing the Marne and Rhine rivers to flood to their highest levels in several decades. In the southern hemisphere Melbourne, Austr., continued in the longest period without rain during the past 50 years.

February brought an end to the drought in most parts of eastern Australia with 12 in. of rainfall in two days in parts of Queensland and record-breaking floods with much damage and

loss of life in parts of New South Wales. Far across the Indian ocean in South Africa, Lobatsi had 23 in. of rain—two inches more than the normal for the entire year—during the first three weeks of February. These anomalies were merely illustrative of the record-breaking weather that occurs almost every day in one place or another and were not necessarily indicative of changing climate. Striking anomalies are found here and there year after year throughout the recorded history of weather and climate. In the British Isles, February brought heavy snows and the lowest recorded temperature there since 1895—13° F. at Braemar. In North America a mass of arctic air crossed Canada and brought very low temperatures to New York state where the Hudson river froze from shore to shore for the first time in 37 years. A low temperature of—38° F. was recorded at Saranac lake during the first week of February. Again, during the latter half of the month temperature conditions were reversed with severe cold in the western half of North America and above normal temperatures in the east.

For February as a whole temperatures were 8° to 10° below normal over most of the area west of the Mississippi and 2° to 4° above normal through the east. Precipitation was unusually light in the United States except for a few localities on the Gulf coast and in the far northwest. These characteristics in temperature typified the winter months December through February as a whole, most of the states in the Rocky mountain and Pacific coast areas showing temperatures 2° to 6° below normal. For the eastern half of the country the weekly departures from normal temperature tended to cancel out so that the winter as a whole in most places was within 2° of normal temperature. Rainfall was generally below normal for the winter, particularly in west Texas and New Mexico.

March brought the beginning of the season of severe tornadoes in the United States and strong winds in the plains states with gusts in some localities up to 90 m.p.h. which raised dust storms to heights of 20,000 ft. in some places. Loss of top soil and damage to wheat in the dry sections of eastern Colorado and adjoining Kansas and New Mexico came from these storms. Late March saw some of the extreme temperature differences for which North America is famous—temperatures 15° to 20° below zero in Minnesota and 85° to 90° in Georgia and Florida. As the cold air from the north moved toward the gulf, the average temperatures for the states from Texas to Montana turned 12° to 27° below normal for the last week of March. The contrast of icy air with the warm moist air from the Gulf of Mexico brought tornadoes, floods, blizzards and dust storms to parts of the midwest and southwest United States. All-time records for low temperature at this time of year were recorded at many stations in the southern states. For the month as a whole, temperatures were 5° to 10° below normal for the north-

Table III.—Some New Weather Records, U.S., 1955

Place	New record*	Dates
Harrisburg, Pa. . . .	January drought—only 0.7 in. of rain and snow; the driest in 110 yr.	Month of January
Norfolk, Va.	January snowfall heaviest in 100 yr. Total 13.8 in. snow during month	Month of January
New Orleans, La. . .	Heaviest shower in 60 yr. One inch in 5 min.	February 5
Sheridan, Wyo. . . .	Heaviest snowfall—22.7 in. in 24 hr.	April 3
Little Rock, Ark. . .	Heaviest rainfall—3 in. in 1 hr.; 7.6 in. in 6 hr.	May 26
Chicago, Ill.	Early spring high temperature, 92° F.	May 3
Baltimore, Md. . . .	Hottest July on record for Baltimore, average for month—83.5° F.	Month of July
Jefferson City, Ia. . .	Heaviest rainfall in 1 min.—0.72 in., greatest rate ever recorded in U.S.	July 10
Falls Village, Conn. .	Heaviest rainfall in 24 hr.—9.5 in.	Aug. 19 ("Diane")
Los Angeles, Calif. .	Highest temperature for Los Angeles—110° F.	Sept. 1

*Unless specifically stated the above data are new records for the locality named and not for the country as a whole.

western half of the country and 2° to 4° above normal for the southeastern half. Rainfall was less than half of normal in most of the states in southwestern United States. In Europe the worst snowstorm since 1929 occurred at Nice, Fr., and heavy falls were reported through central Europe. Most parts of the

British Isles had temperatures 3° to 5° below normal for the month as a whole. Belthorpe, Austr., recorded 20 in. of rain in 24 hours, an amount equal to about half of the total average rainfall for a year in most parts of eastern United States.

In April the weather became decidedly warm in eastern United States where parts of Tennessee and Georgia reported maxima of 90° F. to 92° F., all-time records for mid-April. For the month as a whole temperatures were as much as 8° above normal in some regions of the United States and particularly in the Great Lakes region while in Oregon it was 8° below normal, with lesser subnormal temperatures in other parts of the west. In northwestern Europe and the British Isles April was cool and relatively dry. In Switzerland it was the sunniest and most pleasant April on record, the lack of rainfall there and in parts of southern Europe approaching drought in contrast to the cold wet weather of Scandinavia during the spring.

May and June brought relatively few anomalies but July was a month of dry, hot weather both in midwestern United States and in most of the British Isles and western Europe. Unusually violent thunderstorms and hail occurred in parts of central Europe and floods damaged some of Austria. Argentina had its coldest winter weather on record during July while New York city had its hottest month in more than 80 years. The heat continued in eastern United States during August until Hurricane "Connie" arrived and changed the circulation pattern. The frequent and intense hurricanes during August and September have been described in other paragraphs. While Pennsylvania and Connecticut were suffering from hurricane floods, the opposite side of the hemisphere in Burma also had disastrous flooding, the worst in 50 years.

The autumn months were characterized in North America as in western Europe by fairly early arrival of colder weather. In the United States the temperatures in December gave promise of new low records for that month in many localities. The year closed as it began with many people seeking the causes for what they regarded as the changing climate! (See also DISASTERS; FLOODS AND FLOOD CONTROL.) (F. W. RR.)

Methodist Church. During 1955 the annual conferences into which the denomination is divided. 102 in the United States and 46 overseas, elected 754 delegates, half lay, half clerical, to the general conference of 1956. This quadrennial law- and policy-making body was to meet in Minneapolis, Minn., April 25 to May 9, 1956. At the year's end more than 1,500 memorials (petitions for legislative action) had been filed with the secretary. Leading the demands were appeals for full clergy rights for women.

Ten days of Jan. 1955 were devoted to an experiment which brought to Cincinnati, O., 800 members of the governing boards of about 30 general agencies. Annual meetings were held, then a two-day general assembly where each board member was instructed in the over-all program of the church. Normally the agencies meet at various times and places. The general conference was to consider the value in this centralized plan.

Two quadrennial convocations were held: the National Methodist Town and Country conference, with 1,600 delegates, on the University of Indiana campus, Bloomington, July 22-25, and the National Convocation of Methodist Youth, with 4,000 young people and 1,000 youth leaders, at Purdue University, West Lafayette, Ind., Aug. 22-26.

Every day during 1955 two or more Methodist churches conducted 24-hour prayer vigils in the interest of world peace. The project was directed by the Board of Evangelism.

The circulation of the *Upper Room*, a bimonthly publication for daily devotions, now published in 26 languages and Braille, passed the 3,000,000 circulation mark.

Among Methodism's 199 hospitals and homes, 104 new building projects were started at an aggregate cost of \$51,600,000. Four new homes for the aged were begun. Capital gifts to Methodist-related colleges and universities reached more than \$30,000,000.

Methodist Men, organized on the local church level to provide fellowship and inspire larger lay activities, had nearly 9,000 chapters, enrolling 500,000 men.

Ground was broken during the summer for a \$1,500,000 office building adjacent to the manufacturing plant of the Methodist Publishing House in Nashville. Business for the year, reported at the annual meeting in October, was up 10% for a gross of \$19,690,488.

"The Way," a series of 13 half-hour dramatic television programs, was produced in Hollywood by the Radio and Film commission at a cost of \$286,000. To be distributed in 1956 by the Broadcasting and Film commission of the National Council of Churches, the series was a public service contribution of the Methodist Church.

Bishop Clare Purcell of Birmingham, Ala., in April was elected president of the council of bishops. He was to be succeeded April 27, 1956, by the president-designate, Bishop W. Earl Ledden of Syracuse, N.Y.

Paul Bosley of Evanston, Ill., on Aug. 19, was elected president of the National Conference of Methodist Youth.

Figures issued in the fall of 1955 for the latest reported 12 months were: the Methodist Church had 9,223,152 members in the U.S., 607,657 overseas and 96,472 belonging to affiliated autonomous churches. Not included were 1,086,104 preparatory members in the U.S. and 607,491 overseas. Church school enrollment in the U.S. was 6,750,000 with average attendance 3,500,000. The Woman's Society of Christian Service, with 30,667 local units, gave \$16,863,452 for home church projects and \$9,356,389 for its missionary, benevolent and service projects. Total benevolent giving was \$52,481,949, an increase 11.94%; paid for building and improvements, \$94,537,963; totaling for all purposes, \$345,416,448; total value of church parsonages and other property was \$2,030,755,429. (See also CHURCH MEMBERSHIP.) (R. SY.)

Mexico. A federal republic of Middle America lying between the United States on the north and Guatemala and British Honduras on the south, Mexico has an area of 760,354 sq. mi. Population (government est., 1954) 28,850,000. Capital, Mexico City. Chief cities (pop. July 31, 1951): Federal District, including Mexico City, 3,408,687; Guadalajara 379,400; Monterrey 330,012; Puebla 210,533; Mérida 159,405; Torreón 128,557; San Luis Potosí 126,601; León 122,680; Ciudad Juárez 121,912; Veracruz 113,803; Tampico 97,673; Aguascalientes 93,432; Chihuahua 86,796; Tijuana (est.) 80,000; Saltillo 69,874; Mexicali 64,701; Morelia 60,650; Pachuca 58,690; Culiacán 49,801; Matamoros 43,830. Language: Spanish, with an estimated 6.29% (1940) speaking Indian tongues only. Religion: predominantly Roman Catholic. President in 1955: Adolfo Ruiz Cortines.

History.—Marked recovery from the aftereffects of the previous year's peso devaluation, and serious floods which caused widespread damage in 16 of the republic's 29 states, were highlights of 1955 in Mexico.

Ending a nine-year drought, torrential rains swept most of the country in late summer and fall. The port city of Tampico on the Gulf coast was virtually destroyed, and hundreds of residents were saved from drowning by heroic rescue work by the United States navy and air force and by Red Cross teams. The devastation was regarded as the worst in Mexican history.

While admitting the floods had dealt Mexico a crippling blow

ADY BULLFIGHTER, Patricia Hayes of the U.S., saluting the crowd at capulco, Mex., before meeting the first of two bulls at a fight in 1955. She as thrown seven times and knocked unconscious by the bulls

Officials claimed that the long-range effect of the rains would be beneficial.

There was agreement among foreign and domestic observers that Mexico had recovered remarkably from the peso devaluation of April 1954. President Ruiz Cortines and Treasury Minister Antonio Carillo Flores pledged that the peso would not be devaluated again during their administration. Carillo Flores said that the flight of capital which followed peso devaluation had been reversed. The president, in his annual report in September, said Mexico's monetary reserves totalled \$305,000,000 as compared with a low of \$169,000,000 the previous September.

During the year President Ruiz Cortines inaugurated the giant hydroelectric plant, El Cobano, in Michoacán state. The plant could supply electricity to 3,500,000 persons in five states. Petroleos Mexicanos opened a \$25,000,000 lubricants plant in Tlalmanca in January. It would produce oils, greases, low-cost fertilizers, chemicals, detergents and raw materials for nylon and plastics. Plans were also announced to build newsprint plants in Michoacán and Oaxaca states, as well as a steel mill in Veracruz state.

Tourism officials said 425,000 visitors came to Mexico in 1954 and predicted tourism income for 1955 would reach \$550,000,000 U.S., the highest in history.

The Banco Nacional de Mexico said the nation must find jobs for 250,000 more workers annually. The National Harvesters association announced in Dec. 1954 that the average Mexican farm worker received only 1.54 pesos (12 cents U.S.) daily, or 60 pesos a year income. Forty per cent of the population lived on such an income, although in larger cities unskilled labourers received about 10 pesos daily.

Communications Minister Carlos Lazo reported the current administration was spending about eight times as much annually on feeder roads as did the former administration in an effort to raise rural living standards. Expenditures totalled about \$4,800,000 U.S. yearly. About 10,540 mi. of highway were built in 1954, a public works official reported. The newly completed 575-mi. highway down Mexico's west coast from Nogales to Mexico City was opened, and officials said the final link between Mexico and Guatemala would be open by 1956.

Mexico's national elections in July marked the first time

women had exercised their franchise nationally. There was considerable dissent and charges of fraud over announced results, which gave the government party all but 20 of 162 seats in the Mexican congress. Seven governors also were named. The year also saw the ousting by President Ruiz Cortines of the governors of Chihuahua and Tabasco states.

Mexico City continued to sink, giving experts grave concern that portions of the city might have to be abandoned in 40 years unless the subsidence was halted.

Following crashes which killed some drivers in the 1954 Pan-American Road race in Mexico, President Ruiz Cortines banned the annual 1,908-mi. border-to-border sports event as too dangerous. (See also FOREIGN INVESTMENTS.) (C. D. HE.)

Education.—In 1951 there were 24,583 primary schools with 67,871 teachers and 2,660,232 pupils; 466 secondary schools with 7,805 teachers and 80,598 pupils; 57 normal schools with 2,788 teachers and 16,890 pupils; and 43 technical colleges with 2,556 teachers and 16,556 pupils. University education was available at 14 universities with 63 faculties, most important of which was the National university at Mexico City.

Finance.—The monetary unit is the peso, valued at 7.99 cents U.S. currency during 1955. The 1955 budget called for revenue of 5,685,000,000 pesos and expenditure of 5,681,000,000 pesos, of which 26.3% was allocated to communications and transportation, 14.0% to the public debt, 13% to public education and cultural services and 11.4% to the development of agriculture, forestry and cattle. On Dec. 31, 1952, the funded internal debt totalled 3,334,400,000 pesos and the external debt, including the railway debt, 1,360,700,000 pesos. Currency in circulation (April 30, 1955) was 4,478,000,000 pesos; demand deposits, 4,802,000,000 pesos. The U.S. department of commerce estimated U.S. direct investments in 1954 at \$523,000,000, of which manufacturing investments accounted for \$217,000,000. The cost-of-living index (Mexico City) stood at 166 in April 1955 (1948=100). National income in 1954 was estimated at 59,180,000,000 pesos.

Trade and Communications.—Exports in 1954 totalled 6,532,137,044 pesos; imports were 8,419,731,318 pesos. Leading exports were cotton (25%), coffee (12%), lead (9%), petroleum and products (7%) and copper (5%); leading imports included machinery and apparatus (28%), metals and manufactures (16%), chemicals and drugs (12%), petroleum products (6%) and vehicles and parts (5%). Leading customers were the U.S. (71%), the U.K. (7%), Japan (6%), Germany (3%) and the Netherlands (1%); leading suppliers, the U.S. (78%), Germany (4%), Canada (3%), the U.K. (2%) and France (2%).

Railway mileage (1951) was 14,575. Total road mileage (1953) was 37,300, of which 15,450 mi. was all-weather. On Jan. 1, 1954, there were 253,354 automobiles, 179,564 trucks and 19,898 buses. According to Lloyd's Register of Shipping, the merchant marine had 84 vessels (100 tons and over) aggregating 169,327 gross tons on June 30, 1954. Telephones (Jan. 1, 1954) numbered 330,221, 72% of which were automatic and 52% of which were located in Mexico City.

Agriculture.—Production estimates in 1954-55 included maize 4,200,000 metric tons; wheat 830,000 tons; rice (rough) 162,000 tons; coffee 1,500,000 bags of 132 lb. each (exports, 1954, 1,149,000 bags); cotton 1,777,000 bales of 480 lb. each (exports, 1954, 259,419 tons); oranges and tangerines 18,897,000 boxes of 70 lb. each; limes 2,342,000 boxes of 80 lb. each; tobacco (1954) 77,602,000 lb.; sesame 80,000 tons; henequen 231,000,000 lb. Sugar production included an estimated 964,000 tons of centrifugal sugar and 150,000 tons of piloncillo.

According to U.S. department of agriculture estimates, there were 15,800,000 cattle, 5,200,000 sheep and 7,750,000 pigs in 1954 and 2,800,000 horses in 1952; in 1950 there were 6,893,000 goats, 1,021,000 mules and 2,543,000 donkeys. Chiclé exports (1954) were 2,722 metric tons.

Manufactures.—Production figures for 1954 included cement 1,783,200 metric tons; pig iron 231,600 tons; steel 454,800 tons; cotton yarn 4,920 tons; woven cotton fabrics 29,400 tons; wheat flour 400,000 tons; sulphuric acid 111,100 tons; tires 823,000 units; electric energy 6,300,000,000 kw.hr. In 1954 there were 1,123,000 cotton spindles and 34,133 looms. The index of industrial production stood at 141 in 1954 (1948=100).

Minerals.—Production in 1954 (excluding petroleum, coal and sulphur) totalled 923,899 metric tons valued officially at 2,568,453,912 pesos. Most important were lead 216,624 metric tons; zinc 223,749 tons; copper 54,806 tons; silver 39,895,546 fine oz.; gold 386,925 oz.; manganese 83,356 tons; iron ore 313,556 tons; mercury 509 tons; antimony 4,154 tons; bismuth 360 tons; cadmium 513 tons; graphite 21,784 tons; tungsten 327 tons; tin 355 tons; arsenic 2,427 tons; molybdenum 119 tons. In 1954, 83,600,000 bbl. of crude petroleum were produced; known reserves were estimated at 2,427,000,000 bbl. Coal production in 1954 was 1,310,000 metric tons; sulphur 73,636 tons. (J. W. Mw.)

Michigan. One of the north central group of states of the United States, Michigan was the 26th state admitted to the union; it is popularly known as the "Wolverine state." Land area: 58,216 sq.mi. (excluding 39,960 sq.mi. of Great Lakes water surface); pop.: (1950 census) 6,371,766; (July 1, 1955, est.) 7,222,000. Of the state's population in 1950, 70.7% was urban and 29.3% rural; whites composed 92.9% of the population, nonwhites 7.1%. Capital: Lansing (pop. 1950) 92,129. Larger cities were (1950 census): Detroit 1,849,568;

exceeded \$300,000,000, a record in the state's history.

Agriculture.—Production of all field crops in 1955 was 1% above 1954 and 9% above the 10-year average. Feed grain production was 30% above average; food grains were more than 10% below average because of heat acreage restrictions. Drought damage in the north and west central parts of the lower peninsula was more than offset by good to record high yields in most of the southern and eastern counties. The corn crop established a record for Michigan; the oats and barley crops were the largest since 1946; the field bean crop, the largest since 1949. The potato crop, on the other hand, was the smallest since 1887.

Despite the spring freeze, the fruit crop was only 12% below average. Milk production during the first nine months was slightly above that of the corresponding period of 1954.

Manufacturing.—During the first nine months of 1955 industrial production in Michigan was at a record level. The history of Michigan's chief industry, automobile manufacturing, was highlighted by guaranteed annual wage agreements reached first with the Ford Motor company and then with the other leading manufacturers. A strike against the Calumet division of the Calumet & Hecla Mining company in Michigan's northern peninsula, during which the company threatened to liquidate mining operations in Michigan's copper country, was settled by negotiation after a 11-day duration. (L. G. V. V.)

Table III.—Principal Mineral Products of Michigan

(Short tons, except as noted)

Mineral	1953		1952	
	Quantity	Value	Quantity	Value
Asphalt (bbl.)	15,853,000	\$ 41,860,000	14,761,000	\$ 36,819,000
Asbestos	1,646,000	1,686,000	1,776,000	1,811,000
Barite	3,220,000	49,518,000	2,863,000	44,721,000
Bentonite	24,000	13,832,000	22,000	10,502,000
Bryolite	1,447,000	4,091,000	1,488,000	4,200,000
Chromite	14,910,000	94,692,000	13,193,000	76,089,000
Cinnabar	2,472,000	?	2,131,000	?
Magnesium compounds	43,000	4,592,000	38,000	3,917,000
Natural gas (1000 cu. ft.)	7,774,000	1,275,000	9,052,000	1,322,000
Petroleum (bbl.)	12,285,000	35,870,000	13,251,000	35,250,000
Salt	5,127,000	22,172,000	4,778,000	21,446,000
Sand and gravel	30,460,000	23,171,000	29,194,000	22,401,000
Stone	21,616,000	17,640,000	17,974,000	15,771,000
Other minerals	...	25,506,000	...	24,990,000
Total		\$286,487,000		\$254,518,000

*Values for processed materials are not included in the totals.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Michigan in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953, Michigan was first among the states in the production of gypsum and salt, second in brome, iron ore, and sand and gravel, and fourth in cement and stone. It ranked 14th in the value of its mineral output, with 1.99% of the U.S. total.

Middle Eastern Affairs.

The middle eastern countries, stretching from the eastern Mediterranean to the Indian ocean and from the Black and Caspian seas to the Arabian sea, form one of the most important strategic areas of the world, the value of which is enhanced by the wealth of its oil deposits. For the last 200 years this region has been subjected to steady Russian expansive pressure. This pressure was increased at the end of World War II, and in March 1947 it brought the United States into the middle eastern picture in an attempt to strengthen the local defenses against Soviet expansion. By the end of 1954 these efforts seemed to have borne fruit. A cohesive defensive force seemed in the making, linked to the North Atlantic Treaty organization. At the same time the settlement of the disputes over Trieste between Italy and Yugoslavia and over the military guardianship of the Suez Canal Zone between Great Britain and Egypt brightened the outlook for the future. On Aug. 9, 1954, Turkey, Greece and Yugoslavia concluded a defensive military alliance at Bled, Yugoslavia, and a week earlier Turkey and Pakistan had signed a military treaty, which, however, to become geographically effective needed the adherence of Iran and of the Arab states, especially Iraq. Iraq, which has common frontiers with Turkey and Iran, is the natural guardian of access to the middle eastern oil fields.

Iraq as Part of the Western Defense.—On Jan. 6, 1955, the Turkish premier, Adnan Menderes, arrived at the head of a large delegation in Baghdad, the Iraqi capital, where he was welcomed by Iraqi Premier Nuri es-Said. At the end of the visit it was announced that Turkey and Iraq would conclude a defense agree-

ment. Turkish efforts to induce Lebanon, Syria and Jordan to join this defense agreement did not succeed, though cordial relations were established between Turkey and Lebanon, and the heads of the two states exchanged official visits. The main opposition to the entrance of the Arab states into an alliance with Turkey came from Egypt. Insisting on Egypt's role of leadership in the Arab world and under the influence of Premier Jawaharlal Nehru of India, the Egyptian leaders inclined toward a neutralist position; above all they regarded Israel and not the U.S.S.R. as the immediate and principal threat to the Arab world.

In spite of Egypt's bitter opposition, the Iraqi government signed the treaty with Turkey on Feb. 24. The United States promised to supply arms to Iraq, but by the fall of 1955 hardly a trickle of these had been delivered. Britain welcomed the new treaty and joined it on April 4, thereby abandoning its old bilateral alliance with Iraq and merging its own middle east defense arrangements into an enlarged setup. The royal air force stations maintained in Iraq under the British-Iraqi alliance were to be turned over to the royal Iraqi air force, but British ground crews would continue to base there for maintenance and training purposes, while R.A.F. squadrons would pay visits there. Forward British supply dumps would be established in Iraq for ground forces, and joint Turkish-British-Iraqi staff talks on middle east defense arrangements would be organized. Thus with a much strengthened and modernized Iraqi army, the mountains in northern Iraq guarding the access to the oil fields could be defended. But meanwhile serious developments in the Balkans and in Egypt threatened in 1955 to undermine the whole middle eastern defense system.

Crisis in the Balkan Alliance.—In the Balkans the Yugoslav-Turkish-Greek alliance was in the second half of 1955 at the verge of disintegration. On March 2, 1955, the foreign ministers of the three Balkan nations, meeting in Ankara, Turk., had decided to set up a joint Balkan consultative assembly, made up of members of parliament from Greece, Turkey and Yugoslavia. This assembly had not met by the end of October. On the contrary, Yugoslavia was stressing more and more its neutralist attitude, especially after the reconciliation between Yugoslavia and the Soviet Union in the wake of the visit of the Soviet leaders to Belgrade, Yugos., at the end of May. An even more dangerous obstacle to the functioning of the Balkan alliance in 1955 than the growing coolness of Yugoslavia toward Turkey and Greece, both of which were members of NATO, was the open hostility which developed between these two NATO members as a result of the Cyprus dispute.

The Graeco-Turkish Dispute.—The island of Cyprus had long been regarded as the anchor of the defense of the eastern Mediterranean and of western Asia. It was for that reason that the Turkish government allowed in its treaty of defensive alliance with Great Britain on June 4, 1878, the British occupation of the Turkish island of Cyprus against the British promise to protect Asian Turkey against Russian expansion. The island is situated near the Asian coast, only 40 mi. from Anatolia, whereas it is five times as distant from the nearest Greek isle. After the outbreak of hostilities between Turkey and Britain in World War I, Britain annexed the island, and this annexation was recognized by Turkey in the peace treaty of Lausanne. The island is inhabited by a population of which four-fifths is Greek and one-fifth Turkish.

In 1954 the Greek population under the leadership of Archbishop Makarios III vigorously renewed its demand for union with Greece. The Communist party, which had shown considerable strength among the Greek population of Cyprus, supported the demand. The Turks opposed it, not only in order to protect the Turkish minority but principally because of the

strategic importance of Cyprus and its proximity to the Turkish coast. After the evacuation of the Suez canal the British intended to make Cyprus their chief defensive base in the Mediterranean against Soviet expansion, thus fulfilling the original purpose for which Turkey had ceded the island to Britain. The Turks were afraid that a cession of Cyprus to Greece might mean a dangerous weakening of the defenses against a possible Soviet expansion. Remembering the Greek invasion of Turkish Asia Minor in 1919 and the costly struggle for Turkey's liberation, the Turks were afraid that Greek claims to Cyprus might presage another era of Greek expansion into Asian Turkey. For strategic and historic reasons the Turks claimed a right to participate in any Cyprus settlement and opposed the transfer of the island to Greece. When the United Nations general assembly decided at the end of 1954 not to discuss the Cyprus question, Turkish Premier Menderes expressed the hope that the Cyprus problem was now permanently disposed of and that Turkish-Greek friendship would thus be preserved and even further developed.

But Greek agitation for the union of the island with Greece continued and increased during 1955, and after the Greek government under popular pressure submitted the Cyprus question again to the United Nations, mutual distrust and recrimination between the two allied peoples reached such a height that Greek demonstrators in Salonika, formerly a Turkish city, damaged the birthplace of Kemal Ataturk, the revered founder of the Turkish republic, and the Turkish consulate, and Turkish crowds in Istanbul and in Izmir destroyed and looted many Greek-owned shops and churches. The Turkish government proclaimed martial law and expressed its deep regrets over the incidents. Premier Menderes declared that Turkey considered the alliance with Greece as a guarantee of their mutual existence, but Greek public opinion left no doubt that the friendship with Turkey was, at least for the time being, dying. In spite of the efforts of the two governments, popular feelings on both sides were so strong that the Balkan pact had suffered a serious blow by the fall of 1955. And the deterioration did not confine itself to the Balkans. It was as bad at the other end of the middle eastern region.

Egypt's Neutralism.—Whereas the year 1954 had brought a *rapprochement* between Egypt and the west, the year 1955 found Egypt in an effort to lead the middle east in the direction of neutralism. Turkish President Celal Bayar issued an invitation to Iran during his visit there at the end of Sept. 1955 to join the Turkish-Iraqi-Pakistan pact. This invitation was officially accepted on Oct. 11, 1955, but this western success was offset by Egypt's decision to buy arms from countries in the Soviet orbit. The Czechoslovak government offered to supply arms to Egypt and perhaps also to Syria and Saudi Arabia in exchange for Egyptian cotton and other raw material. Egypt had applied for United States arms earlier in the year, but the protracted negotiations had not led to any concrete results. Nor had the United States supplied Iraq to any considerable degree with promised arms. The Arab states felt that Israel was far superior to them in military strength and equipment; they argued that France and other western nations were supplying Israel with heavy equipment but would sell none to the Arab countries. Thus they declared that they had to procure further armaments wherever they could in order to establish a balance of military power in the middle east. This feeling was especially strong in Egypt after Israeli attacks on Egyptian positions in the Gaza territory in southern Palestine. The United States government sent Assistant Secretary of State George V. Allen to Cairo at the end of September to discuss the question of arms supply to Egypt. (H. Ko.)

Middle East Defense Organization.—The first meeting of

the powers concerned took place in Baghdad, Iraq, Nov. 21-22. It was attended by Nuri es-Said, Chaudry Mohammed Ali Hussein Ala and Adnan Menderes, respectively premiers of Iraq, Pakistan, Iran and Turkey, and by Harold Macmillan, British foreign secretary. The delegates were accompanied by the chiefs of general staff of the member countries. The U.S. ambassador to Iraq and the commander in chief of the U.S. forces in the eastern Atlantic and Mediterranean attended the council as political and military observers respectively.

It was agreed to set up a permanent council which would be deemed to be in continuous session; each government would appoint a deputy representative to the council with ambassadorial rank. The permanent seat of the organization was Baghdad and a secretariat was established there. A permanent military committee and an economic committee were also established.

Mineral and Metal Production and Prices.

The decline in output of essential minerals and metals in the United States in 1954 was clearly a reflection of the general world economic situation. In 1955, the U.S. achieved a remarkable recovery and toward the close of the year the economy of the country reached an all-time high peak. Table II gives prices for two parts of 1955. Quotations for some sensitive commodities have been averaged for several days because they varied so much, influenced by world events. During 1955, silver hit its highest price since Oct. 1920. Exact data on 1955 mineral production were not available at the close of the year, but the 1954 data, recently available, are shown in Table I. Spotlights of the world situation in minerals and metals in 1955 follow:

Most spectacular was uranium, coupled with the rapid advance toward commercial utilization of atomic energy. A tremendous mining boom in Canada was opening up its northern wilderness, giving the world several new major producing districts. There was a significant increase of U.S. imports of iron ore. The abnormally high price of copper brought threats to consumers to use less copper and to find substitutes. The worldwide shortage of aluminum stimulated the expansion of production facilities, especially where low-cost hydro-electric power was available. Primary aluminum output in the U.S. rose to a new high. In Sept. 1955, the director of the Office of Defense Mobilization announced that no additional government aid would be granted to firms entering the primary aluminum industry or expanding their existing capacity. Coal output had not shared proportionately in the increased productive activity, largely because of continued inroads of oil and gas into the coal markets, especially in the United States and Great Britain.

Two important contributions to literature on minerals were the Malone subcommittee report, *Accessibility of Strategic and Critical Materials to the United States in Time of War and Peace*, and *Our Expanding Economy*, published by the U.S. government printing office in the last half of 1954; and *Mineral Facts and Problems*, Bulletin no. 556, prepared by the U.S. bureau of mines in 1955—a useful source of information on minerals.

The data in the tables on mineral production in other countries were supplied by the foreign minerals staff of the U.S. bureau of mines.

(See also GEOLOGICAL SURVEY, U.S.; and separate articles on the various mineral commodities for further details.)

Mineralogy. New minerals continued to be discovered. The following were described during the year 1955: pittite, uranyl carbonate, from the Lucky Strike No. 2 mine, Piute county, Utah, by M. E. Thompson, A. D. Weeks and M. Sherwood (*American Mineralogist*, 40:201-206); navaite, hydrated vanadium pentoxide, from the Monument No. 2 mine, Navajo Indian reservation, Apache county, Ariz., by A. D. Weeks, M. E. Thompson and A. M. Sherwood (*ibid.*, 40:207-210); goldichite, hydrous potassium ferric sulphate, from the Lucky Strike No. 7 mine, Calf Mesa, San Rafael Swell, Utah, by A. D. Weeks and E. B. Gross (*ibid.*, 40:469-480); hawleyite, hydrous cadmium sulphide, from the Hector-Calumet mine, Pinal County, Arizona, by R. J. Trail and R. W. Boyle (*ibid.*, 40:555-559); cerianite, dioxide of cerium, from Lackner mine, Sudbury district, Ontario, by A. R. Graham (*ibid.*, 40:560-564).

"Jade Story—European" Elsie Ruff gave the history of the use of jade, especially as tools, in Europe (*Journal of Gemmology*, vol. iv, pp. 336-347 [London, Eng.]). R. J. Barber discussed the composition and the means of identification of the various varieties of jade in "The Nature of Jade" (*Gems and Gemmology*, vol. viii, pp. 38-46 and 67-77). The history and the successful production of cultured pearls by K. Mikimoto were discussed by Jeanne G. M. Martin in the well-illustrated article "Kikichi Mikimoto, a Tribute" (*ibid.*, vol. viii, pp. 108-122). "Some Unusual Structures in Pearls and Cultured Pearls" (*Journal of Gemmology*, vol. iv, pp. 325-334), Robert Webster described the techniques used in their detection.

For more than a century numerous attempts had been made to produce the diamond in the laboratory. However, time and improved methods of identification had shown that no incontrovertible proof had ever been given that the various attempts had been successful. Because of the importance of the diamond as a gem and its ever-increasing use in industry, many intensive research programs had been carried on in recent years to produce the diamond in the laboratory. For over four years a team of research scientists at the laboratory of the General Electric company, Schenectady, N.Y., worked on this problem and on Feb. 15, 1955, announcement was made that processes and apparatus had been developed whereby diamonds could be made in the laboratory. The comprehensive and well-illustrated report "Man-Made Diamonds" by the General Electric company described the methods involving high pressures up to 1,500,000 lb. per square inch and temperatures up to 5,000° F. and the means for the positive identification of the product. The material produced thus far was very small and of no commercial value, but the results obtained were extremely important in that they would probably lead to significant achievements in other studies in the area of ultrahigh pressures and temperatures.

Strontium titanate was a recent laboratory product which has optical properties quite similar to those of the diamond but is much softer and heavier. It was expected that it would soon be marketed as *starilian*. Leon Merker discussed its production and properties in "Synthesis and Properties of Large Crystals of Strontium Titanate" (*Mining Engineering*, 7:645-648). Other articles about this new gem were by R. T. Liddicoat, Jr., and

C. R. Crowningshield (*Gems and Gemology*, vol. viii, pp. 148 and 156) and by D. E. Mayers (*Journal of Gemmology*, vol. v, pp. 98-99).

Alexander N. Winchell was designated as the 14th recipient of the Washington A. Roebling medal of the Mineralogical Society of America.

The fourth award of the Mineralogical Society of America for meritorious achievement by a younger scientist was made to Hatten S. Yoder, Jr., of the Geophysical laboratory, Washington, D.C., in recognition of his studies on the synthesis and stability range of two constituents of metamorphic rocks. (See also MINERAL AND METAL PRODUCTION AND PRICES.) (E. H. Kr.)

Mining: see MINERAL AND METAL PRODUCTION AND PRICES. See also under various minerals.

Minnesota. A north central state, admitted to the union on May 11, 1858, Minnesota includes the northernmost land in the United States—the northwest angle. Minnesota is variously known as the "land of sky-blue waters," "land of 10,000 lakes," "North Star state" and "Gopher state." The water area covers 4,059 sq.mi. of its total area of 84,068 sq.mi. Population: (July 1, 1955 est.) 3,169,000; (1950 census) 2,982,483, of which 54% lived in cities of 2,500 or more. The three largest cities were (1950 pop.): Minneapolis, 521,718; St. Paul, the capital city, 311,349; Duluth, 104,511.

History.—Minnesota's economy, both industrial and agricultural, continued to grow, though falling farm prices caused some concern. Manufacturing and commerce related to agriculture were affected somewhat more than in previous years. Personal income in 1955 reached \$5,148,000,000 and nonagricultural employment increased from the previous year's total to 879,992 in Sept. 1955. Manufacturing continued to strengthen its position as the major part of the Minnesota economy. An entirely new city, Silver Bay, was completed in Minnesota in 1955 at the site of the new taconite industry on the north shore of Lake Superior. The E. W. Davis Taconite plant, named for the University of Minnesota geologist who developed the processes for profitable mining of taconite, began full-scale operation. Another major addition to the Minnesota industrial economy during 1955 was the increase of manufacture of by-products from the oil refineries recently established as a result of the Williston basin and Alberta oil fields. An ammonia plant was built and began operation near the refineries close to St. Paul. Major legislative accomplishments during the 1955 session included a major reorganization bill dedicated to making more efficient and intelligible the machinery of state government. A Fair Employment Practices bill making illegal job discrimination on the basis of race, colour or creed was also passed.

State constitutional officers serving during 1955 were with one exception members of the Democrat-Farmer Labor party. They were: governor, Orville L. Freeman; lieutenant governor, Karl Rolvaag; attorney general, Miles Lord; secretary of state, Joseph L. Donovan; state treasurer, Arthur Hansen, and clerk of the supreme court, Frank Larkin. State Auditor Stafford King was the lone Republican. U.S. senators were Hubert H. Humphrey (D-F.L.) and Edward Thye (R.). William P. Murphy of St. Paul was appointed by Governor Freeman to the Minnesota supreme court to fill the vacancy created by the death of Justice Theodore Christianson.

Education.—Approximately \$265,061,850 was spent for education by the 4,261 public school districts in Minnesota for 1954-55. This amount provided for 366,211 pupils in 3,711 elementary schools, 216,762 in 655 secondary schools, 1,560 in 9 junior colleges and 86 in 6 teacher training departments. These pupils were taught by 13,464 elementary teachers, 10,804 secondary teachers, 123 teachers in junior colleges and 6 in teacher training departments. In addition, five teachers' colleges were operated from public funds. For the support of these public elementary and secondary schools, the state contributed \$73,209,951 revenue from trust

funds and the state income tax. Dean M. Schweickhard was commissioner of education.

Social Insurance and Assistance, Public Welfare and Related Programs. In the fiscal year ending June 30, 1955, a monthly average of 99,488 persons received financial assistance amounting to \$57,777,412. Of those years of age and over, 46.9% or 144,000 were receiving either old-age assistance or old-age and survivors' insurance or both in June. As of March 31, there were 16,617 children receiving services from public welfare agencies. Children receiving services from physicians under Minnesota Crippled Children's program during 1954 totalled 4,782.

About 885,224 workers were covered by the Minnesota Employment Security law during 1954. Their wages amounted to \$2,210,026,861 the year. An estimated \$26,698,183 was paid in unemployment compensation benefits during 1954.

In Sept. 1955, the state prison and two reformatories had a total of 1,973 inmates. June counts showed the eight state mental hospitals having 11,167 patients, the unit for alcoholics 230 inmates, and the units for mentally deficient and epileptic, 4,818 patients. Gillette Hospital for Crippled Children had 181 patients. As of April 30 (enrollment term) the two special schools for the blind and deaf had 100 pupils.

The Youth Conservation commission is responsible for delinquency prevention and control. As of June 30, 1955, the commission had 186 wards in correctional institutions, 186 in diagnostic centres and 960 under probation or parole supervision.

Communications.—The systems of highways and streets maintained by various governmental units as of Jan. 1, 1955, totalled 122,726 mi. included 11,821 mi. of state trunk highways, 43,560 mi. of county roads, 55,586 mi. of township roads, 9,076 mi. of municipal streets in addition to those on the trunk highway system, and 2,683 mi. of state and national park, forest and institutional roads. Fiscal year (ending June 30, 1955) expenditures for construction and maintenance of the trunk highway system totalled \$63,363,212.85. There being no indebtedness, the amount of available encumbered cash brought \$548,263 in interest to highway funds.

As of Dec. 31, 1954, railroad main-line trackage totalled 8,328 mi. and 22 railroads operating in the state. Another 4,350 mi. was reported for other tracks—second main line, siding, yards and switching tracks.

Of the 134 airports in the state, 91 were municipally owned, 18 public seaplane bases, 25 were public airports privately owned, and 1 was a military airport at Camp Ripley. There were also 300 private landing fields.

Banking and Finance.—Minnesota's 681 state and national banks reported total resources of \$3,873,249,500 on June 30, 1955, compared with \$3,780,365,000 for 680 banks on June 30, 1954. Represented were 1 state bank, 1 mutual savings bank and 3 trust companies reporting total assets of \$1,256,239,000, an increase of \$48,719,000, and resources of \$1,367,322,000, an increase of \$56,373,000. Deposits for the 178 national banks were \$2,289,710,400, an increase of \$19,233,400, with resources totalling \$2,505,927,500, an increase of \$36,511,500.

The 76 state- and federal-chartered savings and building and loan associations reported resources of \$754,298,245 in 1955 as compared with \$627,437,000 the previous year. This represented 40 state-chartered associations with resources of \$181,550,864 and 36 federal savings and loan associations with resources of \$572,747,381.

The 338 state-chartered credit unions reported assets of \$54,800,000 as of Dec. 31, 1954, and the 49 federal credit unions had \$3,668,000 assets.

Net disbursements of the state government (exclusive of public debt redemption, stores for resale, annuities and pensions, land and interest on land) totalled \$503,546,522 for the fiscal year ending June 30, 1955, compared with \$433,599,101 in 1954. Total state indebtedness in 1955 and certificates was lowered by a net \$11,198,765 during the year. The \$83,509,566 as of June 30, 1955. The four principal state trust funds totalled \$262,486,282 as compared with \$251,058,041 in 1954. Individual balances were as follows: internal improvement land \$390,623.84; swamp land \$23,279,024.02; permanent school \$199,393,629.87; permanent university \$39,422,904.38.

Agriculture.—Minnesota farmers received \$1,256,497,000 during 1955 from crops, livestock and livestock products, thereby retaining the

Table I.—Principal Crops of Minnesota

Crop	Indicated 1955	1954	Average 1941-54
Corn, bu.	279,120,000	277,043,000	236,300
Oats, bu.	202,734,000	181,685,000	189,900

of fifth among states. Of this total cash income \$879,119,000 came from the sale of livestock and livestock products, while the remainder of \$378,000 was derived from the sale of crops. Cash farm income for the first six months of 1955 totalled \$621,897,000, or 1% more than same period of 1954.

Manufacturing.—Minnesota's estimated manufacturing employment was 219,055 in Sept. 1955, a slight increase over 1954. Weekly earnings averaged about \$80.25. Wages in manufacturing industries covered by employment compensation totalled \$861,498,000 in 1954. Value added in manufacturing in 1953 was \$1,554,405,000. (O. L.)

Values for processed materials are not included in the totals.
Value included in other minerals.

Mineral commodities produced in Minnesota in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953, Minnesota led the states in the production of iron ore and was fifth in output of stone. It stood fourth among the states in the value of its mineral output in 1953, 3.77% of the U.S. total.

Missions, Foreign (Religious). In a survey of Christian foreign missions in 1955 certain general features stand out. On the Roman Catholic side was the growing share of the Catholics of the United States and Canada in the world-wide enterprise of their church. Examples were the facts that the Roman Catholics of the United States contributed more money to foreign missions than before and that the number of "Maryknollers" (of the Holy Foreign Mission Society of America) ordained was more than in any previous year. On the Protestant side were the increasing share of the younger churches of Asia and Africa in the "world mission of the church" and the giving of concrete expression to the slogan of "Mission and Unity." One of the chief indications of these trends was the interdenominational (ecumenical) co-operation formalized in a conference in Hong Kong through which, with the aid of funds from more than one denomination in the United States, several churches of Asia were assisted in sending missionaries to neighbouring lands. Another was a great gathering at the end of the year at Athens, O., of the Student Volunteer movement, in which a large proportion of those present were from countries outside the United States and Canada, and the purpose of which was to have students of the entire world consider other means of meeting the challenge of the world-wide mission.

A rapid survey, region by region, of the areas in which Christians were still minorities revealed the continuation of earlier trends and some changes as against the preceding year. In Japan general interest in Christianity was less marked than it was immediately after World War II, but the numerical growth of the Christian community, while slow, was steady. In South America, in spite of acute divisions within the Protestant forces, missionary activity and increase in numbers were striking. On the mainland of China, under communist control, the situation was still grim. Missionaries from abroad were forbidden to enter, and those few who remained at the beginning of the year, chiefly Roman Catholics, were in prison or under other disabilities and

their number was further reduced by death or withdrawal. Although accurate statistics were lacking, it seemed clear that since the communists had obtained the mastery of the country the churches had declined sharply in membership. Yet conversions and baptisms of adults as well as children were registered, clergy were being trained and ordained, and some new church buildings were erected.

On Formosa, under the Nationalists, missionaries, both Roman Catholic and Protestant, were numerous and Christians continued to multiply. The control by the communist Vietminh of the north of Indochina led to an extensive exodus to Vietnam, in the south. Thousands of those who sought refuge from communist rule were Christians, most of them Roman Catholics, and their relief posed a problem to their church and to others. The restrictions on the admission of missionaries to India persisted. Some missionaries were granted visas, either to enter for the first time or to return after furlough, but many were refused. This was true of both Roman Catholics and Protestants.

In many parts of Africa south of the Sahara the increase in the number of Christians was again marked. This was in spite of the advance of Islam, chiefly southward into Nigeria and the Gold Coast. The status of missions in the Union of South Africa was rendered peculiarly difficult by the intensification of the government's policy of *apartheid*. Under that policy financial aid was withdrawn from mission schools for Africans. Handicapped though they were, many of these schools survived.

(K. S. L.)

Mississippi. A southern state of the U.S., admitted to the union in 1817, Mississippi is popularly known as the "Magnolia state." Area: 47,716 sq.mi. (47,248 sq.mi. land and 468 sq.mi. water); pop.: (1950) 2,178,914, (July 1, 1955, est.) 2,085,000. Capital: Jackson (98,271). Other cities of more than 20,000 population (1950 census): Biloxi (37,425); Greenville (29,936); Gulfport (22,659); Hattiesburg (29,474); Laurel (25,038); Meridian (41,893); Natchez (22,740); Vicksburg (27,948). Of the state's population in 1950, 607,162 or 27.9% were urban.

History.—For 1956–60 the elected officials of the state were: governor, J. P. Coleman; lieutenant governor, Carroll Gartin; secretary of state, Heber Ladner; attorney general, Joe E. Patterson; state treasurer, Robert D. Morrow; auditor of public accounts, E. B. Golding; superintendent of public education, J. M. Tubbs; commissioner of agriculture and commerce, S. E. Corley; commissioner of insurance, Walter Dell Davis; state tax collector, Mrs. Thomas L. Bailey; state land commissioner, Robert E. Graham; supreme court clerk, Tom Q. Ellis.

In Sept. 1954 a special session of the legislature was convened to consider the school segregation problem growing out of the decision of the U.S. supreme court. It adopted a proposal in the form of an amendment to the state constitution which as a referendum was voted on and adopted in an election held Dec. 21, 1954. This amendment to abolish the public schools was not adopted by the legislature with the idea of abolishing the public schools as the first step in solving the question. It was announced that it was to serve as a last resort in the effort to maintain segregation of races in the public schools. The amendment gave the state legislature authority to: (1) on a two-thirds vote, abolish public schools state-wide; (2) on a majority vote, empower local school districts to abolish their schools (local option); (3) make funds available directly to children to attend schools of their choice, privately or otherwise; (4) sell or lease existing school buildings, obviously to private groups for operation of private institutions.

The new four-year school of medicine of the University of Mississippi, located at Jackson, was opened in Sept. 1955.

under the jurisdiction of, but separate from, the university at Oxford.

Education.—In 1954-55 there were 813 white elementary schools in Mississippi and 1,748 Negro elementary schools, a total of 2,561. The enrollment in elementary schools was 448,780 of whom 211,262 were white and 237,518 Negroes. The state had 473 approved white high schools and 162 approved Negro high schools. The enrollment of these approved high schools plus enrolments in nonaccredited schools gave a total enrollment of 93,158 in 1954-55. There were 10,008 white elementary and high school teachers (including superintendents and principals), and 7,028 Negro elementary and high school teachers (including superintendents and principals), a total of 17,036 teachers. The total enrollment in white elementary and high schools was 273,722; in Negro elementary and high schools, 268,216.

Social Insurance and Assistance, Public Welfare and Related Programs.—From July 1, 1954, to June 30, 1955, the state department of public welfare in Mississippi paid \$22,654,915 to 77,445 recipients of old-age assistance; \$1,382,413 to 3,880 recipients of aid to the blind; \$4,650,553 to 19,717 families for aid to dependent children; and \$845,399 to 3,976 recipients of aid to the permanently and totally disabled.

The state-county program of foster home care for children maintained 521 children in 226 foster homes at a cost of \$151,657.13.

Communications.—As of June 30, 1955, the state maintained 8,152.9 mi. of highways; the counties maintained approximately 53,187.9 mi. In the fiscal year 1954-55 the state maintenance expenditures were estimated at \$5,129,043.94. The maintenance expenditures on county highways was \$23,172,248.33. The total mileage of railroads in the state on Dec. 31, 1954, was 3,838.28.

Banking and Finance.—On June 30, 1955, there were 171 state banks in Mississippi with 24 branch banks and 55 branch offices; there were 25 national banks. The resources of state banks were \$707,117,217.46 and the total deposits were \$648,053,925.62; the resources of the national banks were \$280,067,877.83 and the total deposits were \$259,304,612.04.

As of June 30, 1955, the full faith and credit debt of the state of Mississippi had been paid entirely and the outstanding highway bonds payable from gasoline tax amounted to \$72,317,000, making a total debt of \$72,317,000.

Agriculture.—The 1954 census reported 215,915 farms of a total 20,702,412 ac. In 1954 the total harvested acreage of principal crops was 5,423,000 ac. In 1954 receipts from farm marketings were \$520,060,000 of which \$375,019,000 were from crops and \$145,041,000 were from livestock products; the value of farm products consumed in farm households was \$86,434,000.

Manufacturing.—The value of manufactured products in Mississippi for the year 1954 was approximately \$655,000,000. Income from payrolls and profits totalled approximately \$18,000,000 in 1954. (A. B. Bu.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Mississippi in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953 Mississippi ranked 25th among the states in the value of its mineral output, with 0.75% of the U.S. total.

Missouri. A west north central state of the United States. Missouri was admitted to the union in 1821; popularly known as the "Show Me" state. Area: 69,674 sq. mi. of which 448 sq.mi. are water. Pop.: (1950 census) 3,954,000 (61.5% urban, 38.5% rural; 90.2% white, 9.8% nonwhite) (July 1, 1955, est.) 4,094,000. Capital: Jefferson City (1950 census) 25,099. Largest cities (1950 census): St. Louis 856,000; Kansas City 456,622; St. Joseph 78,588; Springfield 66,000; University City 39,892; Joplin 38,711; Independence 36,900.

History.—The 68th general assembly convened on Jan. 12, 1955, and adjourned on May 31, 1955. There were 19 Democrats and 15 Republicans in the senate, and 97 Democrats and 60 Republicans in the house. Among laws passed at this session were those reorganizing the department of corrections to meet more modern conditions which led to the penitentiary riots (July 22, 1954), and those improving the state mental health program.

In addition, the general assembly passed four measures which were to go into effect if approved by the people at the polls (1) an act levying a mill tax on each cigarette sold in the state, all the revenue thus produced to go to the support of the state public schools, and, if approved, to become effective on Jan. 1, 1956; (2) an act creating a school foundation program to establish a new system of distributing state aid to the public schools and to set up new financing goals calling for increased educational grants; (3) a proposed constitutional amendment to provide for a \$75,000,000 bond issue, the proceeds to be used for repairing and rebuilding present state buildings and for construction of the penal and correctional institutions, mental hospitals and institutions of higher learning; and (4) a proposed constitutional amendment providing for annual sessions of the state legislature. The first and second measures were approved at the polls on Oct. 4, 1955, and the third was to be submitted to the voters on Jan. 24, 1956. No date had been set as of Jan. 1, 1956, for an election to approve the fourth measure.

The major state officers at the close of 1955, all Democrats: Phil M. Donnelly, governor; James T. Blair, Jr., lieutenant governor; Walter H. Toberman, secretary of state; William H. Holman, auditor; G. H. Bates, treasurer; John M. Darr, attorney general.

Education.—For the school year ended June 30, 1955, the public school system consisted of 2,923 districts operating elementary schools, 563,771 pupils and 17,604 teachers; 579 districts operating secondary schools, with 160,968 pupils and 6,802 teachers. Hubert Wheeler was state commissioner of education.

On Nov. 30, 1955, 16,122 veterans were enrolled in universities, colleges and other schools in the state, 2,274 were receiving training on the farm and 1,610 were gaining on-the-job training.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the year ended June 30, 1955, unemployment insurance totalled \$73,400, paid to about 136,928 persons. For the year ended June 30, 1955, old-age assistance amounted to \$79,420,974, aid to dependent children \$17,360,112, general relief \$2,705,460, pensions for the blind \$684, aid to the blind \$2,335,630 and aid to the disabled \$8,885,730. In June 1955, 132,983 persons received old-age assistance; 22,100 families (57,623 children) aid to dependent children; 6,125 general relief blind pensions; 3,751 aid to the blind; and 14,154 aid to the disabled.

During the year ended June 30, 1955, the state penitentiary had an average of 3,388 inmates per day; the intermediate reformatory (A. J. J. J.) 555; and the expenditures of these institutions amounted to \$2,340,000. For the year ended June 30, 1955, the three state training schools (Chillicothe and Tipton) had an average population per day of 1,000 boys (white) and 121 girls (95 white, 26 Negro); and for the period their expenditures totalled \$773,407, in addition to \$86,500 for the office of the state director and placement department of the training schools.

Communications.—On Dec. 31, 1954, Missouri had 22,945 mi. of highways and 76,706 mi. of rural roads. During 1954 the state highway commission spent \$83,184,326 (state and federal funds), of which \$446,887 was for construction and \$15,689,686 for maintenance. In 1954 railroad mileage totalled 6,739. On June 1, 1955, there were 100 airports. There were 1,397,000 telephones in use on Dec. 31, 1955.

Banking and Finance.—On June 30, 1955, Missouri had 508 state banks with deposits of \$2,747,388,000 and resources (loans and investments) \$2,622,552,000; 77 national banks with deposits of \$1,576,721,000 and resources (loans and investments) of \$1,559,117,000. On June 30, 1955, there were 116 state chartered savings and loan associations with resources of \$322,309,995; and on June 30, 1955, 40 federal savings and loan associations with resources of \$415,495,236.

During the fiscal year ended June 30, 1954, receipts in all state

lled \$345,910,549, plus transfers of \$131,955,488; disbursements, 2,538,627. On June 30, 1954, the balance in the state treasury was \$2,466,715. The state debt (road bonds) on July 1, 1953, was \$500,000, and on June 30, 1954, \$10,500,000.

Agriculture.—During 1954 cash income from crops and livestock was \$35,635,000 and cash income from government payments was \$9,068,715. The value of Missouri's 1954 crops, harvested from 12,837,800 ac., \$493,246,600, the value of the 1955 crops was estimated at \$608,715.

600. In 1955 the production of corn was the largest since 1952, the production of wheat and oats the second largest on record, and the soybeans the largest on record.

Manufacturing.—The average number of persons employed in manufacturing industries in 1953 was 405,061, an increase of 26,803 over 1952 (revised figures). Salaries and wages in 1953 totalled \$1,552,445,000; in 1952 (revised figures), \$1,360,676,000. The value added by manufacture products in 1953 totalled \$2,786,829,000, compared with \$2,422,709,000 in 1952 (revised figures).

Mineral Production.—The estimated total value of all mineral produc-

tion in Missouri for 1955 was \$144,437,000. The total value of all mineral production in the state for 1954 was \$133,118,000, for 1953, \$129,726,000, and for 1952, \$140,977,000. (R. P. Br.)

TOWER RESCUE at Grandview, Mo., in June 1955. Shown on the left is a maintenance man who had fallen from the top of the tower to a narrow catwalk below and remained there four hours until he could be rescued.

Mitchell, James Paul (1902—), U.S. government official, was born at Elizabeth, N.J., on Nov. 12. He attended New York university but did not graduate, beginning work instead with the Western Electric company at Kearny, N.J., and becoming personnel manager of that company in 1936. Later he was named a special labour adviser to the director of the Works Progress administration in New York state, and from 1942 to 1945 he was director of the U.S. army service forces' division of industrial personnel in Washington, D.C. He then returned to private business, as director of personnel and industrial relations for R. H. Macy & Co., New York city department store. In 1947 he was elected vice-president of Bloomingdale Brothers department store in New York city. On April 6, 1953, Pres. Dwight D. Eisenhower appointed Mitchell assistant secretary of the army in charge of manpower and reserve affairs. On the following Oct. 8 Eisenhower named him secretary of labour.

In a speech before the annual convention of the American Federation of Labor at Los Angeles, Calif., on Sept. 20, 1954, Mitchell berated the A.F. of L. for its failure to make "an objective appraisal of the Eisenhower administration's achievements" in behalf of U.S. labour. Relations between Mitchell and the A.F. of L. and the Congress of Industrial Organizations were somewhat strained thereafter. On Feb. 1, 1955, the A.F. of L. executive council accused him of tolerating violations of minimum wage rates on government construction projects—a charge Mitchell promptly denied. Mitchell also urged a 90-cent hourly national minimum wage, against the \$1.25 minimum asked by A.F. of L. and C.I.O. officials.

Mohammedanism: see ISLAM.

Molotov, Vyacheslav Mikhailovich (1890—), Soviet politician, was born at Kukarka (Sovetsk), in the Vyatka (Kirov) province, March 9. He was educated at St. Petersburg Polytechnic institute and joined the Russian Social Democratic party in 1906. In 1915 he was exiled to Siberia, but was back in St. Petersburg in time to play a part in the Revolution. Closely associated with Lenin and Stalin from that time on, he was appointed a member

"INTERNATIONAL TV SHOW," a cartoon of 1955 by Fitzpatrick of the St. Louis Post-Dispatch (Mo.)

of the committee which planned and directed the communist coup d'état of Nov. 7, 1917. In Nov. 1920 he was appointed secretary of the central committee of the Ukrainian Communist party. In March 1921 he was elected to the central committee of the All-Union Communist party and appointed a member of the secretariat and candidate-member of the Politburo; he became a full member of the Politburo in 1926. From 1928 to 1934 he was a member of the executive committee of the Comintern. On Dec. 19, 1930, he was chosen by Stalin to preside over the council of people's commissars. He succeeded Maxim Litvinov as commissar for foreign affairs on May 3, 1939, and two years later, when Stalin assumed the premiership, Molotov was made first deputy premier. On March 4, 1949, he handed down the post of minister for foreign affairs to A. Y. Vyshinsky, but continued to be second in importance among the Kremlin leaders. On March 6, 1953, the day after Stalin's death, he once again received the foreign affairs portfolio in the council of ministers. On May 15, 1955, he was one of the cosignatories of the Austrian peace treaty in Vienna. In June he took part in the tenth anniversary meeting of the United Nations in San Francisco. He was present at the meeting of the heads of state of the Big Four Powers in Geneva (July 18-23). The October issue of the *Kommunist* published a letter in which Molotov confessed to an ideological error in a speech made to the supreme soviet on Feb. 8, 1955. Although this aroused some speculation as to his future in the Soviet hierarchy, Molotov was present at the October meeting at Geneva of the four foreign ministers.

Molybdenum: see MINERAL AND METAL PRODUCTION AND PRICES.

Monaco. A sovereign principality on the Mediterranean coast, 9 mi. east of Nice, Fr., Monaco is bounded on all land sides by the French department of Alpes Maritimes,

and is united to France by customs union. Area: 0.6 sq. mi. Pop. (1946 census): 19,242, including 1,975 Monégasques, 10,522 French and 6,745 other foreigners: (1951 census) 202, wholly divided between the three communes, Monaco-Ville (1,860), Monte Carlo (8,484) and La Condamine (9,898) (1954 est.) 22,000. Language: French. Religion: Roman Catholic. Sovereign, Prince Rainier III; minister of state in 1955, Henri Soum, a French civil servant.

History.—On Oct. 10, 1955, Prince Rainier said in a broadcast to the Monégasque people that the question of his marriage, which rightly preoccupied them, interested him just as much and more, and that he hoped that the human, as well as the political, aspect of this question would not be forgotten. Under a treaty signed in 1918, Monaco was to be annexed to France if the prince died without an heir. The prince arrived in the United States for a visit on Nov. 24.

On Aug. 1 the Société Monégasque de Banque et Métiers Précieux (S.M.B.M.P.), the largest bank of the principality (founded in 1948), was declared bankrupt. The bank reopened on Nov. 14, a Paris financial group having acquired 97% of its bank holdings. It agreed to pay out small creditors in full and larger creditors in full in 15 years.

The bankruptcy of the S.M.B.M.P. provoked a political crisis in Monaco. Arthur Crovetto, secretary of state for finance, Césaire Solamito, private counsellor to Prince Rainier and chairman of the board of the Radio Monte Carlo, were suspended on July 1. They were held responsible for the financial crisis and their resignation was demanded by the 18-member national council—a consultative assembly elected by Monégasque citizens. On Sept. 5, however, Crovetto and Solamito were reinstated. In protest, 13 out of 18 members of the national council resigned. New elections were held on Nov. 27. Out of 18 electors 940 voted. As a result 11 out of 18 seats went to L'Aureglia's Action démocratique, i.e., the critics of Crovetto and Solamito and their friends.

Finance.—Budget (1954 est.): revenue 2,121,371,000 fr.; expenditures 2,512,555,000 fr.

Monetary Units: see EXCHANGE CONTROL AND EXCHANGE RATES.

Money Markets: see BANKING.

Mongolian People's Republic. This people's republic is located in the north of eastern Asia, bounded north by the U.S.S.R. and east, south and southwest by China. Area (1954 Soviet est.): 591,119 sq. mi. Population (census ever taken; 1953 est.): 920,000. Language: Mongolian. Religion: lamaistic Buddhism. Capital: Ulan Bator, pop. (1953 est.) 100,000. First secretary of the Mongolian People's Revolutionary (Communist) party in 1955, D. Damba; chairman of the presidium of the Great Khural, Zh. Sambu; chairman of the council of ministers, Yumzhaghiyin Tsendenbal.

History.—The year 1955 was the third of the second five-year (1953-57) development plan. According to T. Bavudorj, minister of industry, the total value of industrial production rose by 15.9% during 1954. In 1954 capital investments were two-thirds higher than in the previous year. Three wind shafts were sunk in the coal basins and four electric power stations started production.

The second five-year plan aimed to increase the number of cattle, sheep, horses and camels to 27,500,000 by 1957, no easy task, for, according to a Soviet source, the number of livestock at the beginning of 1955 amounted only to "more than 22,000,000." Haymowing machine stations were helping breeders to build up stocks of fodder. There were also many veterinary centres. Many wells were sunk in arid areas.

the plan also aimed to increase agricultural production, a branch of Mongolian economy, and to provide at least 5 of the bread supply. The areas devoted to wheat, barley, maize, potatoes and vegetables were extending, but strong winds and small precipitation were a great challenge to culture.

In the summer of 1955 the railway line from Ulan Bator to the Chinese border was completed and junction was established on the new Chinese Tsining-Dzamyin line. This railway link was particularly important to the Soviet Union and Communist China because it cut the Moscow-Peking journey by nearly 1,000 mi. (K. Sm.)

Education.—Schools (1953): primary 377, higher primary 31, secondary vocational 16, pupils (all schools) 80,000. Teachers' training colleges 2, secondary teachers' training institute at Ulan Bator. Mongolian State University at Ulan Bator with 1,300 students.

Economy.—Livestock (1955): more than 22,000,000 head of cattle, sheep, horses and camels. Coal extraction at the Nalaikha basin, 27 mi. from Ulan Bator (1953): about 300,000 metric tons.

Finance.—Monetary unit: tugrik, at par with the rouble. Budget (1953; in parentheses): balanced at 436,700,000 (38,900,000) tugriks; 25 per cent of expenditure invested in national economy and cultural development.

Transport and Communications.—Railways (1955): about 1,180 mi. of track (1955): about 3,000 mi.

Montana. A northwestern state of the United States, popularly known as the "Treasure state," Montana was admitted to the union on Nov. 8, 1889, as the 41st state. It is the largest of the northwestern states and the third largest in the United States, with an area of 147,138 sq.mi., including a water area of 1,260 sq.mi. The population by the 1950 official census was 591,024. The urban population was 258,034 or 43.7% compared with 37.8% in 1940. Of the state's total population, 90,038 or 96.8% were white, of whom 528,919 were native-born. Other racial groups totalled 18,986, with 16,606 Indians and 1,232 Negroes. The July 1, 1955, U.S. bureau of the census estimate of population was 628,000. The population of the principal cities (1950 census) was: Helena, the capital, 17,581; Great Falls 39,214; Butte 33,251; Billings 31,834; Missoula 18,851; Bozeman 11,325; Anaconda 11,254; Kalispell 9,737; Great City 9,243; Havre 8,036.

History.—Incumbents in the principal elective state offices in 1955, whose terms were to expire in Jan. 1957, were: J. Hugo Aronson (Rep.), governor; George M. Gosman (Rep.), lieutenant-governor; Sam W. Mitchell (Dem.), secretary of state; Harold H. Olson (Dem.), attorney general; Edna Hinman (Rep.), treasurer; John J. Holmes (Dem.), auditor; Mary M. Gordon (Dem.), superintendent of public instruction; and W. T. Smith (Dem.), railroad and public service commissioner. In June 1955 Mitchell died at the age of 83, after having served continuously as secretary of state for 23 years. S. C. Gordon, previously in the state senate for four terms, was appointed by Governor Aronson to serve as acting secretary of state until the general election of 1956.

The 34th legislative assembly convened in regular biennial session on Jan. 3, 1955. Appropriations of \$48,689,000 from the general fund for the 1955-57 biennium established a new level of state spending—\$8,756,000 above the previous biennium—with two-thirds of this increase earmarked for education. Seven laws were enacted increasing the salaries of state officials, including members of future legislatures. Six new state agencies or commissions were established, including a second "Hoover commission" which was given an appropriation of \$40,000 and charged primarily with studying the state's tax structure during the interim between the 1955 and 1957 sessions. An act was passed providing for referendum votes permitting public school teachers and state employees to come under the federal old-age social security program if they so desired. Social security payments would be in addition to retire-

ment programs already in force for these groups. State tax legislation for increased revenue was highlighted by a new state income tax withholding 1% on wage and salary payments exceeding withholding exemptions; by an increase from six to nine cents per gallon on diesel fuel used in motor vehicles operating on the public highways; and by an increase in the state gasoline tax from six cents per gallon to seven cents, despite the fact that such an increase in the gasoline tax had been defeated when submitted to the voters in the Nov. 1952 election. With local gasoline prices reported the highest in the nation, an appropriation of \$20,000 was made to investigate its high cost in the state.

Education.—During the school year 1954-55 there were 1,296 public elementary schools in the state with 4,452 teachers and an enrolment of 91,635 pupils. The number of public high schools was 178 with 1,754 teachers and 29,794 students. The total cost of operating public elementary and secondary schools for the fiscal year 1954-55 was \$35,159,209, not including expenditures for debt service and school building construction.

Social Insurance and Assistance, Public Welfare and Related Programs.—Approximately 22,000 persons received public assistance in Montana during the fiscal year 1954-55. Grants totalling \$13,048,607 were distributed as follows (figures in parentheses indicate the average number of recipients per month): old-age assistance (9,280) \$6,431,559; aid to dependent children (families 2,154, children 5,714) \$2,664,909; aid to needy blind (451) \$347,767; aid to disabled (1,438) \$1,087,015; general assistance (1,133) \$513,561; medical care \$451,666; hospitalization \$1,494,185; burials \$57,945. Unemployment benefits of \$3,463,083 were paid to 18,369 persons, an average of \$21.28 per week for 11.2 weeks, or \$188.53 per claimant. Correctional institutions with their average populations and total expenditures for 1952-53 were: Montana state prison, 582 inmates, \$533,419; state industrial school, 73 inmates, \$213,219; vocational school for girls, 28 inmates, \$98,673.

Communications.—As of July 1, 1955, the total road mileage of Montana was 71,798, of which the state maintained 9,586. The local road system, rural and municipal, totalled 62,212 mi. with 13,786 mi. surfaced with oil or gravel. During the fiscal year 1954-55 the state highway commission spent \$24,625,336, including federal aid funds, of which \$16,533,913 was for construction and \$8,091,423 for maintenance and administration. Municipal, military and forest service airports totalled 139, and there were 321 privately owned airfields used by farmers and ranchers within the state. There were 1,215 registered aircraft and 1,415 registered air pilots. Motor vehicle registrations on June 30, 1955, amounted to 203,975 passenger cars, 89,128 trucks and 16,590 trailers. The railway mileage was 5,241. The number of telephones as tallied for June 30, 1955 was 187,595. There were 82 weekly newspapers and 15 dailies.

Banking and Finance.—On June 30, 1955, Montana had 71 state banks with deposits of \$330,304,113 and assets of \$349,515,129. There were 40 national banks with resources of \$347,064,000 and liabilities of \$329,702,000. Building and loan associations numbered 15 with resources of \$45,981,905, a gain of \$6,585,853 over the previous year. For the fiscal year 1954-55 treasury receipts totalled \$111,827,440 and disbursements \$109,358,260. The state's bonded debt on Sept. 30, 1955, was \$36,780,250 as compared with \$35,261,000 a year before.

Agriculture.—The Montana crop year in 1955 was very favourable through July, with moderate temperatures and good rainfall. Warm and exceptionally dry weather in August, however, and early frosts in Sep-

Table I.—Principal Crops of Montana

Crop	Indicated 1955	1954	Average 1944-53
Wheat, bu.	97,615,000	76,557,000	80,013,000
Hay, tons	3,163,000	2,863,000	2,574,000
Barley, bu.	41,160,000	33,332,000	16,861,000
Sugar beets, tons	686,000	683,000	709,000
Oats, bu.	14,965,000	11,151,000	11,307,000
Potatoes, bu.	2,548,000	2,401,000	2,410,000
Corn, bu.	3,876,000	2,813,000	2,698,000
Dry beans, 100-lb. bags	306,000	270,000	222,000
Flaxseed, bu.	825,000	670,000	728,000
Dry peas, 100-lb. bags	66,000	56,000	170,000
Rye, bu.	285,000	138,000	173,000

Source: U.S. Department of Agriculture.

tember cut down earlier forecasts considerably, but Oct. 1 indications pointed to a higher production for all crops than in 1954. The wheat crop was estimated at 97,615,000 bu., the second largest on record as compared with the largest harvest of 114,174,000 bu. in 1953. Agricultural net income in Montana in 1954 was \$197,000,000 or 18.4% of the total net income of \$1,070,000,000 of all individuals in Montana, as compared with 5.3% nationally.

Table II.—Industrial Products of Montana

Products	1954	1953	1952
American cheese, lb.	4,450,000	4,005,000	2,780,000
Cottage cheese, lb.	1,255,000	1,255,000	1,255,000
Butter, lb.	6,370,000	6,616,000	5,970,000
Ice cream, gal.	2,465,000	2,930,000	3,020,000
Other frozen dairy desserts, gal.	338,000	338,000	338,000
Beef sugar, cwt.	2,038,666	1,806,025	1,495,709
Beer, bbl.	229,088	217,805	230,502
Gasoline, gal.	295,919,407	271,485,695	262,016,625
Electric power generated, kw.hr.	4,616,507,000	3,750,235,000	3,234,500,000

Manufactures.—The total value added by manufacture (1953 annual survey of manufactures) in approximately 900 manufacturing plants in the state was \$142,045,000, compared with \$138,952,000 in 1952 and \$149,776,000 in 1951. Estimates of the Montana unemployment compensation commission indicated that manufacturing industries employed an average of 19,100 covered employees during the fiscal year 1954-55, a slight gain from the preceding year. Salaries and wages of these employees totalled \$81,208,586 as compared with \$76,629,905 for 1953-54. Total employment for all Montana, aside from agriculture, during the same period was 151,800. Manufacturing payrolls gained slightly in 1954-55 but constituted only 7% of aggregate incomes in Montana as compared with 23% nationally. (E. E. B.)

Table III.—Mineral Production of Montana
(Short tons, except as noted)

Mineral	1952		1953	
	Quantity	Value	Quantity	Value
Coal	2,069,000	\$ 5,812,000	1,873,000	\$ 4,978,000
Copper	62,000	29,983,000	78,000	44,552,000
Gold (oz.)	24,000	846,000	25,000	867,000
Lead	21,000	6,852,000	20,000	5,227,000
Manganese ore	100,000	?	113,000	?
Natural gas (thousand cu. ft.)	28,714,000	1,752,000	27,889,000	1,645,000
Natural gasoline (bbl.)	?	?	?	?
Petroleum (bbl.)	9,606,000	21,610,000	11,920,000	26,020,000
Petroleum gases (bbl.)	?	?	?	?
Phosphate rock	?	?	?	?
Sand and gravel	6,766,000	3,580,000	6,203,000	2,994,000

Stone	690,000	793,000	803,000	1,125,000
Zinc	82,000	27,285,000	80,000	18,462,000
Other minerals	17,332,000	...	20,261,000
Total		\$121,649,000		\$132,185,000

*Value included with other minerals.
†Phosphate rock now figured on mined production, not sold or used basis. Figures are concealed, value included with other minerals.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Montana in 1952 and 1953 (preliminary) whose value exceeded \$100,000. In 1953 Montana was first among the states in the production of vermiculite and zinc; third in copper, pyrite and silver and fourth in clay and lime; and ranked 22nd in the value of its mineral output, with 0.92% of the U.S. total.

Montreal. A city in the province of Quebec, and metropolis of Canada, first called Ville Marie, Montreal was founded in 1642. The census of 1951 gave the city proper a population of 1,021,520, and that of greater Montreal 1,395,400.

The port of Montreal is the largest in Canada. Deep-sea arrivals (commercial) during 1954 numbered 1,294, with a net tonnage of 4,480,597. The total of water-borne cargo tonnage which passed through the port during 1954 was 16,158,423; this consisted of 8,859,959 inward and 7,298,464 outward. There were 33,697 arrivals at Dorval airport during 1954, and the same number of departures, involving a total of 801,316 passengers carried.

The assessed value of real estate in 1954 was \$1,889,985,903, of which \$1,493,318,973 was taxable, and \$396,666,930 was exempt from taxation. During the year 1954, building permits were issued for 5,301 new buildings having a value of \$93,945,025 and for 2,697 repairs having a value of \$16,934,095.

Budget appropriations for the fiscal year ended April 30, 1954, were \$112,149,648. The enrolment in public schools during 1952-53 was: Protestant 37,003; Catholic 121,223. Gross value of industrial production of greater Montreal during 1954 was estimated at \$2,918,119,449, with 4,883 establishments and 244,556 employees.

A serious riot took place in March 1955 outside Montreal's Forum Hockey arena, arising out of a severe penalty given by the Hockey league president to a popular hockey player. With police badly outnumbered, the mob, made up largely of young men in their teens, surged along the main thoroughfares breaking windows and looting stores. Although no people were seriously injured, property damage ran into tens of thousands of dollars.

In one of the most hotly contested municipal elections in many years, Jean Drapeau was elected mayor of the city in Oct. 1954. Drapeau was the candidate of a newly formed Civic Action league whose purpose was the elimination of corruption in Montreal politics. The league also won sufficient seats on the municipal council to give it control over the civic administra-

tion. The new regime inaugurated an investigation and clearing of several municipal departments, including the police department. As a result, a number of police officers were demoted or dismissed on charges of collusion with gambling houses and other organized rackets. (See also MUNICIPAL GOVERNMENT.) (H. F. Q.)

Mormons. During 1955, the Church of Jesus Christ of Latter-day Saints went forward on a number of projects.

A temple was dedicated in Berne, Switzerland, the first to be built and dedicated in Europe. David O. McKay, president of the church, officiated at the ceremonies. Ground was broken for plans drawn for the building of a temple at Newchapel, London, England. The temple at Los Angeles, Calif. (the largest yet erected) was expected to be completed and dedicated in the year's end. A temple in process of building in New Zealand near Hamilton, was to serve the southern Pacific area. Temples are for the use of church members in "good standing" and who therein perform special ordinances for the living, and certain ordinances for the dead, vicariously performed.

The former Australian mission was divided into two missions—the Australian mission (including New South Wales and Queensland), and the South Australian mission (including South of Victoria, South Australia, West Australia and Tasmania).

In the far east, the territory formerly comprising the Japanese mission was divided into the Northern Far East mission, including Japan, Korea and Okinawa, and the Southern Far East mission, including Hong Kong, the Philippines, Guam and Formosa.

The church was establishing or enlarging (adding buildings and equipment) schools in Samoa, Tonga, New Zealand and Hawaii. The church schools in the Rocky mountain area (Brigham Young university at Provo, Utah, and the Ricks college at Rexburg, Ida.) were adding substantial school buildings and dormitories to their installations. The university at Provo is now the largest denominational school in America.

The Salt Lake Tabernacle choir completed a successful concert tour of Europe, performing before large and enthusiastic audiences in twelve of the principal cities in Europe, including Berlin. (See also CHURCH MEMBERSHIP.) (J. R. CL.)

Morocco, French. A sultanate of northwest Africa, between both Mediterranean and Atlantic coasts, Morocco is divided into a French protectorate (to which the historical section below refers), the Spanish protectorate (see SPANISH COLONIAL EMPIRE) and the international zone of Tangier (*q.v.*). Areas and populations are shown in the table.

French protectorate, pop., mostly Arabs and Berbers who are Moslem and speak Arabic (64%) or Berber (22%) or are bilingual (14%); Europeans (1951 est.) 362,800, including French; Jews 199,200. Chief towns (pop., 1952 census): Rabat (cap.) 156,209; Casablanca 682,388; Marrakesh 215,312; Tangier, 179,372; Meknès 140,380. Reigning sultans, Mulay Mohammed V and (from Nov. 5) Mohammed V Ben Youssef. French residents general in 1955: Francis Lacoste, Gilbert Gran-

	Area (in sq. mi.)	Population
French protectorate	154,054	8,340,000
Spanish protectorate	20,282	1,020,000
Places of Spanish sovereignty†	661	17,000
Tangier	135	180,000

from June 20), Gen. Pierre Georges Boyer de Latour du Poulain (from Aug. 31) and André Dubois (from Nov. 9).

History.—Morocco in 1955 suffered from an outbreak of terrorism and insurrection. But the political dilemma was eventually resolved and Sultan Mohammed V returned to his throne. From March to May there was intermittent bomb throwing and a series of murders in Casablanca, the pro-French sheriff Moulay Idriss being among those killed. This Moroccan terrorist activity provoked certain elements of the French population to a spirited campaign of counterterrorism. On June 11 Jacques Maigre-Dubreuil, an industrialist sympathetic to Moroccan Muslims, was assassinated; and an inquest on his death led to the arrest of certain French police officers.

On June 20 Gilbert Grandval, a former high commissioner in the Saar, was appointed resident general. Welcomed by the Moroccan townspeople who were demanding the return of the deposed sultan Ben Yusef, Grandval soon found himself in trouble with the French extremists; he dismissed most of the heads of the various public services. On July 14 a bomb exploded in Casablanca and killed several Europeans; whereupon bands of Europeans sacked the Arab town. The Moroccans retaliated by setting fire to buildings and by erecting barricades, from which they were not easily dislodged. Seraphim Causse, leader of the movement known as *Présence Française*, was expelled, while an amnesty was accorded to certain Moroccan nationalist leaders. Grandval's visits to Marrakesh and to Meknès, at the end of July, were the occasion of demonstrations and rioting. Moulay Idriss a lieutenant trying to soothe the mob was torn to pieces.

In August Grandval submitted to the French government a plan for solving the political crisis. This involved the departure of the reigning sultan Ben Arafa and the establishment of a Moroccan government in which the nationalists would be represented. As the right wing opposed Grandval's solution, a preliminary request to form a government was made to Ben Arafa; this ended in failure. On Aug. 20 insurrection broke out at Khenifra and at Oued Zem in the Middle Atlas, culminating in the massacre of about 100 Europeans. Khenifra was for a time in rebel hands but surrendered promptly, and a few days later the insurgent tribes made formal submission.

Conversations between the French government and the Moroccan parties were opened at Aix-les-Bains on Aug. 22 and continued until Aug. 26. Agreement was reached on principle, but disagreement on methods of implementation led to Grandval's resignation (Aug. 29). General Boyer de Latour, resident general in Tunisia, was appointed to succeed Grandval.

On Sept. 10, at Antsirabé, Madagascar, Gen. Georges Catroux, the government's delegate, induced the deposed sultan Ben Arafa to approve the agreements. On Sept. 11, the right to self-union organization was extended to Moroccans. The French extremists in Morocco worked up an agitation against the agreements, while from Cairo the titular chief of the Istiqlal (Independence) party, Allal el-Fassi, incited his countrymen to resistance. At the beginning of October there were risings in the north of the Middle Atlas and in the Rif near the border with the Spanish zone.

On Oct. 1 the sultan Ben Arafa laid down his authority and went to live in Tangier. On Oct. 6 the Gaullist ministers in the French government, who had objected to the enforcement of the agreements of Aix-les-Bains, resigned. The national assembly then gave its approval to the new policy, by 477 votes against 140. On Oct. 15 a council of guardians of the throne was constituted, comprising the grand vizier, Haj Mohammed el-Khatib; the pasha of Salé, Haj Mohammed ben Haj Taib; the former pasha of Sefrou, M'Barek ben Mustafa el-Khatib; and the caid of the Ait Alham tribe, Tahar ou-Ali ou-

NATIVE TROOPER in Casablanca, Mor., peering around a corner and hoping to attract the fire of rock-throwing native nationalists during the rioting of Aug. 1955

Assou Ludyi. This council then set about forming a government.

So strong, however, was the general demand for the return of Sultan Mohammed V, that Haj Thami el-Mezuari el-Glaoui, pasha of Marrakesh, who played the leading part in the sultan's deposition in 1953, declared on Oct. 25 that Mohammed's return alone "can ensure an orderly unification of spirits and hearts." The deposed sultan arrived from Antsirabé to Nice on Oct. 31, and the next day took residence at Saint-Germain-en-Laye, near Paris. On Nov. 2 the council of guardians of the throne resigned and the following day Ben Arafa did the same. On Nov. 5 the French government decided that Mohammed V was the legitimate sultan of Morocco. He returned to Rabat on Nov. 16. (See also FRENCH UNION; UNITED NATIONS.) (HU. DE.)

Education.—Pupils (1953): primary 262,558; secondary 21,163; vocational 15,035. Institutions of higher education (1955 excluding private Moslem) 8, students about 5,500.

Foreign Trade.—(1954) Monetary unit: Moroccan franc=metropolitan franc; 350 metropolitan francs=U.S. \$1. Imports 167,933,000,000 fr., including 89,000,000,000 fr. from France, 16,000,000,000 fr. from the United States; exports 100,459,000,000 fr., including 42,000,000,000 fr. to France, 9,300,000,000 fr. to the U.K. Principal products and exports (metric tons): phosphates (1953) 4,156,004; manganese (1953) 375,594; iron ore (50% metal content, 1954) 335,000; citrus fruit (exports, 1954) 96,800; fish (total landed, 1953) 128,000.

Motion Pictures. The key to continued advances by the U.S. motion-picture industry in 1955 over the preceding year was the increase in foreign income from film rentals. By mid-November it appeared that foreign revenue in 1955 would top even the record-breaking gross of \$175,000,000 reached in 1954. The increase was made in the face of new and tighter restrictions on U.S. and other foreign motion-picture imports. The increase in foreign revenue served to offset the general decrease in attendance in the U.S. and a corresponding drop in domestic theatre box-office returns.

Industry Statistics.—Weekly attendance at motion-picture theatres in the United States by the end of the third quarter of 1955 was averaging about 41,000,000, compared with an average weekly attendance of 49,200,000 for all of 1954. However, there was evidence that business in the final quarter of 1955 might bring the total closer to the figures for the preceding year. United States theatre grosses, including taxes, were estimated by the U.S. department of commerce to be \$1,275,000,000 in 1954. The expected 1955 total was about 8% to 10% less.

Industry surveys showed that by July 1955 there were 19,108 theatres in operation in the U.S., composed of 14,724 indoor theatres and 4,384 drive-in theatres. This total represented a small increase since the previous year, largely in the number of drive-in theatres.

On Jan. 1, 1955, an estimated 108,537 theatres were exhibiting 35-mm. films in approximately 120 countries and territories throughout the world. This was an increase of 9% over a 1951 estimate of 99,543 theatres.

According to the U.S. department of labour, employment in the U.S. motion-picture industry was averaging about 237,200 during the first seven months of 1955. The annual average for 1954 was 231,500 and for 1953 it was 234,000.

Industry sources estimated total capital invested in the industry at \$2,738,700,000, broken down as follows: studios (production), \$142,000,000; distribution, \$25,700,000; theatres, \$2,550,000,000; nontheatrical, \$21,000,000.

Profits for most motion-picture corporations were running markedly higher than those of previous comparable periods.

Production.—By the end of Oct. 1955 the American Production Code administration had approved 216 feature pictures, including 191 domestic and 25 foreign. For the same period of 1954 it had approved 226 pictures. The total for the entire year 1954 was 303 pictures.

For 1955, 12 national distributors had scheduled for release a total of 277 features and 19 reissues. This compared with 292 actual releases plus 90 reissues for 1954.

As of the end of Oct. 1955 the number of feature films produced in colour was running just under 50% of the total. During this period a total of 177 films, or 48.6%, were in colour. This compared with 58.4% for all of 1954.

Foreign Sales of U.S. Films.—Although domestic revenues in 1955 fell off somewhat compared with the previous year, foreign sales increased. It was estimated that foreign revenue would go as high as \$225,000,000 in 1955. It amounted to \$210,000,000 in 1954, with actual dollar receipts around \$175,000,000. This

increasing importance of the foreign market was shown by the fact that U.S. companies were receiving from 42% to 45% their total revenue from abroad.

World film rentals for U.S. pictures rose from \$620,000,000 in 1953 to \$650,000,000 in 1954. Popularity of U.S. films abroad continued high, approximately 68% of the world's screen time being devoted to them. The world-wide weekly audience for U.S. films was estimated at 260,000,000.

Exports of motion-picture films and equipment from the U.S. in the first six months of 1955 were more than 20% ahead of the first half of 1954, reaching an estimated valuation of \$237,794 against \$18,457,874 (258,884,781 linear feet against 191,977,153 linear feet).

Foreign Exports of Films to the U.S.—Film industry journals reported that a total of 174 foreign features were released in 1954, compared with 190 during 1953. While top foreign films continued to enjoy wide success in the U.S. market, the number of imports from abroad fell off in 1954 from the preceding year. Leading film exporters to the U.S. in 1954 were Great Britain, Hong Kong, Japan, Mexico and Italy. Among the outstanding foreign features released in the U.S. during 1955 were:

Holiday For Henrietta (French); *Innocents in Paris* (British); *Doctor in the House* (British); *The Wages of Fear* (French); *To Paris With Love* (British); *The Great Adventure* (Swedish); *The Court Martial* (British); *The Sheep Has Five Legs* (French); *One Summer of Happiness* (Swedish); *Gate of Hell* (Japanese); *The Game of Love* (French); *Berto D* (Italian).

New Developments and Organizational Changes. Throughout 1955 the debate over "toll" or "pay-as-you-see" television waxed hotter and hotter. Involved were the already tested systems—Phonevision, Skiatron and Telemeter—whereby viewers would pay for motion-picture programs telecast. Having in mind that the most desirable programs for these systems would inevitably be new motion pictures, the theatre owners throughout the country joined together in a common front to oppose approval of any pay-as-you-see system by the Federal Communications commission. Equally vocal were the representatives of the toll TV companies, and, as a result the FCC asked all interested parties to file opinions or briefs. The TV networks joined the movie exhibitors in expressing opposition. The volume of printed material filed with the FCC reached staggering proportions, and it looked as though a decision would be a long time away.

Meanwhile, the major Hollywood studios began to follow Walt Disney's lead in the establishment of their own TV programs. Warner Bros. began a weekly show, as did 20th Century-Fox and Metro-Goldwyn-Mayer.

In July RKO Radio Pictures, Inc., was purchased from Howard Hughes by Thomas O'Neil, president of General Tire & Rubber Co., Inc., a subsidiary of General Tire & Rubber Co., for a cash payment of \$25,000,000. It was later announced that veteran producer David Selznick had concluded a long-term deal to produce for RKO distribution.

The U.S. department of justice's antitrust suit against dominated motion-picture companies, charging conspiracy to withhold 16-mm. pictures from television and other nontheatrical outlets, went to trial in California in October. Meanwhile, Republic Pictures corporation entered into a consent decree with the government whereby it was required to make available to TV at least 80% of pictures released prior to 1948 and at least half of its newer releases three years after theatrical release. This was not regarded as a significant change, since Republic had been selling old pictures to TV for some time.

Wide-screen developments continued apace, with Metro-Goldwyn-Mayer announcing a new 65-mm. photography process and 20th Century-Fox placing into production a film version of *Carousel* in 55mm. CinemaScope. The latter studio predicted that this wider-

CinemaScope would be even more effective than CinemaScope, which swept the field in 1954 and 1955. As of Oct. 22 there were 133 theatres in the United States and Canada equipped with CinemaScope.

National Theatres, Inc., announced the coming introduction of a new wide-screen system called Cine-Miracle that would rival Cinerama, already established with its second production, *Cinerama Holiday*, paying off well. Cine-Miracle would be a three-strip (three projectors) system projected from a single screen, circumventing by means of mirrors the use of three screens as required for Cinerama. It was claimed that the line distortion seen in the latter was completely suppressed in the new system.

Republic Pictures also announced that Republic Pictures would enter the field of CinemaScope-type production with CinePanorama, a new anamorphic lens origination.

The big headline of the year in technological innovations was the opening of *Oklahoma!*, filmed and projected in the Todd-AO process after three years of preparation. This "bugeye" process, which employs a 70-mm. camera lens and projects its images on a screen about 65 ft. wide with a curvature 13 ft. deep, was developed by the American Optical company under the original sponsorship of Michael Todd. Subsequently, the Magna Theatre Corporation was formed to produce and distribute films made in the process. The October opening at the Rivoli theatre in New York City received critical acclaim, although some early technical defects were noted in the new method.

On April 12, the Supreme Court repealed its censorship statute, which had been in effect since 1913. The attorney general succeeded in having the repeal ruled unconstitutional by the Kansas supreme court. However, when the Kansas ban on *The Moon Is Blue* was brought up to the United States supreme court by the American Motion Picture Producers and Distributors Association in October, the high court declared the Kansas censorship law unconstitutional.

Massachusetts court actions were brought by the Brattle Street Theatre and the Times Film Corp. against the Sunday censorship law following bans placed on *Miss Julie* and *One Summer of Love*, both Swedish pictures, and *The Game of Love* (French). The state supreme court declared this 47-year-old law unconstitutional and void.

Trend in Film Subjects.—While CinemaScope pictures dominated the wide-screen field in 1955 (52 approved by the Production Code administration as of Nov. 2), the emphasis on adventure and spectacle films which characterized the previous year continued, and the trend turned more toward adult drama. Many of the year were of the latter variety, including: *Love Me or Leave Me*, *The Cobweb*, *Not as a Stranger*, *Summertime*, *A Desperate Hours*, *The Barefoot Contessa*, *Désirée*, *The Time I Saw Paris*, *Battle Cry*, *East of Eden*, *Bad Day at Black Rock*, *The Bridges at Toko-Ri*, *The Blackboard Jungle*, *Interrupted Melody*, *A Man Called Peter*, *Marty*, *The Country Girl* and *On the Waterfront*.

In addition to the 52 CinemaScope pictures, there were seven VistaVision and nine in Superscope for the same period.

Outstanding musicals of the year included: *It's Always Fair Weather*, *Guys and Dolls*, *Hit the Deck*, *Deep in My Heart*, *Seven Bridges* and *There's No Business Like Show Business*.

Another notable trend was the accent on military themes. These included such outstanding films as: *To Hell and Back*, *For the Boys*, *Strategic Air Command*, *The Bridges at Toko-Ri*, *The Long Gray Line* and *Battle Cry*.

Other outstanding hits for the year included *The Seven Year Itch*, *To Catch a Thief*, *The Seven Little Foys*, *The Man From Nowhere*, *Cinerama Holiday*, *The Glass Slipper*, *20,000 Leagues Under the Sea*, *The Prodigal*, *Lady and the Tramp* and *Daddy Long Legs*.

GRACE KELLY AND MARLON BRANDO, voted the best actress and actor of 1954, shown with their "Oscars" at the 1955 Academy of Motion Picture Arts and Sciences award presentations

Documentaries and Short Subjects.—Documentaries and short subjects, the quality and quantity of which had slipped somewhat in past years, again came into their own. Choice documentaries of the year were Disney's *The African Lion* and the Italian productions *Green Magic*, *Wakamba* and *Hunters of the Deep*. As in feature films, a growing number of short subjects were filmed in the new wide-screen processes. Some of 20th Century-Fox's outstanding CinemaScope short subjects of the year were *The Living Swamp* (the Okefenokee swamp in Georgia), *Tears of the Morn* (pearl fishing off Japan), *Volcanic Violence* (erupting volcano in Hawaii), *Jet Carrier* (the "Yorktown" on a training mission), *El Toro* (Spain and bullfighting) and *Far East Bastions* (a tour of far eastern democracies).

Paramount's VistaVision process contributed such memorable short subjects as *VistaVision Visits Mexico* and *VistaVision Visits Norway*.

Unusual cartoon subjects produced during the year were *Baby Boogie* (UPA-Columbia), *Spare the Child* (UPA-Columbia) and *The Peppermint Tree* (Arias). Other outstanding examples of short subjects were *The King's Secret* (Universal), *Siam* (Buena Vista), *Fortress of Freedom* (Universal), *Thursday's Children* (British Information services), *Switzerland* (Buena Vista) and *Devil Take Us* (RKO).

Polls and Awards.—The Academy of Motion Picture Arts and Sciences announced in March 1955 the following awards for 1954:

BEST PRODUCTION.—*On the Waterfront* (Horizon-Columbia).
 ACTOR.—Marlon Brando (*On the Waterfront*).
 ACTRESS.—Grace Kelly (*The Country Girl*).
 SUPPORTING ACTOR.—Edmond O'Brien (*The Barefoot Contessa*).
 SUPPORTING ACTRESS.—Eva Marie Saint (*On the Waterfront*).
 DIRECTION.—Elia Kazan (*On the Waterfront*).
 MOTION-PICTURE STORY.—Philip Yordan (*Broken Lance*).
 SCREENPLAY.—George Seaton (*The Country Girl*).
 STORY AND SCREENPLAY.—Budd Schulberg (*On the Waterfront*).
 SCORING, MUSICAL.—Adolph Deutsch and Saul Chaplin (*Seven Brides for Seven Brothers*).
 SCORING, COMEDY OR DRAMA.—Dimitri Tiomkin (*The High and the Low*).

Mighty).

SONGS.—"Three Coins in the Fountain" (*Three Coins in the Fountain*); music, Jule Styne; lyrics, Sammy Cahn.

SHORT SUBJECTS.—One-reel: *This Mechanical Age* (Warner Bros.). Two-reel: *A Time Out of War* (Carnival productions). Cartoon: *When Magoo Flew* (UPA-Columbia).

ART DIRECTION.—Black and white: Richard Day (*On the Waterfront*). Colour: John Meehan (*20,000 Leagues Under the Sea*).

SET DECORATION.—Black and white: Richard Day (*On the Waterfront*). Colour: Emile Kuri (*20,000 Leagues Under the Sea*).

CINEMATOGRAPHY.—Black and white: Boris Kaufman (*On the Waterfront*). Colour: Milton Krasner (*Three Coins in the Fountain*).

COSTUME DESIGN.—Black and white: Edith Head (*Sabrina*). Colour: Sanzo Wada (*Gate of Hell*).

FILM EDITING.—Gene Milford (*On the Waterfront*).

DOCUMENTARIES.—Short subject: *Thursday's Children* (World Wide British Information services). Feature: *The Vanishing Prairie* (Walt Disney-Buena Vista).

SOUND RECORDING.—Leslie I. Carey (*The Glenn Miller Story*).

SPECIAL AWARDS.—Greta Garbo, Danny Kaye, Jon Whitley and Vincent Winter, Bausch & Lomb Optical Co.; *Gate of Hell*, a Daiei production, Edward Harrison (Japanese).

(No Irving Thalberg Memorial award was made.)

TECHNICAL AWARDS.—Class one: Loren L. Ryder and John R. Bishop for developing VistaVision. Class three: David S. Horsley; Karl Freund and Frank Crandell; Wesley C. Miller; J. W. Stafford and K. M. Frieron; John Livadary and Lloyd Russell; Roland Miller and Max Goepfinger; Carlos Rivas and G. M. Sprague; Fred Wilson; P. C. Young, Fred Knoch and Orien Ernest.

SPECIAL EFFECTS.—*20,000 Leagues Under the Sea* (Walt Disney-Buena Vista).

The *Motion Picture Herald* annual poll of top money-making stars of 1954, exhibitor selections, was as follows: John Wayne, James Stewart, Dean Martin and Jerry Lewis, Gary Cooper, Marilyn Monroe, Alan Ladd, Jane Wyman, William Holden, June Allyson and Bing Crosby.

The *Motion Picture Daily* box-office hits of 1954 were (listed alphabetically): *Apache* (United Artists), *The Caine Mutiny* (Columbia), *Dragnet* (Warner Bros.), *The Egyptian* (20th Century-Fox), *The Glenn Miller Story* (Universal-International), *Gone With the Wind* (reissue) (M-G-M), *The High and the Mighty* (Warner Bros.), *Hondo* (Warner Bros.), *How to Marry a Millionaire* (20th Century-Fox), *Living It Up* (Paramount), *Magnificent Obsession* (Universal-International), *Mogambo* (M-G-M), *On the Waterfront* (Columbia), *Rear Window* (Paramount), *The Robe* (20th Century-Fox), *Seven Brides for Seven Brothers* (M-G-M), *Three Coins in the Fountain* (20th-Century-Fox) and *White Christmas* (Paramount).

Film Daily's ten best pictures of 1954 (poll of critics and reviewers) were: *The Caine Mutiny* (Columbia), *On the Waterfront* (Columbia), *Rear Window* (Paramount), *The Country Girl* (Paramount), *The High and the Mighty* (Warner Bros.), *Seven Brides for Seven Brothers* (M-G-M), *Sabrina* (Paramount), *Executive Suite* (M-G-M), *The Glenn Miller Story* (Universal-International), and *Three Coins in the Fountain* (20th Century-Fox).

The New York Film Critics' awards for 1954 were: best motion picture: *On the Waterfront* (Columbia); best male performance: Marlon Brando, *On the Waterfront* (Columbia); best feminine performance: Grace Kelly, *The Country Girl* and *Rear Window* (Paramount); best direction: Elia Kazan, *On the Waterfront* (Columbia); best foreign film: *Gate of Hell* (Daiei-Edward Harrison). (M. LN.)

Educational Motion Pictures.—In 1955 the field of instructional, factual and documentary motion pictures shared the growing pains of U.S. education generally. California schools announced state-wide audio-visual budgets approximating \$3,500,000; Los Angeles public schools inventoried nearly \$2,500,000 worth of educational films in the audio-visual library of the system; an estimated 50,000 16-mm. sound motion-picture projectors were in daily use among the principal school systems of city and county schools, both elementary and secondary, all over the U.S.

Production of films to serve the nation's rapidly expanding school population, aimed to ease overloaded teacher staffs, was shared by such companies as Coronet Films, Encyclopædia

ERNEST BORGNINE AND BETSY BLAIR in a scene from *Marty*, winning film of the 1955 Cannes (Fr.) festival

Britannica Films Inc., the Text-Film division of McGraw-Hill Book Co., Young America Films and many others, which contributed to the total of nearly 300 new motion pictures, hundreds of film strips issued during the year. Coronet, with motion pictures released during the year, and Britannica Films with a total of 60 motion pictures and 78 film strips, led the field in output; Young America increased the total with the lease for school use of numerous documentary television programs obtained by special agreement with the Columbia Broadcasting system.

Notable titles of the year were Britannica Films' *The Pilgrims* and *String Quartette*; a British Information services *Thursday's Children*; and several Coronet series, including films on the *Geography of Europe and the Middle East*. National Education association issued the challenging *Freedom to Learn* for town meeting use.

The nation's expanding industrial plant was reflected in annual statistics of business motion-picture production, which registered a 12% increase over the previous year. Total sales of 162 producers of business-sponsored motion pictures and slide films were \$56,000,000 in 1954. Films honoured at numerous film festivals and emanating from business sources during the year included such widely varying titles as General Motors' *ABC of Jet Propulsion*; *All I Need Is a Conference* sponsored by General Electric; *On Stream*, a notable example of industrial relations, sponsored by the Socony Mobil Oil Company; *Production 5118*, a thoughtful film on communication offered by the Champion Paper & Fibre Co.; and *Horizon of Hope*, a picture on cancer research, financed by the National Cancer Foundation.

The influence of U.S. affairs in the world-wide scene was reflected in educational and training film activity. Britannica Films sent producer John Barnes to England for such productions as *The Pilgrims*, *William Shakespeare* and *Captain Smith*; another producer from the same company, Milan Zog, originated films on the middle ages during extensive travels in France and Italy during the year. Greater authenticity in the common goal in these efforts. Pan-American World Affairs Council emulated this mission with the production in Japan of a film, *So Small My Island*, which was honoured at the Buffalo, Cleveland and Stamford film festivals. *The Story of Light*, a General Electric film produced in the Netherlands, traced the evolution of artificial illumination in another "film of the year." The U.S. Information service motion pictures, *The Story of Helen Keller*, *Symphony of the Air* and others, played to

ences throughout the free world.

The medical motion-picture field also set several marks in a rising year of unusual progress. An audience of 1,500 doctors of the American College of Surgeons attended medical films during that body's annual meeting in Chicago in the fall. The college also made news with the announcement of a new permanent film library.

At the federal government the most active user of films was the department of defense, which continued the production of training films. An active program in civil defense, launched during the year, resulted in 4,731 prints of eight civil defense films being completed and released within a single four-month period. Other films were in production and 11 additional scripts had been approved. Each of the film productions of the Federal Civil Defense Administration was sponsored by a fund grant from a business source, thus enabling the government to expand its program considerably.

The evidence of the popular interest in factual documentary films is given through numerous sustaining showings on most of the nation's television stations; such programs as *Omnibus* included reports or complete educational motion pictures, both sponsored and nonsponsored. The total of 16-mm. sound projectors in use throughout the U.S., owned by schools, churches, clubs, business organizations and community groups, was reliably estimated to exceed 500,000 during the year. (O. H. C.)

Technical Developments.—Developments in the motion-picture industry in 1955 were directed toward the improvement of pictorial quality on large screens by the use of camera negatives with larger areas than formerly used.

Todd-AO.—The Todd-AO system, first used to produce and release the production *Oklahoma!*, has a negative 65 mm. wide and the negative image five perforations high. This provides a positive film area approximately $3\frac{1}{2}$ times the area of a standard 35-mm. negative. The film runs at 30 frames per second, rather than the usual 24, to reduce light flicker on the screen. The picture has an aspect ratio of approximately 2 to 1 on the screen. A typical screen is approximately 50 ft. wide and 25 ft. high, with a depth of 13 ft. in at the centre. The actual length of the screen from the curve is about 65 ft. The sound is six-track magnetic stereophonic with five speakers behind the screen and surround speakers in the auditorium. Special projectors for the Todd-AO system were developed by the Phillips company. These projectors accept either 65-mm. or 70-mm. film at 30 frames per second, and can project CinemaScope or wide-screen releases on 35-mm. film at 24 frames per second. They are capable of playing six-track magnetic stereophonic sound for the wide film and four-track magnetic or optical stereophonic sound for 35-mm. film.

SuperCinemaScope.—20th Century-Fox started photographing its first SuperCinemaScope production in September. This system utilizes a film 55.625 in. wide with the image on the negative approximately 1.8 in. \times 14.4 in. The negative picture area is approximately 2 to 1; that is, at the same ratio as the regular CinemaScope. A direct print from this negative results in a picture on the screen with an aspect ratio (width to height) of 2.5 to 1, which is again the same aspect ratio as regular CinemaScope. From this negative it was anticipated that both the wide-screen SuperCinemaScope print, as well as a regular 35-mm. CinemaScope reduction print, would be made. With the wide-film negative, six magnetic sound tracks and one magnetic control track would be used to provide stereophonic sound. Five of the tracks would furnish sound to five speakers behind the screen.

The sixth track would provide sound for the auditorium speakers, with the control track determining which of these speakers were in operation.

Lighting.—The National Carbon company developed a

ON THE SET of *War and Peace*, stars Henry Fonda and Audrey Hepburn relaxing between shootings of the film in Rome, It., in 1955

16-mm. 225-amp. carbon which produces light with a colour temperature close to that of an incandescent lamp. This was the first such carbon, as previously the light from all carbon arcs matched daylight rather than incandescent light. After evaluation by the Motion Picture Research council this carbon was used by all the studios for productions photographed in colour, as the colour negative is balanced to incandescent illumination. This new carbon in its proper lamphouse gives twice as much light as any set lighting unit previously available and is extremely valuable on the set to match sunlit exteriors, as it is a point source.

Background Process Projection.—In production of motion pictures it is often difficult or costly to photograph the cast at a distant location. Instead of this, prints of the scene are projected on the stage through a translucent screen, with action taking place in front of the screen. This composite scene is then rephotographed on the set, giving the appearance and illusion that the scene is actually photographed at the location. The set illumination for colour had increased with the use of large area negatives, which necessitated a more powerful projector. Paramount Pictures corporation, Pacific Optical company and the Motion Picture Research council co-operated in designing a completely new triple-head projector, which by means of a new condenser relay system, modifications in the lamphouse and special lenses gave more than four times the light formerly available.

Plastics.—The motion-picture studios are constantly increasing their use of plastic materials, particularly the so-called foaming resins for casting lightweight breakaway props and set units. These developments culminated in an exhibit of studio-made plastic units arranged by the Motion Picture Research council and participated in by the major Hollywood studios at the World Plastics Fair and Trade Exposition held in Los Angeles in October. (W. F. Kv.)

Canada.—There were signs in 1955 that the spread of television in Canada might result in the establishment of a Canadian entertainment film industry. The considerable achievements of Canadian film makers had been entirely in the field of short subjects. The demand for at least a modest percentage of native film production for TV distribution was sparking a story search which it was believed might result in launching a modest development in the entertainment field by way of TV series, which could perhaps later blossom into feature film production.

The continuing expansion of the world market for TV films in 1955 (as for instance the establishment of sponsored TV

in Great Britain) was a factor in the growing conviction that quality Canadian film production in the TV field could take place only if the product were tailored for the world market.

In 1955 Canadian film production for television consisted entirely of documentary shorts and "commercial spot" films up to one-minute screening time. One high light of the year was the virtual removal of the federal government sales tax on Canadian

Summary Statistics of Canadian Motion-Picture Production

Year	(Private industry)		
	Salaries and wages	Gross revenue Production	Printing and laboratory
1952	\$1,006,918	\$1,331,393	\$1,274,137
1953	1,150,890	1,592,779	1,230,493
1954	1,549,233	2,106,131	1,456,405

domestic film production on July 1, 1955. This tax had been 10% on the full cost of production.

A tabulation from the report of the Canadian government bureau of statistics, covering Canadian motion-picture production by private industry for all purposes, is shown in the table. It was estimated by industry leaders that the 1955 figures would show an increase of about 25% over these. (F. R. Cy.)

Other Countries.—British films maintained a steady output and consistently presentable standard. *The Dam Busters* and *The Colditz Story* (both black and white) were the two best of a new series rather surprisingly treating episodes of World War II perfectly straightforwardly, almost without a "ten years after" slant. The first dealt impressively with the royal air force raid on the Moehne and Eder dams from the early back-room research, with Richard Todd as Wing-Commander Guy Gibson, leader of the raid, and a notable performance by Michael Redgrave as Dr. Wallis, a scientist working on the bomb. *The Colditz Story* reconstructed life in Colditz castle as a German punishment camp for Allied prisoners of war. Ivan Foxwell and Guy Hamilton, respectively producer and director, made it a film of considerable style and dignity, though adding little to film lore on prisoner-of-war camps.

A powerful impression was made both by Peter Glenville's first essay at film direction and Alec Guinness' moving portrayal of the cardinal on trial in Bridget Boland's adaptation of her own drama *The Prisoner*. Jack Hawkins also played effectively against his usual type as the cardinal's interrogator. Another ambitious but less satisfactory adaptation was made by Lenore Coffee and directed by Edward Dmytryk of Graham Greene's *The End of the Affair*. For all its solemnity the film seemed lacking in sympathy with the original and in the imagination or momentum which might have brought to life on the screen this story of a modern sinner who becomes a saint. Peter Cushing gave a brilliant portrait of the wronged husband, Stephen Murray a reasonably convincing one of the priest. But Van Johnson was oddly cast as a typically Graham Greene hero, while the heroine's character had been so mutilated that Deborah Kerr could revive her only spasmodically.

A Kid for Two Farthings aroused interest as a film by Sir Carol Reed and his first in colour. Wolf Mankowitz' story of Petticoat lane Jewry had a whimsical bias out of Reed's usual style, though the little boy is a familiar central figure in Reed films. On this occasion, in spite of all his master touches in the evocation of the colourful atmosphere, a pack of brilliant performances (notably David Kossoff's as the old tailor) and an exciting wrestling bout, Reed did not succeed in making an integrated film of the picturesque community.

David Lean fell similarly short of success in *Summertime*. With Katharine Hepburn and Venice as costars, Lean seemed understandably reluctant to balance the superb travelogue he achieved, with Hepburn as an eager American tourist, by a comparably sensitive treatment of her romantic entangle-

ment with an Italian married adventurer, very well played by Rossano Brazzi. Lean and H. E. Bates, who together made adaptation from Arthur Laurents's play *The Time of the Cuckoo*, failed to choose first between Venice and the bribe counter, and again between sentimental or cynical treatment of the latter. The result was a beautiful but broken-backed picture.

With one exception, British comedies did not reach so high a level. *Touch and Go* kept up Ealing Studios' high reputation for comedies both very fresh and very British. Jack Hawkins carried the picture, as a frustrated furniture designer determined on an impulse to emigrate to Australia. But he was splendidly supported by Margaret Johnston as his wife and June Brown and John Fraser as their daughter and her friend. The mildly amusing British comedies were *The Constant Husband* (starring Rex Harrison) and *Geordie*, both by Frank Launder and Sidney Gilliat, and *Doctor at Sea* (a sequel to *Doctor in the House*). *Raising a Riot* was an agreeably unpretentious comedy showing naval methods applied to the nursery and starring Kenneth More, who won the actor's award at the Venice festival for his performance in *The Deep Blue Sea* in the part he played on the stage. Another British award at Venice was won by William Fairchild, director of *John and Julie*, which showed charming use of coronation scenes for a story of two children who played truant to see the coronation.

One of the most interesting experiments of the year was Halas and Batchelor cartoon of George Orwell's *Animal Farm*, the first use of cartoon film for a serious subject. Opinions differed as to whether the plain, poster-style drawing was suited to Orwell's grim fable, but there can be little doubt that the cartoon made the book's points.

Two new experiments were made with grand opera. An extraordinary enterprise was the filming of a performance of *Giovanni* from the Festspielhaus Salzburg, of interest only for recording. An Italo-Japanese version of *Madam Butterfly* with Japanese players and Italian singers came much nearer a satisfactory solution of the perennial problems of opera. Still another intriguing film opera was the Chinese opera *Liang Shou and Chu Ying-Tai*.

Continental films were not outstanding, with few exceptions. Vittorio de Sica's plaint for a lonely old man, *Umberto D.*, was at last publicly shown. It provoked sharp controversy but was generally acknowledged a sad masterpiece. Jean Renoir's *Les Can-Can* was a riot of colour and gaiety and music, with a camera seeing with a painter's eye. *Rififi* was a beautifully filmed French gangster film made by the Franco-American director Jules Dassin. It contained one memorable sequence of silent suspense while the gang of crooks drilled through the ceiling of Mappin and Webb's in Paris.

The victory in the battle of the projection systems was won by the wide screens. Cinerama retained its enormous popularity with the public, but the multiplicity of its equipment and, without doubt, its cost continued to limit the number of its installations. This did not mean, of course, that the moviegoer no longer saw films in the conventional dimensions; many films were still produced in the old shape in 1955, not only to provide for unconverted theatres but also because producers often found that this was more suitable for the particular picture or position they wanted. In order to cope with the variously sized product available to them, exhibitors installed adjustable projection systems. For example, the Rank organization, which owned two of the three major circuits in the United Kingdom, equipped its 594 theatres with wide screens and variable anamorphic lenses so that films of all shapes—Cinerama, VistaVision, conventional, etc.—could be screened as the occasion arose.

A film could be made to appear ludicrous if it was sub-

THE START of a 57-mi. outboard race—twice around Manhattan island—Sept. 11, 1955. Thirty of 74 starting boats finished

an unsuitable form of projection. On the other hand, no filmmaker could afford to limit his market by restricting the audience value of his film to one particular type of projection. In endeavour to resolve this difficulty the British Film Producers' association adopted a resolution that the "composition pictures in the studio camera (other than for proprietary processes such as CinemaScope and VistaVision) should be standardized at a ratio of 1.75:1 tolerable for both 1.65:1 and 1.1."

In 1955 the British Film Institute in conjunction with Associated-British Pathé sponsored a film, produced by Howard Thomas and directed by Glenn Alvey, which demonstrated the "dynamic frame." *The Hole in the Wall* was shot in VistaVision colour, and during the action the screen shape was varied to produce the desired effects. The aim was that of selecting a screen shape most suitable to the mood, setting or action of a particular scene. Its method, the director believed, was "sufficiently subtle and unostentatious not to make the audience over-conscious of technical devices." (See also PHOTOGRAPHY.)

(F. B. L.; D. Cw.)

Motor-Boat Racing. Motor-boat racing during 1955 saw the breaking of the 200-m.p.h. speed mark and increased interest and activity in all classes of motor-boat competition. Donald Campbell of England, son of the former record holder Sir Malcolm Campbell, established on Nov. 24 an average of 202.32 m.p.h. in the first practical jet-powered hydroplane. This mark was officially recognized by the F.I.M. (international governing body for motor boating) as the jet-boat speed record. Stanley S. Sayres of Seattle, Wash., held the propeller-driven record of 178.497 m.p.h. with the "Slo-Mo-Shun IV," which boat, in contrast with Campbell's "Bluebird," was used in closed course competition. On Nov. 16 Campbell again broke the world record in the "Bluebird," on Lake Mead, Nev., with an average mark of 216.2 m.p.h. The activity of the unlimited inboard hydroplanes brought forth several new and extremely fast boats, the most successful of which was Guy Lombardo's "Tempo VII," piloted to victories in the Silver cup, the President's cup and the International cup. In winning the International cup, Danny Foster averaged 199 m.p.h. to set a new record for three-mile courses. The same cup, raced for in Seattle, saw the "Gale V," owned by Ralph Schoenith of Detroit, Mich., and driven by his son Lee, take the trophy by the scant margin of 4.53 sec. from Willard Jones's newcomer "Miss Thriftway" driven by Bill Muncy. The five-year stranglehold of the Sayres fleet of "Slo-Mo-Shuns" was broken when "Slo-Mo-Shun IV" caught fire while competing in the final heat and withdrew, and when Lou Fageol

at the wheel of the "Slo-Mo-Shun V" did a 360° loop during a qualifying trial while travelling faster than 150 m.p.h. Fageol was seriously injured, and the boat was withdrawn. Winner of the Seafair trophy was Ray Gassner of St. Petersburg, Fla., in his "Sunshine Baby."

Winners at the Stock Outboard national championships, held at Devil's lake, Ore., were: Class JU runabout, Bill Schumacher, Seattle; AU runabout, Schumacher; BU runabout, Don Baldaccini, Miami, Fla.; CU runabout, Ron Loomis, Santa Barbara, Calif., the only driver to repeat from 1954; DU runabout, Paul Woodroffe, Salem, Ore.; EU runabout, Dean Mahaffey, Salem; A stock hydro, Don Benson, Seattle; B stock hydro, Baldaccini; and D stock hydro, Bill Holloway, Tipp City, O. (L. EL.)

Motor Transportation. Motor transportation in the United States continued its 60 years of growth at an accelerated rate during 1955. Exceeding all past records, automobile production soared above the 8,000,000-unit mark for the year. In addition, more than 1,000,000 motor trucks and motor coaches were produced, bringing the estimated 1955 grand total to more than 9,000,000 motor vehicles of all types. The figure was about 1,000,000 above the previous record of 8,003,000 set in 1950. It topped the 1954 total by nearly 2,500,000.

The number of vehicles in use rose at a comparable rate. Preliminary estimates by the bureau of public roads placed total U.S. motor vehicle registrations in 1955 at 61,334,000—51,000,000 passenger cars and more than 10,000,000 trucks and buses—an increase of approximately 2,700,000 during the year.

In a year's time, the 72,182,000 drivers and 61,334,000 motor vehicles of the United States travelled a grand total of more than 561,000,000,000 mi., for averages of approximately 9,200 mi. per vehicle and 7,800 mi. per driver. During 1955, road and street mileage in the nation totalled 3,366,000. Sixty-two per cent of rural mileage was surfaced.

The speed with which motor transportation had grown during the last decade was dramatically illustrated by comparing current motor vehicle registration and mileage figures with those of 1946. In that first post-World War II year, there were 34,373,002 registered motor vehicles in the United States, or about 56% of the 1955 total. Vehicle miles of travel reached what was then a record high of 340,655,000,000, climbed past 500,000,000,000 in 1952 and continued climbing to the 1955 level—an increase of 65%. Passenger cars accounted for 81% of the 1955 mileage total.

Annual motor fuel consumption by motor vehicles rose to a record high of 44,365,465,000 gal. in 1954, which represented a 4% increase over 1953.

As motor vehicle mileage soared higher, efforts increased throughout the nation to reduce traffic accidents. The result was a steady lowering of the motor vehicle fatality rate. Since 1945, the number of traffic deaths per 100,000,000 motor vehicle miles declined from 11.3 to a record low of 6.4 in 1954. In the 1920s and 1930s the rate ranged as high as 16.3. It dropped below 12 for the first time in 1939.

The United States continued in 1955 to lead the world in motor transportation by a wide margin. The nation accounted for 71% of world passenger car production and 73% of world passenger car registrations.

More than 46% of the trucks in the world were owned and operated in the United States.

An estimated total of 88,000,000 motor vehicles were in use throughout the world in 1954, operating on about 10,500,000 mi. of highways. There were about 29 people in the world for every motor vehicle. In the United States, the ratio was 2.7 to each motor vehicle—by far the lowest of any country. Tied for second place were Canada and New Zealand, each with a ratio of 4.2 persons per vehicle. In less motorized parts of the world, the ratio ran far to the other extreme. For example, the China ratio was estimated as 7,524 people per motor vehicle; the U.S.S.R. 74 to 1; Hungary, 600 to 1; Haiti, 383 to 1, and Pakistan, 1,973 to 1.

Half of U.S. passenger car registrations were concentrated in eight states, led by California with 4,879,210.

Western states had the highest car ownership rate, with 82% of families owning cars, as compared with 78% in the midwest, 70% in the south and southwest and 67% in the New England states. Farmers of the nation owned about 7,000,000 cars and trucks, and 4,600,000 tractors.

A recent survey showed that 85.5% of all vacation trips in the United States were by automobile. The average mileage travelled per trip was 1,018 and the total amount spent for automobile transportation by vacation travellers per year was estimated at \$586,800,000.

During 1955, motor transportation provided jobs for 9,831,773 persons in the United States, or one out of every seven employed persons in the nation. This included employment in motor vehicle and automotive parts and equipment manufacturing, crude and refined petroleum industries, automotive sales and service businesses, and employment by trucking, bus and taxi companies. In addition, motor transportation created countless jobs in other industries. About one-fifth of the nation's steel output, for example, was being consumed by the automotive industry. Most businesses depended upon motor vehicles for transportation of supplies, finished products and customers.

Motor trucks hauled a high percentage of the nation's freight. For example, 91% of dressed poultry, 99.9% of live poultry, 99.8% of shell eggs, 52% of fruits and vegetables and 80% of livestock were shipped to major wholesale markets by truck. Eighty per cent of new motor vehicles were shipped from the factories over the highways.

Highway users contributed a large share of government revenue through special taxes. In 1954, special automotive taxes in the United States totalled \$6,235,517,000. Of the total, \$1,771,483,000 was contributed by truck operators. It was estimated that taxes took nearly one quarter of every dollar spent for new automobiles.

The rapid growth in motor transportation since World War II and lagging highway building caused a serious road deficiency in the United States. Highway experts estimated in 1955 that expenditures totalling more than \$100,000,000,000 would be

needed to meet all the nation's highway construction, maintenance and administrative needs over the next 10 years.

They predicted that motor vehicle registrations and traffic mileage would increase one-third by 1965 and that half of traffic growth would be on the 40,000-mi. interstate highway system.

Municipal Government. Metropolitan Areas.—The problems of metropolitan areas created by the expansion of urbanism far beyond the borders of the central cities of the United States received considerable attention in 1955. Many years' effort in the Miami-Dade county area in Florida was rewarded in 1955 by enactment by the state legislature of a constitutional amendment, to be submitted to all voters of the state at the Nov. 1956 elections, authorizing adoption of a home rule charter providing a metropolitan form of government for the county, to which certain area-wide functions would be transferred; provision was also made for creation of a charter commission, subject to approval by the voters of the county in 1956. In the Pittsburgh, Pa., area, the Metropolitan Study commission issued its report to the governor's general assembly entitled "An Urban Home Rule Charter for Allegheny County," which likewise recommended a new framework of government for the county which would take over various countywide urban services. Here again a constitutional amendment would first be requisite, followed by appointment of a charter commission. The Illinois legislature enacted a law authorizing creation of the Northeastern Illinois Metropolitan Area Local Governmental Services commission, consisting of representatives of state and local governments, to facilitate a comprehensive study of the problems of the Chicago metropolitan area.

In Canada, the Commission for the Study of the Metropolitan Problems of Montreal, Que., following the pattern set by metropolitan Toronto, Ont., recommended creation of a metropolitan body of 29 members, 14 appointed by the suburban municipalities, 14 by the city of Montreal, and 1 by the provincial government, to administer a variety of intermunicipal services for the area, as well as a uniform system of property assessment, sales tax, and other administrative matters, autonomy in local affairs remaining vested in the municipalities.

Progress study reports were issued by the Metropolitan Problems committee of the Municipal League of Seattle and King county (Wash.) and by the Toledo Area Study committee (Ohio). A citizens' committee was incorporated in Missouri to work for co-ordination of the St. Louis city and county government in the regional planning field, at least five states, Arkansas, Georgia, Indiana, Maine and Massachusetts, enacted legislation either permitting or requiring the establishment of metropolitan planning agencies; at the local level, new regional planning agencies were created in the Denver, Colo., area and the Little Rock-Pulaski county area in Arkansas, steps toward such agencies were taken in the areas of Columbia, S.C., and Cape Cod, Mass., and Monroe county, Mich., joined the Detroit Regional Planning commission.

Early in 1955 a group of planners at Yale university, headed by Christopher Tunnard, reached the conclusion that the

from Portland, Me., to Norfolk, Va., because of its almost daily urban character, constituted in fact one continuous regional city" 600 mi. long and with a population of 34,000,-. Charlton E. Chute of the Institute of Public Administration, New York, developed the thesis that in fact the entire continental United States could be broken down into 19 "urban regions" consisting of adjacent metropolitan areas (as defined by the U.S. census bureau) scattered throughout the country including about 40% of its population. These revolutionary concepts marked the first new approach in decades to the study of the problem of metropolitan areas in the United States.

Traffic and Transportation.—Rapid transit or mass transportation claimed the spotlight in 1955 as providing a possible solution to the urgent problems of urban traffic congestion and consequent parking difficulties which were widely prevalent throughout the nation. Studies of urban mass transportation were either completed, under way, or authorized in Baltimore, Md.; San Francisco bay, Calif., area; Milwaukee, Wis.; Detroit, Mich.; Oklahoma City, Okla.; Philadelphia and Wilkes-Barre, Pa.; the Washington, D.C., area, the south Jersey area; Akron, Barberton and Cuyahoga Falls area in Ohio; and the St. Louis-St. Louis county, Mo., area. In Washington, D.C., the chairman of the House Public Works committee offered to hold hearings on proposals for federal aid to cities for the construction of municipal transit systems on a matching fund basis. Innovations proposed to speed transit included adoption of a monorail rapid transit system, because of its economy, to supplement surface or bus transportation. Ground was broken in 1955 for a test half-mile project in Houston, Tex., financed by state capital of \$50,000,000. Los Angeles, Calif., established a transit authority with jurisdiction limited to monorail transportation over an 8-mi. zone. Possibly the most striking proposal for relief of the transit problem was made by Henry K. Norton, former member of the New York City Transit authority, to the New York Metropolitan Rapid Transit commission for the establishment of a tri-state authority (New York, New Jersey, Connecticut) to construct an "aerial transit" using electric high-speed rubber-tired trains running on narrow overhead structures, estimated to cut commuting time within a radius of 50 mi. as much as half, and to eliminate 40% to 60% of existing vehicular traffic from the suburbs to the city.

Municipal Finance.—The census bureau's latest available annual report on the finances of the 481 cities with populations exceeding 25,000 covering their 1954 fiscal years, showed a substantial rise to record high levels in revenue, expenditure and debt. These cities accounted for approximately four-fifths of all city government revenue and expenditure in the nation. Total revenue reached \$7,533,000,000, an increase of 6% over 1953, and general revenue (which excluded income from utilities, employment retirement systems) amounted to \$5,968,000,000, an increase of 5%. Property taxes continued to constitute about three-fourths of all tax revenues. Total expenditure amounted to \$7,856,000,000, an increase of 8% over 1953; general expenditure totalled \$6,107,000,000, also an 8% increase. Outlay for all major municipal functions increased in 1954, particularly for sanitation. New city borrowing reached a record of \$1,542,000,000, which was 26% over 1953; but \$728,000,000 in existing debt was redeemed, or 21% more than in 1953. Outstanding gross debt rose 7% to a total of \$12,162,000,000.

More state legislation than usual relating to local finance was enacted in 1955; while much of it pertained to revenues, a greater quantity was concerned with the improvement of fiscal procedures. Broader grants of local taxing powers in the tax field were made in California, which extended the tax authority to counties, gave cities the priority in levying the tax and

provided for a co-ordinated state-administered state, county and city tax. New Mexico authorized a state-administered sales tax of up to 1% in cities of over 75,000 population, and Albuquerque, the only qualifying city, imposed a tax on April 15. Mississippi removed the referendum previously required for its one-half cent city sales taxes, except where protested by 20% of the voters. Illinois removed a similar requirement, which had previously prevented the adoption of local sales taxes, but also required abandonment of local cigarette taxes if sales taxes were imposed; by September, more than 140 Illinois cities, including Chicago, had imposed a sales tax collectible by the state. There was less activity in the income tax field: Ohio, where numerous city income taxes were in effect, adopted a law defining the income to be considered, prescribing a uniform rate, and regulating the allocation of new income of corporations between municipalities; voters in Canton, O., in late 1954 approved two income tax measures amounting to six-tenths of 1%; Cincinnati, O., reimposed its earned income tax in 1955, for the period of March 1 to Nov. 30; Pittsburgh, Pa., reduced its earned income tax from 1% to one-half of 1% for 1955, and its suburbs imposed reciprocal income taxes in such number as to create a serious problem from the administrative standpoint.

New or increased shares in state collected taxes were granted in 1955 in about a dozen states, including Mississippi, which adopted its first permanent municipal aid program providing for the allocation of gasoline tax funds to its 267 incorporated communities. In New York, the governor and the mayor of New York city appointed jointly a 10-member citizens' committee to consider the tangled fiscal relations between the city and the state.

State and municipal bond sales for the first nine months of 1955 totalled \$3,900,000,000, or about \$1,000,000,000 less than for the corresponding period in 1954. Similarly, the aggregate of bond issues submitted to voters for approval at the November election by three states and 272 municipalities, amounting to \$1,400,000,000, fell short of the 1954 figure by about \$139,000,000.

Housing and Urban Redevelopment.—The deterioration in housing characteristic of major cities throughout the nation had prompted enactment of the original Housing act of 1949 by the federal government for provision of aid to cities in attacking the problem on a comprehensive scale through costly slum clearance and urban redevelopment programs. Developments under the act moved slowly, and while by July 1, 1955, capital grant reservations totalled nearly \$445,000,000 out of the original \$500,000,000 authorized, covering 302 approved projects in 198 communities, actually not more than 10 projects were fully or practically completed, including some in Baltimore, New York city, Chicago and Detroit. New features and programs incorporated in the Housing act of 1954 were expanded and liberalized in 1955. As finally approved, the new legislation increased capital grant authorizations for slum clearance and urban renewal projects by an additional \$500,000,000 for the next two fiscal years, and authorized loans and advances for the redevelopment of predominantly open land for industrial and other nonresidential uses. In public housing, 45,000 units were approved for fiscal 1955-1956, and 1954 requirements limiting such units to families displaced by slum clearance and calling for an approved "workable program" by cities, which had greatly impeded the letting of contracts in early 1955, were dispensed with. Other measures included authorization of substantially increased advance planning loans, up to a total of \$48,000,000 over the next three years, to be held in a revolving fund and to be continually available for establishment of a genuine reservoir of planned public works, with previous limitations on type and cost of individual projects removed; a public works loan pro-

gram of up to \$100,000,000, which gave priority to communities of less than 10,000 population; and an additional \$2,000,000 appropriation for planning aid grants to small communities and metropolitan and regional areas. By midyear, seven such planning aid grants had been made, to the states of Rhode Island, Tennessee, Alabama and New Hampshire, and to the metropolitan areas of Atlanta, Ga., Little Rock, Ark., and Detroit, Mich.

As of Sept. 1955, 36 states had adopted urban redevelopment or urban renewal laws, four of them in 1955. More than 60 communities had complied with the "workable program" requirement for slum clearance and urban redevelopment aid under the 1954 Housing act. By October, 35 cities had adopted housing codes providing minimum standards—prescribed in connection with their "workable programs"—more than half of which were put into effect during the preceding six months.

Chicago early in 1955 received a federal grant of \$6,000,000 to be used in its Hyde Park redevelopment program involving rehabilitation of the greatly deteriorated area in the vicinity of the University of Chicago. Mayor Robert F. Wagner of New York city announced in October a multimillion dollar plan for the rehabilitation of an enormous area on Manhattan's west side under the urban renewal provisions of the Housing act of 1954, estimated to take from four to five years to complete. (See also HOUSING.)

Air Pollution Control.—Air contamination of differing types loomed as a serious threat to the public health and safety in many cities in 1955. Attention centred on conditions in Los Angeles, Calif., which in September experienced some of the worst "smog" attacks in its history. Main causes there were attributed to fumes from industry, automobiles and backyard incineration. An "alert" system instituted in July called for bans on all three in varying degree, though only the restrictions on incinerator burning were actually utilized. Many governmental and other agencies were engaged in efforts to ameliorate this major threat to the city's progress. The states of New York and New Jersey each appropriated \$30,000 for a survey of air pollution in that area to be undertaken by the Interstate Sanitation commission. A nationwide federal program of research and technical assistance in air pollution control, under the direction of the surgeon general, was authorized by congress, under which appropriations of up to \$5,000,000 a year over a five-year period would be available to support and aid technical research by state and local government or other agencies or to provide technical assistance. In August, the Louisville, Ky., City-County Air Pollution Control commission approved a one-year \$137,000 air pollution study to be financed jointly by federal and local funds.

Civil Defense.—Nationwide civil defense exercises were held in about 50 critical target cities from coast to coast on June 15-17. At least 12 cities conducted evacuation tests, including Washington, D.C., where about 15,000 federal employees moved out to relocation sites. Portland, Ore., in October held the biggest evacuation test up to that time, involving about 200,000 people working or shopping in a 1,000-block downtown area which was cleared in 34 min. by the use of 90,000 autos and trucks. Congress voted \$10,000,000 for grants to cities to prepare for H-bomb evacuation tests by studies of such pertinent factors as population, communications, transportation, shelter availability and co-ordination of public jurisdictions, and under the Civil Defense administration's national survival plan 15 critical target cities were initially selected to make such studies. Additional studies were contemplated near important military establishments.

Water Supply.—The problem of future water supplies for rapidly mounting municipal needs was particularly stressed in 1955. A summary analysis issued by the U.S. department of commerce in March 1955, covering 552 of the country's major

public water supply facilities as of the close of 1953, found that only 58%, serving a population of 40,700,000, were deemed adequate for present demands with satisfactory reserve capacity above a maximum day's demand. A 1955 survey by the U.S. public health service, made in conjunction with American Municipal association activities, revealed that out of 1,555 water supply systems serving more than 95,000,000 people, and including nearly 2,000 municipalities, 815 systems, or 52%, serving nearly 65,000,000 people, required improvements to provide "reasonable, adequate service." (See also CIVIL DEFENSE, U.S.; TOOLS AND REGIONAL PLANNING; URBAN TRANSPORTATION, U.S.; and under individual large cities.) (L. GU.; A. M. DS.)

Canada.—The current expenditures of Canada's organized municipalities, comprising 13,000,000 of the country's population, were \$922,000,000 in 1953; their revenues from all sources were \$933,000,000. Education was the principal expenditure item, \$255,000,000, followed by debt charges, \$149,000,000, public works, \$128,000,000, protection to persons and property, \$112,000,000, health, \$43,000,000, sanitation and waste removal, \$57,000,000, social welfare, \$36,000,000. Taxes, mainly on property, yielded \$698,000,000 of the revenues of which \$340,000,000 were collected for general municipal and \$292,000,000 for school purposes. The remaining municipal revenue derived from grants and subsidies by other governments, from municipal enterprises, licences and miscellaneous sources. Capital expenditures out of capital funds amounted to \$306,000,000 during 1953. The aggregate outstanding debenture debt of all municipalities at the end of 1953 came to \$1,802,000,000.

On Jan. 1, 1954, the Metropolitan Corporation of Toronto embracing 13 heretofore separate municipalities comprised of 1 city, three villages, four towns and five urban townships with a population of 1,250,000, became responsible for water supply, sewage disposal, housing, education, arterial highways, metropolitan parks, certain welfare services, certain administration of justice expenses, public transportation and the over-all planning of the area of greater Toronto. The corporation's first budget provided for revenues and expenditures of about \$65,000,000.

Canada's municipalities continued to press, notably through the Canadian Conference of Mayors and Municipalities, for additional sources of revenue. The demand that the scope of the Dominion-Provincial conference which convened in the fall of 1955 be enlarged so as to provide for municipal representation was not met because, as Prime Minister L. S. St. Laurent stated, "there are no constitutional grounds for direct negotiations between the federal government and the municipalities." But the suggestion that it was open for every province to include representatives of its municipalities in its delegation had the result that for the first time more than 20 municipal representatives took part in the Dominion-Provincial conference of Oct. 1955 which laid the groundwork for further studies of the financial relationships of the three levels of government. (R. RR.)

Munitions. **U.S. Army.**—A listing of the United States armaments and munitions items of interest for the year 1955 follows:

Radar Island.—A Texas tower (man-made island) established about 100 mi. off the New England coast, as a key link in the nation's defense against surprise attack, was completed late in 1955. The estimated cost was between \$5,000,000 and \$10,000,000.

Packaged Atomic Power.—Fort Belvoir, Va., was chosen as the site for an experimental, full-scale but small nuclear power plant to be designed and built jointly with the Atomic Energy commission. Locating the army package power reactor at the government-owned Fort Belvoir would provide a training facility that could be used in the regular program of the army engineering school.

hool located there.

Mobile Howitzer.—The M-44 self-propelled howitzer, a new 10-ton, full-tracked, armoured vehicle, had a top speed of 35 mi. per hour and a cruising range of 76 mi.

Compact Radar.—This new, compact airborne Sperry radar, that assured greater safety for troop-carrying transports and essential cargo planes, was announced by the Air Research and Development command of the air force.

Mechanical Rhino.—This new amphibious vehicle could successfully traverse mud flats, marshes and rough terrain, and could also cruise in water.

Giant Electronic Tube.—A powerful giant electronic tube, said to pave the way for super radars reaching far beyond present limits, was announced by the Air Research and Development command. Known as a megawatt klystron, the tube was eight feet tall and was the first to produce millions of watts of precisely controlled radar power for military systems as yet undiscovered.

Maintenance Shelter.—A new-type portable maintenance shelter for B-29, B-50 and C-97 aircraft that would greatly speed engine maintenance work and enable personnel to perform around-the-clock servicing in any kind of weather or climate was adopted by the U.S. air force.

Signal Instruction.—By installing six vehicular mounted AN/RC-9 radios in a room, TES's Communications section was able to overcome many of the problems relative to teaching signal communications. Power was supplied by regular storage batteries located outside the building.

Jet Reconnaissance Plane.—Republic Aviation corporation developed the first jet photoreconnaissance fighter plane. RF-84F Thunderflashes were being delivered to the 363 Tactical Reconnaissance Wing of the Tactical Air command, Shaw Air Force Base at Sumter, S.C.

Barracks for Polar Icecap.—The corps of engineers designed and constructed a unique type of military installation, the first permanent barracks ever built for use on the polar icecap.

Vehicle-Bridge Signs.—The engineer school had developed a system by which drivers could quickly tell whether or not their vehicles could safely cross any given bridge. Numbers were fixed on vehicles and bridges and the driver could cross if his vehicle's number was lower than that of the bridge. This system had been adopted by all NATO countries.

Battlefield X-Ray Unit.—The army Medical Research laboratory developed a portable x-ray unit for use on the battlefield. Weighing only 48 lb., the complete unit could be carried on the back of a medical aid man. It was powered by a tiny piece of radioactive thulium, and a ¼-in. lead plate protected the user from accidental radiation exposure. The x-ray could produce a picture without electricity, water or a darkroom. The thulium is effective for about a year, after which it could be rejuvenated in an atomic reactor.

Helicopter.—The army contracted with Bell Aircraft corporation for a new medium-sized helicopter to be used for evacuation, general utility and instrument training. Designated by Bell as the Model 212, the helicopter carried 800 lb. of cargo, had a cruising speed of 100 knots and a ceiling of 6,000 ft. Its rate of climb was 1,500 ft. per minute.

Germ Counter.—An instrument which could give instant warning of a germ warfare attack was developed by an army medical corps engineer at Camp Detrick, Md. It measured and counted microscopic airborne germs, dust and moisture particles at the rate of 100 per second.

Shoes.—New footwear were designed on a new system of interchangeable lasts which reduced the number of shoe sizes from 15 to 113.

Electrical Radiation Device.—An improved device for check-

TRACK OF THE FALCON, 6-ft. guided missile of the U.S. air force, as it was about to score a direct hit on an "enemy" plane during tests in March 1955. Developed by Hughes Aircraft Co., the missile had its own guidance system, permitting it to follow a moving target

ing instruments that measure radiation was invented by an army private at Fort Benning, Ga., late in 1955; he was completing experiments on an electrical device that could align radiometers with a 1% margin of error.

Explosion Stopper.—A tiny new electronically controlled device that would protect aircraft in combat from fuel tank explosions was developed by the Fireye division of Electronics Corp. of America. The heart of the new device was a miniature, rugged, lightweight photoconductive cell mounted inside the fuel tank of an aeroplane.

106-mm. Recoilless Rifle.—The .50-cal. spotting rifle was used to bring the BAT (Battalion Antitank 106-mm. recoilless rifle system) on target during tests of the new 106-mm. recoilless rifle at Aberdeen Proving Ground, Md.

Lightweight Truck.—An experimental all-aluminum army truck, weighing 6,000 lb. less than the conventional model and

TANK AND ANTI-TANK VEHICLE of 1955. Left: British Conqueror, 65-ton tank with long-barreled gun shown during trials at Chobham, Eng., in March; right: Ontos ("The Thing"), U.S. marine corps armoured anti-tank vehicle equipped with six 106-mm. recoilless rifles, four .50 calibre spotting rifles and one .30 calibre machine gun

utilizing a fuel injection system, hydraulic disk brakes, and ball-joint suspension, was developed by the Chrysler Corp. The truck had a waterproof 6-cyl., 200-h.p., air-cooled engine and was capable of speeds of more than 60 mi. per hour.

Missile Tracker.—The new equipment would record time, position, and attitude of the tracking target on 35-mm. film at rates of 10 or 30 frames a second.

Plastic Barge.—This army cargo barge, 51 ft. long, that could transport five tons of cargo with a draft of only two feet, or could carry a full load of 10 tons, was built of plastic in a sandwich construction and was made in 15 sections for ease of transport. It was powered by two 165-h.p. Diesel engines.

Countermortar Radar.—With the help of this electronic locator, front-line forces could detect and "lock on" the path of an enemy mortar shell, automatically track its trajectory, and obtain computer range data revealing its position. Counterbattery fire could then be placed on the hostile weapons.

Audio-Visual Nurse Call System.—As a result of co-ordinated planning and efforts by the office of the surgeon general and the signal corps Plant Engineering agency, a new-type electronic communication known as the Audio-Visual Nurse Call system was adopted and was being utilized in seven U.S. army hospitals.

Power Jack.—A self-propelled hydraulic power jack for the surfacing of military railroad tracks was developed by the corps of engineers' Research and Development laboratories and the Kershaw Manufacturing Co. of Montgomery, Ala. Propelled by a hydraulic motor with a two-speed transmission, the unit could travel 12 mi. per hour.

Nuclear Battery.—A nuclear battery that would convert nuclear energy into electrical energy was developed by the Patterson-Moos Research division of the Universal Winding Co.

Xenon Lamps.—Xenon lamps for special military applications were being produced by Westinghouse Electric Corp., East Pittsburgh, Pa.

Hydraulic Press.—Air Force Secy. H. E. Talbott on May 5, 1955, put huge 35,000- and 50,000-ton hydraulic forging presses into production at Aluminum Co. of America's Cleveland works. The \$40,000,000 installation became the first complete plant of the air force's \$279,000,000 heavy-press program to begin operation.

Dynamic Tester.—Development of a tester to measure dynamic performance of antiaircraft fire-control systems was initiated by army ordnance under contract with Melpar, Inc.

(R. S. T.)

U.S. Navy.—Production and procurement of naval armament

continued at a substantially reduced pace during 1955, primarily because of further levelling off in requirements from the termination of the Korean conflict. The greatest reduction occurred in connection with expendable ordnance, such as ammunition, mines and torpedoes. The policy of placing maximum reliance upon an adequate production base rather than accumulation of inventories was also an important factor in this decrease.

There was, however, a marked increase in procurement of the "push-button" variety of ordnance, notably guided missiles, completely automatic guns and mounts, and advanced types of fire control equipment, as programs completed the research and development stage and entered the procurement stage.

In research and development, the trend was away from conventional weapon programs to greater emphasis on guided missiles and atomic weapons.

A spectacular advance in the striking power of the U.S. navy was achieved with the commissioning of the world's first guided missile cruiser, the "Boston," late in 1955 after completing conversion to carry the navy's new supersonic rocket-propelled Terrier. In the conversion, the after 143-ton 8-in. gun turret was removed and two twin launchers, each capable of firing two Terriers simultaneously, were mounted.

The Terrier successfully completed operational test firing in the fleet from the "Mississippi" and the "Norton Sound" before installation in the "Boston." The needle-nosed missile was designed to intercept aircraft under any weather conditions at a longer range and higher altitudes than conventional antiaircraft guns. It could be fired either singly or in salvo and would be effective for night firing as well as day time.

Storage of Terriers on board ship is below deck in two magazines nicknamed "coke machines," which are completely automatic loading devices. The "Boston" also carries the most modern radar and electronic equipment for detecting targets and for missile guidance.

New methods of bonding fibreglass with metals and inorganic substances, or combinations of both, were developed. The new method produces laminates and tubular products of superior strength and possessing high resistance to usual corrosion agents, elements very important in the field of guided missiles.

A high-altitude guided missile target, the Pogo, was developed by Convair. Consisting of a parachute packed into the nose of a small rocket which is fired vertically from a portable launcher to the desired altitude, Pogo was the first inexpensive high-altitude target for research and development testing of guided missiles.

A simple lightweight handle-bar type gun fire control system completed evaluation and was accepted for service in small ships and auxiliaries. The system was highly reliable and had excellent

performance capabilities against aircraft targets under good visibility conditions.

The reliability and maintenance of new fire control systems are improved considerably through the use of two new types of fire control radar equipments which utilized long-life components, subminiature tubes and units of the plug-in type.

The navy's first completely automatic gun, the 5 in. 54 cal., is mounted in new construction ships, including the first two destroyers of the Forrestal class, "Forrestal" and "Saratoga."

Programs aimed to provide weapons of improved kill-probability for high-speed aircraft, and to increase performance and accuracy in bomb and fire control systems were accelerated to keep pace with the new emphasis on air operations in defense planning. Continued emphasis was placed on underwater ordnance to counter the substantial buildup in Soviet naval strength. Recognizing that the torpedo is still one of the most effective and strategic antisubmarine or prosurface weapons, programs to modernize older type torpedoes and to expedite production of new types for launching from aircraft, submarines and surface vessels were accelerated. Torpedo workshops were designed for installation aboard submarine tenders, destroyer tenders and aircraft carriers to provide facilities for servicing new torpedoes as they were issued to the fleet, as well as the older type inventory torpedoes.

The first family of "drill mine kits" was made available to the fleet in quantity. These kits enabled service units to convert inert loaded service mines into drill mines which gave positive indication of actuation and could be recovered without divers.

Two new naval reserve ordnance plants were completed and placed in operation. The plant at Mishawaka, Ind., for the production of guided missiles, is operated for the navy by the Bendix Aviation corporation. The plant at Hayes, Pa., operated by the Mullins Manufacturing company, manufactures projectiles, rocket heads and other ammunition items by the cold-chambering process for the army and the navy. (F. S. W.)

U.S. Air Force.—Guided Missiles.—The year 1955 saw considerable progress in the guided missile field, as new missiles came far enough advanced to be ordered into full production and new advances were made toward development of the "ultimate weapon," the intercontinental missile.

At the end of the year, the U.S. military services had eight separate types of missiles in production. These included the Glenn L. Martin Co.'s Matador, Chance Vought's Regulus, the Redstone Corporal, Convair Terrier, Douglas Honest John, Sperry Sparrow, Western Electric Nike and Hughes Falcon. The Terrier was also ordered into second-source production with Philco Corp. as the contractor.

Three of these missiles were in actual service with first-line units in Germany. The U.S. army had two units operating Corporals and Honest Johns, while the air force had two more equipped with the Matador on constant alert duty.

The Convair division of General Dynamics Corp. continued work on its intercontinental ballistic missile (IBM), the Atlas, which was not yet ready for test firing. Actual firings were conducted on the Northrop Snark and North American Navaho, intercontinental missiles of the pilotless bomber rather than of the ballistic variety, those which follow the flight path of a bomber rather than the artillery shell trajectory of the ballistic missile. The Snark was a jet-propelled missile which had employed several different power plants, most recently the powerplant of the Pratt and Whitney J-57 engine. The Navaho was powered by a combination of liquid rockets and ramjet engines, the latter developed by Curtiss-Wright Corp.

At the end of 1955 the air force was planning a new emphasis on development of the intercontinental type missile, which

travels at far greater speeds than the pilotless bomber types and against which no defense had yet been developed. The U.S. air force planned to contract for a parallel development to the Atlas, as insurance against development delays, but no contractor was announced.

The following is a roundup of U.S. missile types in service, production or development:

Surface-to-Surface.—The Glenn L. Martin Co. continued production of the Matador, a winged pilotless bomber, jet powered, which was in its third year of production status. Chance Vought also continued production of a similar navy missile, the Regulus, designed for ship-to-surface firing. Both missiles were capable of a range of "several hundred miles."

Chrysler Corp. started production of the Redstone, a medium-range missile developed by Redstone arsenal for army use. The Redstone was a ballistic type missile, an extension of the field artillery principle, with a range of about 200 mi. Also in production for the army were the Firestone Corporal, a somewhat smaller ballistic missile with a range of about 150 mi., and the Douglas Honest John, a short range unguided rocket for anti-personnel use.

Under development for both the army and the marine corps by Martin was a new close support missile, LaCrosse. LaCrosse was capable of a range of about 8 to 10 mi. It was powered by a single small solid propellant rocket.

The aforementioned Snark, Navaho and Atlas, all U.S. air force missiles and all still in development status, rounded out the surface-to-surface category.

Air-to-Air.—One new missile of this type turned up during the year—the Sidewinder, or XAAM-N-7, under development by Philco Corp. No details were released. Production of the Sperry Sparrow was continued for the navy bureau of aeronautics and the Hughes Falcon was being readied for introduction to operational service. It would be used as armament for the Convair F-102 delta wing all-weather fighter, expected to go into service in early 1956. The Martin Oriole, a larger missile than either the Sparrow or Falcon, was cancelled during 1954.

Surface-to-Air.—Nike, an army antiaircraft missile, joint project of Western Electric and Douglas, was in its third year of production and its second year of service use. More than 100 Nike sites had been set up around 13 major cities in the U.S. by the end of 1955. The Nike is a slim, 20-ft. rocket with beam-riding guidance system (it follows a radar beam to its target). Range of the in-service missiles is about 20 mi., but a Nike II under development was to have greater distance capabilities.

Boeing Airplane Co. continued development of the Bomarc, a large rocket-ramjet missile resembling a fighter plane, with comparable range. It was not yet ready for service introduction. Bendix Aviation Corp. was developing a new surface-to-air missile, the Talos, but no details were made public. Talos was a navy missile, but was also being considered by the air force. East Coast Aeronautics was developing the Loki, an unguided antiaircraft artillery rocket.

Air-to-Surface.—This is a type of missile designed to be carried by a bombing plane and launched some distance from a target, permitting the "mother" plane to stay out of range of the target's antiaircraft or missile defenses. Generally, missiles of this type follow a beam projected from the mother plane to the target.

Two new missiles in this category were announced. Martin was working for the air force on the Bulldog, a small missile powered by a single solid fuel rocket. Eastman Kodak was developing the Dove, which would be used either as an air-to-surface or air-to-underwater missile, for the navy.

Bell Aircraft Corp. continued development work on its Rascal, a winged weapon which resembled a small aeroplane. Gorgon 5,

a Martin-navy project, was cancelled. No missile in this category had yet reached production status.

Air-to-Underwater.—In addition to the Dove, Fairchild Guided Missiles division was developing the Petrel, an anti-submarine weapon launched from a plane like a guided aerial torpedo. Development status was not disclosed.

In addition to the above categories, the navy was reportedly working on an "underwater-to-underwater" guided torpedo, but no missile types were disclosed officially. (See also ARMIES OF THE WORLD; ATOMIC ENERGY; AVIATION, MILITARY; JET PROPULSION; NAVIES OF THE WORLD.) (J. J. Hy.)

Muscat and Oman: see ARABIA.

Museums. *United States.*—The American Association of Museums celebrated its 50th anniversary during 1955. It was a year of expansion and modernization to meet growing needs for the unique services museums perform. The 150th annual exhibition of the Pennsylvania Academy of Fine Arts, Philadelphia, recalled that museum services to the community are of long standing.

Building activity was widespread and gave promise of continuing. The Whitney Museum of American Art, New York city, and the Fort Worth (Tex.) Art centre moved into new buildings. Both structures were good examples of modern thinking in museum architecture. The Santa Barbara (Calif.) Museum of Natural History completed a wing which increased its exhibit space by one-third. In Richmond the Virginia Museum of Fine Arts opened its large addition and the Valentine museum moved and rebuilt a historic residence to provide more space for its collections and program. New wings were finished at the J. B. Speed Art gallery, Louisville, Ky., and the M. H. de Young Memorial museum, San Francisco, Calif. The Cleveland (O.) Museum of Art began work on a \$5,000,000 addition. The Birmingham (Ala.) Museum of Art, received a \$1,000,000 bequest for a new building.

The changing educational needs of the public, matched by changes in the techniques of exhibition, require museums to bring their exhibits up to date. The United States National museum, Washington, D.C., opened two reinstalled halls as part of its long-term renovation plan. One was the famous collection of gowns worn by the first ladies of the White House. The dresses were placed in period settings representing rooms in the executive mansion. The other hall was on American Indians and their characteristic ways of life. The American Museum of Natural History, New York city, continued to shift the emphasis of its new exhibits to man's relation with his environment, completing a hall of oil geology. The Metropolitan Museum of Art, New York city, finished its great postwar remodelling and reinstallation project. Some of the new installations elsewhere concerned unusual subject matter. The San Diego (Calif.) Museum

of Man prepared an exhibit series on ethnic music. Besides showing primitive instruments in appropriate settings, it contained a juke box which visitors could play to hear recordings of native songs. Displays illustrating the methods and interest of 19th-century natural history were installed in a new building at the Old Museum Village of Smith's Clove, Monroe, N.Y. The Shelburne (Vt.) museum moved a big side-wheeler nearly two miles overland from Lake Champlain to preserve and tell the story of steamboating on the lake. In Pittsburgh, Pa., the Buhl Planetarium and Institute of Popular Science opened a hall called "Worlds Without End" using fluorescent paintings and moving models to illustrate many facts about the stars and planets. A rocket hall at the American Museum of Natural History showed how rockets are fired into the upper atmosphere and what has been learned from these experiments.

New museums opened during the year represented a variety of interests. After years of careful excavation and reconstruction the Saugus (Mass.) Ironworks restoration was complete. It recreated in operating condition an actual iron furnace, for and mill exactly where they had stood in 1646. The national park service and the state of North Carolina built a Museum of North Carolina Minerals on the Blue Ridge parkway. Exhibits not only showed the important minerals found in the state, but illustrated historic and present-day mining and uses. In Abilene, Kan., the Eisenhower museum, built by citizens of Pres. Dwight D. Eisenhower's boyhood home, was dedicated. A Museum of Indigenous Art was established in New York city.

One of the responsibilities of museums is to preserve the research collections of natural history specimens upon which are based much of man's detailed knowledge of the world. The American Museum of Natural History, the Chicago (Ill.) Natural History museum and the National museum each receive important collections of insects containing many thousands of specimens to be filed, studied and preserved. (See also SMITHSONIAN INSTITUTION.) (R. H. Ls.)

Accessions to Art Galleries and Art Museums.—Despite

"TWELFTH NIGHT" by Jan Steen, a 1955 acquisition of the Museum of Fine Arts, Boston (Mass.)

the death of Samuel H. Kress, the Kress foundation continued during 1955 the policy of diversifying its vast collections with the opening of the 12th and by far the most important group so far at the De Young museum in San Francisco. Highlights were the "Portrait of a Young Man Holding a Book" by a Venetian painter, a close follower of Giorgione (formerly in the Cook Collection, London) and Francisco de Goya's "Don Ramon de Sada y Soto."

The University museum in Philadelphia, which was one of the first archaeological museums to recognize that its collections were works of art as well as mere records of a civilization, had installed its great Babylonian collection emphasizing particularly its high artistic qualities. This centres around a group of extraordinary gold objects from the royal tombs at Ur dating about 2600 B.C.

The long-awaited opening took place of the Sterling and Francine Clark Art Institute at Williamstown, Mass. This impressive white marble building with the most up-to-date equipment and lighting opened three galleries as a sampling of the collections which would be placed on view as more galleries and period rooms were completed within the spacious building. The paintings on view included a Goya portrait of Ascensio Julia and a nude landscape, but otherwise were mostly 19th-century American and French canvases, including many by academic artists long out of favour. Among them were John Singer Sargent's brilliant early portrait of his teacher Carolus-Duran, an early Mary Cassatt "Offering the Panal to the Bull Fighter," ten paintings by Winslow Homer and a famous Turner, "Ships and Blue Lights." Among the French were Géricault's "Portrait of an Artist," Chartran's "Calvé as Carmen" (1898) and three Gérômes including the "Slave Market." The collection also contained superb examples of American and European 19th-century silver.

The Frick gallery in New York city acquired the famous "Schild Madonna, a late work of Jan van Eyck (c. 1441) finished by Petrus Christus. It shows the Virgin and Child, saints and a Carthusian donor and was reputed to have cost 10,000.

The Virginia Museum of Fine Arts opened a new \$2,200,000 building, more than half of which was paid for by the state of Virginia. Among its important recent acquisitions was the "Presentation of the Virgin" by Luca Signorelli (Italian, c. 1450-1493). The Metropolitan museum acquired Edwin Dickinson's "Sins at Daphne," four feet high, which took the artist 12 years to paint and may be regarded as a landmark in American romantic painting. Chicago's Art Institute through partial purchase and partial group gift acquired Picasso's "Woman and Child," a large and most monumental painting of his classical period. August Rodin's monumental sculpture of the French novelist Honoré de Balzac (1897) was presented to the Museum of Modern Art in memory of Curt Valentin by 130 friends of the regular former head of the Valentin gallery.

Boston's Museum of Fine Arts purchased a large and outstanding painting, "Moses Striking Water From the Rock" by Pieter van Leyden, signed and dated 1527. This was acquired from the National museum in Nuremberg, Ger., and was only the third example of this rare Dutch master's work to come to an American collection.

The William Rockhill Nelson Gallery of Art in Kansas City, Mo., acquired an important painting by Jacques Louis David, "Portrait of Diane de la Vanpalière Comtesse de Langeron."

A large portrait (85½ in. high) of a Genoese lady and child (1627) by Sir Anthony van Dyck went to the Cleveland Museum of Art, and a Pieter Brueghel, the Younger, "Winter Landscape With a Birdtrap" to the Toledo (O.) Museum of Art. This is the first portion of the Joseph Winterbotham bequest, the

ENTRANCE to Oil Geology hall opened at the American Museum of Natural History, New York city, in 1955

Art Institute of Chicago received a Van Gogh "Self-Portrait" and the "Woman in a Rose Hat (Mme. D. M.)" by Edgar Degas.

A rare bronze, "Le Bourgeois qui Flâne, L'Armoureux" by Honoré Daumier (1808-79), went to the National gallery in Washington.

The City Art museum of St. Louis, Mo., acquired "The Capture of Weislingen" by Eugène Delacroix (1798-1863).

Rembrandt's "Portrait of a Young Man," dated 1655, was purchased for the Sumner collection of the Wadsworth Atheneum, Hartford, Conn. (F. A. Sw.)

International.—An international conference of art historians was held in Venice, It., during September. At the 12th International Congress of Local Authorities in Rome in October the principal session was concerned with "Local Authorities and Culture." During the year the United Nations Educational, Scientific and Cultural organization (UNESCO) raised its contribution to the International Council of Museums from \$17,000 to \$20,000 and seven out of 20 fellowships granted by UNESCO in 1955 were devoted to museum subjects. At the 11th session of the advisory board of the International Council of Museums in Paris in July the subjects of most general concern were the recruitment and training of new members of the museum profession and the reconstruction of museums in war-ravaged regions such as Austria and Japan.

Great Britain.—The second report of the reviewing committee on the export of works of art again stressed the insufficiency of purchase grants from the state, especially those to provincial museums, which remained at a total of £1,320 for the year. Among the treasures saved for the nation were mediaeval stone statues from St. Mary's abbey, York, for the Yorkshire museum; the Butler-Bowdon cope for the Victoria and Albert museum, for which the treasury made a special grant of £9,000 toward the purchase price of £33,000; a pair of 18th-century silver-gilt salvers by Frederick Kandler for the Birmingham city museum and art gallery and the Victoria and Albert museum; the manuscript autobiography of the composer Thomas Whythorne for the Bodleian library, Oxford; and a sketch by El Greco, the "Dream of Philip II," for the National gallery. The treasury made a special grant of £30,100 toward the purchase price of £42,500 for this picture.

The National Gallery and Tate Gallery act enabled the Tate gallery trustees to become independent of the National gallery, and British works of art from the gallery's collection could therefore be loaned for public exhibition overseas.

Commonwealth.—In Australia the Museum of Applied Arts

and Sciences celebrated its 75th anniversary and the biennial conference of the art galleries and museums of Australia was held in Melbourne. In Canada the new building of the Saskatchewan Natural History museum was opened and the Château de Ramezay in Montreal celebrated its 250th anniversary. In New Zealand, at the Hawke's Bay art gallery and museum, Napier, a new wing was opened to house Maori and Pacific basin collections, local historical exhibits, and a natural science display. The first children's museum in the country was inaugurated there.

The Colombo museum, Ceylon, acquired an important collection of books from the New York Museum of Modern Art. New galleries were opened in museums at Ratnapura, Kandy and Jaffna. In Pakistan a general museum at Hyderabad Sind and an army museum at Rawalpindi were opened. The art gallery of the Peshawar museum was expanded. The South African museum, Cape Town, and the Albany museum, Grahamstown, celebrated their centenaries and the house of Sir Marshall and Lady Campbell, which contained a valuable collection of Afri-cana, was presented to the city of Durban.

Europe.—In Austria a museum of army history was opened in June at Vienna by the minister of education. The annual conference of the Association of Czech Museums was held at Prague, at which the five-year plan for museum development in Czechoslovakia was accepted. In Hungary the ancient Tihany monastery on Lake Balaton was opened as a museum. The foundation document of the monastery, the earliest written record of the Hungarian language, was exhibited.

Three new museums were opened in Italy—the Museo Civico, Viterbo, the Castello Storico di Miramare, Trieste, and the Convent of the Oblate, Florence. The Galleria Nazionale dell' Umbria, Perugia, was reopened and extensive reorganization was carried out in the Museo Nazionale di Villa Giulia, Rome, and the Museo Archeologico, Aquileia.

The Joodsch Historical museum was reopened in Amsterdam and an exhibition of European style from Michelangelo to El Greco was organized at the National museum, Amsterdam, by the Council of Europe, Strasbourg. In Poland museums came under the administration of the state. New museums included a historical and Lenin museum in Warsaw, an archaeological museum in Cracow and a general museum in Elblag. In Switzerland the gallery of near eastern art at the Musée d'Art et d'Histoire, Geneva, was reorganized. In Yugoslavia the Central Museum of the National Liberation of the People's Republic, Slovenia, was opened at Ljubljana and the first international exhibition of drawings was held in the Gallery of Modern Arts, Ljubljana. (See also ART EXHIBITIONS; ART SALES.) (M. D. N.)

Music. **Classical.**—During the 1955 season, international travel by opera companies and symphony orchestras became more frequent than ever before. Three orchestras from the United States undertook extensive tours abroad. The New York Philharmonic made a European trip in the summer under its permanent conductor, Dimitri Mitropoulos, going as far as Athens, Gr. The Philadelphia orchestra under the direction of Eugene Ormandy also toured Europe as far as Finland. The newly reorganized Symphony of the Air undertook a trip by plane to Japan, Korea, Formosa and the Philippines under two U.S.-born conductors, Walter Hendl of the Dallas Symphony and Thor Johnson of the Cincinnati Symphony. This was the first trip by a large American orchestra to Asia.

European orchestras paid visits to the United States. The Berlin Philharmonic presented up to April 1 concerts in the major cities of the United States under its conductor, Herbert von Karajan, successor of Wilhelm Furtwängler; in Oct. 1955 Karajan toured the United States again with the Philharmonia orchestra of London.

As in previous years there were numerous and varied festivals of music in Europe. The annual festival of the International Society for Contemporary Music (I.S.C.M.) was held in Baden-Baden, with the co-operation of the radio network Südwestfunk. The first program (June 17) included the following orchestral works: *Seventh Symphony* by the Danish composer Vagn Holmboe; *Variations for Orchestra* by Luigi Dallapiccola of Italy; a cantata, *Lied der Kentauren*, by Markus Lehmann of Germany; *Music for Strings* by the Swiss composer Constant Regamey; and *Third Symphony* by Carlos Chávez of Mexico.

The second program of the I.S.C.M. festival (June 18) included *Actus Tragicus* for ten instruments by Erich Itor Kampe of the United States; *Kammerkonzert* by Karl Birger Blomdahl of Sweden; *Arpiade* for voice and a chamber ensemble by Wladimir Vogel, Russian-born composer living in Switzerland; and *Le Marteau sans maître* for voice and a chamber ensemble by the French ultra-modern composer Pierre Boulez.

The third concert of the I.S.C.M. festival on the afternoon of June 19 was devoted mainly to chamber music. The following works were performed: *String Quartet* by Herbert Brün of Israel; *Alpha and Beta* for piano by the young Japanese composer Makoto Moroi; *Sonatina* for piano by Peter Sculthorpe of Australia; *Five Songs* by Hans Erich Apostel of Austria; *Trio* for oboe, clarinet and bassoon by Jan Maegaard of Denmark; and *Third String Quartet* by the Hungarian-born English composer Matyas Seiber.

The fourth concert of the I.S.C.M. festival on the evening of June 19 included *Orchestral Ornament* by the China-born Baltic-German composer Boris Blacher; *String Quartet* by the young German modernist Hans Werner Henze; *Chanson and Romance* by Werner Egk of Germany; *The Creation* by the German composer Wolfgang Fortner; and *Variations for Orchestra* by Arnold Schönberg.

The fifth concert (I.S.C.M.) was given on June 20 in a program including *Sonata for Two Pianos* by Riccardo Nielsen of Italy; *Quartet* for flute, clarinet, bassoon and piano by Krystian Wiggan of Norway; *Cello Sonata* by Elliott Carter of the United States; *Concertino* for flute, oboe, English horn and cello by Ingvar Lidholm of Sweden; and *String Quartet* by Francis Burt of England.

The I.S.C.M. festival concluded on June 21 with an orchestral program that featured a *Rhapsody* by the pianist Art Schnabel; *Divertimento* by the Hungarian-French composer Tibor Harsanyi (1898-1954); *Suite* for string orchestra, piano and percussion by Gino Contilli of Italy; and a *Symphony* by the Spanish-born English resident composer, Roberto Gerha.

A special concert of jazztime music was given as part of the I.S.C.M. festival on June 22, in a program that included the following pieces: *Passacaglia for Big Band* by Roland Kovacs; *Spiritual Concert* for baritone and jazz orchestra by Herbert Werner Zimmermann; and *Ebony Concerto* by Stravinsky.

The list of European festivals presenting opera, symphony and chamber music comprised the following: Edinburgh (Aug. 21-Sept. 10), at which the Berlin Philharmonic and the New York Philharmonic took part; Salzburg (July 24-Aug. 3), which featured the world première of the opera *Irish Legend* by Werner Egk (Aug. 17); Bayreuth (July 22-Aug. 21), devoted to Wagner; Munich (Aug. 12-Sept. 11), presenting operas by Richard Strauss, Mozart, Handel, Wagner and Hans Pfitzner; Wuppertal (June 4-6), presenting the music of Paul Hindemith, who conducted the first performance of his oratorio, *Angeli Veloces*; Aix-en-Provence (July 10-31), in performance by several opera companies, orchestral organizations and chamber ensembles; Bergen, Nor. (May 26-June 7), in program of Scandinavian music; the Holland festival at various cities and towns (June 15-July 15) that brought the Israel Philharmonic

the opera company of La Scala from Milan; Venice (Sept. 15-25), presenting as a main event the first complete stage performance of Sergei Prokofiev's opera *The Flaming Angel* (Sept. 15).

The first international annual music festival to be held in Greece took place at Athens (Aug. 24-Oct. 2). The program included eight opera performances and seven symphony concerts. The Athens festival was held in the ancient open-air theatre situated on the Acropolis. The concerts of the New York Philharmonic were incorporated into the festival.

In Latin America an important music festival was held in Caracas, Venez., from Nov. 22 to Dec. 10, 1954, which, in addition to symphonic and choral concerts, awarded generous prizes for the best works. Juan José Castro of Argentina received first prize (\$10,000) for his *Corales Criollos*; Carlos Chávez of Mexico received second prize (\$5,000) for his *Third Symphony*; and Julian Orbón of Cuba received another prize of \$5,000 for *Tres variaciones sinfónicas*.

Festivals of music in the United States, while not so numerous as those in Europe, contributed to the interest of American musical life. The Berkshire Music festival at Tanglewood, Mass., featured the production of *The Rope*, opera by Louis Nunni (Aug. 9) commissioned by the Koussevitzky Music Foundation.

The ninth annual Ojai festival at Ojai, Calif. (May 20-22), presented an ambitious series of concerts, with Stravinsky conducting several of his works. The third Early Moravian Music Festival at Winston-Salem, N.C. (June 20-26), gave performances of music by European composers who settled in Pennsylvania in the middle of the 18th century.

Among successful opera productions, the American premiere of Sir William Walton's *Troilus and Cressida* (originally produced in London on Dec. 3, 1954) was given in San Francisco on Oct. 7, 1955. The opera by Gian-Carlo Menotti, *The Saint of Bleeker Street*, first produced in New York on Dec. 27, 1954, had subsequent performances in Vienna and at La Scala in Milan. It was awarded a Pulitzer prize.

Two interesting short operas by United States composers were presented for the first time: *The Pot of Fat* by Theodore Kutzer (Cambridge, Mass., May 8) and *The Ruby* by Norman Lo Joio (Bloomington, Ind., May 13).

The Louisville orchestra continued the presentation of specially commissioned works, among them *The Wish*, opera by George Antheil to his own libretto (April 2).

Lukas Foss composed a special opera for television named *Effekkin*, which was produced on the "NBC Television Opera Theatre" on Nov. 6.

In London the opera by Michael Tippett, *The Midsummer Marriage*, was produced on Jan. 27. The opera *Die Füsse im Feuer* by the Swiss composer Armin Schibler was presented for the first time in Zürich on April 25.

When Prokofiev died in 1953 he left a newly revised version of his opera *War and Peace*. This version was performed for the first time in Leningrad on March 31, 1955. Among other musical events in the U.S.S.R., the appearance in Moscow of the Brazilian composer Claudio Santoro was met with interest. He conducted his *Symphony of Peace* there on March 21.

There was a noticeable increase of musical interchange between the Soviet Union and the western world. A major Soviet artist appeared in the United States in the person of the pianist Emil Gilels, who gave recitals in the U.S. in October and also played concertos with symphony orchestras. The Soviet violinist David Oistrakh followed him in November.

Among symphonic and other works performed for the first time in 1955 the following were of interest: *Violin Concerto* by Arthur Bliss (London, May 11); *Cantata of Psalms* by the

SCENE FROM "THE SAINT OF BLEEKER STREET," a 1955 television production of the opera which won the Pulitzer prize for Gian-Carlo Menotti

young Viennese composer Anton Heiller (Vienna, June 16); *Sixth Symphony* by Darius Milhaud (Boston, Oct. 7; commissioned by the Boston Symphony orchestra); Walter Piston's *Fifth Symphony* (Boston, Nov. 25; also a commissioned work). *Deserts* by Edgar Varèse, scored for 20 instruments and sound effects on tape and written according to the composer's theory of "organized sound," was first performed in Paris on Dec. 2, 1954, much to the consternation of some listeners; it was given its first American performance on May 17, 1955, at Bennington, Vt.

A new violin concerto by the Canadian composer John Weinzwieg was played for the first time in Toronto (May 30) by the Symphony orchestra of the Canadian Broadcasting corporation.

Serious music continued to make progress in Japan. Among new works given in Tokyo were two piano concertos, by Yasuji Kiyose (March 10) and Shukichi Mitsukuri (April 23).

An event of great cultural significance was the opening of the new hall of the Vienna State Opera on Nov. 5, with a production of Beethoven's opera *Fidelio* symbolizing the triumph of freedom. The new hall replaced the one destroyed during World War II; rebuilt according to the architectural plan of the old opera house, it is modern in its furniture and lighting.

In anticipation of the 90th birthday of Jan Sibelius (Dec. 8), a complete cycle of his symphonies was presented in Finland. (N. Sv.)

Popular.—The year 1955 presented an unusual situation in the fact that the most popular music was almost all either a resurrection of old materials or a flagrant imitation of folk song, the latter reaching its lowest ebb in the so-called "rock 'n' roll" style of rhythmic chant.

The most popular song of the year, as judged by the statistics of "Your Hit Parade," was merely a waltz arrangement of the ancient "Melody of Love," a favourite with piano students in the early years of the 20th century. Its music was credited to the original composer, Hans Engelmann, and Tom Glazer, himself an expert in folk music, added singable words.

Definitely in the folk style was the "Ballad of Davy Crockett." The refrain had a suggestion of the old "Ja-Da" tune, but on the whole this could almost pass for true folk music. Tom Blackburn and George Bruns were credited with the text and

melody, respectively.

Late in the year there was a solid revival of "The Yellow Rose of Texas," which had been a popular song of the Confederacy. (Its tune was echoed by Paul Dresser nearly 40 years later in "Just Tell Them That You Saw Me.") The original was signed only by the initials J. K., but the modern version was published as "by Don George" and popularized in the recording of Mitch Miller of Columbia. Eventually he started to work also on "The Bonnie Blue Flag," which became "The Bonnie Blue Gal."

A monstrosity called "Let Me Go, Lover" had only a suggestion of the more obvious "country" quality, while "Learnin' the Blues," by Dolores Vicki Silvers, scarcely lived up to its title and owed its success largely to Frank Sinatra. A far better song was "Mr. Sandman," popularized by the Chordettes, and there was considerable merit in "Unchained Melody," written by Hy Zaret and Alex North, with practical help from the blind Negro singer Al Hibbler.

A French importation, "Cherry Pink and Apple Blossom White," won success by way of Jane Russell's motion picture *Underwater*, with the music credited to Louiguy and the words of Jacques Larue adapted by Mack David. "Tweedlee Dee" supplied the annual nonsense song, again in the tradition of early folk materials, and Irving Berlin upheld the honour of the established song writers by appearing 13 times on "Your Hit Parade" with "Count Your Blessings Instead of Sheep," sung effectively by Eddie Fisher.

There were such minor items as "I Need You Now," "Sincerely," "Domani," etc., and the rowdy element was represented by "Rock Around the Clock," theme song of the controversial film *The Blackboard Jungle*. The "rock 'n' roll" school in general concentrated on a minimum of melodic line and a maximum of rhythmic noise, deliberately competing with the artistic

ideals of the jungle itself.

The most encouraging aspects of the year's popular music were to be found in the Broadway shows, with young Richard Adler and Jerry Ross following up the success of their *Pajama Game* with *Damn Yankees*, which contained two respectable hits in "Whatever Lola Wants" and "Heart" (a bit reminiscent of "It Had to Be You"). *Plain and Fancy* offered a more than adequate score, and Cole Porter's *Silk Stockings* came close to his best standards. There were good songs also in the devastating parody of the 1920s, *The Boy Friend*.

At the close of the year lovers of popular production music were looking forward to a new work by Richard Rodgers and Oscar Hammerstein II based on John Steinbeck's novel *Swing Time*. Meanwhile their epoch-making *Oklahoma!* had reached the screen, with a revelation of new possibilities in colour and sound and a timely reminder of the permanence of the songs. (S. Sp.)

Music in Industry.—With an ever-increasing emphasis on office and industrial automation, there was great historic business significance to be gleaned from a number of independent surveys taken during 1955. Conclusive evidence pointed to the fact that properly conceived and programmed work music could be as important a tool of progressive management in measuring increasing employees' efficiency and productivity as automatic devices designed to save time or cut costs or errors, etc. Indeed the greater the degree of automation, the more important work music becomes, according to these surveys. On-the-job experiments demonstrated that office and industrial machines, while solving one set of production problems, create others. For instance, the more mechanical the device, the more boring and monotonous the job is to its operator. Boredom leads to discontent which in turn is almost invariably followed by a marked fall-off in efficiency, by absenteeism and eventually by the loss of valued employees. It was found that the greater the degree of skill (training) required to operate automatic machinery, the more intelligent the operator, the more likely are boredom and monotony to lead to costly employee turnover and unnecessary labour-management friction.

Muzak corporation, pioneer in the industrial music field, has documented that work music in many instances can eradicate personnel problems induced by automation. This can be accomplished only by special recordings (music made for this purpose only) and transmission (controlled high fidelity) technique coupled with programming specifically designed by musicologists to fulfil the needs (the time, the place and the activity of the areas to be serviced) of individual subscribers.

It was the consensus of many management consultants that the day was not far removed when work music would be considered as necessary to the operation of any business as gas, lighting, heating and ventilation. (X.)

Recordings.—Since the phonograph was invented in 1877 its principal function had been the reproduction of recorded music. By 1955, however, all the major works of musical art had been superbly recorded, and many extremely minor works had been equally well treated. The record industry had, in effect, run out of worthwhile unrecorded music.

To compensate for this shortage, record manufacturers were exerting themselves to find suitable nonmusical material, the result was most varied. More than 90 records of poetry, much of it read by the poets themselves, were now available. Almost as many plays, essentially complete, were similarly served. Tennessee Williams and Sir Max Beerbohm had their own short stories in their entirety, and even the audio art of a burlesque show had been dutifully preserved for forthcoming generations to savour.

At the year's end the array of nonmusical but otherwise

ANGRY DIVA, Mme. Maria Meneghini Callas, shouting at U.S. marshal Stanley Pringle who had served the Italian soprano with a summons after her farewell performance with the Lyric theatre opera company in Chicago, Ill., Nov. 1955

assifiable record album titles was steadily mounting and included such diverse entries as "The Birth of a Baby," "The Tinsey Report," "Entertainment of Sinister and Disconcerting Humor," "Excuse My Fluff," "Golden Voiced Canaries," "Great Moments in Sports," "Heart Recordings," "How To Relax and Live," "Milady, Your Figure!," "Parakeet Lessons," "Parson My Blooper," "The Power of Positive Thinking," "Rail Dynamics," "Relaxation by Suggestive Therapy," "Sam Snead Golf Lessons," "Sounds of the American Southwest," "Sounds of the South American Rain Forest," "Sounds of the Sea," "Through the Sound Barrier," "Voices of the Sea," "Voices of the Night" and "Zany Letters."

The national revival of interest in Civil War lore led Columbia Records to issue a remarkable album of music and history titled *The Confederacy*. From this, Mitch Miller, the company's director of popular music, extracted "The Yellow Rose of Texas," a tune which turned out to be one of the year's liveliest best-sellers. Among the best albums of serious music issued during the year were the following:

On RCA-Victor, Ravel's *Daphnis and Chloë* in the complete vocal and orchestral version with a vocal group trained by Robert Shaw and the Boston Symphony orchestra conducted by Charles Munch; the same orchestra provided two astonishing performances of the *Pathétique* of Tchaikovsky and the *Fantastique* of Berlioz with Pierre Monteux conducting the first of these and Munch the second; Verdi's *Te Deum* and Boito's *Mefistofele Prologue* played by the NBC Symphony and sung by the Robert Shaw Chorale under the direction of Arturo Toscanini; and *Fifty Years of Great Operatic Singing*, a handsomely turned out five-record album which starts with tenor Francesco Pannofino singing "Di Quella Pira" from *Il Trovatore* in 1902 and covering most of the memorable vocal performances up to 1951 when Risè Stevens sings "So Piu Cosa Son" from *The Marriage of Figaro*.

On Columbia, Gustav Mahler's *First Symphony, The Titan*, conducted by the New York Philharmonic Symphony society under Bruno Walter, who at the age of 17 was Mahler's assistant conductor at the Hamburg Opera house; an unusually revelatory album titled *The Birth of a Performance* in which Columbia added to a fine recorded performance of Mozart's *Symphony No. 36* (K.425) a complete recording of the rehearsal preceding the finished product in which Bruno Walter is heard patiently and persuasively fashioning the instrumentalists to his taste; and Shostakovich *Symphony No. 10* played by the New York Philharmonic under Dimitri Mitropoulos.

On Angel, Verdi's *La Forza del Destino*, sung by the La Scala company of Milan with the famed Maria Meneghini as Desdemona; Mozart's *Così fan Tutte*, conducted by Herbert von Karajan with Elizabeth Schwarzkopf and Nan Merriman in the lead roles; the complete piano music of Mozart played by Walter Gieseking in a de-luxe edition released in honour of the forthcoming bicentennial of the composer's birth.

On Mercury, Tchaikovsky's complete ballet score for *Swan Lake* played by the Minneapolis Symphony orchestra under Leopold Stokowski. On Decca, the *Violin Concerto* of Brahms with the renowned Russian David Oistrakh in the solo role and the accompaniment provided by the Saxon State orchestra of Dresden led by Franz Konwitschny. On Vox, three Mozart sonatas (Nos. 331, 545 and 283), played by pianist Guiomar Novaes; and 12 church and 12 chamber sonatas comprising Corelli's *Opus 1* and 4, played by the Musicorum Arcadia. On Westminster, the six *Concerti Grossi* of *Opus 3* of Francesco Geminiani played by the English Baroque orchestra under Herman Scherchen. (J. J. RY.)

Jazz.—The trend in jazz during 1955 seemed to be away from the currently popular rhythm and blues. This older form of jazz,

"CRAZY OTTO," a German concert pianist named Fritz Schulz-Reichel, whose novelty recordings were best sellers in the U.S. in 1955

not being a balanced entity in that rhythm predominates over melody and harmony, is not of sufficient character to retain the public it initially attracts, and 1955 saw a lessening of interest in this type of music. Many of its supporters were augmenting their musical experiences with more modern forms of jazz.

The movie industry was aware of the growing interest in jazz and had released or had in production several stories based on jazz sequences. Some of the more prominent were *Love Me or Leave Me*, *Pete Kelly's Blues*, *The Red Nichols Story*, *The Benny Goodman Story*, *Daddy Long Legs* and *The Joe Sullivan Story*.

Independent radio stations rely for a major portion of their programming upon jazz, and the major networks were beginning to extend their coverage in this area. Jazz was an important part of the format of several of the popular television programs.

Among the outstanding smaller jazz units, or combos, were those of Dave Brubeck, John Lewis, Tony Scott, Gerry Mulligan, Chet Baker and Shorty Rogers. In the forefront of the larger bands were Stan Kenton, Billy May, Count Basie, Woody Herman, Les Brown, Les Elgart, the Dorsey Brothers, Ray Anthony and the Sauter-Finegan orchestra.

It appeared that while the rhythm and blues era had by no means passed, its supporters were sensing a lack of musical depth and were beginning to cast about for additional musical experiences. Many were finding that the better jazz groups produce a type of music which is melodically and harmonically interesting as well as rhythmically stimulating. (M. E. HL.)

Narcotics. The tenth year of international control of narcotics under the sponsorship of the United Nations was marked by steady progress on various fronts. The Commission on Narcotic Drugs at its tenth session, April 18 through May 12, 1955, made several recommendations for the consideration of the Economic and Social Council.

International Control of Narcotics and Implementation of Treaties.—The commission requested that governments comply with their obligations under the 1925 and 1931 conventions to transmit complete and accurate estimates and statistics, regularly and promptly, giving adequate explanation of methods used to calculate the quantities involved.

Priority was given to discussion of the proposed single convention, which would revise, improve and codify the nine existing narcotic treaties into one document. The commission considered these questions relating to the single convention: control of poppy straw, coca leaves, cannabis and cannabis resin; specific rules for synthetic narcotics; details concerning estimates and statistics, particularly for opium; the remaining formal sections, especially those that provided for a territorial (colonial) clause, amendment of the new treaty, settlement of disputes and reservations; composition of schedules listing categories of drugs under different regimes; and definitions of terms to be used in the treaty.

Drug Addiction.—Increasing emphasis was being placed on social and economic aspects of drug addiction. The work of the Social commission in crime prevention somewhat paralleled the work of the Commission on Narcotic Drugs, which requested continued collection of information and study of drug addiction by the secretary-general in consultation with the World Health organization, the Social commission and other bodies concerned; noted that in the treatment of drug addiction ambulatory treatment methods (including the so-called clinic method) are inadvisable; requested that the World Health organization prepare a study on methods for treating drug addicts; and recommended that governments concerned collect information on drug addiction in their countries and submit these statistics in accordance with the revised form of annual reports.

Illicit Traffic.—The Chinese mainland continued to be the source of great quantities of opium, morphine and heroin, exported with official sanction to supply the international illicit traffic and used as bartering commodities in Japan, Korea and throughout southeast Asia.

Raw Opium.—In 1954, 34,766 kg. of raw opium were seized. Although Thailand had prohibited opium production since 1949, large quantities continued to be smuggled into Thailand from neighbouring producing countries. In Singapore several large smuggling rings were broken up. Strenuous enforcement in Turkey resulted in larger seizures of opium in 1954. Egypt also reported increased seizures of raw opium.

Prepared Opium.—Total seizures of prepared opium in 1954 were 3,529 kg., most of them in the middle and far east. Illicit traffic in prepared opium declined in Canada and the United States. Considerable quantities of morphine base were seized in Lebanon. It was feared that much illicit morphine base from Lebanon was still reaching Canada, Italy, France and the United States.

Heroin.—Therapeutic use of heroin had been discontinued in all except a few countries of the world. Japan, Mexico and Turkey each reported the discovery of an illicit laboratory for the manufacture of heroin. Canada, the United States and Mexico co-operated in bringing to an end the activities of several important international narcotic law violators. Large quantities of heroin from Communist China are annually smuggled into Japan via Korea, and into the United States via Hong Kong and Thailand.

Coca Leaf.—Production of coca leaves, under the proposed single convention, would be limited to legitimate needs, primarily for medical and flavouring purposes. Because chewing of coca leaves produces addiction, it is considered an illegitimate use, to be gradually abolished through persuasion and education and to be prohibited 25 years after the single convention comes into force.

Clandestine factories manufacturing crude cocaine remained a serious problem in Bolivia, Ecuador and Peru, and cocaine addiction was increasing. In the early months of 1955 more cocaine had been seized in the United States than during the entire year 1954. France also reported an increase in illicit traffic in cocaine.

Cannabis sativa.—Because cannabis drugs no longer serve any useful purpose, because of their increasing abuse in many countries and in view of the current research into the possibility of developing strains of *Cannabis sativa* L. devoid of harmful resins, the commission invited the Food and Agriculture organization in co-operation with the United Nations secretariat to act as a co-ordinating agency for this research and to report on progress made to the commission.

In 1954, 127,781 kg. of cannabis were seized. About 3½ tons of hashish were seized in Egypt. Large seizures were made in Lebanon.

Synthetic Drugs.—The secretary-general was requested to invite all governments not parties to the protocol of 1948 for control of synthetic narcotics to report on steps taken to become parties thereof, and to prohibit production and use of any synthetic narcotics not considered indispensable to public health. The commission urged governments that had not already done so, to prohibit manufacture, import and export of ketobemidone, one of the most highly addicting drugs known.

Narcotic Investigations in the United States and Canada.—The Canadian senate committee investigating narcotic problems held hearings in Ottawa, Ont., Vancouver, B.C., Montreal, Que., and Toronto, Ont., the cities with the greatest concentration of narcotic addicts. In June 1955 the committee published its final report and recommendations which emphasized, among other things, the need to establish an institution for treatment of drug addicts in or near Vancouver, where about half of the addicts in Canada are found.

The number of narcotic addicts in the United States was estimated at 50,000 to 60,000, with the greatest concentration in the areas of New York city, Chicago, Ill., and Los Angeles, Calif. Reports from the United States public health service hospital at Lexington, Ky., showed that most persons addicted to opiates came from cities of at least 1,000,000 population.

A survey of drug addiction in the United States, begun by the bureau of narcotics in Jan. 1953, showed that almost 80% of the addicts were men, and that about half of all addicts were between 21 and 30 years of age. Addiction among adolescents was negligible except in a few areas, where it was largely a part of the over-all problem of juvenile delinquency. More than three-fourths of the addicts in the United States use heroin.

Because many addicts have a history of social maladjustment including experience in crime, before they become addicted, the problem of successful treatment is extremely difficult and must be undertaken only in hospitals equipped with specially trained medical and nursing staffs and with psychiatric, occupational and recreational therapy programs to fit addicts to return to normal, productive living. Thus a workable solution of the problem lies in close co-ordination of efforts of narcotic enforcement agencies and medical authorities. Severe penalties also necessary to curb the illicit traffic in narcotics. This had been demonstrated in various parts of the United States that had experienced marked decline in narcotic violations after her

es and long prison sentences had been imposed. The President's Interdepartmental Committee on Narcotics was studying the entire narcotic problem with a view to formulating an administrative policy and recommendations to the congress for severe penalties for violators of the federal narcotic laws.

(H. J. A.)

Nasser, Gamal Abdel (1918-), Egyptian army officer and politician, was born at el-Madiyat, near Alexandria, Jan. 18. He studied at the Ras-el-Tin secondary school in Cairo and was dismissed from there in 1935 for taking part in an antigovernment riot, but two years later was accepted at the Royal Military academy. In World War II he served in the western desert and in 1942 founded the secret Free Officers' movement which by 1952 had a membership of about 700. As a major Nasser took part in the 1948 war against Israel. In May 1952, then a lieutenant colonel, he approached Gen. Mohammed Naguib and offered him the post of commander of a revolution planned to overthrow King Farouk. The coup d'état of July 23 succeeded, and Naguib became the head of state and later president and prime minister of the republic. The real power, however, was held by the Revolutionary Command Council (R.C.C.) composed of 11 officers and controlled by Nasser, although Naguib was its nominal chairman. The relations between Naguib and Nasser became embittered because the former resented being a figurehead and repeatedly asked for greater powers. On Feb. 25, 1954, it was announced that Naguib had resigned from all his offices. Nasser succeeded him, but Naguib's popularity was great and two days later the R.C.C. elected him as president of the republic with Nasser as prime minister, and as chairman of the R.C.C. On March 8, Naguib assumed the position of prime minister, and chairman of the R.C.C. On April 18, however, a new reshuffle took place, Nasser became prime minister while Naguib remained president of the republic and chairman of the R.C.C. On Oct. 26 four officers were fired at Nasser as he was making a speech in Alexandria. Naguib was later implicated and removed from office in November.

From Jan. 22 to Feb. 6, 1955, Nasser presided over a conference of the Arab league in Cairo. From April 9 to 12 he visited Karachi, Pak., and during April 12-15, New Delhi, Ind. From April 18 to 24 he attended the Asian-African conference at Bandung, Indon. On July 11, Nasser and J. Nehru, the Indian prime minister, published a statement in Cairo expressing their conviction that "involvement in military pacts or in alignments with the great powers does not secure the cause of peace."

National Geographic Society. The year 1955 brought to a successful conclusion the seven-year task of preparing the National Geographic society-Palomar observatory sky atlas, joint project of the society and the California Institute of Technology. Employing the unique Schmidt 48-in. wide-angle phototelescope, largest of its kind in the world, astronomers on Palomar mountain had been systematically photomapping the night skies since 1949. Their 1,758 resulting plates chart three-fourths of the heavens—all that could be photographed with good quality from the site. Plates record objects up to 600,000,000 light years distant (three sextillion 600 quintillion miles), an unprecedented depth for a sky atlas. The first section of the atlas, composed of 200 photographic prints from the plates, was released in August to observatories, universities and scientific institutions which had contracted for it. Additional sections, each containing billions of star images, were scheduled for delivery through following months. The 14 by 14-in. photographs each covered a star field the size of the bowl of the Big Dipper.

A second major publishing event of the society's year was the publication in October of *Indians of the Americas*. Matthew W. Stirling, Neil M. Judd, Andrew Ellicott Douglass, Hiram Bingham and other technical authorities contributed chapters to this 432-page record of Indians from Cape Horn to the Arctic and from the Ice Age to modern times. The 400 illustrations included six maps and colour reproductions of 149 paintings and 113 Kodachrome photographs.

The greatest change observed in the geography of Mars since the planet's surface was first mapped 125 years ago was reported by E. C. Slipher in the Sept. 1955 *National Geographic Magazine*, after preliminary study of 20,000 new Mars photographs. The change was a Texas-size dark area, believed to result from primitive plant life, appearing in a large desert region. Unlike new fertile patches previously observed, it was independent of existing dark areas. It thus suggested that deserts and dark areas on Mars were not directly related to topography, surface material or land elevation. The photographs were taken with the 27-in. refractor of the Lamont-Hussey observatory at Bloemfontein, U. of S.Af., by the National Geographic society-Lowell observatory expedition led by Slipher in 1954.

The National Geographic society "Calypso" oceanographic expeditions under Capt. Jacques Yves Cousteau of the French navy made still and motion pictures underwater off the Seychelles, Aldabra, Assumption and Madagascar in the western Indian ocean in addition to continuing Mediterranean and Red sea projects. Harold E. Edgerton, Massachusetts Institute of Technology, in his third summer's work on the expeditions' cameras and underwater lighting, tested a model of a camera he planned to build for the society capable of taking pictures in the greatest depths of the oceans. "Calypso" divers salvaged several thousand amphorae and pieces of fine pottery from the hold of the 2,200-year-old cargo ship found in 23 fathoms a few miles from Marseilles, Fr., late in 1952.

During the year the Marine laboratory of the University of Miami continued its research on life stages and migrations of Atlantic pelagic fish. Carl W. Gartlein, Cornell university, con-

tinued his long-range study of auroras and their relation to sun spots and disruption of wire and wireless communications.

Abundant additional evidence of three distinct periods of construction in the 1,500-year-old Olmec culture of southern Mexico resulted from excavations made at La Venta in westernmost Tabasco state. January through May. Anthropologists Philip Drucker, Smithsonian institution, Robert F. Heizer, University of California, and aides directed 40 native workmen in unearthing jaguar-mask courts of polished tile and five carved stone monuments. They found caches of pottery vessels and 2,000 jade objects including 30 standing figurines gathered in council-meeting fashion around a seated central figure.

In October, E. Thomas Gilliard, associate curator of birds, American Museum of Natural History, reported in the *National Geographic Magazine* on his fourth expedition to New Guinea, aided by a society grant. He made the first zoological exploration of the Hindenburg and Victor Emanuel ranges in northeast New Guinea and Papua close to the Netherlands New Guinea border, and observed the primitive culture of tribes whose head-hunting traditions yielded reluctantly to the impact of the 20th century.

T. Nicholas Panay, Greek scientist, worked summer and fall on a society grant on the Ionian sea island of Cephalonia. His project was to determine if fresh-water springs welling up offshore to the east were linked by any physical processes to a sea stream flowing onto the island in large volume at high tide from the west.

Entering a rocky, canal-like bed, it vanishes underground near the west-coast town of Argostolion.

Adm. Robert E. Peary's 45-starred United States flag, flown at the north pole April 6, 1909, and carried on all the explorer's Arctic travels, was presented to the society May 6, to be enshrined in its Explorers hall. At ceremonies in Constitution hall Mrs. Marie Peary Stafford bestowed the emblem on behalf of her family. At the same time she accepted for her mother, Mrs. Robert E. Peary, a special gold medal of the society honouring Mrs. Peary for her active part in her husband's explorations from 1891 through 1902.

The society's members at the end of 1955 numbered 2,150,000. About 1,100 colour pictures filled 823 colour pages in the year's 12 issues of the monthly illustrated *National Geographic Magazine*. The Atlantic ocean, southeast Asia, New England and eastern South America were 1955 subjects of large-scale map supplements in 10 colours prepared by the cartographic division. Fifty staff-drawn maps and map-diagrams illustrated articles on regional geography.

Chief justice of the United States Earl Warren and Benjamin M. McKelway, editor of the *Washington Star* (D.C.), were elected in January to the board of trustees of the society. At the same time, Thomas W. McKnew, secretary since 1945, became, in addition, a vice-president. On Sept. 22, 1955, John Oliver La Gorce, president and editor, completed 50 years of service to the society.

The other officers were: chairman of the board, Gilbert Grosvenor; vice-president and associate editor, Melville Bell Grosvenor; treasurer, Robert V. Fleming; research committee chairman, Lyman J. Briggs; vice-chairman, Alexander Wetmore.

(J. O. L. G.)

National Guard. By the end of Aug. 1955 the U.S. army national guard consisted of 5,221 units and 360,689 officers and enlisted men, and the air national guard consisted of 664 units and 61,271 officers and airmen. These units and personnel were located in more than 2,200 cities and towns throughout the United States, including each of the 48 states, the territories of Hawaii and Alaska, the commonwealth of Puerto Rico and the District of Columbia. On Oct. 1, 1955, all

NEW YORK GUARDSMEN filing out of the 71st infantry regiment armoury during the nation-wide alert, Operation "Minuteman," April 20, 1955

but one battalion (consisting of four engineer units) of the 1,600 army national guard units which were ordered to active duty during the Korean emergency had been released from federal service and returned to the control of their respective states.

During the latter part of 1954 the basic mission of the national guard, that of providing a reserve force capable of immediate mobilization in the event of a national emergency, was expanded to include new and increased responsibilities. The air national guard began active participation in the Air Defense Augmentation plan of the air defense command, a program designed to ensure the readiness and increase the combat potential of the air national guard, as well as to extend the coverage and strengthen the air defense system of the United States. Seventeen air national guard units at strategic locations maintained two jet fighter aircraft, five combat-ready air crews and thousands of supporting personnel on five-minute runway alert status during daylight hours, daily.

In a similar manner, the army national guard, assisting the regular army in the antiaircraft defense of the continental United States, expanded its antiaircraft artillery program. By the end of Sept. 1955, 54 army national guard antiaircraft batteries had assumed the 24-hour defense of major industrial and population sites which had formerly been defended by batteries of the regular army.

By Oct. 1, 1955, the air national guard had converted 65 of its 73 fighter-interceptor squadrons from conventional to jet aircraft, with the remaining 8 squadrons scheduled for conversion prior to July 1, 1956.

Operation "Minuteman," a surprise nation-wide test alert to the readiness and availability of the national guard, was held on April 20, 1955, and proved to be the greatest peacetime citizen-soldier training exercise in history, with more than 350,000 army and air guardsmen in every state, Alaska and the District of Columbia taking part.

In 1954-55, as in past years, the national guard participated in hundreds of rescue and relief missions, fought fires and flood fighting missions of mercy and responded in all types of local and state emergencies. In the wake of Hurricanes "Carol" and "Diane," national guardsmen performed disaster duty for successive days and nights, aiding storm victims and guarding business and residential districts in Connecticut, Massachusetts, Rhode Island, Pennsylvania, New Jersey, Virginia and North and South Carolina.

National Labor Relations Board. The eighth year of the National Labor Relations board's administration of the Labor Management Relations act was marked by significant rulings in the areas of collective bargaining, jurisdiction and the union filing requirements of the act.

During the 1955 fiscal year, Pres. Dwight D. Eisenhower appointed Theophil C. Kammholz as general counsel and Boyd Leedom, new member to the five-member board. At the close of the fiscal year the board was composed of Chairman Guy F. Farmer and members Abe Murdock, Ivar H. Peterson, Philip W. Rodgers and Boyd Leedom.

Collective Bargaining.—The board made a number of decisions during the year which were significant in the field of collective bargaining. Among these was a ruling involving the subject of employee stock purchase plans. A majority of the board held that a stock purchase plan, when based on the employment relation and providing for company contributions, was a subject upon which an employer would be required to bargain if requested to do so by a union representing the employees. This ruling was based upon a finding that such plans come within the meaning of the "wages" and "other conditions of employment" as these terms were used in the act. The act required an employer to bargain about these matters with the representative chosen by a majority of employees.

Dealing with another aspect of collective bargaining, the board ruled unanimously that an employer must furnish information to support his claim of financial inability to pay a wage increase. The board stated the rule as follows: "... it is settled that when an employer seeks to justify the refusal of a wage increase upon an economic basis . . . good faith bargaining under the Act requires that upon request the employer attempt to substantiate its economic position by reasonable proof."

In another case, a majority of the board found that the employer had violated the act by discharging an employee who had participated in a conference designed to bring together representatives of various employers who needed employees, and thereby help the employer's employees obtain the best competitive offer possible. The conference was intended also to counteract an agreement among employers not to hire each other's employees of the character involved. A majority of the board ruled that the employees' activity engaged in was legitimate, "to broaden their opportunities for employment, to obtain the best market for their services, and to lessen their dependence upon the Respondent for employment—all matters clearly, and properly, related to the issue of wages. . . ."

Interpretation of the act's 30-day notice requirement was involved in another case. A majority of the board held that a strike to compel modification of an agreement was illegal where the union failed to give the Federal Mediation and Conciliation Service at least 30 days' notice of the dispute. The union in the case did not give the service notice until more than a month after the start of the strike.

Jurisdiction of the Board.—A number of decisions involved the board's dollar-volume jurisdictional standards. In one series of decisions the board announced that the standards would be uniformly applied in the territories as in the 48 states. In the first decision under this new policy a majority of the board dismissed a petition for decertification of a union representing employees of a company located in Puerto Rico because the company's operations failed to meet any of the board's standards

governing the assertion of jurisdiction. Board member Murdock dissented. The board previously had exercised plenary jurisdiction in the territories, taking cases without regard to the size of the employer's business.

The board also adopted a new rule for determining jurisdiction in secondary boycott cases. It announced that it would continue to consider the volume of business of all employers involved in such cases. The change was that, instead of counting merely the volume of affected business between the primary employer and any secondary employers concerned, the board would count toward the jurisdictional amounts all business of the secondary employers at the location affected by the boycott.

The Filing Requirements.—The compliance of unions with the filing requirements of the act was involved in two cases.

In one case the board unanimously ruled a national union to be out of compliance with the filing requirements of the act because the union failed to show that it had distributed its financial reports to its members as required by the law. As a consequence, the national and its affiliated local unions were disqualified from bringing cases to the board, participating in representation elections, or making valid union-shop agreements. The board acted after the national union failed to offer any evidence to back up earlier reports it had made asserting that it had distributed the financial reports to its members. This was the first such case to come before the board.

In another ruling, the board found that an officer of a national union had filed false non-Communist affidavits. Acting to effectuate the policies of the act and the requirements of national security and to protect the integrity of board processes, the board unanimously held the national union and its affiliated locals to be out of compliance with the filing requirements of the act. The board found, after a hearing, that the union officer had admitted in an article in the union's newspaper that his affidavit was false. However, the union obtained an order from the U.S. court of appeals at Washington staying any board action under this ruling until the board decision could be reviewed by the court.

Case Activity.—During the fiscal year ended June 30, 1955, individual employees filed more charges of unfair labour practices against employers and unions than in any prior year in the 20-year history of the National Labor Relations board. A sharp upward trend of such filings started during fiscal 1954 when 2,147 individuals filed charges. This compared with 1,656 charges filed by individual employees in fiscal 1953. The previous peak was 2,041 cases filed by individuals in fiscal 1949.

Individual employees filed charges of unfair practices in a total of 2,668 cases during fiscal 1955, constituting 43% of the 6,163 charges of unfair labour practices of all types filed during the year.

A total of 4,358 charges were filed against employers, or 71% of the total charges filed, and 1,805 charges were filed against unions, or 29% of the total charges filed.

Of the employees' charges, 1,576, or 59%, were directed against employers, and the remaining 1,092, or 41%, were directed against unions.

The agency closed a total of 13,679 cases of all types during the year. The board issued formal decisions in a total of 2,108 cases of all types. Of these, 360 were in unfair labour practice cases and 1,748 in representation cases.

The independent general counsel, who was the prosecuting officer of the agency, closed 5,320 unfair labour practice cases without the necessity of formal action; 614, or 12%, were adjusted by various types of settlements; 1,634, or 31%, were dismissed after investigation; and the remaining 57% were withdrawn. In many cases the withdrawals actually reflected settlements of the matter in issue.

The general counsel issued 373 formal complaints alleging violations of the act: 211 against employers, 112 against unions, and 50 against both employers and unions. (See also LABOUR UNIONS; STRIKES.) (G. F.)

National Museum: see SMITHSONIAN INSTITUTION.

National Parks and Monuments. In 1955 travel to areas administered by the U.S. national park service exceeded that of any previous year; funds for road, trail and other improvements were substantially increased; and a number of important donations were made for park purposes.

Visitors to national park areas totalled 49,176,293 in the 12-month period ended Sept. 30, 1955. This compared with a total of about 47,925,000 in the previous 12-month period, and exceeded by approximately 15,500,000 the 1950 total.

Additional accommodations for visitors were provided by the concessionaires operating in a number of parks. Special ceremonies marked completion of the multimillion-dollar Jackson Lake lodge in Grand Teton National park, Wyo., built with funds provided by Jackson Hole Preserve, Inc., a nonprofit organization established by John D. Rockefeller, Jr.

At Grand Canyon National park, Ariz., plans were drawn up for a \$1,000,000 visitor-facilities modernization and improvement program by Fred Harvey, the concessionaire on the canyon's south rim. Negotiations were completed, subject to congressional review, for the installation and operation of extensive dining and boating facilities at the Flamingo site in Everglades National park, Fla., entailing an initial investment of \$250,000 of private capital.

Approximately \$2,500,000 of federal funds was programmed for road, parking area, camp ground, marina and other installations in and adjacent to the Flamingo site.

Work was continued on a number of major road projects, such as the Stevens Canyon road in Mt. Rainier National park, Wash., begun in 1930; the Heart O' the Hills highway in Olympic National park, Wash.; the Heintooga Ridge road in Great Smoky Mountains National park, N.C.-Tenn.; and the Blue Ridge, Natchez Trace and Colonial parkways.

One of the year's highlights was the establishment on Sept. 14 of a representative portion of the scenic and historic Cumberland gap region, Kentucky-Virginia-Tennessee, as the Cumberland Gap National Historical park. The 20,100 ac. for this tri-state park were acquired by the three states at a cost of approximately \$1,250,000 and donated to the federal government.

Another of the year's highlights was the enactment of legislation sponsored by Hawaii's delegate to the U.S. congress, Elizabeth Pruitt Farrington, authorizing establishment of the ancient City of Refuge and adjoining lands on the Kona coast of the Island of Hawaii as a national historical park. This congressional action culminated a half century of effort by the Hawaiian people to achieve national recognition and protection for this unusual "city" where Hawaiian fugitives and refugees found sanctuary many centuries ago. The secretary of the interior was authorized to acquire lands for the park by donation or purchase. The governor of Hawaii also was authorized to acquire lands at the expense of the territory by exchange or otherwise.

One unit of the national park system—Old Kasaan National monument, Alsk.—was abolished and its 38 ac. transferred to the U.S. forest service for administration as part of the Tongass National forest.

Secretary of the Interior Douglas McKay was the principal speaker at ceremonies dedicating Fort Vancouver National monument, Wash., on Aug. 13. This area, established in 1954, includes the site of the stockaded fur-trading post which served

Areas Administered by the National Park Service (Sept. 30, 1955)

Type of area	Number	Federal land (approximate acreage)
National parks*	28	12,670,400
National historical parks	7	31,700
National monuments†	83	8,975,400
National military parks	11	24,400
National memorial parks	1	68,400
National battlefield parks and sites	9	5,700
National historic sites and memorials	22	5,700
National cemeteries	10	2,000
National parkways	5	81,500
National capital parks	1	35,000
National recreation areas	4	2,020,000
Total	181	23,919,000

*Largest and oldest national park is the Yellowstone in Wyoming (also includes small portions of Idaho and Montana). Established in 1872, the park contains more than 2,000,000 acres. †The oldest national monument is Devils Tower in Wyoming, established by proclamation of Pres. Theodore Roosevelt in 1906. Special ceremonies were to be held in 1956 in observance of the area's golden anniversary.

as headquarters, from 1824 to 1846, of the Hudson's Bay company activities from the Rocky mountains to the Pacific and from California to Alaska.

Secretary of Agriculture Ezra Taft Benson delivered the main speech at ceremonies at George Washington Carver National monument, Mo., in observance of Carver day, July 12. The birthsite and boyhood home of the famed Negro educator-scientist are preserved in this area.

Ceremonies were held on June 17 dedicating to public use a new Museum of North Carolina Minerals at Gillespie gap on the Blue Ridge parkway. At this point the parkway skirts the Spruce Pine area, one of the world's most highly mineralized regions. The state of North Carolina provided funds for erecting the museum structure and for the preparation of its series of interesting exhibits by the national park service.

Jackson Hole Preserve, Inc., donated \$300,000 to match an equal amount of federal funds appropriated by congress for park land acquisition. The donation was made and accepted on condition that the entire \$600,000 would be expended for the acquisition of property in Grand Teton National park.

A donation for the purpose made possible the purchase by the national park service of one of the tents used by George Washington during the American Revolution. This valuable accession was to be on display at Yorktown, Colonial National Historical park, Va., during the 350th Jamestown anniversary celebration in 1957. The park includes most of Jamestown Island.

An anonymous donation of \$30,000 was given to the service for a two-year study of methods and devices employed in national and state park areas to interpret these areas to the visiting public. This study was being made by Freeman Tilden, a leading authority on parks and author of the book *The National Parks: What They Mean to You and Me*.

Three vacancies on the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments were filled by the appointment of John B. Oakes, *New York Times* editorial board member; Carl I. Wheat, an attorney of Menlo Park, Calif.; and E. Raymond Hall, chairman of the department of zoology, University of Kansas, Lawrence. (C. L. W.)

England and Wales.—Two further national parks, areas of Northumberland and the Brecon Beacons, comprising about 900 sq.mi., were designated in 1955. Both of these were awaiting confirmation by the minister of housing and local government. The eight national parks already confirmed and established covered an area of 4,333 sq.mi. In these, additional accommodations and facilities for visitors were provided during the year. The National Parks commission made proposals for the designation of the Quantock hills, in Somerset, and the Gower peninsula, Glamorgan, as "areas of outstanding natural beauty." These areas were to be the ones selected for special planning designed to maintain their beauty. They might be less extensive areas than the national parks, and the provisions of the National Park

regarding the development of facilities for open-air recreation did not apply to them.

Australia.—Queensland.—During the year six new areas totalling 7,768 ac. were proclaimed national parks, the chief of which was Magnetic Island, outside Townsville, covering an area of 6,260 ac. Additional areas totalling 1,787 ac. were added to existing parks, including 1,480 ac. to the Carnarvon park. About 2,000 people visited the parks.

Tasmania.—A new national park was established in the rugged southwestern part of the island—Lake Pedder National Park, embracing Lake Pedder and some spectacular peaks rising 5,000 ft. Others included 620 ac. of forest fringing St. Mary's Bay in the northeast, and 20 ac. of scenic foreshore at Stewart's Bay, Port Arthur. About 25,000 people visited the parks during the year.

A "countryside code," the first of its kind in Australia, was sponsored and introduced by the Scenery Preservation board. **South Australia.**—Two new roads were provided in the Belair National park, which enabled visitors to traverse areas hitherto inaccessible. Approximately 400,000 people visited this park during the year.

Victoria.—About 35,000 persons visited the Buchan Caves National park during the year.

Belgian Congo.—No new nature reserve was established during 1955, but consideration was given to the establishment of five national parks, especially in the region of Haute-Tshuapa, with a view to protecting a portion of the equatorial forest. Provision was made for the accommodation of visitors to the Kindi area of the Albert National park by establishing a new camp capable of accommodating 60 persons. A total of 3,754 persons visited the parks during the year.

Kenya.—The two national parks affected by Mau Mau activities, Mt. Kenya and Aberdare, continued to be closed to the public and all plans for development were suspended temporarily. The new Safari lodges were opened in the Tsavo National park, Kenya's main sanctuary for big game, the Kitani Safari lodge in the western sector of the park and the Aruba Safari lodge in the eastern sector. Approximately 120,000 people visited the parks during the year.

Northern Rhodesia.—Development work continued in the northeastern sector of the Kafue National park. In the northern sector six temporary camps were constructed and the dry-weather tracks were improved and extended.

South Africa.—A record number of 91,000 visited the Kruger National park. Conditions in the Mountain Zebra park were very favourable and six foals were raised, making the total 16.

Tanganyika.—The Serengeti National park was the only published national park in Tanganyika, but the establishment of at least two additional parks was under consideration. L. S. B. Key, curator of the Coryndon museum, Nairobi, continued archaeological research in the Oldwai gorge, disclosing further evidence of Stone Age culture and the fauna of 250,000 years ago.

About 2,000 visitors visited the park during the year.

Yugoslavia.—Eight national parks, with a total area of 360,000 ac., had been established since 1949. The largest was the Mavrovo National park in Macedonia, with an area of 176,160 ac. established to protect the recently created Mavrovo lake which supplied water for the Mavrovo electric plant system. The other seven national parks were Durmitor, Biogradska and Lovcen in Montenegro, Plitvice Lakes, Paklenica and Risnjak in Croatia and Pelister in Macedonia. (See also TOURIST TRAVEL.)

Navies of the World. At the end of 1955 there were three great navies, those of the United States, the United Kingdom and the U.S.S.R. Other major fleets were those of France and Italy, followed by those of the Netherlands, Sweden, Spain, Turkey, Canada, Australia, Argentina, Brazil and Chile. There were also 45 lesser navies. The comparative strengths in ships, of and above the escort categories, of the navies of the world were as shown in Table I.

Among the naval events of the year were: the first sea trials of the U.S.S. "Nautilus," the world's first atomic-powered submarine, Jan. 17-20; the large operations of the United States 7th fleet, involving 120 warships, to cover the evacuation by the Chinese Nationalists of the Tachen Islands, which started early in February; the explosions and fire in the U.S. submarine "Pomodon" at San Francisco, Calif., on Feb. 21; the commissioning of H.M.S. "Ark Royal," Great Britain's largest aircraft carrier and the first to have all the postwar developments in flight deck technique, on Feb. 22; the launching of H.M.S. "Excalibur," the second submarine with engines boosted by hydrogen peroxide, at Barrow-in-Furness on Feb. 25; the combined

*Other naval forces with four or fewer escort vessels are those of Cuba, Belgium, Ireland, Korea, Iran, Uruguay, Ecuador and Burma. Minor warships are possessed by Bulgaria, Ceylon, Finland, Germany (East), Germany (West), Haiti, Honduras, Hungary, Iceland, Iraq, Panama, Paraguay, Philippines and Vietnam (South).

fleet exercises in the Mediterranean known as "Sea Lance" during March 10-15 in which about 50 ships and 150 aircraft took part in simulation of atomic warfare; the sinking of the British submarine "Sidon" at Portland, Dorset, following an explosion in a torpedo on June 16 (the submarine was salvaged a week later); the commissioning of H.M.S. "Grey Goose," the largest warship so far to be propelled solely by gas turbines, on June 22; the bombardment lasting for two days of the terrorist positions in Johore on the east coast of Malaya by the British cruiser "Newcastle," flagship of the admiral second in command of the far east station (announced June 28); the agreement to hand over the administration and control of the British naval base at Simonstown to the government of the Union of South Africa (announced July 4); the launching of the U.S.S. "Sea Wolf," the second atomic-powered submarine (but the first with an intermediate reactor and a liquid metal coolant) at Groton, Conn., on July 21; the withdrawal of the last British battleship in commission, H.M.S. "Vanguard," from the fleet to be reduced to reserve (announced Sept. 12); the major North Atlantic Treaty organization maritime tactical exercise of 1955 known as "Sea Enterprise" held in the Norwegian sea area during Sept. 21-28, which was sponsored by the supreme Allied commander, Atlantic, and conducted by the commander in chief, eastern Atlantic, in which 36 ships including 5 British aircraft carriers, 100 aircraft and 15,000 men from the United States, United Kingdom, Canada and Norway took part; the commissioning at the Norfolk naval shipyard, Portsmouth, Va., of the U.S.S. "Forrestal," the largest aircraft carrier in the world, on Oct. 1 and the launching of her sister ship "Saratoga" at the New York naval shipyard, Brooklyn, on Oct. 8; the visit of six Russian warships comprising two cruisers and four destroyers to Portsmouth, Eng., and the reciprocal visit of six British warships comprising an aircraft carrier, a fast minelayer and four destroyers to Leningrad between Oct. 12 and 17; and the celebrations to mark the 150th anniversary of the battle of Trafalgar on Oct. 21 when the queen and the duke of Edinburgh dined with the board of admiralty in the famous Painted hall of the Royal Naval college, Greenwich, to do honour to the immortal memory of Vice-Admiral Lord Nelson.

U.S. Naval Strength.—Three giant aircraft carriers of 60,000 tons were being built, the "Independence," "Ranger" and "Saratoga," and a fifth ship of this "Forrestal" class, the "Kitty Hawk," was projected. Fifteen aircraft carriers of the "Midway" and "Oriskany" ("Essex") classes were being converted with the

new angled deck and the enclosed bow. The heavy cruiser "Boston," "Canberra" and "Los Angeles" were converted guided missile ships. Eleven large destroyers were under construction and seven more were projected. Four destroyer escorts were completed or being built and nine more were projected. Another six nuclear-powered submarines and four large submarines of conventional design were projected. In addition to the ships enumerated in Table I, there were 246 minelayers and minesweepers, 118 patrol vessels, 553 amphibious craft, 550 auxiliaries and 1,800 service craft. The U.S. navy comprised a total of 4,420 vessels at the end of 1955.

British Naval Strength.—The new large fleet aircraft carrier "Ark Royal" was finally completed and joined the operational fleet in the Mediterranean in Oct. 1955. The fleet aircraft carrier "Victorious" was being completely rebuilt into a bigger ship. The intermediate fleet aircraft carrier "Hermes," an improvement on the three new vessels of the "Centaur" class, was still under construction. The light fleet aircraft carriers "Herald" and "Leviathan" were still suspended. The construction of the long-suspended cruisers "Blake," "Defence" and "Tiger" was resumed. Two fleet escort ships (superdestroyers) and eight general-purpose frigates were ordered under the 1955-56 naval estimates. Of the 26 new frigates of the anti-aircraft, anti-submarine and two antisubmarine types, six were completed, five were nearing completion and nine were launched. Six new submarines were under construction. Warships other than those shown in the table included three fast minelayers, 63 ocean minesweepers, 139 coastal minesweepers, 112 inshore minesweepers, 52 fast patrol boats, 30 seaward defense boats, 32 antisubmarine trawlers, 66 landing craft and many miscellaneous ships and auxiliaries.

U.S.S.R.—Eight more of the class of large cruisers of which the "Sverdlov" was the prototype were under construction, bringing the number of this class of Soviet warships up to 10. Among new Russian destroyers were 24 of the flush-decked fleet and escort types. A large number of ocean-going long-range submarines were completed.

France.—Two large fast light fleet aircraft carriers were under construction or projected. The anti-aircraft cruiser " Colbert" was being built. Six more new destroyers were completed and five were under construction, six new frigates were completed and four under construction, and 13 submarines were under construction or projected.

Italy.—Two former light cruisers were converted into

stroyer leaders, and two large destroyers, four frigates and three corvettes were being built or completed. Two large submarines were acquired from the United States.

Netherlands.—Three large destroyers were completed and eight more were under construction. Seven escort vessels, six ocean minesweepers and five patrol vessels were acquired from the United States, and four submarines were under construction.

Sweden.—Two large destroyers were completed, and four destroyers, six submarines, a large minelayer, 20 motor torpedo boats and six coastal minesweepers were being built.

Canada.—The light fleet aircraft carrier "Bonaventure" was under construction in Great Britain, and 14 destroyer escorts, a loop layer, six coastal minesweepers and eight seaward defense patrol craft were being built. Twelve frigates were converted for antisubmarine duties.

Australia.—At the end of the year the light fleet aircraft carrier "Melbourne" (renamed Oct. 28; she was formerly named "Majestic") was completed in Great Britain, and three "Darling" class destroyers, four fast antisubmarine frigates, four coastal minesweepers, four seaward defense boats and four boom defense vessels were being built in Australia.

Nebraska. Known as the "Cornhusker state," Nebraska is situated in the west north central portion of the U.S. Area: 77,227 sq.mi., including an estimated 564 sq.mi. of water. Population: (1950 census) 1,325,510; (July 1, 1955, est.) 1,369,000. In 1950 the urban population constituted 46.9% of the total. Capital city: Lincoln, pop. (1950) 98,884; largest city: Omaha, pop. 251,117.

History.—The 1955 session of the Nebraska legislature met from Jan. 4 to June 17, the longest session in the history of the legislature. A total of 354 bills were enacted into law, some of the more important of which were as follows: (1) property tax assessment date changed from March 10 to March 1; (2) property henceforth to be valued at its "basic value" rather than its "actual value"; (3) business inventories would henceforth be assessed on an "average annual inventory" basis (the above bills were passed to implement constitutional amendments adopted in 1954); (4) the tax commissioner was directed to formulate rules and regulations pertaining to the valuation and assessment of property; (5) the state turnpike authority was abolished; (6) a new formula for the distribution of the gasoline tax to the counties was formulated; (7) the state highway laws were codified; (8) aid to the totally and permanently disabled was added to the state public assistance program; (9) certification requirements for rural elementary teachers were raised; (10) use of radar in traffic enforcement was authorized and legalized; (11) penalties were increased for various traffic offenses; (12) truck and trailer licence fees were increased, as were those for passenger cars; (13) an Egg Improvement law was enacted and a new division of wheat development, utilization and marketing was established; (14) a 2% severance tax was levied on all oil and gas produced in the state.

Five constitutional amendments were proposed: (1) to change the allocation of fines and penalties collected for violation of overloading laws; (2) to authorize the legislature to provide for the appointment of a tax commissioner or tax commission; (3) to authorize the legislature to absolve real properties of tax and assessment charges in certain cases; (4) to remove the constitutional prohibition against changing executive salaries more than once in eight years; and (5) to allow for a different

method of taxing grain.

Elective state officials for 1955 were: governor, Victor Anderson (Rep.); lieutenant governor, Charles J. Warner (Rep., deceased, 1955); treasurer, Ralph Hill (Rep.); secretary of state, Frank Marsh (Rep.); auditor, Ray C. Johnson (Rep.); attorney general, Clarence S. Beck (Rep.).

Education.—Of the 5,536 school districts authorized to provide or elementary education during 1953-54, 3,871 were in operation providing instruction for 54,336 pupils under the direction of 4,382 teachers. Elementary instruction was also provided in 447 high school districts, 134,686 pupils under the direction of 4,247 teachers. There were 24 high schools in operation with enrolment of 60,989 under the direction of 3,341 teachers. Total expenditures for public elementary and secondary schools in 1953-54 were \$66,414,711. The state university is located in Lincoln; there are three other universities, a municipal university in Omaha, Creighton (Catholic) in Omaha and Nebraska Wesleyan (Methodist) in Lincoln. There are 13 four-year colleges and four junior colleges. There are 255 private, parochial and denominational schools in the state. The state holds 1,628,196 ac. of land, valued at \$36,003,479 in 1953, as a permanent endowment for its public schools. The permanent public school endowment fund was \$30,313,976. The commissioner of education in 1955 was Freeman Decker.

Social Insurance and Assistance, Public Welfare and Related Programs. For the biennium 1955-57 the legislature appropriated \$33,912,950 for public assistance, \$20,320,200 of which would come from federal funds. During the first six months of 1955 there was an average case load of 727 persons per month receiving aid to the blind with average payments of \$65.56; 17,938 persons per month receiving old-age assistance with average payments of \$56.23; and 2,568 families receiving aid for dependent children with average payments of \$97.88 per family. The 1955 session of the legislature provided for aid to the totally and permanently disabled, raised maximum blind assistance payments from \$70 to \$100 and added \$3 (for sundries and food) to the public-assistance allowance.

The state maintained 17 charitable, mental, reformatory and penal institutions under the supervision of the state board of control. On July 1, 1955, the total population of these institutions numbered 8,799. The state had 135 hospitals with 13,817 beds.

Communications.—The total road mileage of the state in 1955 was 94,387, of which the state maintained 9,870 mi. There were 5,783 mi. of steam railway. The 1955 legislature appropriated \$81,531,500 for highway purposes for the 1955-57 biennium, approximately \$35,240,000 of which was to come from federal funds.

There were 254 airports in the state, 6 of which were state owned and 66 municipally owned. There were 22 daily newspapers and 447 other newspapers and periodicals of all kinds published in the state. The state had 27 radio stations and 5 television transmitters.

Banking and Finance.—The state budget for the 1955-57 biennium was \$224,831,312, the largest in its history. For the fiscal year ending July 30, 1955, the state's revenues were \$118,167,350, expenditures were \$91,192,660. Federal grants furnished approximately \$22,000,000. The long-term debt of the state was nil.

On June 30, 1955, there were 291 state banks in the state with total resources of \$451,091,638 and 123 national banks with total resources of \$1,129,984,000. There were 50 co-operative credit associations with assets of \$7,737,899.

Agriculture.—A total of 96.8% of the land area is in farms. In 1954 there were approximately 100,846 farms in the state with a total area of 47,466,828 ac. The average size of farms was 470.9 ac., and 38.6% of the farms were operated by tenants.

Manufacturing.—There were (1955) 1,281 manufacturing establishments.

Table I.—Principal Crops of Nebraska

Crop	Indicated 1955	1954	Average 1944-54
Corn, bu.	104,160,000	196,000,000	228,658,000

Negroes, American

During 1955 the issue of racial seg-
regation continued to occupy an
important place among events affecting Negroes in the United
States. On May 31 the U.S. supreme court rendered its imple-
mentation decree in which it reaffirmed the unconstitutionality
of laws requiring racial segregation in public education, ordered
the states affected to make a prompt and reasonable start toward
desegregation of public schools and gave district courts the re-
sponsibility of ensuring compliance with its decree. This court
decision resulted in the breaking down of racial separation of
children in at least 362 school districts or local communities for-
merly maintaining segregated classrooms.

While some desegregation occurred in four southern states,
Alabama, Kentucky, Tennessee and Texas, more progress took
place in the border area, particularly in Missouri, West Virginia,
Oklahoma and the District of Columbia. About 85% of Mis-
souri's Negro children were enrolled in nonsegregated classes
in school reopened in the fall, and 44 of West Virginia's 55
counties had ended or were in the process of ending segregation.
About 80% of the District of Columbia's public schools were
reported as functioning on a nonsegregated basis. Enrolment fig-
ures indicated that a total of 134,000 Negro children were af-
fected by the change from segregated to nonsegregated schools.
Resistance to desegregation was most intense in Alabama,
Georgia, Louisiana, Mississippi, North Carolina, South Carolina
and Virginia. Prince Edward county, Va., and Clarendon county,
S.C., both involved in litigation before the supreme court, con-
tinued to operate segregated schools. School officials in the two
counties contended they were not prepared for immediate desegre-
gation, and in both instances local district courts permitted
more time for planning.

At the college level, a total of 129 formerly "white" public
and private institutions of higher learning in the 17 southern
border states admitted Negro students or expressed willing-
ness to do so in official policy statements. At least 23 "Negro"
institutions also lowered the colour bar, making it possible for
Negroes to enrol. Only five southern states, Alabama, Florida,
Georgia, Mississippi and South Carolina, continued to exclude
Negro students from all educational work at their state-sup-
ported "white" institutions.

Employment and Income.—Major gains in the economic
sphere were included Pres. Dwight D. Eisenhower's executive order
prohibiting discrimination "against any employee or applicant
for employment in the federal government because of race, color,
religion or national origin," and the passage of fully enforceable
fair employment practice laws in Minnesota and Michigan.
The president's order banning bias in federal employment estab-

lished a committee on government employment policy without
enforcement power, but incorporated some improvements over
the nondiscrimination order it superseded. Minnesota and Mich-
igan became the ninth and tenth states in the nation to enact
comprehensive, enforceable fair employment practice laws pro-
hibiting discrimination on the part of public and private employ-
ers, labour unions and employment agencies.

The Armed Forces.—An official report issued by the defense
department late in 1954 announced: "The Negro citizen in the
Armed Forces is now utilized on the basis of individual merit
and proficiency in meeting the needs of the Services." The re-
lease also noted that integration had proceeded more rapidly
than was thought possible, with "no untoward incidents." A later
bulletin from the defense department reported that the number
of Negro officers and enlisted men in the armed forces had
doubled since 1949, the greatest increase occurring in the army,
which already had the largest proportion. The navy and the
marine corps had no Negro officers in 1949, but in 1955 did
have some.

Recreation and Sports.—Breaking precedent with earlier de-
cisions concerning public recreation facilities, the 4th circuit
court of appeals in Richmond, Va., declared segregation in
public parks per se unconstitutional. Considering cases involving
the use of beaches and bathhouses operated by the state of
Maryland and the city of Baltimore, the court held it "obvious"
that "racial segregation in recreational activities can no longer
be sustained. . . ." In the area of professional sports, a Texas
judge ruled in January that the state law prohibiting interracial
boxing was unconstitutional.

Mal Whitfield, Olympic track champion, became the first
Negro to win the James E. Sullivan memorial trophy, the high-
est U.S. amateur sports award.

The Arts and Literature.—In Jan. 1955 audiences and crit-
ics hailed Marian Anderson's debut with the Metropolitan Opera
company, reacting enthusiastically to her portrayal of the sorcer-
ess Ulrica in *The Masked Ball*. Miss Anderson was the first
Negro engaged to sing a major role by the Metropolitan Opera
company. Soprano Camilla Williams, who sang with the New
York City Opera company for several seasons, was engaged by
the Sadlers Wells Opera company in 1955. Miss Williams was
the first foreign-born artist to sing with that company.

Ralph Ellison, young writer of fiction (*Invisible Man*, 1952),
received the Prix de Rome in 1955 and began a year of residence
at the American academy in Rome. Langston Hughes published
Famous Negro Music Makers and *The Sweet Flypaper of Life*,
with photographs by Roy De Carva. James Baldwin followed up
his warmly praised novel *Go Tell It on the Mountain* (1953)
with the autobiographical *Notes on a Native Son*. Arna Bon-
temp's was represented by *Lonesome Boy* and Shirley Graham
by the juvenile biography *Booker T. Washington*. (See also
EDUCATION; ROMAN CATHOLIC CHURCH.)

Nehru, Jawaharlal (1889—), Indian statesman, was
born at Allahabad, United Provinces,
Nov. 14. For his early career see *Encyclopædia Britannica*.
Arrested in 1942, following Congress' call for civil disobedi-
ence, he was released in 1945, and in 1946 took a leading part
in the negotiations with the British on Indian independence. In
September of that year he became prime minister of an all-
Indian interim government. On Aug. 15, 1947, he was appointed

prime minister and minister for external affairs of the independent dominion of India, posts in which he continued when his country became a republic on Jan. 26, 1950, and in which he was confirmed by the 1951-52 general elections.

On Dec. 28-29, 1954, at Bogor, Indon., Nehru conferred with the prime ministers of Indonesia, Burma, Pakistan and Ceylon in preparation for the larger Asian-African conference in April 1955 at Bandung, Indon., at which he led his country's delegation.

In June and July 1955 Nehru made official visits to Prague, the U.S.S.R., Warsaw, Vienna, Yugoslavia, Rome, London and Cairo. On June 22 Nehru and the Soviet prime minister, Marshal N. Bulganin, signed in the Kremlin a statement based on the former's *panch sila* (five principles of coexistence). In New Delhi on July 16 Pres. Rajendra Prasad conferred upon Nehru the Bharat Ratna (Jewel of India), his country's highest order, for his "heroic endeavours in the cause of peace."

In November and early December Nehru received Bulganin and N. S. Khrushchev, first secretary of the Communist Party of the Soviet Union, during their tour of India and Burma. Throughout the year the Indian prime minister's foreign affairs statements continued to express a policy of noninvolvement with either Communist or western blocs and of condemnation of colonialism, racial discrimination and military alliances.

In New Delhi on May 14-18 he met Mohammed Ali, the then prime minister of Pakistan, to discuss Kashmir. These discussions, though cordial, produced no solution of the problem. (See also INDIA.)

Nepal. Nepal is a Himalayan kingdom lying between India and Tibet. Area: 54,510 sq.mi. Pop. (1954 census) 8,431,537. Aboriginal stock is Mongolian, with Hindu admixture. Language: Gorkhalis (Gurkhas) speak Parbatia, of Sanskrit origin; Bothias use Tibetan; Newars, from southern India, speak Gubhajius, resembling Tibetan but with many Sanskrit words. Religion: Buddhism overlaid with Hinduism. Chief towns (pop., 1941 est.): Kathmandu 108,805; Patan 104,928; Bhatgaon 93,176. Kings in 1955: Tribhuvan Bir Bikram and (from March 14) Mahendra Bir Bikram. Prime minister, M. P. Koirala (until March 2, when the king assumed direct rule).

History.—King Tribhuvan died on March 13, 1955, in Zürich.

MOURNERS lining the banks of the holy Baghmati river, Nepal, March 17, 1955, during the funeral of King Tribhuvan. Workmen in white are preparing the cremation site

Prince Mahendra succeeded his father. On March 2 he accepted the resignation of the four-party Koiralacabinet, formed Jan. 31, 1954, and introduced direct rule "for the time being." On Nov. 6 King Mahendra arrived in New Delhi, Ind., on an official visit. The first all-weather airport, constructed by India army engineers, was inaugurated on June 13 at Gauchar. Two projects intended to bring more than 30,000 ac. of land under irrigation were under way; they would cost I.Rs. 350,000 and were undertaken by India as part fulfillment of its obligation to Nepal under the Colombo plan. A £10,000,000 five-year development plan was announced on Oct. 10: 900 mi. of roads, residential university at Kathmandu, a cement factory, a pulp factory and sugar mills were to be built.

Education.—Schools (1952): primary and basic 455, Sanskrit 27, middle and high (English) 190; 2 intermediate colleges and Kathmandu college.

Finance and Banking.—Monetary unit: Indian rupee and Nepalese rupee (called *mohur*) with an official exchange rate of N.Rs. 150 = I.Rs. 100 (for non-essential imports N.Rs. 175 = I.Rs. 100), and N.Rs. 7.14 to U.S. \$1. Budget (1952-53 actual): revenue N.Rs. 40,104,100, expenditure N.Rs. 52,929,000.

Foreign Trade.—With India (April-Dec. 1952): imports Rs. 32,200,000, exports Rs. 58,600,000; with the U.K., imports £2,298, exports £6. Principal exports: grain, jute, timber, oilseeds, clarified butter, potatoes, medicinal herbs, cattle, hides and skins.

Transport and Communications.—Roads (1953): 379 km. suitable for motor vehicles. Railways (1954) 102 km. Licensed motor vehicles (Dec. 1950): cars 220; commercial vehicles 80.

Nervous System: see PSYCHOSOMATIC MEDICINE.

Netherlands. A kingdom of northwest Europe, the Netherlands is bounded north and west by the North Sea, east by Germany and south by Belgium. Area: 12,524 sq.mi. in 1954. Pop.: (1947 census) 9,625,499; (1955 est.) 10,735,000. Language: Dutch. Religion (1947): Roman Catholic 38.50%; Dutch Reformed 31.03%; Reformed Churches 7.93%; non-church members 17.04%. Chief towns (pop., 1954 est.): Amsterdam (cap.) 858,702; Rotterdam 704,646; The Hague 590,755; Utrecht 241,723; Haarlem 165,142; Eindhoven 149,460; Groningen 140,456; Tilburg 126,939; Nijmegen 116,989; Enschede 113,513; Arnhem 114,002. Ruler, Queen Juliana; prime minister in 1955, Willem Drees.

History.—Prosperity was the prevailing note of the economic and social life of the Netherlands in 1955. The boom showed no symptoms of slowing down. The general index of industrial production continued its upward movement in the course of the year, as did the trend of labour productivity; there was a new low record of only 30,400 unemployed at the end of June (about 1% of the working population). The volume and value of exports reached a new peak since the liberation; as the price index numbers of imports and exports changed only a little the balance of trade remained nearly the same with a slight tendency to deterioration. Imports, however, increased at the end of 1954 and in the first half of 1955 so much that the trade balance became more adverse; from January till July 81% of imports were offset by exports (1953: 91%). This rise in imports was caused by a replenishment of stocks and an increase in home consumption. Consequently the balance of payments showed only a small surplus on current account in the same period.

As the currency circulation rose from 3,397,000,000 florins to 3,802,000,000 florins between May 1954 and May 1955, and the gold and dollar reserve slightly decreased in the same period (from \$1,298,000,000 to \$1,270,000,000), the government announced that a close watch would be kept on the development of the balance of payments and the internal economic situation. In September the Bank of the Netherlands told private banks to limit excessive loans and to divert short-term credits to long-term investments. These measures were intended to check anticipated inflationary development. The prevailing opinion in parliament favoured this policy but nearly all parties asked for

limitation of governmental spending on the same ground. Although the 1956 budget presented in September was balanced, notwithstanding a reduction of taxes by 500,000,000 florins, the general feeling was that its level was too high.

The vigilance of the cabinet was also roused by symptoms of price rigidity caused by cartels and other employers' agreements to control the market. The government disbanded several of these agreements in order to set competition going again and to offset inflation.

It was true, however, that the price movement was not alarming up till the end of the year; the cost of living had been very stable since mid-1954, though the index of hourly wages for industrial workers went up from 133 to 146 by mid-1955. Consequently the rate of consumption increased, as did the rate of saving. In view of the stability of prices real wages went up in 1955 but the workers asked for a bigger share of the general prosperity. Under the system of central control of wages, still in being in the Netherlands, the government had to allow a rise of wages; but the cabinet permitted only an extension of holidays and holiday compensation and of other secondary conditions of employment. This thwarted urge for higher wages caused some social unrest, though there were few strikes in 1955 and those short in duration.

A blemish in the picture of prosperity was the housing problem, still not solved ten years after the liberation. The number of homes built had gone up every year but it was expected that in big cities the housing shortage would last till 1964. Connected with the housing problem was the necessity to raise the rents of all homes. In the early summer of 1955 the government proposed a rise of two categories of higher rents by 5% and 10%. Parliament rejected the bill and there was a cabinet crisis. A compromise was reached on the basis of a general rise of rents of 5% and of compensations in the form of lower taxes; the cabinet withdrew its resignation.

The new statute of the kingdom guaranteeing full self-government to Surinam and the Netherlands Antilles moved Queen Juliana and Prince Consort Bernhard to visit these territories—the first visit of a reigning sovereign to these parts of the kingdom.

RACING BALLOONS preparing to ascend at the 6th Andries Blitz cup race held at 's Hertogenbosch, Neth., in May 1955. Seven of the nine balloons have now got off the ground, the winner floating a distance of 80 mi. (measured as a straight line from the point of ascent) in five hours

dom. New Guinea was again the subject of discussion in the UN general assembly of 1955, which was strongly opposed by the minister without portfolio at the foreign ministry, J. M. A. H. Luns.

Relations with Indonesia deteriorated when the trials of Dutch inhabitants accused of subversive activities were held to have been carried out in disregard of the elementary principles of a good administration of justice. In the spring the government made an appeal to world opinion with the publication of a White Paper.

Netherlands foreign policy invariably remained focused on the promotion of European co-operation. The meeting of foreign ministers of the European Coal and Steel community at Messina, It., in June discussed a Benelux proposal for the creation of a European market. In September the ministers discussed at Noordwijk a report of work of a working party instituted at Messina. The Netherlands was much interested in freer trade in Europe; it was also hoping for a European agreement on the use of atomic energy. (See also EUROPEAN UNITY; INDONESIA; NETHERLANDS ANTILLES; NETHERLANDS NEW GUINEA; SURINAM.) (M. RY.)

Education.—Schools (1953): primary 7,328, pupils 1,323,437, teachers 37,570; advanced primary 954, pupils 139,437, teachers 5,181; secondary 365, pupils 86,883, teachers 6,675; vocational 1,018, pupils 280,480, teachers 12,000. Teachers' training colleges (primary) 89, students 9,582. Institutions of higher education 10, including 6 universities; students 28,206.

Finance and Banking.—Monetary unit: guilder or florin, with an exchange rate of 3.79 guildens to U.S. \$1. Budget (1955 est.): revenue 6,600,000,000 guildens; expenditure 7,700,000,000 guildens. Internal debt (June 1954) 21,900,000,000 guildens; external debt 2,500,000,000 guildens. Currency circulation: (Dec. 1954) 3,682,000,000 guildens; (Aug. 1955) 3,466,000,000 guildens. Bank deposits: (Dec. 1954) 5,436,000,000 guildens; (Aug. 1955) 5,376,000,000 guildens. Gold and foreign exchange reserves of the Central bank (March 1955) U.S. \$1,268,000,000.

Foreign Trade.—(1954) Imports 10,853,000,000 guildens; exports 9,164,000,000 guildens. Main sources of imports: Belgium-Luxembourg 17%; Germany 15%; other continental European Payments union countries 13%; U.S. and Canada 12%; U.K. 9%; other sterling area 9%; Latin America 5%. Main destinations of exports: Germany 16%; Belgium-Luxembourg 14%; other continental E.P.U. 20%; U.K. 12%; other sterling area 9%; U.S. and Canada 7%; Latin America 5%.

Transport and Communications.—Roads (1953): 12,500 km. Motor vehicles in use (1954): cars 194,000, commercial vehicles 95,800. Railways (1954): 3,210 km., of which 1,283 km. electrified; passenger-kilometres (1953) 6,621,000,000; freight, ton-kilometres (1954) 3,362,000,000. Navigable inland waterways (Jan. 1954): 6,917.7 km., including 2,634.8 km. for ships of more than 400 tons. Shipping: merchant vessels of 100 gross tons and more (July 1954) 1,686; total tonnage 3,443,451. Cargo in Netherlands ports (metric tons, 1954): loaded 19,505,000; unloaded 41,277,000. Air transport (1954): passenger-kilo-

metres 1,362,119,000; freight, ton-kilometres 53,183,000. Telephones (Jan. 1954): 919,572. Licensed radio receivers (1953): 2,333,000.

Agriculture.—Main crops (metric tons, 1954): wheat 397,000; rye 515,000; barley 208,000; oats 464,000; potatoes 3,999,000; beet sugar, raw 420,000; rapeseed 17,000; linseed 24,000; dry peas 93,000; broad beans 4,000; flax fibre 22,000. Livestock (Sept. 1954): cattle 3,026,000; pigs 1,975,000; horses used in agriculture 241,000; sheep 408,000; poultry 31,900,000. Meat production (metric tons, 1954): beef and veal 181,000; pork 231,000; mutton and lamb 7,000. Dairy production (metric tons, 1954): milk delivered 4,933,000; butter 81,600; cheese 147,000. Fisheries (1953): total catch 343,300 metric tons; fish exports 144,701.

Industry.—Index of industrial production (Feb. 1955: 1948=100): general 149, coal mining 102, manufacturing 151, fuel and power 173. Employment index (Dec. 1953; 1948=100): 111. Registered unemployed (Jan. 1955): 82,200. Wages index: (Feb. 1955; 1948=100) 143; (Jan. 1954) 134. Fuel and power (metric tons, 1954): coal 12,070,000; lignite 171,700; crude oil 939,100; manufactured gas 1,852,000,000 cu.m.; electricity 10,590,000,000 kw.hr. Raw materials (metric tons, 1954): pig iron 610,500; crude steel 927,600; zinc, smelter 26,000; tin, smelter 28,900; salt (1953) 457,000. Manufactured goods (metric tons, 1954): cement 962,000; cotton yarn 68,600; wool yarn 27,600; rayon filament yarn 29,500; rayon staple fibre 11,800. New dwellings completed (1954): 68,487. Merchant shipping launched (1953): 341,313 tons.

Netherlands Antilles.
